PAMELA was wrong in her supposition that since Sir John's death the danger for Millicent was at an end. Tony Stretton would now return home, she thought; and nothing was further from Tony's thoughts. At the time when Pamela was riding through the lanes of Leicestershire on that morning of early spring, Tony was lying in his bunk in the cabin of the *Perseverance* reading over, for the thousandth time, certain letters which he kept beneath his pillow. This week he kept the long night watch from midnight until eight of the morning; it was now eleven, and he had the cabin to himself. The great gale had blown itself out. The trawl, which for three days had remained safely stowed under the lee bulwarks, was now dragging behind the boat; with her topsails set the ketch was sailing full and by the wind; and down the open companion the sunlight streamed into the cabin and played like water upon the floor. The letters Tony Stretton was reading were those which Millie had sent him. Disappointment was plain in every line; they were sown with galling expressions of pity; here and there contempt peeped out. Yet he was glad to have them; they were his monitors, and he found a stimulus in their very cruelty. Though he knew them by heart, he continually read them on mornings like this, when the sun shone down the companion, and the voices of his fellow sailors called cheerily overhead; at night, leaning upon his elbow, and spelling them out by the dim light of the swinging lamp, while the crew slept about him in their bunks.

To his companions he was rather a mystery. To some of them he was just down on his luck; to others he was a man "who had done something."

"I suppose you have come out here to lie doggo," said the skipper to him, shouting out the words in the height of the gale, when both were standing by the lashed wheel one night. "I ask no questions. All I say is, you do your work. I have had no call to slap a haddick across your face. I say that fair and square. Water!"

He concluded his speech with a yell. Stretton saw a ragged line of white suddenly flash out in the darkness high up by the weather bow and descend with a roar. It was a wave breaking down upon the deck. Both men flung themselves down the companion, and the water sluiced after them and washed them struggling about the floor of the cabin. The wave saved Stretton from the need to reply, and the skipper did not refer to the subject again.

Stretton had signed on for this cruise on the *Perseverance* because he wanted a time during which he could be quite sure of his livelihood. So far he had failed. He must map out a new course for himself upon his life's chart. But for that work he needed time for thought, and that time, up till now, he had not enjoyed. The precarious existence which he had led since he had lost the half of Millie's small fortune—now a clerk in a store, and a failure; now a commercial traveller, and again a failure—had left him little breathing space wherein to gather up his slow thoughts and originate a new plan. That breathing space, however, the *Perseverance* had afforded him. During the long watches on fine nights, when the dark sails, swinging up and down to the motion of the boat, revealed and obscured the stars, he wrestled with the difficult problem of his life.

He could go back when his cruise was over if he chose. His father was dying; he faced the fact quite frankly. The object with which he set out would be, after all, accomplished, though not accomplished by himself. There would be a house for Millie and himself independent of the old man's caprice; their life would be freed from the shadow of his tyranny; their seclusion would come to an end; they could let the sunlight in upon their lives. Yes! But there were the letters down in the cabin there, underneath his pillow. Did not they alter the position? He had gone away to keep his wife, just, in a word, to prevent that very contempt of which the letters gave him proof. Must he not now stay away in order to regain her? His wife was at the bottom of all his thoughts. He had no blame for her, however much her written words might hurt. He looked back upon their life together, its pleasant beginnings when they were not merely lovers, but very good friends into the bargain. For it is possible to be the one and yet not the other. They were good days, the days in the little house in Deanery Street, days full of fun and good temper and amusement. He recalled their two seasons in London—London bright with summer—and making of each long day a too short holiday. Then had come the change, sudden, dark, and complete. In the place of freedom, subjection; in the place of company, isolation; in the place of friends, a sour old man, querulous and exacting. Then had come the great hope of another home; and swiftly upon that hope its failure through his incapacity. He could not blame her for the letters underneath his pillow. He was no less set upon regaining her than he had been before on keeping her. His love for her had been the chief motive of his life when he left the house in Berkeley Square. It remained so still. Could he go back, he asked himself?

There was one inducement persuading him always to answer "Yes"—the sentence which Pamela had spoken, and which she had refused to explain. He should be at his wife's side. He had never understood that saying; it remained fixed in his memory, plaguing him. He should be at his wife's side. So Pamela Mardale had said, and for what Pamela said he had the greatest respect. Well, he could be in a few weeks at his wife's side. But would it not be at too great a cost unless he had first redeemed himself from her contempt?

Thus he turned and turned, and saw no issue anywhere. The

days slipped by, and one morning the fish-cutter brought to him a letter, which told him that four days ago his father had died. He could not reach home in time for the funeral even if he started at once. And he could not start at once; he had signed on for eight weeks.

But the letter left him face to face with the old problem. Should he go back or should he stay away? And if he stayed away what should he do?

He came on deck one morning, and his skipper said,

"There's a fog on land, Stretton."

"How do you know that?" asked Stretton.

The captain pointed to some birds hovering over the masts of the ketch.

"Those are land birds," said he. "Look, there's a thrush and there's a blackbird. You won't find them so far from land without a reason. There has been a fog, and very likely a storm. They have lost their bearings in the fog."

The birds hovered about the ships of the fleet calling plaintively. Stretton, watching them, felt very much like one of those birds. He, too, had lost his way in a fog, and though he made no outcry, his need of guidance was no less great than theirs.

Then came a morning at last when the trawl was hauled in for the last time, and the boat's head pointed towards Yarmouth.

"When shall we reach harbor?" Stretton asked, anxiously.

"If this breeze holds, in twenty-four hours," replied the skipper.

Twenty-four hours! Just a day and a night, and Stretton would step from the deck on to Gorleston Quay; and he was no nearer to the solution of his problem than when he had stepped from the quay on to the deck eight weeks ago. Those eight weeks were to have resolved all his perplexities, and lo! the eight weeks had passed.

He was in a fever of restlessness. He paced the deck all the day when he was not standing at the wheel; at night he could not sleep, but stood leaning over the bulwarks, watching the stars trembling in the quiet water. At one o'clock in the morning the *Perseverance* passed a light-ship. Already the boat was so near home! And in the hour which followed, his eight weeks of solitary communing, forced, as it were, by immediate necessity, bore their fruit. His inspiration—he counted the idea no less than an inspiration—came to him suddenly. He saw all at once his course marked out for him upon the chart of life. He would not suffer a doubt of it to enter his mind; he welcomed it with passion, and the great load was lifted from his mind. The idea had come. It was water in a dry land.

A fisherman leaning over the bulwark by Stretton's side heard him suddenly begin to sing over to himself a verse or two of a song:

Oh, come out, mah love! I'm a-waiting foh you heah!
Doan' you keep yuh window closed to-night.

It was a coon song which Stretton was humming over to himself. His voice dropped to a murmur. He stopped and laughed softly to himself, as though the song had very dear associations in his thoughts. Then his voice rose again, and there was now a kind of triumph in the lilt of the song, which had nothing to do with the words:

De stars all a-gwine put dey little ones to bed
Wid dey "hush now, sing a lullaby."
De man in de moon nod his sleepy, sleepy head,
And de sandman put a little in his eye.

The words went lilting out over the quiet sea. It seemed to Stretton that they came from a lighted window just behind him, and were sung in a woman's voice. He was standing on a lawn surrounded by high dark trees in the warmth of a summer night. He was looking out past the islets over eight miles of quiet water to the clustered lights of the yachts in Oban Bay. The coon song was that which his wife had sung to him on one evening he was never to forget; and this night he had recovered its associations. It was no longer "a mere song sung by somebody." It seemed to him, so quickly did his anticipations for once outrun his judgment, that he had already recovered his wife.

The *Perseverance* was moored alongside of the quay at eight o'clock in the morning, and just at that time Millie was reading a letter of condolence from Lionel Callon.

To be Continued.

HESPER
By HAMLIN GARLAND
Author of "The Captain of the Gray-Horse Troop"

A novelist, speaking of Hamlin Garland's new story, recently said: "When I read *Hesper* I can feel the wind come down the cañon and can see the mountains rise before me." One of the charms of this love story is that the reader is irresistibly made to feel the exhilaration and the beauty of the outdoor life depicted. Another charm is Ann Rupert, the New York society girl "out West."

Ornamented Cloth, $1.50

HARPER & BROTHERS, NEW YORK CITY

The Wee Brown Man

By Joaquin Miller

GREAT Czar, good Czar, white Christian Czar,
The white world loves this brown sea wraith,
Brown brother, bared of Hope, of Faith—
Brown child, new born to blood and war.
The art child loves him for his art;
The heart world loves him for his heart,
His dauntless heart, home or abroad,
His love of flowers, nature, God.
It loves this sudden, Orient star,
This lithe Venetian, lover true,
This isle-born elf, so old, so new,
Wee neighbor of the stalwart Czar—
His thousand isles, his million flowers,
His terraced steeps, his cloud-topt towers—
And it would have you love him, too,
And track his warm seas through and through.

Great Czar, brave Czar, so far, so far,
In your proud capital from these
New nadirs of your nether seas—
Why, know you what these brown bees are?
Their length, their strength is scarce a span!
They rarely eat, drink not at all.
The one man this, from pole to pole,
That never knows the flowing bowl!
And brownie, sprite, or baby-man,
He scarce may stand your waistband tall!
And yet his hands are iron, steel.
The arrow's flight is in his feet.
He comes, he goes, whirls by, can wheel
As winds that whistle down your street!
He scarce seems human save that he
Loves truly, bravely, humanly.

Great Czar, wise Czar, peace-loving Czar,
Your strength is as a cyclone's strength.
You hold a world in your arm's length—
Ten million ministers in war!
Your gold, the mines of Solomon—
The North Pole yours to lean upon!
Can you be greater? Aye, the hour
You reach these water-wraiths a hand
Across your shoreless, gold-strown land
The grateful world will glad proclaim
How greater far your place, your power,
And sing your Christian deed and name!
Ah, Sire, hear us! Great white Czar,
So brave, so strong, so wise in war,
Can you who scotched the Corsican
Turn now to bait this wee brown man?

Don't Cross Your Knees

A MEDICAL authority has recently uttered a warning against the habit of sitting with one knee crossed over the other—a pose which is nowadays almost as common among women as among men. This apparently harmless habit, it seems, is likely to cause sciatica, lameness, chronic numbness, ascending paralysis, cramps, varicose veins, and other evils. The reason is simple: The back of the knee, it is explained, as well as the front of the elbow and wrist, the groin and the armpit, contains nerves and blood-vessels which are less adequately protected than in other parts of the body. The space behind the knee contains two large nerves, a large artery, and numerous veins and lymphatic glands. It is the pressure on these nerves and vessels which is apt to give rise to the various troubles against which we are warned.

Art and the Yellow Peril

WHEN William M. Chase, according to a current anecdote, had his summer school at Shinnecock, Long Island, he used to hold semi-public sessions in the main studio building, when the sketches made by students during the week were exhibited and criticised. On one of these occasions, during a summer when the Chinese question was occupying public attention, one landscape showed a broad stretch of lawn painted in brilliant splotches of lemon color. Mr. Chase examined it gravely.

"It seems to me," he observed, indicating the lemon-colored grass on the canvas, "that politics and not art is the proper field for an agitation of the 'yellow-peril' question."

Progress of the War

THE important results of the war in the Far East may be briefly summarized as follows: The Russians have had fifteen war-vessels sunk or disabled—the *Petropavlovsk*, *Pobieda*, *Czarevitch*, *Retvisan*, *Poltava*, *Pallada*, *Novik*, *Askold*, *Diana*, *Variag*, *Boyarin*, *Korietz*, *Yenesei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik*, *Askold*, and *Diana* are known to have been repaired and are again in commission. The disasters to the battle-ships *Petropavlovsk* and *Pobieda* and the destroyer *Bezstrashni* are described below. Japan is known to have lost one torpedo-boat, and several others of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. Previous to April 10 Admiral Togo made two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor. The first land engagement of importance took place at Chongju, Korea, on March 28 and resulted in a Japanese victory.

April 14.—More definite particulars regarding the sinking of the Russian battle-ship *Petropavlovsk* were received to-day. On the night of the 12th of April a Japanese torpedo flotilla reached the mouth of the harbor at Port Arthur, and succeeded in laying mines at several points outside the port. The torpedo flotilla then withdrew. On the morning of the 13th a small Japanese squadron appeared off Port Arthur, and Admiral Makaroff, with the battle-ships *Petropavlovsk*, *Pobieda*, and *Poltava* and the cruisers *Novik*, *Askold*, and *Diana*, sailed out to meet it. The Japanese retreated. The Russians followed about fifteen miles out from port, when the Japanese were suddenly reinforced by Admiral Togo's squadron. The Russians at once began to retreat towards Port Arthur. Upon entering the harbor, the flag-ship, the *Petropavlovsk*, struck one of the mines laid the previous night by the Japanese, and immediately turned turtle and sank. Vice-Admiral Makaroff, Verestchagin, the Russian painter, and practically the entire crew were drowned. According to the Russian official reports forty officers and seven hundred and fifty men perished on the *Petropavlovsk*. Fifty-two, including the Grand-Duke Cyril and Captain Jakoileff, are said to have been saved. The battle-ship *Pobieda* also struck a mine, but was able to regain the harbor. No one on board was killed or wounded.

On the same morning the Russian destroyer *Bezstrashni*, one of a fleet sent out during the previous night to reconnoitre, became separated from the fleet, and was surrounded by Japanese destroyers and sunk. Forty-five officers and men are said to have been lost. Five men were saved.

April 15.—The Czar has appointed Vice-Admiral Skrydloff to succeed the late Vice-Admiral Makaroff as commander-in-chief of the Russian naval forces in the Far East. He will leave at once for Port Arthur.

A despatch from Liao-yang says that the Russians have completed their entrenchments on the Yalu River.

News was received to-day that the Imperial Palace at Seoul was destroyed by fire last night. The Emperor and his suite escaped without injury.

April 16.—Viceroy Alexeieff took command of the Russian fleet at Port Arthur this afternoon, and selected the battle-ship *Sevastapol* as his flag-ship. Admiral Togo has sent his official report of the engagement at Port Arthur on April 13 to the Japanese government at Tokyo. He confirms the sinking of the Russian battle-ship *Petropavlovsk* and the destroyer *Bezstrashni*, and announces that there were no casualties on board the Japanese ships.

April 18.—It is reported to-day that a fleet of seventy Japanese transports has been seen headed for Kin-Chau, north of Port Arthur. It is expected that a landing will be attempted in this vicinity for the purpose of isolating the Liao Tung peninsula.

Progress of Science

The Soft-Coal Smoke Nuisance

THE prevention of the smoke nuisance is a question that has interested many cities in the United States, particularly in the Middle West, and it is the opinion of authorities that considerable progress has been made recently towards ameliorating the evil.

The campaign waged has been largely one of education, as the convincing of factory managers that objectionable smoke was not only unnecessary, but a sign of positive waste of fuel, has had as important effect as threats or the resort to legal measures. Furthermore, when it has been understood by the citizens of a city that insisting on the proper firing of boilers did not entail any hardship on the owners, they became the more ready to insist on the proper observance of their rights, and to demand that all new plants should be so constructed that a minimum of smoke was produced. The smoke nuisance becomes serious only where soft coal is employed, and it is due to the presence in the vapor given off of particles of finely divided carbon, which is deposited in the form of soot. This is obviated by securing good combustion, essential to which are enough air, a sustained high temperature, and a thorough mixing of the gases. This can be illustrated by the ordinary kerosene-lamp, which will smoke and deposit soot unless proper combustion is secured. Petroleum, like soft coal, is composed largely of carbon and hydrogen, and the phenomena of combustion are similar in each case. The lamp is open at the bottom so that an air-supply for the flame may be drawn through, and this opening is generally of gauze, so that the air-supply may be divided and mix with the gases of the flame. The lamp smokes if the wick is turned up too high, or there is not sufficient air, and if the chimney is raised from the bottom there is too much air at a low temperature, which tends to chill the flame, so that the carbon is disengaged instead of passing off in the form of carbon dioxide, a colorless gas, or as water vapor. With a furnace the desired conditions can be realized in hand firing by the use of care and intelligence, qualities rarely secured in the average fireman, and especially by putting small quantities of coal on the fire at frequent intervals and watching and adjusting the air-supply. With this can be used a mechanical arrangement operated by the door, whereby steam from jets is admitted, drawing in air and mixing it thoroughly with the flame when fresh fuel is put on the fire. With mechanical firing, as effected by mechanical stokers, there is a regularity in feeding the coal which permits a uniform air-supply, and more perfect combustion is gained at a saving of about 15 per cent. for fuel over hand firing. By overworking boilers there is an increase in smoke and a great loss of economy, and also in the cleaning of fires, but aside from the suitable provision of mechanical devices, the unskilled and unintelligent men employed as firemen are responsible for smoke as well as the extravagant use of fuel.

Pumice from Russia

The mineral wealth of Russia is hardly appreciated, and new industries are from time to time being developed, though the effect of the present war may be felt in many new schemes. A recent proposition is the development of the pumice-stone, which has been found in the provinces of Erivan and Kars in Transcaucasia. The deposits in Kars, at Malayakutma, are near the surface in horizontal strata, and occasionally run over two and a half feet thick, furnishing a high-grade mineral that is used for polishing, and a poorer quality from which hydraulic cement can be made. The material is convenient to Kars, from which place it will be shipped by rail to Poti, on the Black Sea, and thence conveyed by steamer to Odessa. When the works are operating to their full capacity several million pounds a year of the material will be produced. The world's supply of pumice is now largely derived from the Lipari Islands near Sicily.

A Chance Courtship

is a story of an unconventional love match, well told and beautifully illustrated. The small picture above only *suggests* the real charm of these illustrations. As a bit of readable fiction the story is well worth writing for. It is contained in a handsomely bound book of 128 pages, a portion of which is devoted to the attractive mountain and lake resorts along the Lackawanna Railroad. It is a book you will like to see. It may be had by sending 10 cents in postage stamps to T. W. LEE, General Passenger Agent, Lackawanna Railroad, New York.

Hair Growth

Promoted by shampoos of CUTICURA SOAP and light dressings of CUTICURA, the purest and sweetest emollient skin cure. This treatment allays itching irritations, destroys hair parasites, cleanses, purifies, and beautifies, and makes the hair grow upon a clean, healthy scalp.

Ninety Dollars Out of Ten

If there is any flaw in the logic of this story, for which the Kansas *Ranch News* is responsible, it is not easy to find: Mr. Brown, a Kansas gentleman, keeps a boarding-house, it appears. Around his table at a recent occasion sat his wife, Mrs. Brown; the village milliner, Mrs. Andrews; Mr. Black, the baker; Mr. Jordan, a carpenter; and Mr. Hadley, a flour, feed, and lumber merchant. Mr. Brown took a ten-dollar bill out of his pocketbook and handed it to Mrs. Brown, with the remark that there was ten dollars toward the twenty he had promised her. Mrs. Brown handed the bill to Mrs. Andrews, the milliner, saying, "That pays for my new bonnet." Mrs. Andrews, in turn, passed it on to Mr. Jordan, remarking that it would pay for the carpentering work he had done for her. Mr. Jordan handed it to Mr. Hadley, requesting his receipted bill for flour, feed, and lumber. Mr. Hadley gave the bill back to Mr. Brown, saying, "That pays ten dollars on my board." Mr. Brown again passed it to Mrs. Brown, remarking that he had now paid her the twenty dollars he had promised her. She, in turn, paid it to Mr. Black to settle her bread and pastry account; Mr. Black handed it to Mr. Hadley, asking credit for the amount on his flour bill. Mr. Hadley again returning it to Mr. Brown, with the remark that it settled for that month's board; whereupon Brown put it back into his pocketbook, observing that he had not supposed a greenback would go so far.

A Seasoned Rustic

The young daughter of a prominent New York financier, who had passed most of her years either in the city or at the large summer resorts, recently paid her first visit to a real country home. She was anxious to show that she was not altogether ignorant of rural conditions, and when a dish of honey was set before her on the breakfast-table she saw her opportunity.

"Ah," she observed, carelessly, "I see you keep a bee."

Nearly Sad

A newspaper in a small country town not far from New York employs a reporter whose knowledge of English idioms is somewhat uncertain. He was assigned recently to report the sudden death of an important local citizen, and after describing the circumstances leading up to it, he referred to the sadness of the bereavement sustained by the family.

"The widow," he concluded, "is almost grief-stricken."

Some Long-Lived Animals

It is believed that the whale holds the palm for length of years. A reliably correct computation puts the extreme age of the largest of fish at 400 years. It is said in India that elephants have been known to live over 300 years. Certain species of birds, as the swan and raven, pass the 100-year mark; camels sometimes live fifty years; horses from twenty to thirty. Sheep, oxen, and dogs have less vitality; it is seldom that a dog lives longer than fifteen years.

How Bacon Settled Him

A story that is told of Leonard Bacon, who was one of the best-known theologians in New England a quarter of a century ago, illustrates the absurdity of a popular kind of argument. Dr. Bacon was attending a conference in one of the New England cities, and some assertions he made in his address were vehemently objected to by a member of the opposition.

"Why," he expostulated, "I never heard of such a thing in all my life!"

"Mr. Moderator," rejoined Bacon, calmly, "I cannot allow my opponent's ignorance, however vast, to offset my knowledge, however small."

Old Nick: "It's worse—I haven't got anything like that at home."

Dr. Lapponi

Physician to the Late Pope Leo XIII., and Now Physician in Ordinary to Pope Pius X., Finds

BUFFALO LITHIA WATER

Of "Marvelous Efficacy in Gout, Rheumatism, Gastro-intestinal Dyspepsia, and in all the Various Forms of Uric Acid Diathesis."

Following is an Exact Translation of Dr. Lapponi's Testimonial as Written by Himself:

ROME, August 24, 1903.—In the Hospital of San Giovanni Calibrita (del Fatebene Fratelli) in Rome, directed by myself, I have largely experimented with the natural mineral water placed in commerce under the name of **BUFFALO LITHIA WATER** and am glad to be able to attest that, by its richness of composition of lithia, it is of marvelous efficacy in cases of Gout, of Chronic, Articular, and Muscular Rheumatism, of Hepatic Congestions and Functional Disorders, of Gastro-intestinal Dyspepsia, of Gravel and Renal Insufficiency, of light Nephritic Affections and of all the various forms of Uric Acid Diathesis.

The same water is also to be recommended highly in the initial processes of Arterio-sclerosis and in obstinate forms of Bronchial Asthma.

May also be used as a good table water. So much I declare for the truth.

(Signed) PROF. GIUSEPPE LAPPONI.

Principal Physician of the Hospital of San Giovanni Calibrita (del Fatebene Fratelli) in Rome, Member of the Academy of Medicine of Rome, etc., etc.

BUFFALO LITHIA WATER is for sale by Grocers and Druggists, generally. Testimonials which defy all imputation or question sent to any address.

Hotel opens June 15th.

HARPER & BROTHERS, NEW YORK

IN THE GARDEN OF CHARITY

By BASIL KING

Author of "Let Not Man Put Asunder"

This is a tale of the strange love of two women and a man—of the great love of both women and the great sacrifice of one of them. Charity Pennland and her soldier-husband and his mock-marriage wife—a charming half-Greek—are the leading figures in the story, which, in its idyllic beauty and intensity, recalls George Eliot's "Silas Marner." $1.50.

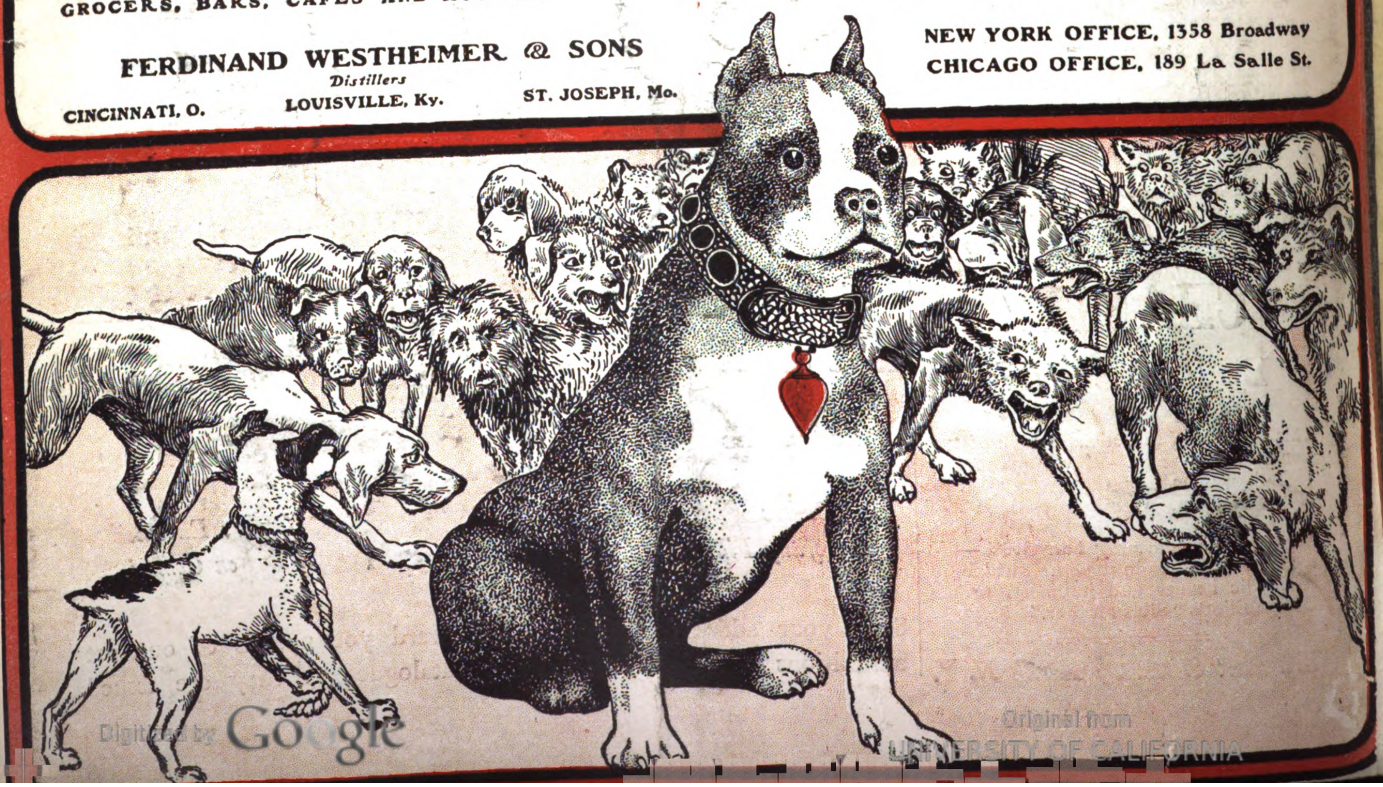
The one absolutely unselfish friend that man can have, the one that never deserts him, the one that never proves ungrateful or treacherous is his dog.

Some of us have good dogs, some have mongrel dogs and a few of us have well-bred pedigreed dogs. Some of us appreciate the value of a dog, and a mongrel cur may have the same place in the hearts of some that a thoroughbred has in others.

Red Top Rye

There are mongrel whiskies also — usually a mixture of a little good and much bad.

Red Top Rye has a pedigree and should hold its place in the hearts of everyone who appreciates a rich, smooth, mellow, high-grade whiskey.



Red Top Rye IS SOLD BY FIRST-CLASS GROCERS, BARS, CAFÉS AND HOTELS.

was afterwards submitted for acceptance or rejection at a primary election, there is no doubt that the members of a State Legislature representing that party would obey its will.

Upon none of the omissions thus far named, however, did Mr. Bryan lay much stress. His most vehement criticism of the Albany platform was levelled at its failure to make a definite pronouncement regarding the issues which, he is convinced, will be pivotal in the coming campaign. These issues are four, and they were named in the following order: Trusts, imperialism, the labor question, and tariff revision. As for the last-named issue, it must be acknowledged that Mr. Bryan was justified in describing as ambiguous the "reasonable" revision demanded at Albany. As to imperialism, it is true that in Porto Rico, in Guam, in one of the Samoan islands, in the Philippines, and, we might add, Alaska, our Federal government is now administering a colonial policy framed upon the political principles avowed and applied by George III. a century and a quarter ago. That, we repeat, is true, but the same principles were adopted and applied in the form of government which a Democratic Congress authorized President Jefferson to set up in the Louisiana Territory in the first lustrum of the nineteenth century. That species of colonial government established in the Louisiana Territory was only provisional and temporary, however, and we do honestly believe that also in Porto Rico, Alaska, and at least a part of the Philippines it will be replaced by some form of self-government at no distant date. Meanwhile, it is to be regretted that the Albany platform did not proclaim its opposition to the permanent adoption of a colonial policy.

What are the reasons given for thinking the labor question an issue? Mr. Bryan points out that working-men are trying to push through Congress three measures in which they are deeply interested. One is the arbitration of differences between corporations engaged in inter-State commerce and their employees. In favor of the proposal the Chicago and Kansas City platforms declared, but no reference was made to it at Albany. The laboring-men also desire most earnestly an eight-hour day, so far as work done for the Federal government is concerned, and the abolition of so-called "government by injunction." The platform suggested by the New York convention contains no allusion to any of these subjects. That the exercise of control over the trusts by the Federal government will be the most conspicuous issue in the coming campaign Mr. Bryan has no doubt whatever, yet, as he points out, in the platform formulated at Albany there is not a word calculated to encourage the determined opponents of the trusts, nor a syllable that binds a person elected on that platform to do anything that the trusts are unwilling to have done.

Summing up his objections in a sentence, Mr. Bryan declared that the platform constructed at the New York State convention is a dishonest platform, fit only for a dishonest party, and that no one but an "artful dodger" would stand upon it. Much the same criticism was made on the platform put together by the Whig national convention in 1848; nevertheless, General Zachary Taylor, whom nobody ventured to describe as an "artful dodger," consented to stand on it, and he was elected. Besides, as we have formerly said, the suggestions put forward tentatively at Albany bind neither the St. Louis convention nor the nominee thereof. They bind nobody except ex-Governor Hill, who phrased the suggestions, and those who endorsed them. If Chief-Judge Parker thinks that it is fitting for the head of the New York State judiciary to proclaim his opinions in advance of the St. Louis convention, which alone is authorized to announce the views and wishes of his party, he will doubtless do so over his own signature. He may think, however, that it would be in better taste for the occupant of a high judicial office to wait until a national convention shall have made him its nominee, and then to declare his personal convictions in a letter of acceptance. As a matter of fact, nobody disputes that Judge Parker has always supported the Democratic nominees for national and State offices. Nor can it be denied that a great deal can be learned about his political prepossessions from a study of his recorded judicial opinions. Under the circumstances, it is obvious that very much more is known or knowable about Judge Parker's political views than was known about William Henry Harrison's in 1840, or Zachary Taylor's in 1848, or Franklin Pierce's in 1852, or General Grant's in 1868, or Grover Cleveland's in 1884.

There has been of late a great deal of discussion in newspapers representing both political parties as to the States supposed to be doubtful in the coming campaign, and, incidentally, as to the States which *must* be carried by the Democracy if they are to elect their nominee for the Presidency this year. Before our readers take any part in such a debate, it might be well for them to consider carefully certain fundamental data. It is, in the first place, evident that, since the reapportionment of members of the Federal House of Representatives, based on the census of 1900, it will be indispensable for the Democratic candidate to get 239 electoral votes if he is to be successful. Where is he to get them? That is the question. He can rely with absolute confidence upon Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, Missouri, North Carolina, South Carolina, Tennessee, Texas, and Virginia. He is almost certain to carry Kentucky, Maryland, and Nevada, although the first-named State gave twelve of her thirteen electoral votes in 1896 to McKinley, although the second State mentioned voted for McKinley in 1896 and 1900, and although the third of the States named voted for Weaver in 1892, for Harrison in 1888, for Blaine in 1884, and for Hayes in 1876. Assuming, however, that the Democratic nominee would carry all of those fifteen States, he would start with only 162 electoral votes. He, therefore, would need 77 additional votes to reach the White House. Let us assume that he could win both New York and Illinois, though the latter State is much more doubtful than the former: even then his aggregate strength would be only 228 electoral votes, or eleven short of the number requisite. Those electoral votes might be obtained in Connecticut and Colorado, or in Delaware, West Virginia, and Montana; or in Wisconsin, which voted for Cleveland in 1892, or in California and Idaho; or in Wyoming, Oregon, and Washington; or in New Jersey alone, which has twelve electoral votes; or in Indiana, which has fifteen.

Now let us see how the Republicans regard the political situation. They express the belief that they are absolutely certain of carrying Connecticut, Delaware, Illinois, Indiana, Iowa, Kansas, Maine, Massachusetts, Michigan, Minnesota, Nebraska, New Jersey, New Hampshire, North Dakota, Ohio, Pennsylvania, South Dakota, Vermont, Washington, West Virginia, Wisconsin, and Wyoming, which, together, will have 243 electoral votes, or four more than the number needed. Let us scrutinize this list somewhat closely. Undoubtedly McKinley carried all of those States in 1900; but the existing situation is not exactly a counterpart of that which obtained then. As for Connecticut, the Democrats carried it in 1892, in 1888, in 1884, and in 1876. From 1876 to 1892 (both years included) Delaware gave her electoral votes to the Democratic nominee. In 1892, Illinois gave her electoral votes to Mr. Cleveland—the first time that she had given them to any but the Republican nominee since the civil war. We come next to Indiana, which voted for Tilden in 1876, for Cleveland in 1884 and 1892. Iowa, of course, like Massachusetts, Maine, Vermont, New Hampshire, and Rhode Island, has never failed to give her electoral votes to the Republican nominee for the Presidency since the Republican party was formed. As for Kansas, which the Republican machinists include so boldly in their list of victories, it voted for Bryan in 1896 and for Weaver in 1892. Michigan has been uniformly a Republican State in Presidential years, except in 1892, when, all but two of the Presidential electors being chosen in Congress districts instead of on a State ticket, she gave five of her electoral votes to Cleveland. Minnesota also in Presidential years has always been faithful to the Republican party. Not so with Nebraska, which, although she repudiated Weaver in 1892, voted for Bryan in 1896. New Jersey, we scarcely need to say, always gave her electoral votes to the Democratic nominee from 1872 to 1896 (both years excluded). As for North Dakota, it is true that she voted for McKinley in 1896 and 1900, but in 1892, the first year when she voted, she gave one electoral vote each to Cleveland, Harrison, and Weaver. Ohio, of course, could always be relied upon by the Republicans in

Presidential years since the formation of their party in 1854, except in 1892, when she actually gave one of her twenty-three electoral votes to Cleveland.

On Pennsylvania we need not dwell; she has been as invariably Republican in Presidential years since and including 1860 as she was invariably Democratic for a long period before that date. If the Republicans are leaning on South Dakota, they are leaning on a broken reed, since she gave her electoral votes to Bryan in 1896. The State of Washington also voted for Bryan in that year. West Virginia, it is true, was swept by McKinley in 1896 and 1900, but it had been Democratic in very many Presidential years. Wisconsin, which McKinley twice carried by upwards of a hundred thousand plurality, gave all of her electoral votes to Cleveland in 1892. Wyoming, which figures at the end of the Republican list of "sure" States, voted for Bryan in 1896. Let any impartial man run over these figures, and then ask himself what basis there is for the Republican confidence. Republicans themselves seem to recognize that some doubt attaches to their alleged "certain" catalogue of 243 electoral votes, for they assert that they will secure at least half of the electoral votes belonging collectively to California, Colorado, Idaho, Maryland, Montana, Rhode Island, and Utah. We have already conceded their claim to Rhode Island, because that State has ever given its electoral votes to a Republican in Presidential years, though of late a Democrat has shown himself able to win the Governorship. As for California, it gave one electoral vote to Bryan in 1896, five to Hancock in 1880, and eight to Cleveland in 1892. Colorado voted for Weaver in 1892, for Bryan in 1896, and again in 1900. In 1892, the first year when the State could vote, Idaho gave her support to Weaver; in 1896 and also in 1900, to Bryan. As for Maryland, although it twice voted for McKinley, it has been hitherto, as it is now, a stronghold of the Democracy. As for Oregon, it gave one of its four electoral votes to Weaver in 1892. Utah gave McKinley a very small plurality in 1900, while Bryan got a relatively enormous plurality in 1896. On the whole, it seems to us that, so far as the coming canvass is concerned, mathematicians will find it difficult to evolve an entirely trustworthy forecast from past electoral statistics. It really begins to look as if this year the battle would be joined between principles, not men.

We referred recently to the notification served upon our State Department by Russia's ambassador, Count Cassini, that newspaper correspondents found using wireless telegraphy within Russia's "zone of hostilities" would be treated as spies. As we pointed out, the announcement implied a departure from the view previously taken of wireless telegraphy by the military and naval authorities at Port Arthur, only a short time having elapsed since the Russian war-vessel *Bayan* overhauled the steamer *Haimun*, and, after examining her papers and inspecting the wireless-telegraphy apparatus, which had been placed on board by the correspondent of the London *Times*, the New York *Times*, and the Philadelphia *Public Ledger*, allowed her to pursue her course unmolested. The two experts, it should be observed, who operate the apparatus are American citizens: hence our national interest in the matter. Now the "treatment" customarily received by spies is immediate execution. Not for a moment, however, do we believe that a Russian court martial would be instructed or permitted to deal with the British newspaper correspondents or with the American operators in that summary way. It is scarcely conceivable that such an act of folly would be committed even by Admiral Alexeieff, though he has played the fool more than once during the last six months, and although, knowing that his removal is imminent, he might be not unwilling to increase the difficulties in the path of his successor.

Some of those who have discussed the incident have professed to detect in it a deliberate design on the part of the war party at St. Petersburg to drag one or more of the great powers into the Far-Eastern contest on the side of Japan, in order to provide an avowable pretext for invoking the aid of France and Germany. It is to consider too curiously to consider so. The coterie of officers and bureaucrats which drove Russia into a preposterous quarrel at the farther end of Asia have ceased for some time to have an atom of influence over the Czar. Its leaders, Alexeieff and Bezabrazoff, are utterly discredited, and such men as Mr. Witté and Count Lamsdorf, who most earnestly opposed the retention of Manchuria and any interference with Japan in Korea, have regained the ear of the sovereign. We, therefore, take for granted that the threat to treat as spies all foreigners found using wireless telegraphy within Russia's "zone of hostilities" is but *brutum fulmen*. Besides, the steamer *Haimun* is extremely unlikely to penetrate the harbors of Port Arthur, Newchwang, and Vladivostok, to which, for the moment, Russia's zone of hostilities seems to be confined, so far as maritime operations are concerned. That the status of wireless telegraphy will soon have to be defined by international agreement we have no doubt. It, obviously, cannot be subjected to the same easy and effective censorship which may be applied to telegraphic, telephonic, and postal communications. For this reason we deem it probable that an international conference would prohibit the use of wireless telegraphy within a theatre of war. At the same time it would be necessary to leave the limits of the area within which the apparatus would be proscribed to be determined by the circumstances of each case.

On Sunday, April 24, a meeting of the House of Representatives was held for the purpose of commemorating certain members of that body who have recently died. An impressive incident was the delivery of a eulogy of the late Representative Charles W. Thompson, of Alabama, by Mr. Littlefield of Maine, who, although a stalwart Republican, has long been recognized as one of the most broad-minded men in the popular branch of the Federal legislature. Mr. Littlefield, it seems, was one of a number of Northern Representatives whom Colonel Thompson, while serving his first term in Congress, invited to accompany him on a journey through the black belt, in order that they might study the negro question at first hand. Mr. Littlefield, he tells us, was profoundly moved by the spectacle of the kindliness and sympathy with which negroes were treated by Southerners of Colonel Thompson's stamp. He came home convinced that such Southern whites are discharging in an admirable spirit the highest duty of American citizenship, and are entitled therefor to unstinted commendation. Who, he asks, can render greater service to his country than the man who demonstrates the possibility of making useful citizens out of members of a race which, under proper conditions of educational development, should prove an agricultural and industrial resource of the utmost value to the South? That the work done by Colonel Thompson in this direction was thoroughly appreciated by the colored people whom he had befriended was attested by the multitude of negroes who were present at the funeral exercises, and followed the body of their benefactor to the grave with unobtrusive, sincere, and pathetic manifestations of sorrow.

The plan of campaign adopted by the Japanese is slowly becoming apparent, in spite of the sedulous care which has been taken to keep every move secret. The steps taken have evidently formed part of a single scheme, and one cannot too much admire the forethought and energy hitherto manifested by the Mikado's War Office. The first stage of this plan is, evidently, an occupation of Korea, not merely as a war measure, or a stage in the invasion of Manchuria, but as a substantive achievement, something intended to last, and to strike roots into the soil. Japan might be well advised to make this her entire plan of campaign, settling her armies along the north frontier of Korea, in the positions of immense strength offered everywhere in that mountainous region, and daring the Russians to dislodge them. Russia would by no means have an easy task here, and we might see just such a deadlock as preceded the arrival of Lord Roberts in South Africa in the Boer war. But Japan is evidently ambitious to carry the war into the enemy's country, and intends to proceed primarily against Port Arthur and Vladivostok. These two ports can be blockaded from the sea, and Japan can keep open a line of transports and supplies to either of them, so that her investing armies would be favorably placed. She might, without great loss, cut the Russian line of communication across the Liao-tung peninsula, and might also get in behind Vladivostok, either from the south or from the north. In this event the Russian armies in Manchuria would be compelled to divide, one part going to the relief of Port Arthur from the land side, while the other sought to render a like service to Vladivostok.

The relieving armies would be exactly in the position of Sir Redvers Buller in his attempt to relieve Ladysmith: unable either to advance or retreat. When the Russian armies were thus drawn in two directions, exactly like the opening of a curtain, there would be an opportunity for a Japanese rush on Harbin, which is the final objective of the Mikado's plan of campaign. With the taking of Harbin the war would be virtually at an end; for the Japanese army could simply hold its own and wait for terms. How far these anticipations will be realized we shall presently have an opportunity of seeing.

It is always a solace to persons of restricted means to meditate upon the special trials that are incident to wealth. It is a lawful form of contemplation, and, on the whole, praiseworthy, since, even though the conclusions it encourages may not be altogether well founded, it tends to remove the underpinning from envy and makes for contentment. Consider, for example, the automobiles, which so greatly abound in this great centre of riches. They are as yet almost exclusively a part of the apparatus of the opulent. Only one or two persons in a thousand of New York's population ever puts foot into an automobile. The rest observe the machines as they speed by, and speculate from time to time as to what automobile life is like, and how it would seem to have one of these distance-annihilating contrivances always at one's command. The usual conclusion is that, like the other expensive luxuries, it would make life a little different, but not necessarily better. An automobile would save some time sometimes, but waste, or at least devour, much time at other times. It would give one the air, but diminish one's share of exercise. It would help a very busy person who had to make many visits, or a less busy person who had time to kill. It is not in the least hard to get along without repining without an automobile, even when on our main thoroughfares the swift machines are never out of sight. It becomes easier still when we read in the newspaper reports of some of the daily experiences which are incident to the automobile habit.

For example, on April 25 the papers had a story of the wreck on Seventh Avenue, far up-town, of the new forty-horse-power automobile of a very rich and well-known citizen. Four chauffeurs, one no doubt in the owner's employ, took the machine out on Sunday evening to give it a trial in the country. Returning to town about one o'clock in the morning and going fast on a dimly lighted street, they ran into a pile of building material, which wrecked the machine, sent three of the occupants to the hospital with serious injuries, and left the fourth impaired, but able to be sent home. One of the men will probably die. Consider how acute must naturally be the annoyance of the owner of this machine. If he is entirely indifferent to the cost of things (as may easily be) and toughened by long experience to the misdeeds and misfortunes of serving-men, he may take such a dispensation as this as philosophically as Uncle Sam takes it when a battleship scrapes a rock or has its lid blown off. But probably, being human, he is vexed, and possibly he uses bad language. Is it not one of the drawbacks to perfect pleasure in automobiles that these machines lend themselves somewhat overreadily to the pleasures, not always judicious, of hired men? Coachmen do not, as a rule, take their owners' horses out on long excursions, either to test their qualities or for pleasure. And if they do, and are overindulgent to themselves, most horses have sense enough to turn out for a pile of bricks of their own accord even in a dark street. When a coachman ceases to be able to take care of a horse, the horse will often take care of the coachman, and bring him home safe, but an automobile is absolutely without discretion or responsibility, and when the chauffeur's caution fails him, anything may happen, and happen with the utmost emphasis.

It seems to the layman almost worth while not to have an auto for the sake of not having a chauffeur. And when one runs his own "devil" the case is not surely bettered, for the papers that told of the accident just rehearsed recorded the painful experience of another party of four gentlemen, who started out the same night about midnight from Trenton, New Jersey, for a little spin up the road. The owner, who was driving, turned a corner too sharply while running perhaps not faster than twenty miles an hour in the dark. The machine took the ditch. Its occupants were thrown out like missiles from a catapult. One soon died from his injuries. Another (the owner) may recover. A third was thrown thirty feet over a fence and merely jarred, and the fourth man wasn't hurt. The propensity to ride at high speed in the dark seems unaccountable, and may doubtless be trusted to correct itself. Meanwhile it may lawfully be noticed that these terrific experiences with their attendant griefs do not befall persons whose circumstances constrain them to shun automobiles, and rely for transportation on the public vehicles, or on horses of mature years and impaired spirits.

Mr. Edward Bok, in a page of the May number of his widely diffused periodical, addresses himself to array the Women's Christian Temperance Union against the patent-medicine industry. He prints a list of thirty-six kinds of "bitters" and other familiar patent remedies with the well-known official report of the analyst of the State of Massachusetts as to the percentage of alcohol each mixture contains. The percentages range from 12 to 47.5, the average being about 23. These patent medicines, which are enormously advertised and which are consumed in vast quantities by the public, are swallowed without scruple by great numbers of persons who are either outspoken foes of "rum," or are particularly wary in their use of it. They are, as a rule, unaware that they are using compounds some of which contain more alcohol than ordinary whiskey does, and all of which contain vastly more alcohol than exists in beer. Mr. Bok feels that the W. C. T. U. is neglecting a field of great promise in not opening a campaign against these deceptive beverages which warm the insides of temperance folk who don't know what they are drinking. Mr. Bok's effort is interesting and seems worthy. So long as the W. C. T. U. is in the fight with alcohol, it ought to pursue it even more fervently when the alcohol is disguised than when its nature appears in the label. How much harm, or the contrary, the patent medicines do we do not know, but a serious fight against them is likely to bring it early to light that they are strongly entrenched not only in the affections of the people, but of the newspapers, which derive from patent-medicine advertisements a revenue that in the aggregate must be enormous. It might be said for the alcoholic "tonics" and "bitters" that they do not lend themselves as readily as whiskey does to convivial uses, and that, as a rule, they are taken in fixed and moderate doses. That may be an advantage, but surely it is more than offset by the insidiousness of mixtures whose real character is concealed. Most sane people prefer, when they drink alcohol, to know what they are drinking.

A contemporary paragrapher in commenting on the career of Dr. Samuel Smiles, who died last month at Kensington, London, speaks of him as the first of the "success" writers. He tempers this doubtful praise by the admission that the kind of success that Dr. Smiles tried to promote was altogether worthy and commendable, and that there was no real fault to find with the methods he inculcated. He did not quite make literature, but he made some very good and useful books, which have been put with confidence in the hands of thousands of young men, and have helped many of them to overcome their natural human inclinations towards ease, and make the most of their chances and equipment. The Harpers published many of Dr. Smiles's books, and that they were good in their day and are still good is attested by their wide appreciation and distribution in years past, and by the fact that new editions of some of them are now impending. The author of *Self-Help* practised his own doctrines, and demonstrated their value by his own experience. He was one of eleven children who were early left fatherless. He studied medicine and practised it for six years; then became the editor of a newspaper, and later secretary of the Southeastern Railway. His books, when once they had reached their public, had an enormous sale, and were translated into many languages. They held to the old-fashioned theory that success should be earned and deserved. The development of superior efficiency was what Dr. Smiles was after, and he would probably have looked with hesitation at least on the David Harum maxim about doing to the other fellow what he means to do to you, and doing it first. It is observed that he maintained himself in comfort, raised a large family, was honored by the public and beloved by his associates, and reached without calamity the great age of ninety-one. Certainly he justified in his own life the theories he had expounded.

Is Imperialism an Extinct Issue?

MANY intelligent persons, including not a few Democrats, take for granted that the imperialism issue will play no part in the coming campaign. That opinion is not shared by Mr. E. W. Carmack, of Tennessee, as is evident from the remarkable speech which he delivered not long ago in the United States Senate. Neither is it shared by Mr. W. J. Bryan, who, speaking at Chicago on April 23, insisted that imperialism would remain an issue so long as our Federal government should continue to enforce a colonial policy framed in accordance with the political principles applied by George III. to the American colonies a century and a quarter ago. We are inclined to think, nevertheless, that it would be useless for the Democratic party to try this year to secure a majority of the electoral votes by dwelling on the imperialism issue, and that such an effort will continue to be futile until the immense pecuniary burden imposed by the new colonial policy shall have been brought home distinctly to the individual voters. The weight of the burden will never be recognized with the requisite precision so long as the bulk of our national revenue is derived from a high protective tariff, or, in other words, from taxes which are paid indirectly, and, so to speak, unconsciously. If a tariff were to be framed for revenue only, or, if, what is much more practicable, the present duties in many schedules were to be reduced materially; and, consequently, the cost of our new colonial policy had to be defrayed in whole or in large part by a direct tax, which the citizen would have to pay directly and consciously, it is not only possible, but probable, that imperialism would become the primary, paramount, controlling issue.

We are led to this conclusion by our observation of the fact that very few American citizens have even an inkling of the amount of money which the adoption of a colonial policy has already cost. The ominous figures relating to the subject are set forth in a public document, a statistical statement compiled by Mr. Edward Atkinson, and ordered by the United States Senate to be printed as an appendix to the speech delivered by Mr. Carmack of Tennessee. It appears from this statement that the cost of the war with Spain and of the warfare which went on in the Philippines up to the end of the last fiscal year, June 30, 1903, had been over $850,000,000. The cost of the war with Spain and of the warfare in the Philippines and of the maintenance of order by armed forces in the archipelago up to June 30, 1904—as computed from the expenditures for the six months running from June 30 to December 31, 1903, and completed by estimates to June 30, 1904—will have been for seven years not less than one billion dollars. Now the average annual expenditure per head of population for the twenty years antecedent to the war with Spain had been five dollars per head, while, during the second administration of President Cleveland, it was $5 18. In the year ending June 30, 1904, the expenditure per capita will be $6 29. The average annual expenditure per head during the seven years of active and passive warfare preceding the last-named date will have been $6 58 per head. The difference between the expenditure and that which took place annually on an average during the twenty years previous to the Spanish war is, obviously, $1 58 per head. But, as Mr. Atkinson points out, during the eight years of Harrison and Cleveland the cost of pensions and interest was $2 50 per head, whereas in the fiscal year ending June 30, 1903, it was less than two dollars. We must, therefore, add fifty cents to $1 58 in order to get the actual average annual cost per head of active and passive warfare during the last seven years. It follows that if the Spanish war had never taken place, and we had not undertaken to govern the Filipinos against their will, the normal cost of government in the fiscal year ending June 30, 1904, now estimated at $6 29, would not have exceeded $4 29 on the basis of peace, order, industry, and good government economically administered. It follows that the taxpayers of the United States are now paying the penalty for the anti-Spanish course pursued by the first McKinley administration at the rate of two dollars per head, or ten dollars per family, a rate, moreover, which is tending to increase rather than diminish.

Now, if it could be proved, as Mr. Atkinson thinks it could be—though this we are not disposed to admit—that the war with Spain was not necessary to secure the liberation of Cuba from oppression, then it would also be proved that, with the one billion dollars that has been spent in more than six years of war and aggression, the whole bonded debt of the United States might have been saved. It is easy to see that, if this huge sum had been expended within the boundaries of the forty-five States and Territories for pacific and useful purposes, many measures now contemplated, but scarcely hoped for, might have been carried out wholly or partially. If, for instance, we had expended in the more than six years named two hundred million dollars on the improvement of rivers and harbors, how much would have been accomplished! Had we expended two hundred million dollars on the irrigation of arid lands how vast an area might have been made productive! Had we made for the Southern States a grant of one hundred million dollars for educational purposes how immense, in all likelihood, would have been the observable abatement of their illiteracy! Let us look at the matter from yet another view-point. If, for instance, the cost of the national government could be reduced once more to the average annual figures of twenty years before the outbreak of the Spanish war, to wit, five dollars per head, what nation could compete with us in the productive pursuits of peace or in the expansion of our transmarine commerce?

Why is it that the American people do not rebel at the extra tax of two dollars per head annually imposed upon us by the cost of war and warfare during the last six years or so? Because the tax is levied indirectly. Because it is unconsciously that every family pays its proportion, ten dollars annually, of this tax, which is imposed on beer, tobacco, spirits, fuel, timber, steel, iron, and other metals, clothing, leather, cord-wood, sugar, salt fish, potatoes, and every other article of necessity, comfort, or luxury that is now subjected to a tax or duty. Indirect taxes are tolerated because those who pay them are not alive to the burden. They would become immediately conscious of it, because a direct tax for the purpose of providing the whole or a large part of the two dollars per head would be indispensable, if a method should be devised of reducing materially the present tariff without dislocating industries and upsetting business. The politico-economical genius who shall invent a formula which shall be recognized as a practicable solution of the problem will revolutionize the attitude of business men toward tariff revision, and forcibly bring home to the pocketbook of every taxpayer a poignant knowledge of the amount which the national attempt to govern foreign peoples against their will costs him personally. When we consider how differently the individual taxpayer would be likely to regard the retention of the Philippines if he felt himself to be taxed directly for the purpose we can see that imperialism, although, as things are for the moment, it may not be a pivotal issue, might easily be made one in the days that are to come.

Some of Mr. Carnegie's Recent Utterances

LAST week we directed attention to the letter in which Mr. Andrew Carnegie set forth in detail the purpose and the scope of the "Hero Fund" of five million dollars which has been created by him. That is not the only interesting paper which he has lately published. Some addresses delivered by him at Dingwall, Cork, Limerick, and other places in the United Kingdom have been printed in a pamphlet, and a striking article exhibiting the enormous resources of Great Britain was contributed the other day to the English review, *Nineteenth Century and After*. What we would point out at this time, however, is the summary of surprising facts relating to the growth of the iron and steel industry which was given in a paper read at Barrow-in-Furness last September by Mr. Carnegie, in the capacity of president of the Iron and Steel Institute. He reminded his auditors that twenty-nine years had passed since the Iron and Steel Institute had held its autumn meeting at Barrow. On that previous occasion Mr. David Forbes, foreign secretary to the institute, had submitted a report upon the condition of the iron and steel industries in foreign countries, and especially in the United States. The account of the progress in those industries which at that time (1874) had been attained on this side of the Atlantic is contrasted by Mr. Carnegie with the state of things that obtains to-day. The facts which are brought out in the course of the comparison are likely to astonish many readers. For example, in 1873, the Pennsylvania Steel Company made twenty thousand tons of steel rails. They now make that quantity in two weeks. The Cambria Iron Works in western Pennsylvania were credited with having made no fewer than 1027½ tons of ingots in the week ending September 26, 1873, the largest quantity which, up to that time, had ever been made in a week. It is a day's work of the Cambria establishment to-day. Mr. Forbes noted in his report that the total yearly production of pig-iron in the United States in 1873 fell considerably short of three million net tons. In 1902 it was at least twenty million net tons. The product of steel in the United States during the year just named was nearly fifteen million gross tons, or nearly as much as was produced in all the rest of the world. The largest output for a furnace then known was during the week ending November 7, 1874, namely, one hundred tons per day. Two new Carnegie furnaces have recently averaged 650 tons each per day for months at a time. If the blast-furnace product has increased more than six times, the rail-mill's product has undergone a still more remarkable expansion. There, too, the work of a week is now done in a day; but, signal as is that contrast, there is one still more impressive. Mr. Carnegie told the Iron and Steel Institute at Barrow that in the United States there have been made and sold without loss hundreds and thousands of tons of four-inch steel billets at the incredible price of three pounds for a penny.

To make that three pounds of steel at least nine pounds of material were required: three pounds of coke, made and transported sixty miles to the works; one and a half pounds of lime, made and transported a hundred and fifty miles; and four and one-half pounds of iron stone mined at Lake Superior, and trans-

ported nine hundred miles to Pittsburg, in the course of which transportation it had to be twice transferred. How, under the circumstances, the work could be done for a penny is scarcely conceivable. Mr. Carnegie himself avowed that every time he repeats the figures he doubts their possibility. Yet he could vouch for their correctness. The transactions occurred, however, during a period of depression in the iron and steel market, and the cost of manufacturing steel billets is considerably greater to-day. Mr. Carnegie, indeed, is inclined to believe that the price of steel will advance steadily from decade to decade, owing to the growing deficiency of raw materials. The United States Steel Corporation, he said, owns iron ore enough to maintain its present rate of consumption for some sixty years; but what are sixty years in the life of a nation? It is upon future discoveries of iron ore that the future of steel manufacturing, even in the United States, depends. There are known, it seems to be, immense deposits of iron ore in parts of the country that, as yet, are inaccessible by railway. In Utah, for instance, and in southern California, large deposits have been found. That America is destined to increase her output of steel at a tremendous pace during the next half-century may doubtless be taken for granted. On the other hand, the output of Britain seems likely to remain nearly stationary, though it may increase somewhat should new deposits be discovered in Norway and Sweden. Before we take leave of this compilation of amazing data we may recall the fact that in 1874 two new blast-furnaces were being built in Ohio, and that, as the capital of the company was all Scotch, it was proposed to call the iron Scotch-American pig. Mr. Carnegie submitted that this is not a bad brand—either of men or iron.

An Anglo-Russian Understanding

For several weeks London has been full of rumors of steps taken by King Edward to draw England and Russia together. Of these rumors there are several causes: first, the obvious result of the good feeling between France and England, which has culminated in the treaty to settle outstanding differences; then the sense that Russia, as the ally of France, was thus brought closer to France's new friend; and, finally, a reaction against the extreme Russophobia of the Jingoes, which is only a part of the general and widespread reaction against the ideas and principles of Mr. Chamberlain.

Rumor goes beyond the mere possibility or even likelihood of a better understanding between Russia and England, and insists that this understanding is occupying the immediate attention of the King. It is pointed out with great justice that his Majesty is bound to the Russian imperial house by the closest bonds. The mother of the Czar is sister to Queen Alexandra; the Czaritza is the daughter of Princess Alice, second daughter of Queen Victoria. Thus the Russian Emperor is a nephew of the Queen of England, and the Russian Empress a niece of the English King. There are other bonds of union, but these ties are strong enough to bring the two royal houses together.

King Edward has thus all-sufficient private reasons for the line of policy ascribed to him; and this policy is in keeping with his character, and with the part he has already played with such success, in healing the age-long sores in the body politic of Europe. The public reasons which might make it expedient to draw England and Russia together begin to appear, as soon as we ask what are the causes which, during half a century, have kept England and Russia apart. The Napoleonic wars, which made so many innovations in European politics and political combinations, found Russia and England on the same side. The famous campaign of Kutuzoff in Russia, the burning of Moscow, and the disastrous retreat of Napoleon's army through the wilds of Lithuania and Poland made possible the victory of Wellington at Waterloo. The first breach between England and Russia was caused, most probably, by their taking opposite sides in the struggle between Austria and Hungary; England, as the defender of nationalism, taking the side of Kossuth, while Nicholas I. of Russia, with his ideas of absolutism, stood for the Hapsburgs.

Then came the Crimean war, when England took the side of Turkey, and, with France, waged an exhausting and barren campaign against Sevastopol and other Russian strongholds on the Black Sea. John Bright, who stood for the English idea of righteousness, once said of the statue celebrating this war in London, which bears the one word "Crimea" across its pedestal, that the last letter of the inscription should be first, so that it would read "A Crime"; Lord Salisbury cynically expressed the same view when, towards the end of his wonderful life, he declared that England in that great struggle "had put its money on the wrong horse." Gladstone was equally strong in condemning the Russophobia of Benjamin Disraeli, when the latter sent the British war-ships through the Dardanelles, to protect Constantinople against the armies of Alexander II. twenty-seven years ago. It seemed, towards the end of the last century, that better relations between England and Russia might be brought about, but the influence of Mr. Chamberlain turned the scale the other way, and Lord Salisbury made his now world-famous treaties, first with Germany, and later with Japan, with the avowed intention of preventing the expansion of Russia in Eastern Asia.

English Russophobia has its stronghold in two widely separated regions. The first of these is India, which, for nearly two centuries, ever since the days of Peter the Great's apocryphal will, has lived in terror of a Russian invasion. Anglo-Indians to a man hold this invasion as the first article of their faith, and it has formed the motive of a long line of viceroys, whose foreign policy in Asia has been directed altogether to forestalling the Bear from the North. Some of Rudyard Kipling's stories have the added merit of reflecting this prevalent Anglo-Indian obsession, as have also some of his most notorious verses. This anti-Russian policy has cost many chiefs of the Indian borderland their independence; it has been the origin of a series of Afghan wars and political intrigues with the Ameers of Afghanistan, who have drawn immense sums from the treasuries of India, as pro-English and anti-Russian bribes; and, lastly, this forward movement across the Indian frontier, to ward off the Bear, has cost the Indian peasants immense sums of taxation wrung from them in their condition of chronic famine. Here we can see where Edward VII., as Emperor of India, will find his humane and politic motive for making a lasting peace with Russia.

The other home of Russophobia is among the British merchants, from the Straits Settlements to Hongkong, and thence to Shanghai and Peking. It may or may not be true that the British authorities in these regions have suppressed the Russian official telegrams concerning the war, as the Mukden telegram declared; but it is certainly true that they would enjoy doing so, unless these telegrams recorded defeats. They had the China trade all to themselves for generations, these stalwart British merchants, and they have by no means become reconciled to the apparition of Russian vessels and of the Russo-Chinese Bank, along the China coast. The climax was reached when, immediately after the Shimonoseki treaty, the Russo-Chinese Bank obtained from the Peking court the invaluable concession for the Manchurian railroad. This is what the British merchant in the Far East could not forgive, and his representative, Sir Claude Macdonald, who was nourished on the Beaconsfield tradition of Russophobia, was, doubtless, the *deus ex machina* of the Anglo-Japanese alliance.

It is too soon to discuss the conditions on which England and Russia could come to terms; but it is quite evident that they would find their mutual advantage in doing so. England would gain security in India, while Russia would be rid of the spectre of English opposition, at every point of her foreign policy, from the Balkans to Bering's Sea.

The Value of the "Platt Amendment"

Cuba is to be congratulated upon the peaceable settlement of her election troubles, which threatened, from February 28 to April 15, to spoil the fair record she has made since the republic was established. The troubles began when the Liberal party claimed that its candidates for Congress in three provinces had been deprived by fraud of the lawful fruits of victory at the polls. That the Conservatives had secured a majority of the votes in Matanzas and Villas was conceded, though reluctantly and with protest against the methods employed; but in Oriente, Camaguëy, and Pinar del Rio the Conservatives (the "Ins") had, according to the passionately reiterated assertions of the "Outs," juggled shamelessly with the results. A typical charge, published by a Liberal organ in a recent issue, was that "the provincial board of Santiago de Cuba falsely announced the election of three persons who were not elected at all, changed the totals on the returns from various election boards, and obtained the signatures of the presidents of local boards by placing the paper on which the forged signature was to be written upon the original document, with the real signature underneath, and then holding the two up to the light and gently pricking out the signature with a pin, inking it over, and rubbing the little holes with a knife-blade so as to hide them, if possible."

When the time came for the assembling of Congress, early in April, the Liberal members tried to prevent the House from securing a quorum. A despatch sent from Manzanillo to Havana on April 8 said: "The people here are well pleased with the attitude of the Liberals in not attending the sessions of the House. It is hoped that the Liberals will maintain this energetic attitude, utterly refusing to condone the scandalous, criminal offence against the republic committed by the bandits of the suffrage." On April 9 *La Lucha* in its leading editorial plainly threatened the government with a civil war, saying that "the fatal hour of revolutions" was sure to arrive whenever the people discovered that the ballot was "a useless arm" to give effect to the purposes of the majority, and that "all those who, in Oriente, Pinar del Rio, and Camaguëy, see their purposes frustrated, have sworn to take such action as is enjoined upon them (*han jurado proceder como se lo aconsejа*) by wounded self-respect, rights violated, law defiled,

and by that which is above all other considerations—the interest of their native land."

To have appealed to arms in such a situation would have been simply to follow the general practice of Latin-American communities. But the Cubans decided to follow, instead, the wise counsels of those who pointed to the third article of the appendix to the Cuban Constitution which is known as the "Platt Amendment," and which provides that the United States may exercise the right to intervene "for the maintenance of a government adequate for the protection of life, property, and individual liberty." On April 15 a number of Liberal and Independent members, forswearing "energy," took their seats in the House, a quorum was at last secured, and a committee on credentials was appointed. It seemed the better plan to deal with the question of fraudulent elections in the House itself or in the courts of law, and *La Lucha* states that 657 cases involving such questions have already been taken before the judges.

In the vain effort to put down the insurrection of 1895-98, over 200,000 Spanish soldiers were employed; and, according to official reports, Spain sent 257,000 men against the insurgents in the Ten Years' War (1868-78). Having these facts in mind, are we at liberty to conclude that the presence of the "Platt Amendment" in the Cuban Constitution imposes more restraint upon an impulsive people than the presence of an army of 200,000 men? Certainly not. It is quite enough to claim, for an influence which serves the purpose so well, that it occasions the minimum of friction; we need not insist that the right to intervene, coupled with the manifest ability to exercise that right, imposes the maximum of restraint. At present the Cubans seem disposed to applaud both the effect and its cause; indeed, shrewd observers among them are now saying, rather cynically, "The 'Platt Amendment' is the only part of our Constitution that is destined to endure; as for universal suffrage, that is a failure in Cuba, as in Spain."

If both Liberals and Conservatives continue to seek lawful ways of escape from the perplexities of the moment, the prosperity which the island is now beginning to enjoy (thanks, in part, to the treaty of reciprocity with the United States) will tend to establish peace on a firmer basis than ever before. The nineteenth-century revolutions were all, in large measure, occasioned by financial distress. Now, an enduring peace will lead more and more to a general appreciation and development of the island's agricultural resources. If prosperity is to signify tranquillity, in the future as in the past, then tranquillity enough and to spare can be evoked from Cuban soil. It need not be invoked from the United States always.

Are Americans Cowards?

PRESIDENT ELIOT of Harvard, addressing St. Louis alumni of Harvard recently, said that he was forced to believe that the American people were cowardly in that so few of them dare to stand against the crowd; and he said that he had been surprised of late to find what timidity there was among American business men, having in mind, no doubt, their supineness in the face of the demands of the trades-unionists.

This is no new charge against us as a people. The tyranny of public opinion and its overriding of individuals is something that impressed Lowell in 1860 when he wrote to Charles Nordhoff that "It was time to take the height of the sun of righteousness," and to quit running by dead-reckoning, and he added, "Is it the effect of democracy to make all our public men cowards? An ounce of pluck now were worth a king's ransom." A year later the war broke out, which revealed the men of the North and of the South as men of courage—physical and moral. It was a purging process that revived the national health.

Wendell Phillips, diagnosing the effect of democracy upon individual character, contended that entire equality and freedom in political forms "almost invariably tend to make the individual subside into the mass and lose his identity in the general whole. . . . In a country like ours . . . public opinion is not only omnipotent, it is omnipresent. There is no refuge from its tyranny, there is no hiding from its reach; and the result is that if you take the old Greek lantern and go about to seek among a hundred, you will not find one single American who does not fancy at least that he has something to gain or lose in his ambition, his social life, or his business, from the good opinion and votes of those around him. And the consequence is that instead of being a mass of individuals, each one fearlessly blurting out his own convictions, as a nation, compared to other nations, we are a mass of cowards. More than all other people, we are afraid of each other."

Phillips attributed what he thought he saw to a desire for approbation characteristic of Americans, their desire to be on good terms with their kind; and Charles Follen, who came from Germany and taught at Harvard, told Harriet Martineau in 1837 that our most striking national characteristics were "deficiency of individual moral independence and extraordinary mutual respect and kindness." Here the two things are related, in the order of effect and cause: we are so eager to be on good terms with all men that we betray our ideals. We love peace more than we do the right.

Emerson contended that "all the American geniuses lacked nerve and dagger," and Mr. J. J. Chapman has pointed out how imitative and secondary all of Lowell's work over his own name was, compared with the work he did anonymously in which the dagger gleamed.

Viewed from one standpoint, what the country most needs now is a great issue which will compel men to take sides, which will cause brother to be arrayed against brother, class against class, section against section. Then would poets sing again, preachers emerge of national and international repute, oratory emerge from the conversational type to the inflammatory and persuasive sort, and great literature be born.

We are living now on the neutral, commonplace stage of undue regard for each other's feelings. Magnanimity, which, it has been said by Mr. Charles Francis Adams, that we love above all things else, has verged on pusillanimity. For lack of fearless speech, resolute action, and positive programmes, our political parties, our churches, our literature are suffering, and with them our national character. "An American explorer, an American settler in new lands, an American man of business pushing a great enterprise, is a being as bold and resourceful as the world has ever seen," says Mr. Bryce, and he speaks with authority. But Americans as statesmen, thinkers, preachers, educators, are they equally bold and resourceful?

Deteriorating Taste

THE English Laureate in the *Fortnightly Review* bemoans the condition of literary taste and the reactive influence upon production. Such a criticism, endangering as it does the Laureate's own position, since he is himself extremely popular in England, bears the hall-marks of sincerity, and should be taken seriously. Mr. Austin regrets that epic and dramatic poetry, indeed, all large and serious treatment of a poetic subject, is being ousted out of life by the short lyric. Dramatic poetry is banished because audiences now insist upon having in its place "sumptuous scenery, choreographic sensuousness, and the lightest of music." The drama is ruled by the stalls, and the occupants of the stalls, according to Mr. Austin, "alike in the theatre, as in their reading, exhibit an ever-deteriorating and more frivolous taste." And if one asks what does it matter, Mr. Austin asserts (a few would question the justice of his statement) it matters to the extent that if this be proven, we are "less intellectual, less spiritual, less wisely serious" than we were in an age that demanded as its reading matter Gray's *Elegy*, Goldsmith's *Deserted Village*, and Pope's *Essay on Man*.

It is true that the cosmopolitan religion of the hour is the acquisition of wealth—an ideal destructive of every great spiritual force in the world. There is a great dearth of prophets and leaders of thought such as Ruskin, Carlyle, Newman, and Emerson of a generation ago. The protests of Maeterlinck and Wagner have not yet prevailed nor even been widely heard, and Nietzsche succumbed to despair. He exhorted his followers to flee the mart and to live alone on a mountain-top, where they might escape even the echoes of popular clamor. But to the sanguine-minded there are other reasons for deterioration of taste. Free education has created a tremendous reading public. Practically everybody reads something. Moreover, the man in the street has experienced an apotheosis; he knows himself to be a power to be reckoned with. He is not timid nor afraid to voice his opinions. The world has made itself a comfortable dwelling-place for him; he has all sorts of facilities and rights; a ready hearing and a swift supply for all his demands; he demands diversion in books and in art. And meantime, hidden away in obscure corners, there are doubtless those few who are happy with the best of the ages. They make little noise, they ask no odds of the yearly output of fiction, they do a small part toward the support of the publishers; the great houses would not thrive in their hands. They are never swept off their feet where a big majority proclaims a new Thackeray. For them, once every half-century, a new edition of Plato is published. And so long as this remnant pursues its course untroubled by any prevailing or general code in art there is little to be feared from an ultimate deterioration of taste.

All this tumultuous reading and writing and printing may be just ebullitions of young life. Of the undue checking of just such clamors Clifford wrote: "Propriety is the crystallization of a race. And if we consider that a race, in proportion as it is plastic and capable of change, may be regarded as young and vigorous, while a race which is fixed, persistent in form, unable to change, is as surely effete, wornout, in peril of extinction, we shall see, I think, the immense importance to a nation of checking the growth of conventionalities. It is quite possible for conventional rulers of action and conventional habits of thought to get such power that progress is impossible and the nation fit only to be improved away. In the face of such a danger *it is not right to be proper.*"

JAPANESE INFANTRY IN NORTHERN KOREA MARCHING TOWARD THE YALU

The double-page illustration in this issue of the "Weekly" shows a force of Japanese cavalry advancing toward Wiju, in northern Korea; the photograph on this page shows a body of infantry on their way to reinforce the main body of the Japanese advance near the Yalu. It is believed that the Japanese do not plan to invade the Manchurian interior, but will confine themselves to the isolating of Port Arthur and Vladivostok, and the junction of the Korean and Liao-Tung forces

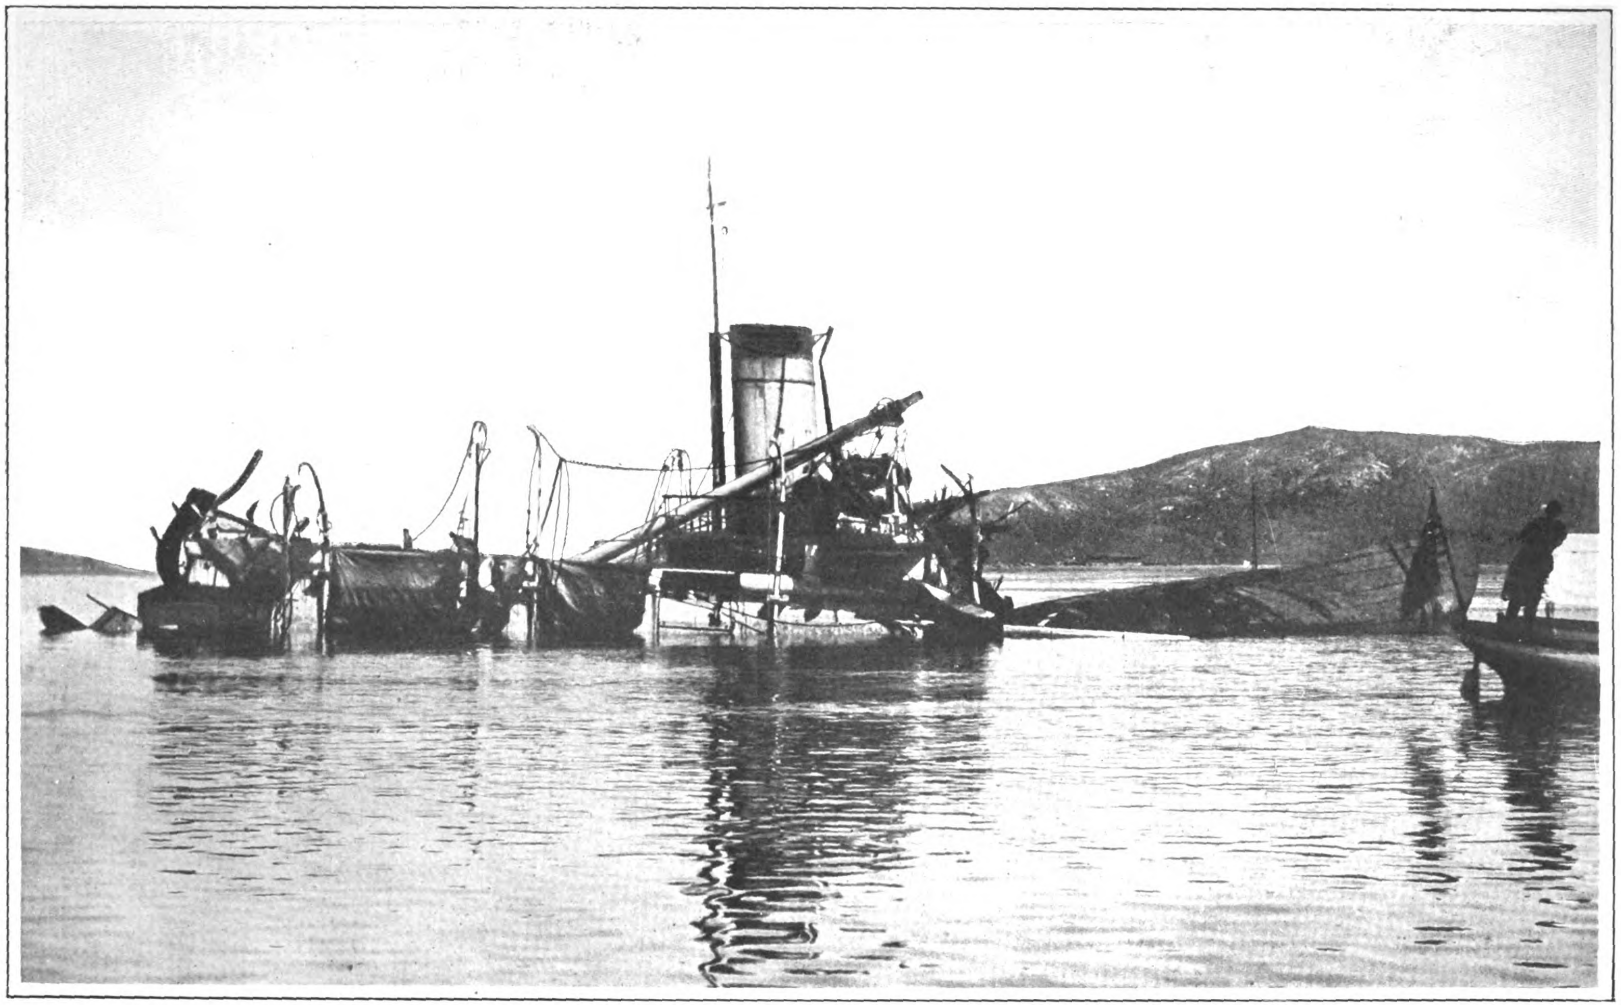
The Wreck of the Cruiser "Variag" in Chemulpo Harbor

The Merchant Ship "Sungari," sunk at Chemulpo



PHOTOGRAPHS OF THE WRECKS OF THE RUSSIAN SHIPS "VARIAG" AND "SUNGARI" IN CHEMULPO HARBOR

The Russian cruiser "Variag" was sunk by the Russians on February 9, after being disabled by the Japanese fleet. The upper photograph on this page shows the wreck of the vessel as it lies to-day in Chemulpo Harbor. The photograph at the bottom of the page shows the wreck of the Russian merchant steamer "Sungari," which was sunk by the Russians, after the loss of the "Variag," to prevent her falling into the hands of the Japanese, who outnumbered the Russian force by ten to one

THE WRECKED GUNBOAT "KORIETZ" AS SHE LOOKS NOW IN CHEMULPO HARBOR

The "Korietz," Russia's 1500-ton gunboat, was blown up by order of her commander on February 9 after the first naval engagement of the war. After the disabling of the "Variag," in the fight of that morning, it was decided to destroy the "Korietz," who was hopelessly outclassed by the Japanese force of twenty ships, to prevent her capture by Admiral Uriu

Recollections of a Japanese Leader

By Poultney Bigelow, M.A., F.R.G.S.

I CONFESS with humility that I am a bunch of quasi prejudice—that I cannot escape from the personal element in history. I was influenced in this way when I first met the present Moltke of Japan—the man whose name is rarely heard, whose face is never seen, but whose web is spinning on all sides of the Russian forces as was that of the illustrious Danish strategist when he locked Bazaine in Metz, and Napoleon in Sedan.

General Fukushima I met first in Germany—he was military attaché at the Court of the Kaiser, and as such was invited to attend the great autumn field operations of the army, which lasted a week or more, and which brought together some fifty to one hundred thousand men of all arms.

Those were hard days, even for spectators. Whoever would keep up with such a host as his Imperial Majesty of Germany must rise early and never want to lie down. There is a story current that William II. was once known to take a nap; it is unsupported by any but hearsay evidence. On the contrary, I have personal knowledge of his having passed many days without any opportunity for such interruption.

Many were the guests whom the Kaiser exhausted completely at these military operations. Even military attachés of other countries were heard to grumble as did Maréchal Lefevre in "Madame Sans Gêne," when reciting to his wife a dinner with the great Napoleon. Many a foreign military guest have I known to sneak away for a nap while his imperial host was on the bridge of a man-o'-war, or in the saddle, or, harder than all, sitting bolt upright in the imperial box listening to an interminable Hohenzollern drama, written with a view of stimulating patriotism.

But Fukushima was here also an exception. I do not say he listened, but he sat upright, his baby eyes serenely bent upon Nirvana, ostensibly devouring the turgid lines of a court drama, but in reality repeating to himself a list of the Russian regiments east of Moscow, and the names of their garrison towns.

Fukushima discussed things with me, because he and I had friends uncommon in Japan. He evidently concluded that he could trust me, and when a Japanese gives you his confidence you may bank upon it, as though he were a Boer or a Briton.

At that time this little Moltke was but a captain, and the smallest soldier in uniform that had ever been seen in Germany outside of a museum. The Emperor had raked his stables in vain for a horse that could squeeze between the legs of his little guest. At last one was found; it came from a circus, and had spots all over. It was the smallest mount available, yet small as it was the witty ones alleged that glove-stretchers had been used before the legs of the Oriental could be made to straddle with ease. Whatever may have been the truth of that, Fukushima managed always to stumble accidentally upon the point of chief interest in the day's operations, whether it was an attack of cavalry, a massing of artillery, the bridging of a river, or something novel in ballooning. On the way to the point of meeting, usually about four o'clock in the morning, the important colonels and generals who constituted the main body of imperial guests held forth learnedly on what would be done that day, and where they should go in order to see what was important. Fukushima never said anything, but when councils diverged amongst the great and learned we soon came to seek light of our little Japanese captain; and when we did so, he invariably professed to know nothing, but would, in his childish manner, place his little finger as though at haphazard upon a point of his map; and those who steered for that point were never disappointed.

He passed, however, for feeble in mental capacity, and he took pains to preserve that character. The Russian military attaché took him for stunted and stupid. The jovial British delegate regarded him as an idiot, and many of my friends asked me seriously how it was that I managed to waste so much time in his company. I told them I was an alienist, and besides that I was refreshing my knowledge of the language.

Even then, and I am talking of a few years before the Chinese-Japanese war of 1894, Fukushima showed me photographs he had taken throughout the border country of Russia—about the Black Sea, down the Danube, in Rumania, Turkey, Bulgaria, etc. He knew all there was worth knowing about the strength of Russia this side of Moscow and the Caspian, and as I had been twice in those territories I found a comparison of data very interesting.

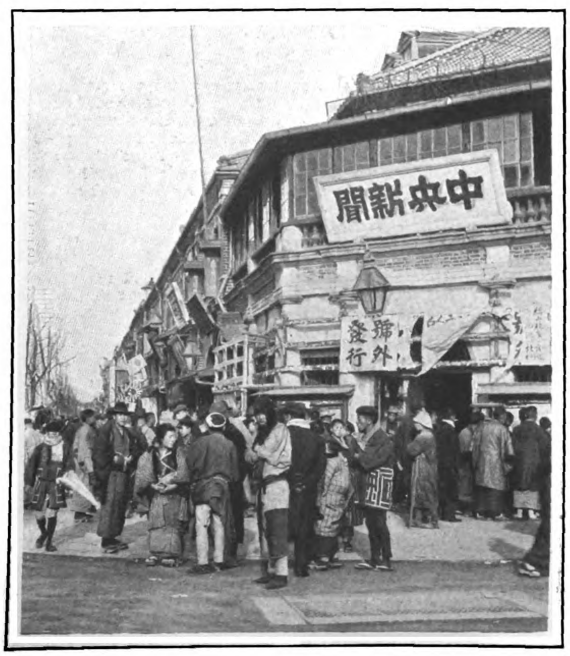
But he never allowed any one else at the Berlin Court to suspect that he was more than a commonplace piece of uniform. Though he spoke seven languages to my knowledge, he never allowed any one else in Berlin to suspect that he knew anything but a few garbled scraps of German. Here is a sample that I overheard:

German General loquitur: "Guten Morgen, Herr Hauptmann!"

Fukushima bowed politely and smiled, while he inhaled audibly.

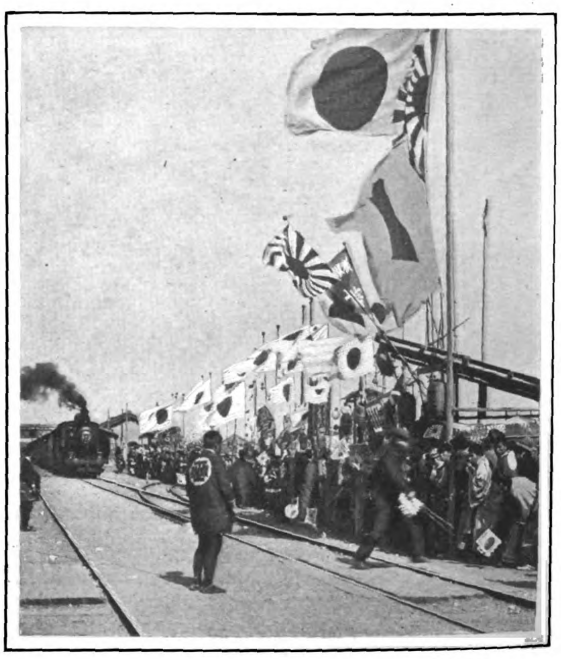
The General: "Tell me, my dear Fukushima, how long would it take you in Japan to mobilize an army-corps and land it in Korea?"

Fukushima: "Thank you, Herr General, my health is very good!"



The General: "I'm very glad to hear it; but I wanted to know something about your mobilization!"

Fukushima: "You are quite right, Herr General; das Wetter ist Heute sehr schoen, but it may possibly rain to-morrow!"



And so this conversation would go on, each day like the last, and each questioner coming away with the impression that it was a shame for governments to send to Berlin representatives who could not speak a civilized tongue.

One day little Captain Fukushima disappeared from Berlin, and many moons later arrived on the shores of Manchuria, or Mongolia, I forget which. He had bought a little cossack pony somewhere east of Moscow, and had steered his way across that vast Siberian plain, keeping his ears and eyes well open, and his mouth tight shut. He had note-books, but he wrote in figures that gave no comfort to any but himself. He counted the telegraph-poles as he rode, he noted the bridges, and the wells, and the farms, and everything that might prove interesting to Japanese visitors who might come after him.

Fortunately for him, Russia also despised his intellect, else he would have met with an accident in some lonely section of his long ride. He would have turned up missing. The Russian government

Count Cassini, the Russian Ambassador at Washington

Mr. Kogoro Takahira, the Japanese Minister, at the Wheel, with Attachés of the Legation

Mr. Minhui Cho, the Korean Minister, at the Wheel

Sir Chentung Liang-Cheng, the Chinese Minister, at the Wheel, with his Attachés

SNAP-SHOTS OF WASHINGTON REPRESENTATIVES OF POWERS INVOLVED IN THE FAR-EASTERN CRISIS

The photographs give some interesting views of the Washington representatives of the powers involved in the Far-Eastern crisis. The Russian ambassador, Count Cassïni, the Japanese minister, Kogoro Takahira, the Korean minister, Minhui Cho, and the Chinese minister, Sir Chentung Liang-Cheng, are all expert automobilists. The snap-shots show them in their different machines as they are often seen in the streets of Washington during the season. The Chinese minister is the only one who wears his native costume

would have expressed great sorrow over the sad accident, and have promised to punish the wicked peasants who had killed him. Those peasants would have been policemen in disguise, but in such matters we must not be too squeamish.

You know the rest, how in 1894 Japan put an army afloat, landed in China, tumbled the forces of that empire head over heels, sank her battle-ships and dictated terms of peace after a short campaign conducted in such a manner as to call forth the praise of military students no less than lovers of fair play on the battle-field.

The next time that I saw Fukushima was in his own home; he was the same sunny, moony, smiling, and sympathetic Fukushima, but had become a general, and was recognized as the hero of the great Chinese war. But to look at him, he was the very same man that had passed in Berlin and Petersburg for a harmless toy.

He lived in Tokyo in a bandbox sort of a bamboo bungalow—all lacquer and matting, and fans, and dainty tea things. He wore the native gown spattered with storks or some such design, and in his arms was a baby—just like the Japanese dolls we see at Christmas. General Fukushima, as chief of a nursery, was worth coming to see, and he played his part with the same success as distinguishes him at the head of an army.

Like all real men, and particularly real great men, he is the simplest of men. When all the world was praising Waldersee as a great soldier, it made me hesitate to accept this verdict, merely because Moltke had the simplicity, the modesty of greatness. At any court ball in Berlin it would have been hard to find Moltke, but harder still to avoid seeing Waldersee.

And so it is with Fukushima; you find him most readily in his little family circle, playing with his children, or chatting with the few intimates whom he can trust.

Our talk was interrupted by the announcement of a Chinese Embassy. So the baby was passed on to the nursery, and in came several big Chinese officers to pay their respects to the man who had humiliated their army more than all the hosts of the white man since the first settlement in Macao.

This was the year 1898—a memorable year to others than to us and Spain, for in that year China sent to Japan thirty military representatives for no other purpose than to learn the art of war from the nation which they had before that referred to as one of contemptible dwarfs.

In other words, only three years from the close of the Chinese-Japanese war, the Chinese Emperor paid to the conquering nation a compliment he has never yet paid to any other country, not even Germany.

Fukushima received his guests kindly, and after they had drunk of his tea and taken their departure he told me many things which have now come true, but which he did not intend that I should publish.

What he told me I have used indirectly, however, and there is no harm in repeating the warning for such of us as have interests in the Far East. Japan has her Monroe Doctrine no less than the United States. The days of Germany in Kiao-Chow are numbered, and it is because she feels uneasy on this subject that we find the unnatural sympathy for Russia in Berlin.

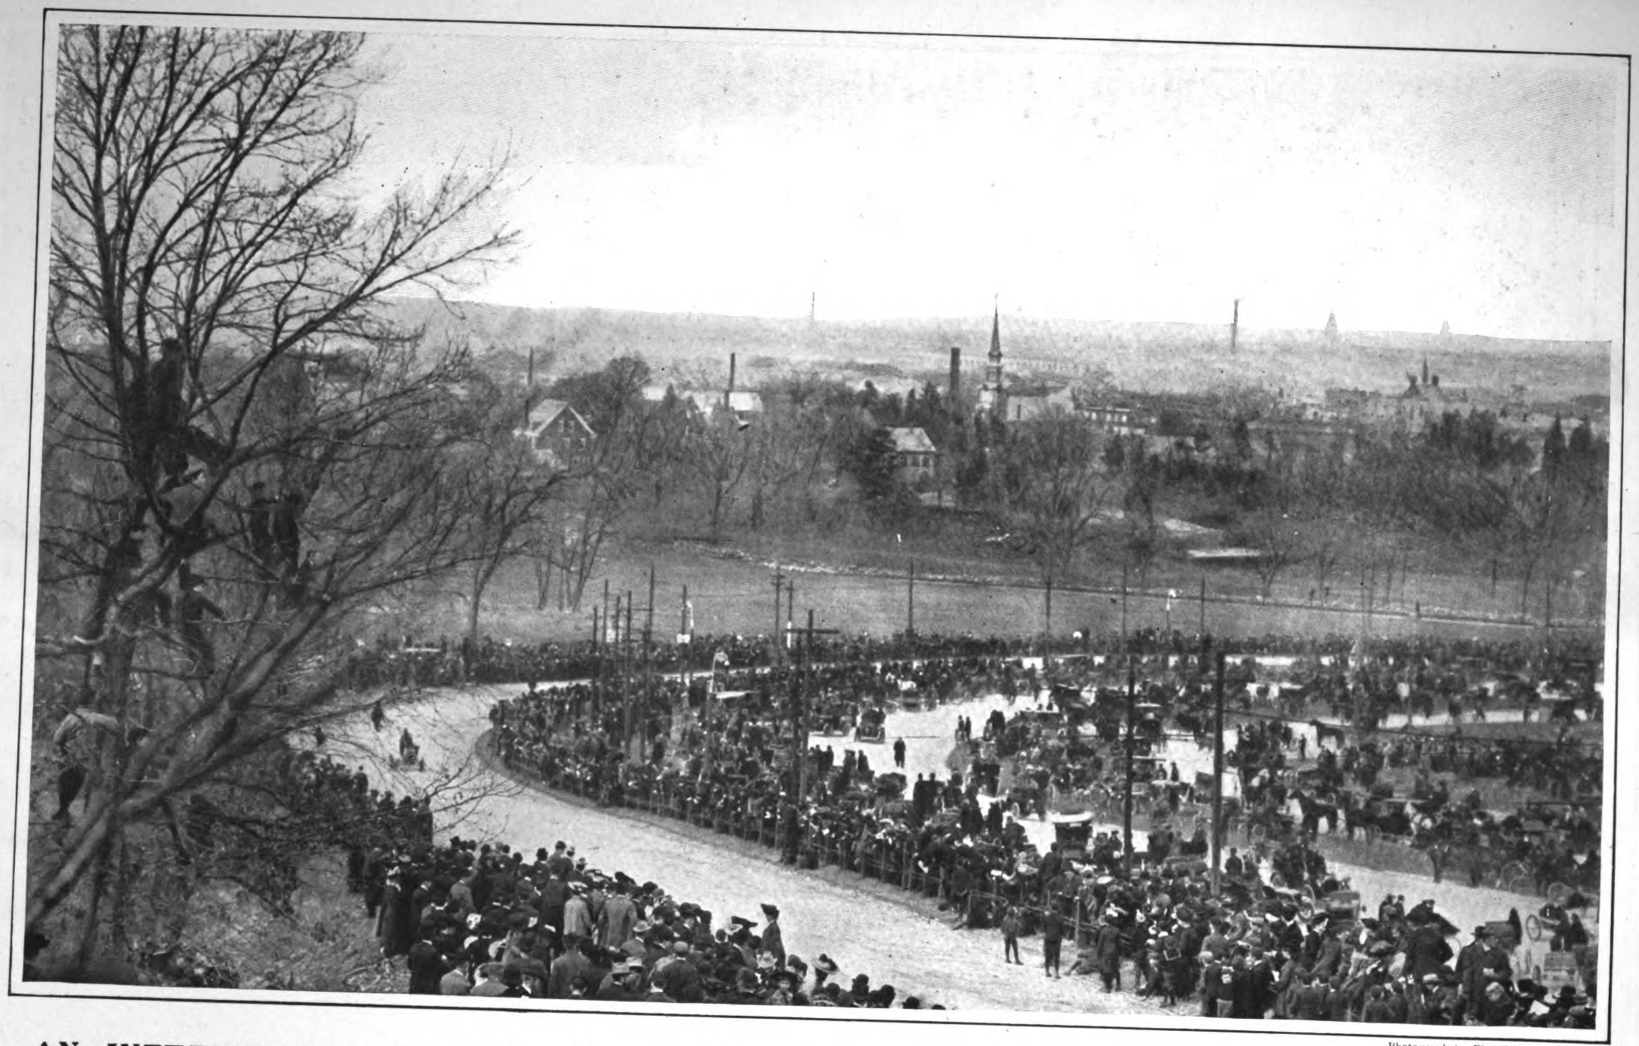
Whatever our sympathies may be it is our business to equip ourselves with sound information from impartial first-hand sources. Our press treats this war as though it were a stage pantomime which would close with the curtain's drop.

It is something vastly different. When peace is declared, a new act will commence in a drama that promises to be continuous, at least a longer drama than any ever put upon a Chinese theatre in our life time.

England and the President

By Sydney Brooks

LONDON, *April 23, 1904.*



ENGLAND greatly admires Mr. Roosevelt. No American President of my time has succeeded in so strongly impressing the imagination of Europe. Last May when I was in Berlin I found an interest in things American that ten years ago would have been surprising and twenty years ago incredible. It was a popular interest as well as an official one, and almost all of it centred on the personality of the President. What little was left over fastened on the trusts and the puzzling wave of Teutophobia that was then sweeping over America. But for one question on these subjects ten were put to me about Mr. Roosevelt. Professors at the Berlin University, high officials in the Wilhelmstrasse, journalists, business men and chance acquaintances in the army all wanted to know about Mr. McKinley's successor. They liked to hear of him, they liked to discuss him, and they especially liked to draw comparisons between him and the Kaiser. The rather piquant developments in the relations between Germany and America during the lest few years may, of course, have had something to do with this, but I am inclined to attribute by far the larger part of it to Mr. Roosevelt's personal characteristics. And that this is the true explanation of the amazing interest that Europe is now taking in the White House may be judged from the fact that President Roosevelt is just as much the subject of eager debate in countries that have no special relations with the United States as in countries where America's political and commercial policy is a matter of national concern. I was talking, for instance, not long ago to the editor and proprietor of the great Italian fortnightly review, the *Nuova Antologia*. Signor Ferraris was a member of Crispi's last cabinet, and sits in the present Chamber of Deputies. He is keenly interested in labor questions and in that cooperative movement which promises to revolutionize Italian agriculture. My idea was to extract information from him on both subjects, and I might have succeeded but for an unhappy admission that I had lived for some years in America. He at once began to talk Roosevelt, and nothing would induce him to come back to Italian trade-unions and village banks. If I had followed every step of Mr. Roosevelt's career from the cradle to the Presidency, had read all his books, and learned by heart all his speeches, I should still have been unable to satisfy my pertinacious questioner. In France, too, where popular interest in foreign affairs and foreign personalities is not usually very deep or well informed, Mr. Roosevelt is a familiar and engrossing topic. When the English Members of Parliament paid their famous visit to the legislators of the French Chamber a neutral and appetizing subject of discussion was found in President Roosevelt, and some wonderful English and perfectly astounding French was devoted more than once to elucidating his personality.

And the qualities that make Mr. Roosevelt so interesting to Germans, French, and Italians make him still more interesting to Englishmen. They see in him a superb specimen of Anglo-Saxondom. He belongs by education, birth, and tastes to the type that Englishmen most like to represent them in the national legislature. If he were an Englishman people feel that he would have explored every inch of the empire, shot all the big game to be found in it, won his Blue at Oxford or Cambridge, kept a pack of hounds, written some slashing books on Wellington and Nelson and the heroes of the Indian mutiny, captured De Wet, annexed an empire or two, and made his mark in Parliament as a progressive Conservative. People here feel they would know what to do with Mr. Roosevelt, and I dare say Mr. Roosevelt feels he would know what to do with them. There are only two other Americans in the political world whom Englishmen show this same instinct towards. One of them is Mr. Hay, the other is Mr. Root. Both appeal to Englishmen as men who would fit in easily with English public life—just as easily as Mr. Chamberlain would take to American politics. I do not say Englishmen are right in this opinion or that it is based on very wide or intimate study. Nevertheless, it exists. People can imagine without any great effort Lord Hay expounding the foreign policy of England in the House of Lords and finding its atmosphere not oppressively uncongenial, and Sir Elihu Root, Bart., P.C., K.C., etc., reforming the War Office and defending his policy in the House of Commons as though he had done nothing else all his life. I cannot recall any other American statesmen of recent years whom Englishmen have felt drawn to in this way. They never showed any desire to annex President Harrison or to transplant Mr. Blaine. They never detected any special affinity between Mr. Cleveland and English public life. They would be quite startled if any one at all resembling Mr. Hearst were to run for Parliament even in an Irish constituency. They can just conceive Mr. Bourke Cockran raising his tempestuous voice from the Nationalist benches in the House of Commons, but naturally they prefer not to dwell on the prospect. On the whole, Mr. Roosevelt, Mr. Hay, and Mr. Root are the only Americans in political life whom Englishmen can picture as taking part in English politics just as they are.

And of the three it is, of course, Mr. Roosevelt who makes by far the widest appeal. To judge Mr. Hay's capacity with any approach to adequacy one must have followed his career and his diplomacy step by step and with meticulous absorption. For a proper estimate of Mr. Root's achievements only an expert in army matters is fully qualified. Mr. Hay and Mr. Root are most honored among those Englishmen who know their work most intimately, but naturally those Englishmen are not precisely a majority of the nation. Mr. Roosevelt, on the other hand, is easily studied even at a distance of three thousand miles. "A pork butcher could understand Harcourt," was said of the Parliamentary veteran whose approaching retirement all England has heard of with regret. A pork butcher could understand Mr. Roosevelt. His whole case is got up in good plain black and white. He is a "popular" subject. There is little to confuse or distract in his clean-cut conciseness. Moreover, Mr. Roosevelt does precisely the kind of things Englishmen like their own leaders to do. Every bear he has shot would be worth five thousand votes to him in England. He would never have to write an election address as a Parliamentary candidate. It would be enough to distribute copies of his books on sport and throw open his collection of heads and skins and rifles to the public. That is the first great hold he has on the English people; he is a sportsman and so are they. The second is that he is a natural leader—so much so that people sometimes question whether the American Constitution allows room enough for his instinct of domination. No such question would arise in England. There is no one the average man in this country takes to more readily than a leader who will put him right on everything—tell him how many children patriotism demands of him and what are the ideals he ought to cherish. Mr. Roosevelt does all this, even in America, without blinking or blushing. Over here he would find a wider field and a larger and less critical audience. There is not a nursery from Land's End to John o' Groats that he could not turn upside down at a word. And besides all this, Mr. Roose-

Books and Bookmen

By James MacArthur

COULD anything more fantastic or original in literature be imagined than *The Memoirs of a Baby*? The fairies knew their business when they lodged the idea in the brain of Miss Josephine Daskam. No author to-day writing of child life has blended her observation of the infant *genus* with such acute humor and sympathy, and surrounded the subject with so much merriment without offending the maternal or paternal prejudices. Indeed, the young father and mother, as well as the dear old maiden aunt—the *Fidus Achates* of potential motherhood—come in for a large share of Miss Daskam's mischievous humor, but it is humor of a wholesome kind that is all laughter and no sting. Chapter I. deals with the Young Mother; in the second the Baby himself comes on the scene and takes possession of the centre of the stage; then there follow in succession the evolution of "the dawning soul," "child study," "spontaneous ejaculations," the "mystery of speech," "family discipline," until the "abdication of Binks" is reached upon the arrival of the new baby. "Martin! Oh, Martin!" Aunt Emma exclaimed as she viewed the pathetic little figure. "Don't you mind, darling, don't you mind! You are Aunt Emma's own baby—you shall always be! Always! You shall be *my* baby!" But Martin struggled from her arms and dashed the tears from his eyes. His hands slipped into the pockets of his ridiculous trousers unconsciously. "Pooh!" he said, catching his father's eye, defiantly, "pooh! I'm not, either. I'm not anybody's baby. *That's* a baby. I'm a boy!" As whimsical and delightful in their humor are Miss F. Y. Cory's drawings, which are scattered profusely through the pages of the Memoirs. Artist and author never worked so harmoniously together to a common end. *The Memoirs of a Baby* is likely to become a classic of household humor.

With the exception of *Kronstadt*, perhaps, I don't think Max Pemberton has given us a better story than *A Daughter of the States*, and the new novel has the advantage of an American heroine. The story opens with a lively scene on board a transatlantic steamer. This is a refreshing change; so many stories of late have begun in the parlor-car or sleeper of a train. "The man's a rogue!"—this is our introduction to the hero, blandly made by the Rev. St. John Trew, vicar of Sackville Street, London. But it is not long before we begin to differ with the vicar—with all due respect for his cloth—and we suspect that the rogue is a right manly, honest fellow, and will have chances enough to prove it before the author is through with him. The tale becomes exciting before we are through with the first chapter, and the scent keeps us hot on the chase until the last is reached. Jessie Golding, the heroine, is an American heiress who is crossing the ocean to join hands and hearts with Lord Eastry of Monkton Castle, which is badly in need of the Golding dollars. Murray West, the hero, has been mixed up in some way with the shooting of Miss Golding's brother Lionel in Jackson City, and she comes to hear of it from a gambling blackleg, just as Murray has made a favorable impression. By the way, the little poker game in the smoker of the *Jersey City*, which led to this spiteful act on the part of Mr. Marx, is quite a lively episode in itself. Things are reaching a crisis, but in a few hours the passengers in whom we have become interested might have landed and gone their several ways without further clash, had not the liner collided with some craft in a dense fog and gone down with most of her human freight. Murray West contrives an escape for himself and Miss Golding on a raft just before the steamer sinks, and they are eventually picked up by an unspeakably wretched tramp steamer. What with mutiny, and a race with a Venezuelan gunboat, after being carried far out of their course, and a miraculous escape from the burning dust of Mount Pelée, the adventures of the couple keep one's interest keyed up to the highest pitch until they are at last safely convoyed to London. But the pause is only for a moment, for the mystery of Lionel Golding's death is still to be cleared up; and Jessie Golding has Lord Eastry to reckon with. And when this is done, Mr. Pemberton has still another surprise for the reader before the curtain falls. There are few writers to-day who can spin a yarn with more adroitness and verve than Max Pemberton, and his inventive genius has never achieved a greater success than *A Daughter of the States*. If you want to read a rattling story, full of "go" and excitement, unimpeded by extraneous matter, let me recommend this latest novel by one of the most popular writers of serial fiction to-day.

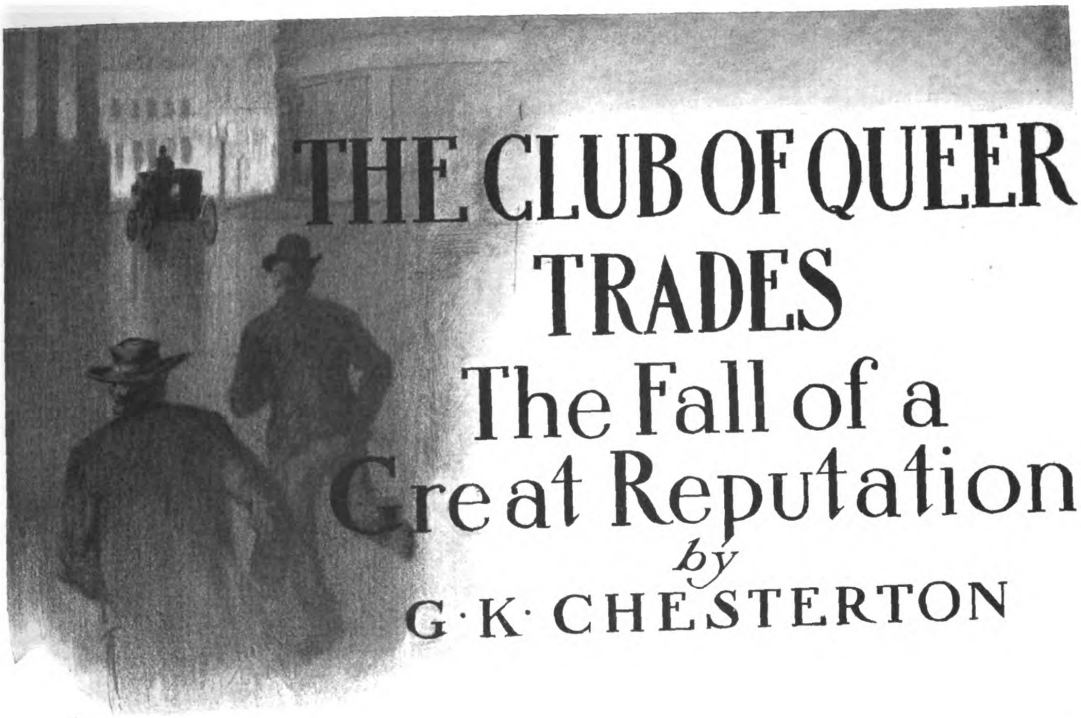
Josephine Daskam
Author of "The Memoirs of a Baby"

After reading *The Woodhouse Correspondence*, by G. W. E. Russell and Edith Sichel, I can assure my readers that a most amusing volume awaits them, notwithstanding the prejudice that has arisen with good cause against the novel told in letters. The authors describe these letters as "studies in idiosyncrasy"; but there is nothing very subtle or deep about the types of human nature studied. We have all been bored by the hypochondriac, who exhorts you to "thank Heaven that you have escaped my trials, and that you and your mother's branch of the family have never known what suffering means"; the person with the Artistic Temperament who is "very, very lonely," and is writing a "Realistico-Spiritual Novel, *The Woof-Warp*, which centres round the Education Bill," who keeps a diary, and calls her collection of unprinted poems *The Versicles of a Lonely Spirit*; the innately selfish prig who writes pompously and shudders at Vulgarity; the mother with social aspirations for her daughters. Here is a mirror in which you may see some of human nature's ugliest traits—is there anything under the sun uglier than undiluted egotism? The story of these characters unfolded in their letters would be the most depressing and sickening sort of thing to read, if it were not for the keen satire of the writers, which plays mercilessly with the emotions of the correspondents and holds their idiosyncrasies up to ridicule while it flays them. Miss Elaine Thompson (she was christened Ellen)—she of the A. T.—might stand as a parody on Mary McLane. She ends up by accepting a position to write "attractive advertisements" for Spasmon Food at £120 a year. Her entrance on this new path is marked "in the silent watches of the night" by this rhapsody:

TO THE CHANGE IN MYSELF
(At the Parting of the Ways)

I, who now and ever, lived for Art's sake,
Shall I hold this changeless as the Best?
Nay, but I will rather live for Heart's sake;
Strive afresh, nor stop to take my rest.

Even Food is holy when prepared
Through long vigils for the Love of Men.
Nought there is that's coarse and nought that's arid—
Body's Soul, Soul's Body, now as then.



The poet of the *Versicles* had read her Browning to good purpose.

"Since feeble Woman is not allowed to speak the truth," writes Miss Elaine Thompson, "it has seemed to me that I could speak out more boldly on many essential facts if I assumed the name of a man." And so, the Realistico-Spiritual Novel was submitted with a *nom de plume*. "Nor is there, I believe," she adds, "any other sign in the book by which my Womanhood will be known." No such motives can happily be imputed to the author of a recent novel entitled *Yarborough the Premier*, by "A. R. Weekes," and there is no reason why Miss Weekes should seek to screen her identity behind the subterfuge of a *nom de masculine*. *Yarborough the Premier* is a vigorously written story of an English politician who rises to power through unscrupulous and high-handed measures, but who is overtaken in the end by the Nemesis of his sins. Miss Weekes has attempted an ambitious task in the portrayal of Yarborough; it is built on epic lines, but she has not the epic imagination to create and sustain so complex and subtle a character. Yet she has contrived skilfully to suggest the lines upon which it was built; the shadow of the man falls across the pages, and we are interested in him as in some sort of modern Paracelsus, groping blindly toward the goal of his ambition, moved solely by one overwhelming desire—England's prestige and glory. "I believe I have neither conscience, honor, nor soul," he declares, "and yet I shall keep England's honor unstained." Margaret, the one woman he loved, but of whom he was not worthy, saw the truth, and spoke it when the blow fell at last. "He had no faith, he could not wait for God; he felt that he must do things his own way; that was his mistake." The words are an echo of Michal's prophetic warning to Paracelsus:

An angel warns me, too,
Men should be humble; you are very proud:
And God, dethroned, has doleful plagues for such!
—Warns me to have in dread no quick repulse,
No slow defeat, but a complete success:
You will find all you seek, and perish so!

For a first novel, *Yarborough the Premier* shows remarkable strength and maturity, and augurs well for the author's future. Miss Weekes has a distinctly dramatic gift, and can invest her salient scenes with a vivid and impressive power of picturesqueness, which is enhanced by her vigorous and graphic style.

THE CLUB OF QUEER TRADES

The Fall of a Great Reputation

by

G·K· CHESTERTON

BASIL GRYCE and I were talking one day in what is perhaps the most perfect place for talking on earth—the top of a tolerably deserted tram-car. To talk on the top of a hill is superb, but to talk on the top of a flying hill is a fairy-tale.

"It is very odd," said Gryce, grimly; "I said all these people were good, and there is the wickedest man in London."

"Which man?" I cried, and then my eye caught the figure at which Basil's bull's eyes were glaring.

He was a slim, smooth person passing very quickly among the quickly passing crowd, but though there was nothing about him sufficient to attract a startled notice, there was quite enough to demand a curious consideration when once that notice was attracted. He wore a black top-hat, but there was enough in it of those strange curves whereby the decadent artist of the 80's tried to turn the top-hat into something as rhythmic as an Etruscan vase. His hair, which was largely gray, was curled with the instinct of one who appreciated the æsthetic beauty of gray and silver. The rest of his face was oval, and, I thought, rather Oriental; he had two black tufts of mustache.

"What has he done?" I asked.

"I am not sure of the details," said Gryce, "but his besetting sin is a desire to intrigue to the disadvantage of others. Probably he has adopted some imposture or other to effect his plan."

"What plan?" I asked. "If you know all about him why don't you tell me why he is the wickedest man in England? What is his name?"

Basil Gryce stared at me for some moments.

"I think you've made a mistake in my meaning," he said. "I don't know his name. I never saw him before in my life."

"Never saw him before!" I cried, with a kind of anger. "Then what in heaven's name do you mean by saying that he is the wickedest man in England? What do you mean by your nonsense about his using other people for his own ends?"

"I meant what I said," said Basil Gryce, calmly. "The moment I saw that man I saw all these populations stricken with a sudden and splendid innocence. I saw that while all ordinary poor men in these streets were being themselves he was not being himself. I saw that all the men in these slums—cadgers, pickpockets, hooligans—are all, in the deepest sense, trying to be good. And I saw that that man was trying to be evil."

"But if you never saw him before," I began.

"In God's name look at his face," cried out Basil in a voice that startled the driver. "Look at the eyebrows. They mean that infernal pride which made Satan so proud that he sneered even at heaven when he was one of the first angels in it. Look at his mustaches; they are so grown as to insult humanity. In the name of the sacred heavens, look at his hair. In the name of God and the stars, look at his hat."

I stirred uncomfortably.

"But, after all," I said, "this is very fanciful—perfectly absurd. Look at the mere facts. You have never seen the man before; you—"

Basil sprang up straight and swayed with the swaying car.

"Let us get off and follow him," he said. "I bet you five pounds it will turn out as I say."

And with a scuttle, a jump, and a run we were off the car.

The man with the curled silver hair and the curved Eastern face walked along for some time, his long splendid frock-coat flying behind him. Then he swung sharply out of the great glaring road and disappeared down an ill-lit alley. We swung silently after him.

"This is an odd turning for a man of this kind to take," I said.

"A man of what kind?" asked my friend.

"Well," I said, "a man with that kind of expression and those boots. I thought it rather odd, to tell the truth, that he should be in this part of the world at all."

"Ah yes," said Basil, and said no more.

We tramped on, looking steadily in front of us. The elegant figure, like the figure of a black swan, was silhouetted suddenly against the glares of intermittent gaslight and then swallowed again in night. The intervals between the lights were long and a fog was thickening on the whole city. Our pace, therefore, had become swift and mechanical between the lamp-posts; but Basil came to a standstill suddenly, like a reined horse; I stopped also. We had almost run into the man. A great part of the solid darkness in front of us was the darkness of his body.

At first I thought he had turned to face us. But though we were hardly a yard off he did not realize that we were there. He tapped four times on a very low and dirty door in the dark, crabbed street. A gleam of gas cut the darkness as it opened slowly. We listened intensely, but the interview was short and simple and inexplicable as an interview could be. Our exquisite friend handed in what looked like a paper or a card, and said:

"At once. Take a cab."

A heavy, deep voice from inside said,

"Right you are."

And with a click we were in blackness again and striding on after the striding stranger through a labyrinth of London lanes, the lights just helping us. It was only five o'clock, but winter and the fog had made it like midnight.

"This is really an extraordinary walk for the patent-leather boots," I repeated.

"I don't know," said Basil, humbly. "It leads to Berkeley Square."

As I tramped on I strained my eyes through the dusky atmosphere and tried to make out the direction described. For some ten minutes I doubted; at the end of that I saw that my friend was right. We were coming to the great dreary spaces of fashionable London—more dreary, one must admit, even than the dreary plebeian spaces.

"This is very extraordinary," said Basil Gryce as we turned into Berkeley Square.

"What is extraordinary?" I asked. "I thought you said it was quite natural."

"I do not wonder," answered Basil, "at his walking through nasty streets; I do not wonder at his going to Berkeley Square. But I do wonder at his going to the house of a very good man."

"What very good man?" I asked, with exasperation.

"The operation of time is a singular one," he said, with his imperturbable irrelevancy. "It is not a true statement of the case to say that I have forgotten my career when I was a judge and a public man. I remember it all vividly, but it is like remembering some novel—such as the life of the Prince Consort. But fifteen years ago I knew this Square as well as Lord Rosebery does, and

a damned long-sight better than that man who is going up the steps of old Beaumont's house."

"Who is old Beaumont?" I asked, irritably.

"A perfectly good fellow. Lord Beaumont of Foxwood—don't you know his name? He is a man of transparent sincerity, a nobleman who does more work than a navvy, a socialist, anarchist, I don't know what—anyhow, he's a philosopher and philanthropist. I admit he has the slight disadvantage of being, beyond all question, off his head. He has that real disadvantage which has arisen out of the modern worship of progress and novelty; and he thinks anything odd and new must be an advance. If you went to him and proposed to eat your grandmother he would agree with you so long as you put it on hygienic and public grounds, as a cheap alternative to cremation. So long as you progress fast enough, it seems a matter of indifference to him whether you are progressing to the stars or the devil. So that his house is filled with an endless succession of literary and political fashions—men who wear long hair because it is romantic; men who wear short hair because it is medical; men who walk on their feet only to exercise their hands, and men who walk on their hands for fear of tiring their feet. But though the inhabitants of his salons are generally fools, like himself, they are almost always, like himself, good men. I am really surprised to see a criminal enter there."

"My good fellow," I said, firmly, striking my stick on the pavement, "the truth of this affair is very simple. To use your own eloquent language, you have the 'slight disadvantage' of being off your head. You see a total stranger in a public street; you choose to start certain theories about his eyebrows. You then treat him as a burglar because he enters an honest man's door. The thing is too monstrous. Admit that it is, Basil, and come home with me. Though these people are still having tea, yet, with the distance we have to go, we shall be late for dinner."

Basil's eyes were shining in the twilight like lamps.

"I thought," he said, "that I had outlived vanity."

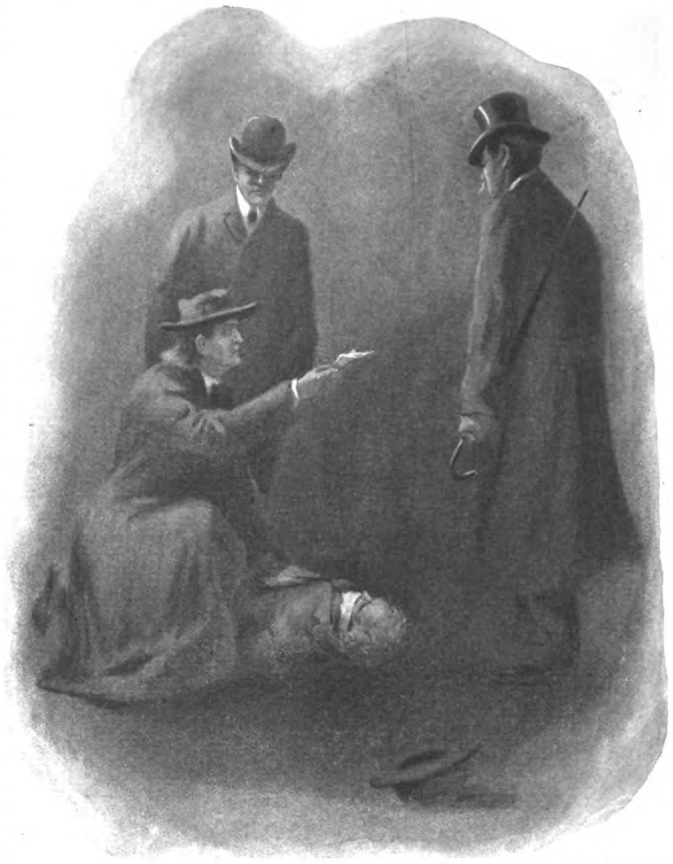
"What do you want now?" I cried.

"I want," he cried out, "what a girl wants when she wears her new frock; I want what a boy wants when he goes in for a slanging match with a monitor—I want to show somebody what a fine fellow I am. I am as right about that man as I am about your having a hat on your head. You say it cannot be tested. I say it can. I will take you to see my old friend Beaumont. He is a delightful man to know."

"Do you really mean?" I began.

"I will apologize," he said, calmly, "for our not being dressed for a call," and walking across the vast misty Square he walked up the dark stone steps and rang at the bell.

A severe servant in black and white opened the door to us; on receiving my friend's name his manner passed in a flash from astonishment to respect. We were ushered into the house very quickly, but not so quickly but that our host, a white-haired man with a fiery face, came out quickly to meet us.



"My dear fellow," he cried, shaking Basil's hand again and again, "I have not met you for years. Have you been—er—" he said, rather wildly. "Have you been in the country?"

"Not for all that time," answered Basil, smiling. "I have long given up my official position, my dear Philip, and have been living in a deliberate retirement. I hope I do not come at an inopportune moment."

"An inopportune moment!" cried the ardent gentleman. "You come at the most opportune moment I could imagine. Do you know who is here?"

"I do not," answered Gryce, with gravity. Even as he spoke a roar of laughter came from the inner room.

"Basil," said Lord Beaumont, solemnly. "I have Wimpole here."

Drawn by W. E. Mears

Basil bent suddenly down and tore a paper out of Sir Walter's breast pocket

"And who is Wimpole?"

"Basil," cried the other, "you must have been in the country. You must have been in the antipodes. You must have been in the moon. Who is Wimpole? Who was Shakespeare?"

"As to who Shakespeare was," answered my friend, placidly, "my views go no further than thinking that he was not Bacon. More probably he was Mary Queen of Scots. But as to who Wimpole is—" and his speech also was cloven with a roar of laughter from within.

"Wimpole!" cried Lord Beaumont, in a sort of ecstasy. "Haven't you heard of the great modern wit? My dear fellow, he has turned conversation, I do not say into an art—for that perhaps it always was—but into a great art, like the statuary of Michael Angelo—an art of masterpieces. His repartees, my good friend, startle one like a man shot dead. They are final; they are—"

Again there came the hilarious roar from the room, and almost with the very noise of it a big, panting, apoplectic old gentleman came out of the inner house into the hall where we were standing.

"Now, my dear chap," began Lord Beaumont, hastily.

"I tell you, Beaumont, I won't stand it," exploded the large old gentleman. "I won't be made game of by a twopenny literary adventurer like that. I won't be made a guy. I won't—"

"Come, come," said Beaumont, feverishly. "Let me introduce you. This is Mr. Justice Gryce — that is, Mr. Gryce. Basil, I am sure you have heard of Sir Walter Cholmondeliegh."

"Who has not?" asked Gryce, and bowed to the worthy old baronet, eyeing him with some curiosity. He was hot and heavy in his momentary anger, but even that could not conceal the noble, though opulent, outlines of his face and body, the florid white hair, the Roman nose, the body stalwart, though corpulent, the chin aristocratic, though double. He was a magnificent courtly gentleman—so much of a gentleman that he could show an unquestionable weakness of anger without altogether losing dignity; so much of a gentleman that even his mistakes were well bred.

"I am distressed beyond expression, Beaumont," he said, gruffly, "to fail in respect to these gentlemen, and even more especially to fail in it in your house. But it is not you or they that are in any way concerned, but that flashy half-caste jackanapes."

At this moment a young man with a twist of red mustache and a sombre air came out of the inner room. He also did not seem to be greatly enjoying the intellectual banquet within.

"I think you remember my friend and secretary, Mr. Drummond," said Lord Beaumont, turning to Gryce. "Even if you only remember him as a schoolboy."

"Perfectly," said the other. Mr. Drummond shook hands pleasantly and respectfully, but the cloud was still on his brow. Turning to Sir Walter Cholmondeliegh, he said:

"I was sent by Lady Beaumont to express her hope that you were not going yet, Sir Walter. She says she has scarcely seen anything of you."

The old gentleman, still red in the face, had a temporary internal struggle; then his good manners triumphed, and with a gesture of obeisance and a vague utterance of "If Lady Beaumont . . . a lady, of course," he followed the young man back into the salon. He had scarcely been deposited there half a minute before another peel of laughter told that he had (in all probability) been scored off again.

"Of course I can excuse dear old Cholmondeliegh," said Beaumont, as he helped us off with our coats. "He has not the modern mind."

"What is the modern mind?" asked Gryce.

"Oh, it's enlightened, you know, and progressive . . . and faces the facts of life seriously." At this moment another roar of laughter came from within.

"I only ask," said Basil, "because of the last two friends of yours who had the modern mind one thought it wrong to eat fishes and the other thought it right to eat men. I beg your pardon—this way, if I remember right."

"Do you know," said Lord Beaumont, with a sort of feverish entertainment as he trotted after us towards the interior, "I can never quite make out which side you are on. Sometimes you seem so liberal and sometimes so reactionary. *Are* you a modern, Basil?"

"No," said Basil, loudly and cheerfully, as he entered the crowded drawing-room, "before Abraham was, I am."

This caused a slight diversion, and some eyes were turned away from our slim friend with the Oriental face for the first time that afternoon. Two people, however, still looked at him. One was the daughter of the house, Muriel Beaumont, who looked at him with great violet eyes and with the intense and awful thirst of the female upper class for verbal amusement and stimulus. The other was Sir Walter Cholmondeliegh, who looked at him with a still and sudden but unmistakable desire to throw him out of the window.

He sat there coiled, rather than seated, on the easy-chair, everything from the curves of his smooth limbs to the coils of his silvered hair suggesting the circles of a serpent more than the straight limbs of a man—the unmistakable, splendid, serpentine gentleman we had seen walking in North London, his eyes shining with repeated victory.

"What I can't understand, Mr. Wimpole," said Muriel Beaumont, eagerly, "is how you contrive to treat all this so easily. You say things quite philosophical and yet so wildly funny. If I thought of such things, I'm sure I should laugh outright when the thought first came."

"I agree with Miss Beaumont," said Sir Walter, suddenly exploding with indignation. "If I had thought of anything so futile I should find it difficult to keep my countenance."

"Difficult to keep your countenance!" cried Mr. Wimpole, with an air of alarm. "Oh, keep your countenance! Keep it in the British Museum. It must not be mislaid."

Every one laughed uproariously, as they do at an already admitted readiness, and Sir Walter, turning suddenly purple, shouted out,

"Do you know who you are talking to with these tomfooleries?"

"I never talk tomfooleries," said the other, "without first knowing my audience."

Gryce walked across the room and tapped the red-mustached secretary on the shoulder. That gentleman was leaning against the wall regarding the whole scene with a great deal of gloom; but, I fancied, with very particular gloom when his eyes fell on the young lady of the house rapturously listening to Wimpole.

"May I have a word with you outside, Drummond?" asked Gryce. "It is about business. Lady Beaumont will excuse us."

I followed my friend, at his own request, greatly wondering, to this strange external interview. We paused abruptly, in a kind of side room out of the hall.

"Drummond," said Basil, sharply, "there are a great many good people and a great many sane people here this afternoon. Unfortunately, by a kind of coincidence, all the good people are mad and all the sane people are wicked. You are the only person I know of here who is honest and has also some common sense. What do you make of Wimpole?"

Mr. Secretary Drummond had a pale face and red hair, but at this his face became suddenly as red as his mustache.

"I am not a fair judge of him," he said.

"Why not?" asked Gryce.

"Because I hate him like hell," said the other, after a long pause, and violently.

Neither Gryce or I needed to ask the reason; his glances towards Miss Beaumont and the stranger were sufficiently illuminating. Gryce said, quietly:

"But before—before you came to hate him, what did you really think of him?"

"I am in a damnable difficulty," said the young man, and his voice told us, like a clear bell, that he was an honest man. "If I spoke about him as I feel about him now I could not trust myself. And I should like to be able to say that when I first saw him I thought he was charming. But, again, the fact is, I didn't. I hate him; that is my private affair. But I also disapprove of him—really, I do believe I disapproved of him quite apart from my private feelings. When first he came I admit he was much quieter, but I did not like, so to speak, the moral swell of him. Then that jolly old Sir Walter Cholmondeliegh got introduced to us, and this fellow, with his cheap-jack wit, began to score off the old man in the way he does now. Then I felt that he must be a bad lot; it must be bad to fight the old and the kindly. And he fights the poor old chap savagely, unceasingly, as if he hated old age and kindliness. Take, if you want it, the evidence of a prejudiced witness. I admit that I hate the man because a certain person admires him. But I believe that, apart from that, I should hate the man because old Sir Walter hates him."

This speech affected me with a genuine sense of esteem and pity for the young man—that is, of pity for him because of his obviously hopeless worship of Miss Beaumont and of esteem for him because of the direct realistic account of the history of Wimpole which he had given. Still, I was sorry that he seemed so steadily set against the man and could not help referring it to an instinct of his personal relations, however nobly disguised from himself.

In the middle of these meditations Gryce whispered in my ear what was perhaps the most startling of all interruptions.

"In the name of God, let's get away."

I have never known exactly in how odd a way this odd old man affected me; I only know that for some reason or other he so affected me that I was within a few minutes in the street outside.

"This," he said, "is a beastly but amusing affair."

"What is?" I asked, baldly enough.

"This affair. Listen to me, my old friend. Lord and Lady Beaumont have just invited you and me to a grand dinner party this very night, at which Mr. Wimpole will be in all his glory. Well, there is nothing very extraordinary about that. The extraordinary thing is that we are not going."

"Well, really," I said. "It is already six o'clock, and I doubt if we could get home and dress. I see nothing extraordinary in the fact that we are not going."

"Don't you?" said Gryce. "I'll bet you'll see something extraordinary in what we're doing instead."

I looked at him, blankly.

"Doing instead?" I asked. "What are we doing instead?"

"Why," said he, "we are waiting for one or two hours outside this house on a winter evening. You must forgive me; it is all my vanity. It is only to show you that I am right. Can you, with the assistance of this cigar, wait until both Sir Walter Cholmondeliegh and the mystic Wimpole have left this house?"

"Certainly," I said. "But I do not know which is likely to leave first. Have you any notion?"

"No," he said. "Sir Walter may leave first in a glow of rage. Or, again, Mr. Wimpole may leave first, feeling that his last epigram is a thing to be flung behind him like a firework. And Sir Walter may remain some time to analyze Mr. Wimpole's character. But they will both have to leave within reasonable time, for they will both have to get dressed and come back to dine here to-night."

As he spoke the shrill double whistle from the porch of the great house drew a dark cab to the dark portal. And then a thing happened that we really had not expected. Mr. Wimpole and Sir Walter Cholmondeliegh came out at the same moment.

They paused for a second or two opposite each other in a natural doubt; then a certain geniality, fundamental perhaps in both of them, made Sir Walter smile and say: "The night is foggy. Pray take my cab."

Before I could count twenty the cab had gone rattling up the street with both of them. And before I could count twenty-three Gryce had hissed in my ear:

"Run after the cab; run as if you were running from a mad dog—run."

We pelted on steadily, keeping the cab in sight, through dark mazy streets. God only, I thought, knows why we are running at all, but we are running hard. Fortunately, we did not run far. The cab pulled up at the fork of two streets, and Sir Walter paid the cabman, who drove away rejoicing, having just come in contact with the more generous among the rich. Then the two men talked together, as men do talk together after giving and receiving great insults—the talk which leads either to forgiveness or a duel—at least so it seemed as we watched it from ten yards off. Then the two men shook hands heartily, and one went down one fork of the road and one down another.

Basil, with one of his rare gestures, flung his arm forward.

"Run after that scoundrel," he cried; "let us catch him now."

We dashed across the open space and reached the juncture of the paths.

"Stop!" I shouted, wildly, to Gryce. "That's the wrong turning."

He ran on.

"Idiot!" I howled. "Old Sir Walter's gone down there! The fellow Wimpole has slipped us. He's half a mile down the other road. You're wrong. . . . Are you deaf? You're wrong!"

"I don't think I am," he panted, and ran on.

"But I saw him!" I cried. "Look in front of you? Is that Wimpole? It's the old man. . . . What are you doing? What are we to do?"

"Keep running," said Gryce.

Running soon brought us up to the broad back of the pompous old baronet whose white whiskers shone silver in the fitful lamplight. My brain was utterly bewildered; I grasped nothing.

"Charlie," said Basil, hoarsely, "can you believe in my common sense for four minutes?"

"Of course," I said, panting.

"Then help me to catch that man in front and hold him down. Do it at once, when I say 'now.' Now!"

We sprang on Sir Walter Cholmondeliegh and rolled that portly old gentleman on his back. He fought with a commendable valor, but we got him tight. I had not the remotest notion why. He had a splendid and full-blooded vigor; when he could not box he kicked and we bound him; when he could not kick he shouted and we gagged him. Then, by Basil's arrangement, we dragged him into a small court by the street side and waited. As I say, I had no notion why.

"I am sorry so to incommode you," said Basil, calmly, out of the darkness, "but I have made an appointment here."

"An appointment?" I said, blankly.

"Yes," he said, glancing calmly at the apoplectic old aristocrat gagged on the ground, whose eyes were staring impotently from his head. "I have made an appointment here with a thoroughly nice young fellow. An old friend. Jasper Drummond his name is; you may have met him this afternoon at the Beaumont's. He can scarcely come, though, till the Beaumont's dinner is over."

Grace George and Margaret Illington

Frederick Perry and Kyrle Bellew

"The Two Orphans" at the New Amsterdam

D'Ennery and Cormon's famous melodrama, "The Two Orphans," is being played at the New Amsterdam Theatre by a remarkable cast, including Kyrle Bellew and Clara Morris. There are probably few theatre-goers who are not familiar with the story of "The Two Orphans," but an indication of the plot may serve to recall it more clearly. The two orphans, "Henriette" and "Louise," have come to Paris from Normandy to make their home with an aged relative. He fails to meet the coach on its arrival, and while the two girls are waiting for him they are set upon by ruffians, who seize "Henriette" and carry her off to the home of the unscrupulous "Marquis de Presles." The action is based upon the adventures of the two orphans, who are finally happily united

"The Shepherd King" at the Knickerbocker

"The Shepherd King," a drama of Biblical times by Wright Lorimer and Arnold Reeves, was produced at the Knickerbocker Theatre on April 5, with Mr. Lorimer as "David." The play is a dramatization of the Old Testament story of the boy David's rise to power and fame, of his relations with Saul of Israel and Prince Jonathan, and of his love for Michal, the king's daughter. The action of the play begins with the summoning of the shepherd boy to the king's court. Then follow the scenes of "David's" arrival at the camp of the Israelites; his winning of "Saul's" affection; his challenge and successful combat with the giant "Goliath"; his rise to power and influence in Israel, and the growing jealousy of "Saul," who feels that the prophecy of "Samuel" referred to "David" in declaring that the next king should be no issue of "Saul's." The love interest is complicated by the hopeless passion of "Merab," "Michal's" sister, for "David," and the affection of "Phalti," the prince, for "Michal"

MISS EDITH WYNNE MATTHISON

Miss Matthison plays "Everyman" in Mr. Ben Greet's production of the morality play of that name, which is now on a tour through the Eastern cities. Miss Matthison was last seen in New York in Mr. Greet's productions of Shakespeare's "Twelfth Night" and "As You Like It," the first of which was given in the Elizabethan manner, as described in "Harper's Weekly" of March 12. She also appeared in a revival of the morality, "Everyman," and of "She Stoops to Conquer"

Correspondence

THE "THIRD TERM" BOGEY

EDGEWOOD PARK, PA., *April 5, 1904.*

To the Editor of Harper's Weekly:

SIR,—I have just read in your issue for April 2, the letter of D. R. Waters, and it prompts me to ask if there is no way to put to rest this "third term" spook or bogey, and especially the habit of invoking Washington as authority against it. How can one read his farewell address and find in it an argument against the principle of a third term when the burden of the opening paragraphs, again and again repeated, is that the more settled condition of the country will now at last permit him to retire from public life, as he would gladly have done four years before, and return to that private life which at the very first, indeed, he left only with reluctance. But he leaves no room for doubt that had the public weal required it, he would have been ready to sacrifice his own inclination and serve his country another term. "I rejoice," he says, "that the state of your concerns . . . . no longer renders the pursuit of inclination *incompatible with the sentiment of duty and propriety*." So far from having scruples against a third term, he is anxious lest his deprecating it appear due to a want of public spirit and patriotism.

As to the principle itself of a third term, as long as the people retain in their own hands the right of passing every four years upon the question, who shall be President, why should they deliberately put out of their power the selection, at some critical hour in the nation's history, of the one man for the hour simply because he had already held the office for two or even three or four terms? Can we imagine the American people being so monstrously foolish? If three terms are dangerous, why not a second, and then suppose that in 1864 we had been by the Constitution forbidden to re-elect Lincoln! Or suppose the war had lasted another four years and we had been brought in 1868 face to face with the third-term spook, who believes it would have resulted in putting a new man at the helm?

As for the availability of Cleveland which this and especially another correspondent in the same issue find so small, I cannot refrain from expressing my own conviction as an independent, that he is the only Democrat who would have a ghost of a chance against Roosevelt. I do not think any Democrat can be elected; but certainly he is the only one in sight who would have a fighting chance, and that I think he would have. He would sweep the independent vote with enthusiasm, while thousands of Republicans would be won by the inflexible political integrity of the man. If the Democrats do not see it at the convention, their stupidity will almost merit the defeat awaiting them.

I am, sir, H. D. C.

A SERVICE

HUNTSVILLE, TEXAS, *April 6, 1904.*

To the Editor of Harper's Weekly:

SIR,—I do not agree with your correspondent, in the WEEKLY of April 2, who charges you with being a Democratic advocate.

You appear to me to be rather a looker-on who is offering to one poor sparrer, who has just received two consecutive solar plexus blows, some suggestions to assist him in avoiding a third and surely fatal blow in the same place. In our government, parties are the best means of getting good officers, and you are doing the nation at large a good deed when you urge the Democratic party not to commit suicide, now when hope is just dawning.

I am, sir, A DEMOCRAT.

A TWENTIETH-CENTURY AMERICAN ABROAD

NAPLES, ITALY, *April 11, 1904.*

To the Editor of Harper's Weekly:

SIR,—I have been in Naples one week, which is just about seven days too much, and I leave for Rome to-morrow. From what I have read and have been told Naples is a very fine place; no one should miss it, but if one cannot come over here a drive along Avenue "A," New York, and the Bowery, would about fill the bill. I understand the population here is about 300,000,000—750,000 of which are beggars, the rest fleas. I have counted 2,367,513 of the latter, and do not think I have yet reached the "home hole." The principle products of Naples are: One, beggars; two, fleas; three, bad smells; four, macaroni and talk.

To any one wanting a real nice trip I should heartily recommend Newark, New Jersey.

I went over to Capri yesterday, and I advise any prospective tourist to spend three months on Blackwell's Island, where he will have more fun and better society. Yours for America.

I am, sir, G. S. C.

RESPECT FOR LAW

ST. LOUIS, MO., *March 17, 1904.*

To the Editor of Harper's Weekly:

SIR,—Anent your comment in the WEEKLY on an article by Booker T. Washington recently published in the *Age-Herald*, I should like to remark that it is not very strange to me why the negro has so little regard for law as to be continually transgressing. If the white man set him a better example, it would be different. We might then have a better reason for branding him as possessed of a nature over which the *respect* for law, and not law's rod of iron, is devoid of influence—that is, if he then failed to follow the example set him.

Observe, as of course you have, how the negro is punished for his transgressions. If he commit murder, a mob is immediately organized, almost as if by magic, to commit crime for crime—to do murder in a more fiendish way, if possible, than the manner in which the one has already been committed by their murderous victim. In their execution of punishment, they strive to eclipse, as far as possible, the cruelty of the old Mosaic law. They burn him at the stake, cut him to pieces with knives, or kill him in any other way by which his death can be the most slowly and fiendishly brought about. In doing so, in their temporary insanity, they flatter themselves that they are angels of justice, Daniels at judgment; that they are doing their country a credit and glory-deserving act. But are they? No! They themselves are violators of the law of their land—as much so, in truth, as was their victim. And that is not all. They have set themselves as examples for law-breaking to every ignorant negro in the country. In his mind he asks, If they can violate the law why cannot I? To him the real crime lies in his lack of ability to escape punishment; not in the violation itself. The white man has set the example, and has also escaped punishment. He can but try.

In my opinion, there is too much of this thing of teaching man to respect law, either man made or God made, out of fear alone. At the same time it teaches him to be a coward, and that no man should be. Let all be taught to be brave, and to respect all laws for the love of order, peace and justice to one another. There are times when any man will temporarily conquer such fear, and if he has obeyed a law for that reason *alone* there will then be nothing to restrain him. Of course, linked with such teachings, there must also always be punishment for the transgressor. It would be far from wisdom to do away with punishment, but let the punishment be administered according to some code of laws—not according to the dictates of an insane and revengeful mind. And for the administration of mob punishment, the plea that the working of the law is too slow is but the poorest of excuses. It seems not so when the transgressor is a white man, and it should not be so when a man of a *different color* is the erring one.

I am, sir,

CHARLES ALMA BYERS.

SPELL IT C-R-U-S-E

WESTWOOD, MASS., *April 4, 1904.*

To the Editor of Harper's Weekly:

SIR,—Widow's cruise (WEEKLY, p. 455) is sanctioned by the dictionary, but is more appropriate to her experiences in Newport and off Coney Island, while cruse is the Bible spelling of the vessel containing oil (*r.* 1 Kings, 17:12).

I am, sir, C. S. LOCKE.

WHO WILL INHERIT AMERICA?

BROOKLINE, MASS., *March 29, 1904.*

To the Editor of Harper's Weekly:

SIR,—Your correspondent from Chicago who chortles over the supposed fact that the Irish-Americans will inherit the United States must look closer into the facts and statistics. The Irish of the first generation do multiply fast, but as they rise in the social scale this rapid multiplication soon ceases. Even the statistics of the mill cities will show this. Moreover, it is a matter of common experience. I know several Irish-Americans of the second generation, and the bachelors, "old maids," and small families level down to the ordinary native New England standard. Moreover, many even of the Irish of the first generation never marry, notably multitudes of those who go out to service.

If the statistics are looked carefully into and used with discretion, it would seem fair to conclude that not the "old American" stock, nor the Irish, nor the Germans will inherit this land, but the French-Canadians, the Italians, and the Russian Hebrews. However, probably in the second and third generations the same influences will affect them in turn which has already affected the "native American," the Irish, and the German.

I am, sir, J. F. TWOMBLY.

CONCURRENCE

CLAYTON, NEW MEXICO, *April 15, 1904.*

To the Editor of Harper's Weekly:

SIR,—I have just read the communication of H. J. Stewart, of Chattanooga, Tenn., and am so impressed with the absolute truth of his statement that I must add my testimony to his.

I am a Southern woman, born and reared among the negroes, and from observation of many years can truthfully state that no self-respecting Northerner can or will equalize the negro when he comes in contact with the race as it is in the South.

My husband was born and reared in Vermont, and had all the enthusiastic ideas of New-Englanders until he came West. All he needed to open his eyes to the negro was to be thrown with him. I am satisfied it is invariably so with intelligent reasonable people.

I am, sir, MRS. H. J. HAMMOND.

England and the President

(Continued from page 720.)

velt's other qualities—his breezy and invigorating self-confidence, his great political courage (which is something better than personal courage or moral courage or the courage of one's opinions, because it embraces all three), his buoyant, eager, somewhat slapdash temperament, and his entire adequacy to the practical duties of whatever office he happens to be holding—irresistibly compel the sympathy and admiration of the English people. They have no one like him over here. He is an amalgam of half a dozen English favorites. Take Selous, the big-game hunter, add Lord Charles Beresford (who would be a Roosevelt himself if he were not an Irishman), add again Baden-Powell, the defender of Mafeking, multiply by Mr. C. A. Pearson, the chairman of the Tariff Reform League and the champion "hustler" of the kingdom, throw in a dash of Chamberlain's decisiveness and practicality and another dash of his belligerency, and you get a result which closely corresponds to the English idea of Mr. Roosevelt.

As for his policy, Englishmen find in it a great deal more to approve than they ever expected to—especially in the sphere of foreign affairs. Mr. Roosevelt came to the Presidency with something of the reputation of an Anglophobe. Englishmen waited with more than a little anxiety to see what would follow the impact of his tingling personality. They had heard of his militant impulsiveness, and they remembered some utterances of his, of ultra-Bismarckian frankness, on the Alaska question and the Monroe Doctrine. They were prepared accordingly for exciting times, and they are proportionately relieved to find Anglo-American relations as satisfactory at this moment as they ever were. England does not care twopence who is in the Presidential chair so long as he is not too flagrantly hostile to or suspicious of Great Britain; but it has given her peculiar pleasure to find in Mr. Roosevelt a President who is firm without being belligerent and conciliatory, though in no way weak. Outside of Anglo-American questions Englishmen were particularly struck with the effectiveness of the President's action in Panama and throughout the Venezuelan mess and with the strong line he has permitted Mr. Hay to take in China. There is a feeling here that Mr. Roosevelt and Mr. Hay are more far-seeing in their Eastern policy than the bulk of their countrymen, and that, if only public opinion would allow them, they would be prepared to go much farther than they have as yet done. I heard one Englishman of high position say that, in his opinion, Mr. Roosevelt and Mr. Hay were engaged on the task of educating their countrymen in foreign affairs. This is a task with which England has every sympathy, believing that the more Americans realize that an active diplomacy cannot be always successful without the readiness to back it up by war, and the more they get rid of such bogeys as "isolation," "non-interference," and "entangling alliances," the nearer will England and the United States be brought to practical co-operation in the Far East.

In matters of purely domestic moment what most impresses Englishmen in Mr. Roosevelt is his insistence on efficiency. They consider him to have come nearer to making public office a public trust, in fact as well as name, than any other American President. They like to read of how he has appointed men to office in spite of the "machine," and they believe him to have breathed a new life of thoroughness and public-spiritedness into the army, the navy, and the civil service. His success in passing the Cuban Reciprocity Treaty was described by an Englishman as "one of the most signal victories ever won by an American President over the grasping provincialism of Congress." His intervention in the coal strike was only criticised from one point of view—that it should have been so long deferred. The objections urged against it by some Americans—that it was "unconstitutional," that it would "increase the arrogance of labor," and so on—carried no weight whatever in England. But naturally it is Mr. Roosevelt's fight against the trusts that has most engaged English opinion. With the masses it makes him quite a hero, and as anything that diminishes the powers of the trusts is thought to be good for English trade, his policy also finds considerable approval among business men. I think, though, one may take it that the best commercial opinion of the country regards the anti-trust campaign as likely to produce more disturbance to business than positive benefit to any one. There is a growing disbelief in the effectiveness of the measures proposed by Mr. Roosevelt, and a distinct suspicion that he will end by injuring commerce itself. This suspicion became almost a conviction when the decision of the Supreme Court in the Northern Securities case was made known. The resurrection of an obsolete law to thwart that movement towards railroad consolidation which has been of such inestimable advantage to travellers, shippers, inventors, and railroad men, struck Englishmen as anything but a wise or beneficial proceeding. Nevertheless, England thinks that Americans do well to be proud of their President, and fully expects to see him elected next November.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

ALL SEAMEN
know the comforts of having on hand a supply of BORDEN'S EAGLE BRAND CONDENSED MILK. It can be used so agreeably for cooking, in coffee, tea, and chocolate. Lay in a supply for all kinds of expeditions. Avoid unknown brands.—[*Adv.*]

INCREASE your strength, ward off ill-health; use Abbott's Angostura Bitters, the strength-giver.—[*Adv.*]

SINGERS and public speakers will find PISO'S CURE FOR CONSUMPTION an effectual cure for hoarseness.—[*Adv.*]

ADVERTISEMENTS.

SOAKED IN COFFEE
Until too Stiff to Bend Over

"When I drank coffee I often had sick headaches, nervousness, and biliousness much of the time, but about 2 years ago I went to visit a friend, and got in the habit of drinking Postum.

"I have never touched coffee since, and the result has been that I have been entirely cured of all my stomach and nervous trouble.

"My mother was just the same way. We all drink Postum now, and have never had any other coffee in the house for 2 years, and we are all well.

"A neighbor of mine, a great coffee drinker, was troubled with pains in her side for years, and was an invalid. She was not able to do her work, and could not even mend clothes or do anything at all where she would have to bend forward. If she tried to do a little hard work she would get such pains that she would have to lie down for the rest of the day.

"I persuaded her at last to stop drinking coffee and try Postum Food Coffee, and she did so, and she has used Postum ever since. The result has been that she can now do her work, can sit for a whole day and mend, and can sew on the machine, and she never feels the least bit of pain in her side; in fact, she has got well, and it shows coffee was the cause of the whole trouble.

"I could also tell you about several other neighbors who have been cured by quitting coffee and using Postum in its place." Name given by Postum Co., Battle Creek, Mich.

Look in each package for the famous little book, "The Road to Wellville."

THE CLUB

are the original bottled Cocktails. Years of experience have made them THE PERFECT COCKTAILS that they are. Do not be lured into buying some imitation. The ORIGINAL of anything is good enough. THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She wires Warrisden to come by an early train, and asks him to find Tony and bring him home. Warrisden accepts the commission. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure. Warrisden learns from Mr. Chase that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. He starts out to find him, and finally reaches him far up in the North Sea. Warrisden uses every argument to prevail upon Tony to come back, but he refuses, and Warrisden is forced to return alone. He reports to Pamela the failure of his mission, but, to his surprise, she does not seem disappointed. He thinks it is because of the news which he hears from her—that Sir John Stretton has died, which will naturally bring Tony home. But that is not the whole explanation: for Pamela is overcoming her old indifference toward life, and in her life are being aroused new sympathies and emotions. Tony remains on the trawler until the term of his cruise is over, and then, after much perplexity and indecision, decides to return to London, feeling that he has seen a way out of his difficulties.

CHAPTER XIII

IN STEPNEY

MR. CHASE left the mission quite early in the evening and walked towards his lodging. That side of his nature which clamored for enjoyments and a life of luxury was urgent with him to-night. As he turned into his street he began to debate with himself whether he should go in search of a cab and drive westwards out of the squalor. A church clock had just struck nine; he would find his club open and his friends about the fire. Thus debating he came to his own door and had unconsciously taken his latch-key from his pocket before he had decided upon his course. The latch-key decided him. He opened the door and went quickly up to his sitting-room. The gas was low and what light there was came from the fire. Chase shut the door gently and his face underwent a change. There came a glitter into his eyes a smile to his lips. He crossed to the little cupboard in the corner and unlocked it stealthily even though he was alone. As he put his hand into it and grasped the decanter, something stirred in his armchair. The back of the chair was towards him. He remained for a second or two motionless, listening. But the noise was not repeated. Chase noiselessly locked the cupboard again and came back to the fire. A man was sitting asleep in the chair.

Chase laid a hand upon his shoulder and shook him.

"Stretton," he said; and Tony Stretton opened his eyes.

"I fell asleep waiting for you," he said.

"When did you get back?" asked Chase.

"I landed at Yarmouth this morning. I came up to London this afternoon."

Chase turned up the gas and lit a cigarette.

"You have not been home then?" he said. "There is news waiting for you there. Your father is dead."

"I know," Stretton replied. "He died a month ago."

Mr. Chase was perplexed. He drew up a chair to the fire and sat down.

"You know that?" he asked, slowly. "And yet you have not gone home?"

"No," replied Stretton. "And I do not mean to go."

Stretton was speaking in the quietest and most natural way. There was no trace in his manner of that anxiety which during the last few days had kept him restless and uneasy. He had come to his decision. Chase was aware of the stubborn persistence of his friend. And it was rather to acquire knowledge than to persuade that he put his questions.

"But why? You went away to make an independent home, free from the restrictions under which you and your wife were living. Well, you have got that home now. The reason for your absence has gone."

Stretton shook his head.

"The *reason* remains. Indeed, it is stronger now than it was when I first left England," he answered. He leaned forward with his elbows upon his knees, gazing into the fire. The light played upon his face, and Chase could not but notice the change which these few months had brought to him. He had grown thin and rather worn; he had lost the comfortable look of prosperity; his face was tanned. But there was more. It might have been expected that the rough surroundings amidst which Stretton had lived would have left their marks. He might have become rather coarse, rather gross to the eye. On the contrary, there was a look of refinement. It was the long battle with his own thoughts which had left the marks. The mind was showing through the flesh. The face had become spiritualized.

"Yes, the reason remains," said Stretton. "I left home to keep my wife. We lived a life of quarrels. All the little memories, the associations, the thousand and one small private things—ideas, thoughts, words, jokes even, which two people who care very much for one another have in common—we were losing, and so quickly—so very quickly. I can't express half what I mean. But haven't you seen a man and a woman at a dinner-table when some chance sentence is spoken, suddenly look at one another just for a second, smile, perhaps—at all events, speak, though no word is spoken? Well, that kind of intimacy was going. I saw indifference coming, perhaps dislike, perhaps contempt—yes, contempt just because I sat there and looked on. So I went away. But the contempt has come. Oh, don't think I believe that I made a mistake in going away. It would have come none the less had I stayed. But I have to reckon with the fact that it has come."

Mr. Chase sat following Stretton's words with a very close attention. Never had Stretton spoken to him with so much frankness before.

"Go on," said Chase. "What you are saying is—much of it—news to me."

"Well, suppose that I were to go back now!" Stretton resumed. "At once—do you see?—that contempt is doubled."

"No," cried Chase.

"Yes, yes," Stretton insisted. "Look at it from Millie's point of view, not from yours, not even from mine! Look at the history of the incident from the beginning! Work it out as she would, nay," he corrected himself, remembering the letters, "as she has. I leave her when things are at their worst. That's not all. I take half Millie's fortune and am fool enough to lose it right away. And that's not all. I stay away in the endeavor to recover the lost ground, and I continually fail. Meanwhile, Millie has the dreary, irksome, exacting, unrequited life which I left behind to get through as best she can alone. Without pleasure, and she likes pleasure—" He suddenly looked at Chase with a challenge in his eyes. "Why shouldn't she?" he asked, abruptly. Chase agreed.

"Why shouldn't she?" he said, with a smile. "I am not disapproving."

Stretton resumed his former attitude, his former tone.

The Club of Queer Trades

(Continued from page 727.)

For I do not know how many hours we stood there calmly in the darkness. By the time those hours were over I had thoroughly made up my mind that the same thing had happened which had happened long ago on the bench of a British court of justice. Basil Gryce had gone mad. I could imagine no other explanation of the facts, with the portly, purple-faced country gentleman flung there strangled on the floor like a bundle of wood.

After about four hours a lean figure in evening dress rushed into the court. A glimpse of gaslight showed the red mustache and white face of Jasper Drummond.

"Mr. Gryce," he said, blankly, "the thing is incredible. You were right; but what did you mean? All through this dinner-party, where dukes and duchesses and editors of quarterlies had come especially to hear him, that extraordinary Wimpole kept perfectly silent. He didn't say a funny thing. He didn't say anything at all. What does it mean?"

Gryce pointed to the portly old gentleman strapped on the floor.

"This is what it means," he said.

Drummond, on observing a fat gentleman lying so calmly about the place, jumped back, as from a mouse.

"What?" he said, weakly, "what?"

Basil bent suddenly down and tore a paper out of Sir Walter's breast pocket, a paper which the baronet, even in his hampered state, seemed to make some effort to retain.

It was a large loose piece of white wrapping-paper, which Mr. Jasper Drummond read with a vacant eye and undisguised astonishment. As far as he could make out it consisted of a series of questions and answers, or, at least, of remarks and replies, arranged in the manner of a catechism. The greater part of the document had been torn and obliterated in the struggle, but the termination remained. It ran as follows:

"*C.* says . . . Keep countenance.
"*W.* Keep . . . British Museum.
"*C.* Know whom talk . . . absurdities.
"*W.* Never talk absurdities without . . ."

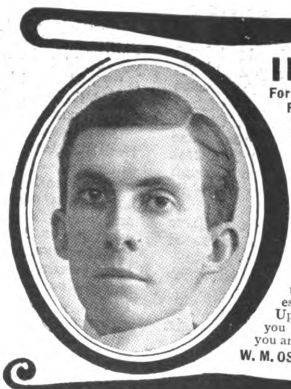
"What is it?" cried Drummond, flinging the paper down in a sort of final fury.

"What is it?" replied Gryce, his voice rising into a kind of splendid chant. "What is it? It is a great new profession. A great new trade. A trifle immoral, I admit, but still great, like piracy."

"A new profession," said the young man with the red mustache, vaguely, "a new trade?"

"A new trade," repeated Gryce, with a strange exultation, "a new profession! What a pity it is immoral."

"But what the devil is it?" cried Drummond and I in a breath of blasphemy.



"It is," said Gryce, calmly, "the great new trade of the Organizer of Repartee. This fat old gentleman lying on the ground strikes you, I have no doubt, as very stupid and very rich. Let me clear his character. He is, like ourselves, very clever and very poor. He is also not really at all fat; all that is stuffing. He is not particularly old, and his name is not Cholmondeliegh. He is a swindler and a swindler of a perfectly delightful and novel kind. He hires himself out at dinner-parties to lead up to other people's repartees. According to a preconcerted scheme (which you may find on that piece of paper) he says the stupid things he has arranged for himself, and his client says the clever things arranged for him. In short, he allows himself to be scored off for a guinea a night."

"And this fellow Wimpole—" began Drummond, with indignation.

"This fellow Wimpole," said Basil Gryce, smiling, "will not be an intellectual rival in the future. He had some fine things—elegance and silvered hair, and so on. But his intellect is with our friend on the floor."

"That fellow," cried Drummond, furiously, "that fellow ought to be in jail."

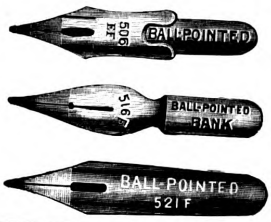
"Not at all," said Basil, indulgently, "he ought to be in the Club of Queer Trades."

IF YOU WANT CASH

For Your Real Estate, No Matter Where It Is, or Real Estate For Your Cash, I Can Promptly Fill Your Requirements.

I can not only fill your requirements, but I can save you some money at the same time. I have saved money for thousands of others and I can do it for you.

I am spending over $100,000 a year for the purpose of bringing together buyers and sellers of every kind of real estate—*and I do it*—in every state and county in the United States.



This is my specialty. I do not dabble in side lines. I now have the most extensive real-estate brokerage business in existence and it is still growing. My facilities are still increasing, and I offer you even better service to-day than I have ever been able to offer before. Will you avail yourself of this service? Can you afford not to? Think it over.

If you want to sell any kind of real estate in any part of the country, send me a brief description, including your lowest cash price. If you want to buy, tell me your requirements. Upon receipt of the necessary information I will write you fully and frankly, stating just exactly what I can do for you and how and why I can do it.

W. M. OSTRANDER, Suite 252, North American Bldg., Philadelphia

Ball-Pointed Pens

(Continued from page 732.)

"Without friends, and she is fond of having friends about her! Without any chance of gratifying her spirits or her youth! To make her life still more disheartening every mail which reaches her from New York brings her only another instalment of my disastrous record. Work it out from her point of view, Chase! Then add this to crown it all!" He leaned forward towards Chase and emphasized his words with a gesture of his hand. "The first moment when her life suddenly becomes easy and does so through no help of mine, I—the failure—come scurrying back to share it. No, Chase, no!"

He uttered his refusal to accept that position with a positive violence and flung himself back in his chair. Chase answered quietly,

"Surely you are forgetting that it is your father's wealth which makes her life easy."

"I am not forgetting it at all."

"It's your father's wealth," Chase repeated. "You have a right to share in it."

"Yes," Stretton admitted. "But what have rights to do with the question at all? If my wife thinks me no good, will my rights save me from her contempt?"

And before that blunt question Mr. Chase was silent. It was too direct, too unanswerable. Stretton rose from his chair and stood looking down at his companion.

"Just consider the story I should have to tell Millie—to-night, by George!" he exclaimed, suddenly, "if I went back to-night. I start out with fifteen hundred pounds of hers to make a home and a competence. And within a few months I am working as a hand on a North Sea trawler at nineteen shillings a week."

"A story of hardships undergone for her sake," said Chase. "For that's the truth of your story, Stretton. And don't you think the hardships would count for ever so much more than any success you could have won?"

"Hardships!" exclaimed Stretton, with a laugh. "I think I would find it difficult to make a moving tale out of my hardships. And I wouldn't if I could. No!"

As a fact, although it was unknown to Tony, Chase was wrong. Had Stretton told his story ever so vividly it would have made no difference. Millie Stretton had not the imagination to realize what those hardships had been. Tony's story would have been to her just a story, calling no doubt for exclamations of tenderness and pity. But she could not have understood what he had felt, what he had thought, what he had endured. Deeper feelings and a wider sympathy than Millie Stretton was dowered with would have been needed for comprehension.

Stretton walked across the room and came back to the fire. He looked down at Chase with a smile. "Very likely you think I am a great fool," he said, in a gentler voice than he had used till now. "No doubt nine men out of ten would say, 'Take the gifts the gods send you and let the rest slide. What if you and your wife drift apart? You won't be the only couple.' But frankly, Chase, that is not good enough. I have seen a good deal of it, the boredom, the gradual ossification—oh no, I am not content with that. You see, Chase," he stopped for a moment and gazed steadily into the fire. Then he went on quite simply, "You see, I care for Millie very much."

Chase knew well what weight to give to that short sentence. Had it been more elaborate it would have meant less. It needed no other commentary than the quiet sincerity with which it was uttered.

"Yes, I understand," he said.

To be Continued.

What We Know of the Sun

By Charles Augustus Young, Ph.D., LL.D.

Professor of Astronomy at Princeton

A VERY wonderful and, in some respects, mysterious object is the sun; a typical star, the nearest one, and not so far away as to prevent us from studying it in detail; and yet presenting conditions so different from those we can obtain in our laboratories that to a considerable extent it defies our reasonings and renders our conclusions merely conjectural.

Certain facts, however, have been established beyond any possible doubt, and must necessarily form the foundation of all reasonable theories and opinions.

We know, for instance, that its mean distance from the earth is very closely 93,000,000 miles; that its diameter is about 866,500 miles, or 109½ times that of the earth, and its bulk about 1,300,000 as great.

We know also that its mass is about 330,000 that of the earth, and that consequently gravity upon its surface is about 27½ times as powerful as here; a man who here weighs 150 pounds would weigh more than two tons upon the sun, and there a squirrel would not be able to jump any more friskily than an elephant here.

And yet, comparing the bulk of the sun with its mass, it is certain that, notwithstanding this enormous gravitating force, the sun's mean density is only about one-fourth as great as the earth's, or less than once and a half that of water; and this, although we know, as we shall see, that iron and other heavy metals are abundant in its constitution.

Again, from direct observation with the telescope we know that the visible surface of the sun, the so-called "photosphere," is not permanent and solid like that of the earth and moon, nor a continuous expanse of liquid like an ocean; it looks and acts like a sheet of tumbling clouds—brilliant lumps and grains floating in a less luminous medium.

Dark spots, sometimes as much as 100,000 miles in diameter, appear upon it from time to time, remain visible for a few days or months, continually undergoing changes of form and size as they pass across the disk.

Their motions show that the sun rotates on its axis like the earth, though much more slowly. We can, therefore, determine the position of its poles and its equator; and a significant fact appears—that spots near the equator complete their circuit in about two days less time than those half-way towards the poles, the periods being about twenty-five and twenty-seven days, respectively. Then, again, the spots are, for the most part, confined to two belts between 5° and 40° on each side of the equator.

Moreover, the spots have a roughly regular eleven-year periodicity of abundance; at the time of maximum they appear by scores and hundreds, while at the time of minimum there are none for weeks and months.

Strangest of all, the magnetic conditions of the earth sympathize to a certain extent. When spots abound the usual daily magnetic variations shown by our instruments become more extensive, and so-called "magnetic storms" are frequent, often accompanied by brilliant auroras, and sometimes by the demoralization of our telegraph and telephone circuits; in numerous instances these violent "storms" have coincided with the outburst or sudden transformation of some great sun spot, as on October 31 of last year.

Outside the photosphere the telescope at the time of a total solar eclipse shows the so-called "chromosphere," or "sierra"—a thin crimson fringe around the disk of the sun, looking like "a prairie on fire," to use Professor Langley's graphic expression. From it here and there project great tongues and clouds which sometimes reach a height exceeding 100,000 miles, as restless and changeable as the tossing flames of a conflagration.

Enveloping the whole, but visible only during the fleeting moments of a total eclipse, is the beautiful and mysterious "corona," a magnificent glory of pearly streamers radiating from every portion of the solar surface, but as a rule especially abundant in the sun-spot zones, and sometimes extending to a distance of several million miles. Near the poles they are shorter and curve each way like parted hair. The corona is never twice quite the same, but changes with no such rapidity as the prominences. In form and extent it exhibits an obvious sympathy with the sun-spot period.

The spectroscope proves beyond dispute that in the solar atmosphere interpenetrating and overlying the photosphere there exist nearly forty of our familiar chemical elements, mostly metals in the state of vapor. Iron, calcium, magnesium, sodium, and hydrogen are specially conspicuous, though such conspicuousness is not necessarily the measure of actual abundance.

In the spectrum of the chromosphere and prominences hydrogen, calcium, and helium stand out far more prominently than anything else, though numerous other elements at times appear. One of the most interesting triumphs of the spectroscope is that it has made the chromosphere and prominences observable whenever the sun shines; we need not wait for an eclipse; not so with the corona, however. But during an eclipse the corona spectrum shows certain bright lines which indicate the presence of some unknown gas, not yet detected upon the earth.

Experiments with burning-glasses make it certain that the effective temperature of the sun's surface, taken as a whole (doubtless the actual temperature varies widely at different points), is much above any which we can produce by artificial means; not even the electric furnace can rival it. Carried to the sun and kept there for a few hours only the earth would melt and pass into vapor. The estimated temperature is about 12,000° F., but cannot be regarded as exact.

Finally, we can measure by experiment how much heat is received by the earth from the sun, and it appears that when the sun is overhead the heat from it, after allowing for the loss in passing through the air, would be sufficient to melt in an hour a sheet of ice about three-quarters of an inch thick, provided that none of the heat were reflected from the surface of the ice or passed through it to the earth underneath. Just how much this simple statement implies our space does not permit us to set forth; it is enough to say that this heat received from the sun is the ultimate and sufficient source of nearly all the energy that is developed and utilized upon the earth.

The facts above stated are unimpeachable, but the conclusions to be drawn from them are in various degrees debatable.

In a second article the writer will try to show what the best authorities at present believe respecting the constitution of the sun.

Progress of the War

THE important results of the war in the Far East may be briefly summarized as follows: The Russians have had fifteen war-vessels sunk or disabled—the *Petropavlovsk*, *Pobieda*, *Czarevitch*, *Retvisan*, *Poltava*, *Pallada*, *Novik*, *Askold*, *Diana*, *Variag*, *Boyarin*, *Korietz*, *Yenesei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik*, *Askold*, and *Diana* are known to have been repaired and are again in commission. Japan has lost one torpedo-boat, and several of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. Admiral Togo has made two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor. The first land engagement of importance took place at Chongju, Korea, on March 28 and resulted in a Japanese victory.

April 19.—News was received to-day from St. Petersburg that Viceroy Alexeieff has telegraphed to the Czar asking to be relieved of his position of viceroy in the Far East. The general staff of the Russian government has given out the report that General Kuropatkin now has a force of 300,000 men in the Far East, and that the further despatch of troops has been suspended for the present.

April 20.—General Kuropatkin to-day reported to the Czar that Japanese transports were seen at Potinsa, about sixteen miles west of Tatung-Kao, at the mouth of the Yalu. The Japanese are concentrating their forces at Wiju. It is estimated that the Russians now have 50,000 men stationed along the north bank of the Yalu.

It is reported that 1500 engineers are to be sent from the Russian Black Sea shipyards to repair the damaged ships at Port Arthur.

April 21.—A despatch to-day from St. Petersburg says that the cost of the war to Russia in all branches of the service, up to April 5, is officially estimated at $46,250,000.

It is now definitely stated that the loss on the Russian destroyer *Bezstrashni*, sunk by the Japanese at Port Arthur on April 13, was three officers and fifty-five seamen.

April 22.—Admiral Alexeieff reports that while some steam-launches were engaged in placing mines at Port Arthur one of the mines exploded, killing twenty men. In his official report of the engagement of April 13 at Port Arthur, Admiral Alexeieff gives the number of rescued from the battle-ship *Petropavlovsk* as seven officers and seventy-three men.

April 24.—A report from Seoul says that the Japanese lines now extend thirty miles along the Yalu, reaching from Yongampho to ten miles above Wiju. There is no confirmation of the reports of recent engagements between the Russian and Japanese forces along the Yalu, in which both sides are said to have lost heavily.

April 25.—A Russian squadron, consisting of three cruisers and two torpedo-boats, appeared off the port of Gensan, Korea, 350 miles south of Vladivostok, and sank the Japanese merchant steamer *Goyo Maru*. It is believed that the war-ships belonged to the Vladivostok squadron, which was previously reported as having been bottled up in Vladivostok by the Japanese.

General Kuropatkin to-day telegraphed the Czar that small detachments of Japanese have been seen west of the Yalu. He also reports that the Japanese have been landing pontoon material and collecting boats for the purpose of constructing bridges near Wiju.

April 26.—It was officially admitted to-day by the Russian government at St. Petersburg that the Japanese forces are crossing the Yalu. Two companies of infantry are known to have crossed the river near Tchangjiou, and under cover of their guns reinforcements are crossing. No official reports have been received of any engagements of importance.

A report received to-day from Port Arthur says that the Russians have successfully launched four submarine boats.

A Biblical Story on the Stage

By the Rev. Percy Stickney Grant, D.D.

When I noticed on the billboards some few weeks ago the picture of a shepherd lad used to advertise a Biblical play, I immediately rated the piece in my mind as a third-class entertainment, and only wondered who it was that hoped to interest New York in such a play. When I saw the "Shepherd King" performed I was astonished, for I have seen few more consistently dramatic productions of a more constant emotional intensity.

But why should it surprise me that a great story of the Bible contained dramatic capabilities? These same stories are listened to by people year after year, with an interest—a human interest—that does not abate. The elements in the story of David are certainly more varied and profound than those which constitute the moving forces in most Greek dramas. A shepherd boy by his skill and courage in single combat with a gigantic champion was raised to a high position in the court and army. Endowed not only with courage and warlike skill, but with a melting heart for poetry and music, he became the lyric voice of his nation. Hero, poet, king—here already is a personality of wonderful endowment and of splendid accomplishment. David's relation to the gloomy and maddened King Saul, in the evening of his sovereign power and popularity. Saul's dealing with the supernatural. Best of all, perhaps, the ideal friendship of David and Prince Jonathan. Why should not such remarkable persons and events in their joint action produce upon the stage a moving drama? As a matter of fact, they do. The youthful simplicity, the skill, the courage of David in the freshened incidents of the play are stirring. The madness of Saul has a dignity and effectiveness not unpleasantly to be compared with Lear, and the Witch of Endor scene was not unworthy of expectation trained by Macbeth.

The meeting of Jonathan and David is as effective as the recognition by Electra of Orestes, and more powerful than the recognition in "Twelfth Night" of Viola by her brother.

The play opens on sunny fields and hillsides, the home of *Jesse*, the father of *David*. The hay is in the fields, the sheep are led to the fold, the women servants weave cloth, the brothers go and come about their rustic labors. While the father and mother of *David* are dignified and strong and the scene beautiful, yet there is no especial interest, the key is low and a little disappointing.

I found myself fearing my friend, who urged me to see the play, had been mistaken in his praise. Suddenly down a flight of rocky steps descends a group of royal personages. *Prince Jonathan*, like a young Achilles, the *Princess Michal*, and *Phalti*, a prince. There is an immediate quickening of the pulse when the royal world of *Saul's* court touches the simple pastoral life of *David's* home. From that moment on there is little pause in the intensity of the play. *Prince Phalti* is in love with *Princess Michal*, but the little princess at sight of *David* loses her heart to the future king. *Jonathan*, too, coming to ask the unknown lad reputed to be a magical musician, to play to his distracted and moody father, finds a comrade for his soul and for his future enterprise. The note of the play has been struck, and it proceeds on a high key of courts and camps all the more potent in contrast to the quiet pastoral opening.

Brought to *Saul's* camp to beguile him from his melancholy, *David* on his way uses his sling in preparatory prowess, slaying a lion which is pursuing the little princess as she strays from the camp picking flowers. The familiar exploit with Goliath is off the stage, but the expectant king and soldiery give breathless eagerness to the spectators as the result is awaited.

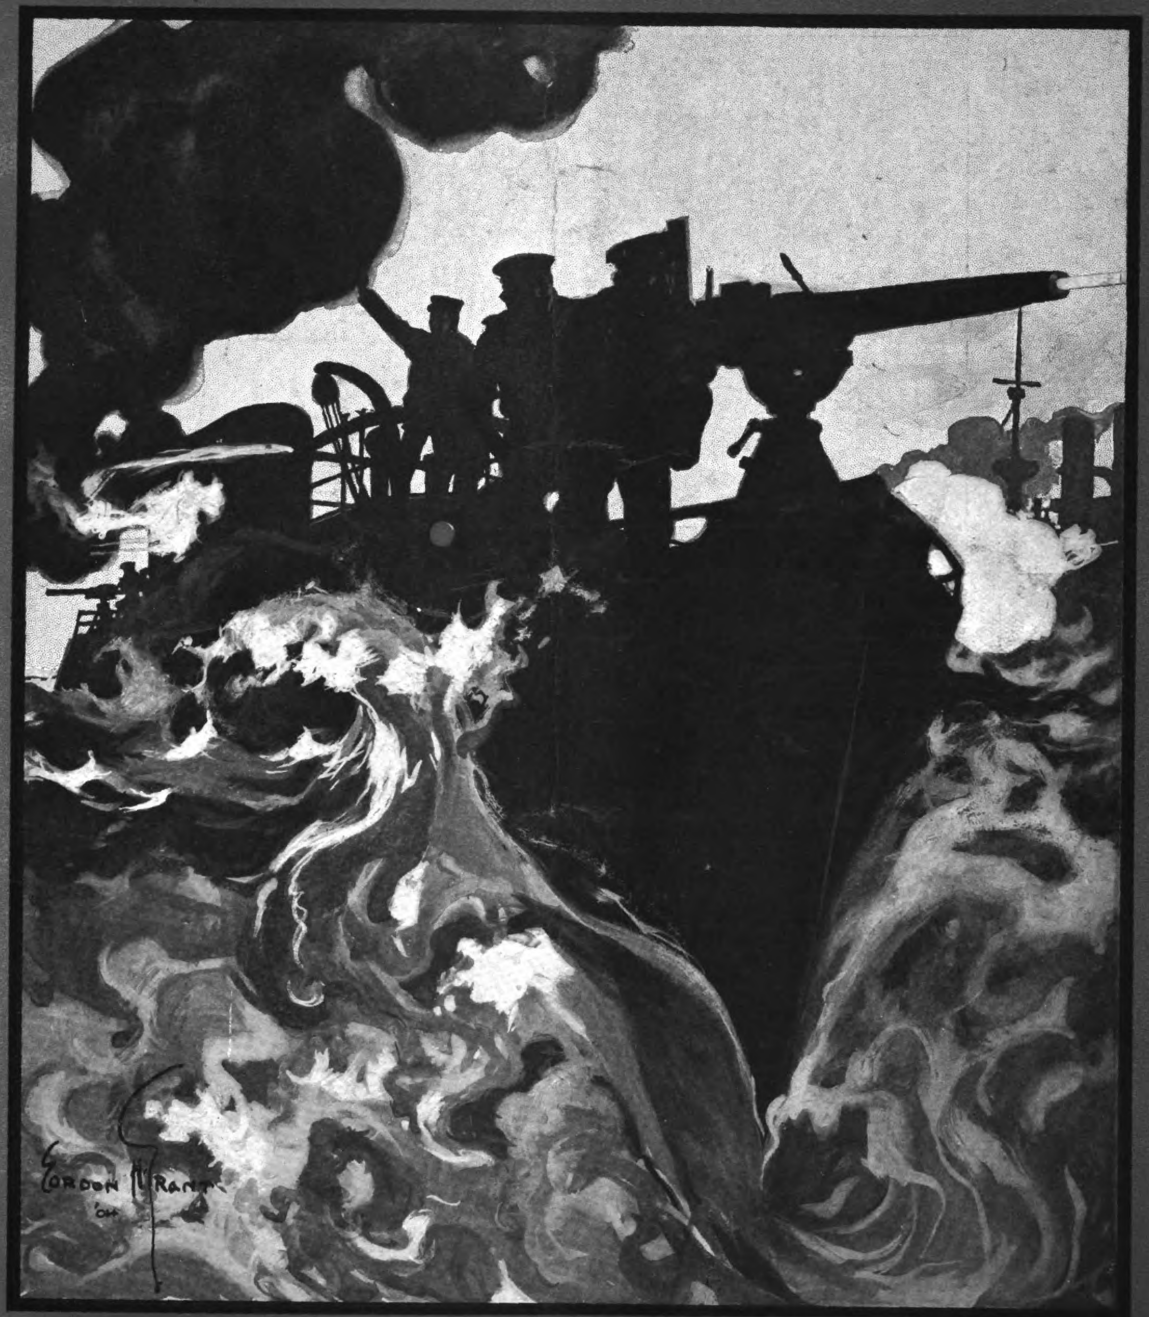
Merab, a second daughter of *Saul*, a haughty, ambitious nature, seeing the star of *David* in the ascendent, desires by alliance with him to seize for herself the sceptre which her father must soon lay down. The different natures and different loves of the two sisters are finely contrasted with strong dramatic effect. The noble *Prince Phalti*, the lover of *Princess Michal*, magnanimously appreciates her preference for *David*, and is a happy contrast to the blacker devotion which *Doeg*, the Edomite, gives the more ambitious of *Saul's* daughters. A strain of disloyalty to the Hebrew king is made to proceed from this Edomite and his brother *Omar* on the very just grounds of an historical antagonism of the intensest sort between Edom and Israel.

There are moments of thrilling emotion in the "Shepherd King," although in the whole play the tears are not far from brimming the eyes. As *Saul* in his rage at the faithless *Omar* strides from his throne and lifts his own hand to stab his faithless captain, *David* for the first time steps in front of him with harp in hand, singing and playing, until the king, fascinated and abashed, slinks back to his throne. Even with "Parsifal" in mind, I did not feel any deficiency in the delicate, powerful, but difficult, scene. When *Saul's* jealousy is kindled against *David* and he thrusts at him with a spear, it is a faithful bondmaiden whose heart unasked long ago on his father's farm had been given to the hero, that receives in her body the fatal blow. At the end, when the palace of *Saul* is the seat of terror, while just outside the battle with the Philistines rages, where *Saul* and *Jonathan* meet their death, the girl who mounts to the walls of the palace and describes the battle scene gives one the effect of a Homeric picture.

Not only is there quickness of movement in the play and intense emotion, but splendid color. The Oriental costumes and Oriental interiors are magnificent. The dancing, too, which so appropriately is a part of Oriental life, is introduced with great artistic effect, and the semi-barbaric cymbals clash with new emotional value.

There are some persons who do not like to see Biblical scenes reproduced on the stage for fear of irreverence. The "Shepherd King" does not contain a suspicion of irreverence, as do certain New Testament plays where the relation of Christ to the drama is a difficult one. There can be no slightest irreverence in giving dramatic vividness to the great Hebrew kings. The Old Testament has gradually thrown over these personages a kind of Olympian vagueness, and it actually helps our religious need to have these personages with their great moral struggles through great historical crises made real to us to-day. Men who have been so gifted and have so dared and have fought and conquered or so fallen must by sheer necessity of their colossal nature and experiences become the historical teachers of posterity.

Mr. Wright Lorimer deserves our thanks. He is joint author of the "Shepherd King" with Arnold Reeves, and takes the title part, which he represents with winning beauty. He has a fortunate stage presence and voice which fitly represent the strong open-natured youth. Mr. Lorimer is not the David of Michael Angelo, but perhaps more the David of Browning. He should be given our gratitude also for a literary version which does not jar the memory of the story as told in the Bible. Unhappily the English of the text is usually weak in Biblical dramas. The author manager has also not stinted his hand in the selection of an excellent company and of fresh and rich stage settings. People who are fond of discussing the elevation of the stage, religious persons, wishing fresh pictures of the scenes from which their religion borrows so much of its force, as well as the theatre-goer desiring new sensations, all can find satisfaction in the "Shepherd King."



The First Umbrellas

Those who suppose that the umbrella is a modern contrivance will be surprised to learn that umbrellas may be found sculptured on some of the Egyptian monuments and on the Nineveh ruins. That umbrellas bearing a close resemblance to those of to-day were in use long before the Christian era is shown by their representation in the designs on ancient Greek vases. The umbrella made its first appearance in London about the middle of the eighteenth century, when one Jonas Hanway, it is said, thus protected himself from the weather at the cost of much ridicule.

A HISTORY OF THE AMERICAN PEOPLE

In Five Volumes

By WOODROW WILSON, Ph.D., Litt.D., LL.D.

President of Princeton University

A new, epoch-making work—the only complete narrative history of the great Republic in existence to-day

PRESIDENT WOODROW WILSON has devoted the best years of his life to the preparation of his great work, "A History of the American People," from the earliest times to the administration of President Roosevelt. The work is monumental in character and scope, represents the genius of the greatest historical writer of the present time, and is written in that delightfully flowing style which translates historical facts into the romance of a nation. Hundreds upon hundreds of new portraits, prints, maps (in colors), plans, and pictures make the pictorial features alone tell their wonderful story—the birth and growth of what is now the United States of America. There is a photogravure frontispiece to each volume, and portraits in India tint and black. Dr. Woodrow Wilson's is the first complete narrative history of the United States in existence.

In order to meet the urgent demand for this work, the publishers have now in readiness a

NEW SUBSCRIPTION EDITION

With Photogravure Portraits of the Presidents

In addition to the illustrations noted above, the new edition contains full-page photogravure portraits of the Presidents of the United States—twenty-five in all—from Washington to Roosevelt, a feature which materially enhances the richness of the work. The five volumes are issued in bindings of new design and beauty:

Green crepe buckram, with leather label, per set - $25.00
Half-red American Library leather, " - 33.00

OUR OFFER *We will send you the entire set of five volumes, charges prepaid, on receipt of* $1.00. *If you do not like the books when they reach you, send them back at our expense, and we will return the* $1.00. *If you do like them, send us* $2.00 *every month until the full amount is paid. On receipt of this dollar, we will send you, without cost, beginning at once, a year's subscription to either* ***Harper's Magazine, Harper's Weekly, Harper's Bazar,*** *or* ***The North American Review.*** *In writing, state which binding and which periodical you want.*

COMMENT

IOWA'S Democratic delegation goes to St. Louis instructed to vote for Mr. Hearst, whose managers now claim to have more than one hundred delegates pledged to vote for him "first, last, and all the time." As for Ohio, it seems to be taken for granted that Mayor Johnson of Cleveland will control the delegation to St. Louis, but, radical as he is, he is known to treat Mr. Hearst's candidacy with derision. There may be such a thing as overdoing the widespread contempt for the Hearst movement. In the State of Washington on April 30 his friends carried the Spokane primaries; the first county convention held in Minnesota instructed its delegates for Hearst; so did the Orange County convention of California, held on April 30; so did Kenosha County in Wisconsin on the same day; while of the total number of delegates thus far elected to the State convention of Michigan, 185 are said to be for Hearst, and only twelve for Parker, the remainder professing to have no choice. It will have been observed that Mr. Bryan has never, in so many words, declared himself for Mr. Hearst, but, on the other hand, in recognition of the support which he received from the Hearst papers in 1896 and 1900, he is, naturally, reluctant to pour contumely on his follower's aspirations. It is alleged by some persons who are supposed to enjoy the Nebraskan's confidence, first, that under no circumstances will he bolt the ticket nominated at St. Louis; and, secondly, while he would prefer to see ex-Senator Charles A. Towne the nominee of the Democratic convention, he would be satisfied with Mayor McClellan, General Miles, Judge Gray, Adlai Stevenson, or even ex-Governor Pattison of Pennsylvania. The candidacy of Chief-Judge Parker of New York, and, *a fortiori*, that of ex-President Cleveland, the Nebraskan is believed to be determined to fight to the last ditch.

As over 520 delegates, or over two-thirds of the whole number chosen to the Republican national convention, have now been instructed for Mr. Roosevelt, his nomination is obviously so assured that public interest no longer attaches to the subject. The only act of the Republican national convention about which any curiosity is at present felt is the decision which it may reach with regard to a nominee for the Vice-Presidency. The candidacy of Senator Elkins for that post has been endorsed by the Republican State convention of West Virginia, and the Republican State convention of Indiana would undoubtedly have pressed the nomination of Senator Fairbanks had not that gentleman urged his friends not to permit such a step to be taken. Republican strategists seem to have reached the conclusion that Indiana is now lodged so firmly in their party column that it would be more conducive to their success to accept a candidate from Illinois. Should that view be taken by the President himself and by his spokesmen in the Republican national convention, there is no doubt about the nominee. The choice of the Republicans would fall inevitably upon Speaker Cannon, who is one of the most popular men in the United States, and who has gained the confidence of conservative members of his party without alienating the progressives. As we have formerly pointed out, political conditions in Illinois seem just now so mutable, owing to the difficulty of foreseeing the action of Cook County, that the Republicans cannot neglect the State with safety, nor can the Democrats overlook it without folly. If, however, the Republicans should take their nominee for the Vice-Presidency from that State, it would then seem judicious on the part of the Democrats to make a desperate effort to carry Indiana, to which end they would doubtless pick out a nominee for the Vice-Presidency from the Hoosier State.

It seems that Senator Gorman is opposed to the abrogation of the two-thirds rule in the St. Louis convention. His opposition would be intelligible if we could believe him to fear that the Hearst-Bryan coalition may control a majority of the delegates. To us it seems incredible that the Hearst-Bryan wing of the party can command more than a *third* of the delegates if the unit rule be enforced, as, we assume, it will be. The unit rule ought to be maintained, because it is simply an application to State delegations in a national convention of the Democratic principle that the wishes of a majority should prevail. If a majority of one in a State delegation cannot decide how the whole vote of a State shall be cast in a national convention, why should a bare majority of one in the electoral colleges elect a President, as was the case with Rutherford B. Hayes? The argument for the maintenance of the unit rule is irresistible. But the grounds on which Senator Gorman is said to defend the two-thirds rule are far from convincing. It is alleged that the regulation has been useful in the past, and we do not deny that its devisers imagined that it would prove a bulwark of the sectional interests of the slave States. It proved, however, to be a weapon that cut the hand which used it.

There seems to be some difference of opinion or of intention between President Roosevelt and Postmaster-General Payne as to the institution of a drastic investigation of the Post-office Department during the recess of Congress. For the reason that both Chambers are controlled by Republican majorities, Congress adjourned on April 29, it will be remembered, without acting on the Democratic proposals for an investigation of the Post-office Department. Simultaneously, however, newspaper correspondents were informed at the White House that an investigation would take place, and a very thorough one at that, although it would be conducted by government officials who presently would be appointed by the Chief Magistrate. President Roosevelt is determined, so the correspondents were informed, that the Democrats shall not be able to make campaign material out of their charge, repeatedly launched in Congress during the recent session, that the Republican party did not dare to turn a searchlight any further on the conduct of the Post-office Department. As a matter of fact, he is resolved, so the callers at the White House on April 29 were informed, to institute an inquiry so searching that none but the guilty can find fault with it, and not one of them can escape. This ruthless purpose of the President was represented as having been conceived in pursuance of Mr. Lodge's declaration, made in the Senate, that the Republican party would investigate the Post-office Department at the proper time and in its own way. The proper time is now, according to the President, and to strike and spare not is the proper way. The information was added that in ordering a merciless inquiry the President would take the public into his confidence with regard to his motives, as he did in the letter which he wrote to explain the appointment of the Panama Canal Commission.

Since this edifying declaration was made at the White House, Postmaster-General Payne has returned to Wash-

ington from the voyage in Southern waters which he undertook for hygienic purposes, his health having been impaired temporarily by the distressing failure of the evidence to bear out his assertion that all the charges levelled against the postal service were "hot air." He was promptly interviewed with reference to the Executive programme for administering to his Department a thorough shaking up. He disavowed any knowledge of the design, and was sceptical in the extreme with regard to the execution of it. All the wrongdoing in his Department, he said, the existence of which there was the faintest reason to suspect, had been already unearthed with pitiless completeness in the course of the inquiry conducted by First Assistant Postmaster-General Wynne and Fourth Assistant Postmaster-General Bristow. There was nothing more to investigate, according to Postmaster-General Payne, although, of course, should any new irregularity happen to occur in the course of the summer, it would be dealt with rigorously. Under the circumstances, the newspaper correspondents who got what they presumed to be authentic intelligence at the White House are now quivering with curiosity to learn whether President Roosevelt or Postmaster-General Payne, the political expert of the present administration, knows most about the intentions of the Federal government.

With one exception, the first session of the Fifty-eighth Congress will be remembered as the shortest first session ever held since the government organized under the Constitution went into operation. Of the thousands of legislative proposals, only a small fraction were adopted; and of these there were eight private bills to one public measure. Among the important projects which failed to become laws may be mentioned Senator Hoar's bill for the protection of the President. This bill will be called up, however, on December 6. The Cooper-Lodge Philippine bill, which was reported favorably by the House and Senate committees, and actually passed the House, was never considered in the Senate, the Democratic Senators being determined to oppose the measure, unless the promise of government aid to Philippine railroads should be stricken out. The bill creating two States, composed respectively of Arizona and New Mexico on the one hand, and of Oklahoma and Indian Territory on the other, and the bill giving the inhabitants of Alaska a larger measure of self-government than they now possess, also secured the approval of the House of Representatives, but were held up in the Senate Committee on Territory. On the other hand, a number of measures which had proved acceptable to the Senate failed to commend themselves to the popular branch of the Federal legislature. Among these was a bill providing annual salaries for steamboat-inspectors, in lieu of the present statutory regulation by which they are paid according to the number of vessels inspected. The same fate awaited the bill, obviously urgent, for the destruction of derelicts.

The bill as to naturalization laws for Porto Rico, which, in the form prepared by the Senate, compelled a Porto-Rican to go through the same procedure as would a Frenchman or a Russian in order to become a citizen, except as to the renouncement of his foreign allegiance, was reported by the House Committee on Insular Affairs with all the provisions relating to Porto-Rican citizenship stricken out. The House also declined to act on a proposal to give a delegate (technically so called) to Porto Rico, although in the Fifty-seventh Congress the House unanimously passed the same bill. The House rendered, nevertheless, an instalment of justice to Porto Rico in giving, by amendment of its own rules (which does not, of course, require the concurrence of the Senate), to the Porto-Rican Resident Commissioner the right to serve on committees, introduce bills, and speak in the House. Practically, therefore, though not nominally, he will be hereafter a delegate. Strange to say, organized labor, though it is expected to play an important part in the coming campaign, did not secure from the party dominant in both Chambers the concessions that it desired. Of the two measures in which organized labor was deeply interested, one, an anti-injunction bill, was referred to the Judiciary Committee, and another, an eight-hour bill, to the Labor Committee. The advocates of the projects had many hearings, but in each case the Republican members of the committee voted to postpone decision until the next session, while the Democratic members, with one exception, favored immediate consideration. On the whole, it is generally recognized that in the manœuvring for advantageous strategic positions during the coming campaign the Democrats, under the revitalizing influence of Representative John Sharp Williams and the astute guidance of Senator Gorman, got the better of their opponents.

The Louisiana Purchase Exposition, which was opened formally on Saturday, April 30, seems likely to prove worthy of the event which it commemorates. The event, of course, is one of the four most important incidents in the history of the New World,—to wit, the discovery by Columbus, which was celebrated at Chicago; the Declaration of Independence, which was honored at Philadelphia; the surrender of Lee at Appomattox, which will be duly remembered at some future date when the wounds caused by the civil war shall have been healed; and the transaction by which we secured from France an empire, including exclusive control of the whole Mississippi Valley. Upon the details of that transaction we need not dwell, since they were made familiar a year ago, when the grounds of the Exposition were dedicated. Of the speeches delivered on April 30, the most interesting was made by Judge Taft, lately Governor-General of the Philippines, and now Secretary of War. As spokesman of the Federal Executive, Judge Taft pointed out that the St. Louis Exposition—like each of its more notable predecessors since 1851, when the Crystal Palace was thrown open in the British metropolis—should be looked upon as a mile-stone in the progress of the world. Each nation represented at St. Louis is striving to show how, since the last World's Fair, it has handled and added to the talent confided to its care. Such international competition affords a measuring-rod of that at which myriads of hands and myriads of brains have aimed, namely, an increase in the control which mind and muscle can exercise over nature's inanimate resources. Judge Taft went on to remind his auditors that from each of the great expositions can be dated the world's familiarity with some useful or marvellous invention. The adoption of the telephone, for instance, dates from the World's Fair held in Philadelphia in 1876. It is hard for some of us to realize that then for the first time were shown publicly the experiments which resulted in the transmission of the human voice hundreds of miles, and which has revolutionized the methods of life and business in every civilized community. Not only in the mechanical sciences, but also in the fine arts and in education have the steps of modern progress been marked by the more notable expositions.

Judge Taft went on to direct attention to the fact that at the present hour, when we are engaged in commemorating the centenary of the Louisiana Purchase, the American people have entered upon another and a different kind of expansion than that contemplated by Thomas Jefferson—a kind of expansion that involves the solution of other and different problems than those presented by the Louisiana Purchase. Those problems, he said, had been forced upon us without our seeking, and must be solved with the same high sense of duty, yet with the same fearlessness, with which our ancestors met the startling questions presented by the acquisition of the vast domain secured from France. It was pronounced probable by the late Governor-General of the Philippines that the assimilative problems by which we are now confronted will not be solved by the bestowal of Statehood upon the territory newly acquired in the Far East. He intimated a personal belief that the ultimate purpose of our Federal government should be to repeat in the Philippines what it has done in Cuba, or, in other words, to aid another people to stand upon its feet, and to take a short cut to the civil liberty which it has cost us and our ancestors so much time and so sturdy an effort to hammer out.

There seems to be a concerted movement on the part of many conspicuous citizens of German birth or descent for the promotion of the election of Mr. Roosevelt to the Presidency. A meeting which had this purpose in view was held in Washington on Sunday, May 1, and an organization was effected, to which was given the name "The National Roosevelt League. Richard Bartholdt, of Missouri, was chosen president; Joseph Winter, of New York, secretary; F. L. Ringler, of New York, treasurer; while on the executive com-

mittee were placed Arthur von Briesen, of New York, Judge A. H. Bude, of Cincinnati, E. G. Halle, of Chicago, Rudolph Blankenburg, of Philadelphia, Frank C. Wachter, of Baltimore, Otto Stiffel, of Missouri, and George Brunder, of Wisconsin. Letters cordially approving the aim of the league were read from many German-Americans well known all over the United States, and resolutions were adopted providing for the appointment of a central committee to be composed of one member from each State in the Union, and of an executive committee to take charge of campaign work. We need not remind our readers of the importance of the part played in pivotal States by German-American voters in 1896 and 1900.

The address issued on Sunday by the National Roosevelt League was written with much ability from the Jacob Riis point of view. It began by declaring, what no one is likely to deny, that the man who is to be the executive head of this great nation must possess the following qualifications, namely: a clear head, a warm heart, a strong sense of justice, persevering diligence, large experience, and, above all, a firm character and a pure mind. The address proceeds to assert that these qualifications are personified in Mr. Roosevelt. That he possesses a clear head has been proved, it is alleged, by the solution of the difficult diplomatic problems with which he has had to wrestle. How much credit for the solution should be given to John Hay the address deems it superfluous to inquire. It goes on to adduce the evidence for Mr. Roosevelt's warmth of heart. Whenever the poor and the powerless needed protection, whether they were mine-workers, helpless immigrants, or needy veterans, Theodore Roosevelt has been always ready to come to the rescue. On the other hand, when the mighty attempted to make themselves still more powerful, it was Theodore Roosevelt who stayed their hand. The address adds that it takes a strong moral character to engage in combat with powerful interests and with the forces of prejudice. His greatest glory, however, is asserted to consist in this, that he has faithfully executed the political testament of his predecessor, the immortal martyr, William McKinley. For these reasons, with which is coupled the unquestioned purity of his private life, Theodore Roosevelt is proclaimed the choice of German-Americans. On the whole, it cannot be denied that the National Roosevelt League has given the President a satisfactory bill of health, from both moral and intellectual view-points.

The Chief Magistrate showed his appreciation of the service which citizens of German birth or parentage have it in their power to render when, late on Sunday evening, the members of the league called at the White House in a body. He dwelt at length on the debt which the United States owed to German-American citizens, notably at the critical conjuncture when the union of the States was threatened. There was at the time dissension, he recalled, among the inhabitants of various sections, but there was none among the Germans. He told his visitors that he would rather a hundredfold lose the office of Chief Magistrate and retire from public life than forfeit the right to the friendship and to the respect which they had testified. In conclusion, he assured the members of the league that he needed their support, not only when he was battling with bad men, but also when he was battling with good men, who sometimes get a little puzzle-headed. He took for granted, he said, that he would have the assistance of German-Americans in opposing wrong, but he also should count upon their assistance in the upholding of right principles whereon good men might chance to have divergent ideas. On the whole, we infer from his treatment of the incident that the President is something of a politician himself, and is pretty well qualified to be his own campaign-manager.

Some steps have recently been taken with the hope of strengthening Judge Parker's candidacy in his native State, and also among conservative Democrats throughout the Union. It has come to be recognized that the equivocal programme put forward tentatively at Albany has pleased nobody, while it provoked Mr. Bryan to outspoken and vehement denunciation. A mischievous effect has been produced in the West and some parts of the South by the suspicion widely current that Judge Parker allowed Mr. David B. Hill to frame the platitudinous Albany platform, and that, should the New York candidate be chosen President, the ex-Senator would be the power behind the throne. An effort to counteract this impression was made the other day, when Cord Meyer, Jr., was appointed chairman of the Democratic State Committee, whereof he was not a member. There is no doubt that this is a shrewdly planned concession to the friends of Mr. Cleveland. Throughout his political life Mr. Meyer has been a stanch and zealous supporter of the ex-President. Neither is there any doubt that he possesses sufficient firmness of character to run the Democratic machine in a way calculated to command the approval of conservative Democrats. The selection of Mr. Meyer, however, does not please Mr. Charles F. Murphy, the leader of Tammany Hall. He says that in order to carry the State of New York, or any other doubtful State, the Democrats have got to make a pivotal issue of the trusts during the coming campaign, and that they cannot do so consistently if the control of their machinery in the Empire commonwealth is committed to Cord Meyer, Jr., who has long been known to be associated very closely with the Sugar Trust.

There is no doubt, on the other hand, that Mr. Meyer was regarded with much favor by Mr. Croker, and that, although he is not a member of the Tammany organization, being a resident of Long Island, he was, at Mr. Croker's suggestion, made one of the governors of the Democratic Club. We suspect that what angered Mr. Murphy was not so much the selection of Mr. Meyer for chairman of the Democratic State Committee as it was the designation of Senator McCarren for the leadership of the executive committee. Mr. Meyer, in an interview, spoke of Mr. Murphy's favorites in a most conciliatory strain. He declared that no two men have done more for their party than have Mr. McClellan and Mr. McAdoo, by the admirable government they are giving the city of New York. We presume that this means that Mr. Meyer, as comptroller of the party machinery, would willingly and effectively promote the nomination of Mayor McClellan to the Governorship next autumn. It is, apparently, evident to him that without the cordial and vehement support of Tammany Hall it may prove extremely difficult to beat Mr. Roosevelt this year in the State of New York. He has said for publication that, in his opinion, Judge Parker will be named at St. Louis, and that the Democracy could not ask for a more available nominee. We do not imagine, however, that Mr. Meyer's heart would be broken if the St. Louis convention should take the bit between its teeth and nominate Grover Cleveland. There are at present no clear indications of such an event, but until the St. Louis convention adjourns, the New Jersey delegation will bear a good deal of watching.

The land campaign in the Far East is fairly begun with the crossing of the Yalu by General Kuroki's army and the driving back of the Russian forces under General Zassalitch after a hard fight. The engagement will entail a series of highly important results, both moral and material. To begin with, the extrusion, so to speak, of one arm of the Japanese army across the Yalu will compel the Russians to retire from the coast between the Yalu and Liao-tung peninsula, thus leaving the region about Takushan free for the landing of Japanese troops. The next result of the crossing of the Yalu will be an increased strain on the line of communication between Mukden and Port Arthur. Should the Japanese turn the whole of this force against the railroad, they should have no difficulty in cutting it, and thus gravely menacing the chief Russian naval base—a sufficiently serious matter, in view of the hopes placed on the arrival of the Baltic squadron. A report of the capture of Newchwang is still unconfirmed as the WEEKLY goes to press.

In the May number of the *Metropolitan Magazine* Major G. Creighton Webb recites the historical reasons why Americans should regard Russia with grateful friendship, and warns us all against harboring friendly sentiments towards Japan. He reminds us of Russia's urgent need of ice-free ports; recalls how the powers held her back (worse luck) from seizing Constantinople in 1877, and explains how the abandonment of Korea to Japan would constitute the Strait of Korea a new Dardanelles between Vladivostok and Port Arthur. He tells what excellent work Russia has done in Manchuria, and excuses the breaches of her promises to withdraw her troops from that country. Turning to history, he recounts how

Catharine II. refused to let England hire mercenary troops among her subjects for service against the American colonies; how the League of Neutrals broke the heart of George III.; how Czar Alexander refused to carry out Napoleon's orders to exclude American ships from the Baltic ports; and how during our civil war Russia was our strong friend in Europe, and sent in 1863 a fleet to New York and one to San Francisco, both with sealed orders to be opened only if our government became involved with any government in Europe; and finally he recounts how Russia sold us Alaska, because she wanted us to have it. In view of this long record of Russia's active friendship for the United States, Major Webb feels, as many others do, that Russia's broken promises about Manchuria are not enough to account for the "almost unanimity of the press in siding with Japan against Russia." The pro-Japanese sentiment is largely due, he thinks, to the active work of a large body of writers whose business it is to make sentiment for Japan and England. "For this is England's war," says Major Webb. "Whoever wins, England gains."

We think Major Webb takes American sympathy for Japan rather too hard. It exists undoubtedly, but it by no means goes the length of hostility to Russia. Sympathy for Japan preponderates at present in this country: that is as much as is safe to say. Nothing that Russia ever did for us has been forgotten. We do not hate her, but quite the contrary; do not envy her, do not fear her. We are still Russia's friend, albeit the warmth of our emotion has lately been chilled by several things, and especially by the harrying of Jews and by Manchurian duplicities. We hoped Russia would make terms with Japan and avoid this war. Was that unfriendly? She could have kept her ice-free port, and, on fair terms, everything she needed. That she did not make terms with Japan is now as plainly conceded in St. Petersburg to have been a mistake as it is in Washington. Was it the fault of the Americans that the Czar was hoodwinked and misled by his advisers and agents in the Far East, and put in a position where it was impossible for Americans to wish him complete success? There is no lack of sympathy between America and the Czar, none between us and the Russian people, but there are many things about the Russian system of government that try our patience. When Jews are massacred under the noses of government officials we cannot applaud; when the promises of St. Petersburg are broken in Manchuria we cannot like it. As a generous people admiring grit and willing to see every nation get its due, we could not withhold a measure of our sympathy from Japan. Japan is our friend; her cause is at least as good as Russia's; she is as much entitled to what she can get as Russia is. If the memory of past favors and the hope of favors to come availed to make Americans eager to see Japan crushed and Russia all-prevailing, then truly it would appear that we had been bought with a price, and the goods delivered.

The utmost we can do is to be neutral; and we are neutral. Outside of the Jews and the papers that they control there is no hostility to Russia, and nowhere is there exultation over her reverses. Russia has blundered, and practically she admits it. We are not glad; we are sorry. Major Webb says that pro-English sentiment is at the bottom of our feelings. But five years ago, when we were quite as pro-English as we are now, our sympathies were more decidedly with the Boers than they are now with Japan. Our sympathies are apt to go out to any people who are fighting for national existence. If they are anywise worthy, we are for them. We can't help it. We are built that way, and neither ties of blood nor claims of ancient friendship, nor even self-interest, will break us of that habit. When the Filipinos fought against us, many of us sympathized with them, and some of our people even went so far as to hope they would win. Japan is worthy. To be crushed in this war would be, for her, an irreparable calamity. For Russia a defeat would be a mere setback. Japan is in a way the under dog, not because she is not as strong—or stronger—in the East as Russia, but because the risk she runs is so immeasurably greater than Russia's. We sympathize with her because of her cause, her grit, and the magnitude of her peril. But we are neither unfriendly to Russia nor unmindful of her record in our history. She may not now understand our feelings or our position, but some day she will. Meanwhile she will probably misjudge us.

Mrs. Gertrude Atherton thinks that contemporary American literature is a tame and unprofitable product. She says so in the May number of the *North American Review*, and sets herself to explain why it is so bad. She charges it with misrepresenting its country, and contrasts the boldness and dynamic energy of the American race with a literature "the most timid, the most anæmic, the most lacking in individualities, the most bourgeois that any country has ever known." It might, she declares, be the product of a great village censored by the village gossip. She names Mark Twain and Bret Harte as the two American authors who first showed the shaping influences of a new nation. They could have been born and nourished nowhere else on the planet but here, and she wonders why they did not found permanent and important schools, or at least by their brilliant success remind others that "originality is the final and supreme touch which secures an artist a permanent position on the heights." She has hopes for the future. Our public seems to her to be disentangling itself from leading-strings, and there are signs that in another generation we shall have discarded our Puritanism and grown into a broad, tolerant, and no less virtuous race. But meanwhile our literary affairs are in a deplorable state, and the tyranny of the American literary powers is crushing.

We had a reign of Realism—which she calls Littleism—and then the Spanish war came on and created a demand for stories of adventure. The change was small gain except that it prodded on the public to demand the unfamiliar. One awful barrier to any native literature worth reading she finds in the magazines. Writers want to get into the magazines, but the magazines, Mrs. Atherton discloses, proscribe originality, except in the mildest form; insist upon the world that ought to be and ignore the world that is; demand anæmic literature with vigor, audacity, and all American characteristics bleached out of it; make a fetish of the body and let the brain rot; and defend far too solicitously their readers' nerves. The writing of the authors whom the magazines nourish conveys to Mrs. Atherton the impression of "having flowed forth in puny studies between a well-filled stomach and an ear cocked to catch the prattle of the nursery." She derides the magazine authors as "good family men, who eat well, rarely drink, and are too dull to be bored by their own wives." The magazines, she feels, will never produce even one great writer. The coming great writer must forego them. But, for that matter, she declares that "no writer with a real gift and a real ambition has any business with a home, children, the unintermittent comforts of life which stultify and stifle."

We fear the future great writer will not shape himself very accurately on Mrs. Atherton's suggestion. Great writers are almost incorrigibly addicted to the comforts of life, and get them if they can. Stevenson, bohemian as he was, married a wife. Kipling is married; so were Dickens and Thackeray; so is Mark Twain; so was Bret Harte. A good deal of attention has to be paid to the body if the mind is to be kept long at work at high pressure. Mrs. Atherton realizes that, and she warns us against stimulants, thereby weakening her disparagement of magazine writers as persons who eat better than they drink. We don't think the really vital trouble with the American writers is that they are not "tough" enough, nor are we sure that they are spoiled by having to write down to the anæmic level of the magazines. The *Century Magazine*, one of the most respectable of our periodicals, is just now printing as a serial as brutal, bloody, and nerve-racking a tale as Mrs. Atherton could demand, and a lively tale it is and much appreciated. To our mind there is nothing the matter with current American literature, except that the demand for the best lines of it is very much in excess of the supply. A great writer is a very rare bird, and always has been. The publishers print the best books they can get; the magazines print the best stories they can get; the public reads the best books and magazines it can find. There is no conspiracy to put down talent, and some notable minds that ought to be making literature are otherwise employed. We fear that there is no better reason for it than the sordid one that the other jobs pay better.

Herbert Spencer's Political Views

It is a curious fact that, of the numerous reviewers of Herbert Spencer's remarkable autobiography, scarcely one has noted the author's attitude toward the political system of his native land, or, for that matter, toward the political system of any other country, past or present. Yet there is no doubt that his attitude was definite, significant, and characteristic, and it could have been guessed by those who marked his singular avowal that never in his life, except once in the sixties, did he vote for a member of Parliament. That unique vote was given in the town of Derby under circumstances which are carefully recorded. It seems that certain property which had come to Mr. Spencer from an uncle gave him a qualification in that constituency; but that when, shortly afterwards, he sold this property, he was disqualified, so far as Derby was concerned. It is true that, subsequently, he acquired a Parliamentary qualification in London, and might have registered, but never did so. Not, he explains, that the election of a Liberal or of a Conservative was a matter of total indifference to him; for, speaking generally, he acknowledges that his sympathies have been with the Liberal candidate. In most cases, however, his dissent from the beliefs, openly or tacitly held by both political parties, on the question of the true functions of the state—a question which Mr. Spencer regarded as of paramount importance—was so pronounced that he had but little motive to support one candidate rather than another. Moreover, as of late years Liberals have vied with Conservatives in extending legislative regulations in all directions, there has been, in Mr. Spencer's eyes, nothing to choose between them, and, therefore, no temptation to vote.

It is toward the close of the second volume of the "Autobiography" that Mr. Spencer, describing that volume of the "Synthetic Philosophy" which is devoted to "political institutions"—a volume which was composed in the biennial period 1880-2—that Mr. Spencer is moved to say something about the political opinions which he held at the age of sixty, as contrasted with those which he held in earlier days. He queries whether his ideas have been modified by the conservatism of advancing years, or by the wider knowledge acquired? Or whether both influences have cooperated in causing the change from a sanguine view to a desponding view? Certainly, he that had been an optimist did, in course of time, become pessimistic. He admits that, after attaining the age of sixty, he sometimes startled friends by saying that he was more Tory than any Tory, and more Radical than any Radical. What he means is that, while he had not relinquished his ideal of a future, he had come to see that its realization was far more remote than he had supposed. The adolescent indignation against war, the hopefulness of youth, and the lack of experience, had joined in Mr. Spencer, as they join in many a young man, to produce eagerness for political reorganization, and the belief that it needed only to establish a form of government, theoretically more equitable, to remedy the evils under which society suffered. Hence his juvenile radicalism.

Mr. Spencer goes on to testify that by the time he was thirty—when his tentative volume, *Social Statics*, which contained the germ of his evolutionary hypothesis, was published—the crude notions of five-and-twenty had been qualified considerably. He had come to see that institutions are dependent on human character, and, however changed in their superficial aspects, cannot be changed in their essential nature faster than the character of human beings changes. Moreover, it had become manifest to Mr. Spencer at the age of thirty—what some social philosophers never seem to realize—that men are rational beings in but a limited sense; that conduct results from desire, to the gratification of which reason serves but as a guide; and that hence political action will on the average be determined by the balance of desires wherever this can show itself. It is also true, as is disclosed in the essay on "Reform: the Dangers and the Safeguards," that, by the age of forty, Mr. Spencer had perceived, or thought he perceived, that mischief would result from the giving of votes unless the costs of political action, general and local, were made to fall, directly and unmistakably, on all the individuals to whom votes were given; or, in other words, that political power can be safely extended only as fast as governmental functions are restricted. He himself exemplified the truth that feeling rather than intellect guides, for, temporarily forgetting the confusion just mentioned, he approved the wide extension of the franchise effected by the Reform bill of 1867. The sentiment of early years which had been strongly enlisted on behalf of the seemingly just principle of giving equal political powers to all men proved too strong for the restraints of his calmer judgment.

Moreover, above and beyond the recognized truths which feeling had led him to ignore, there were other truths as yet unrecognized which in later days he felt that he ought not to have overlooked, truths from the recognition of which further deterrents should have arisen. What other truths does Mr. Spencer have in mind? He might have inferred *a priori*, he tells us, what has now become clear *a posteriori*, that the change introduced in the British political system by the Reform bill of 1867 would result in replacing the old class-legislation by a new class-legislation. It is certain, he holds, that, given the average human nature now existing, those who have power will pursue, indirectly, if not directly, obscurely, if not clearly, their own interests, or rather, their apparent interests. Mr. Spencer, unlike Mr. Gladstone, could never see any reason for assuming that the lower classes are intrinsically better than the higher classes. Hence it seemed to him self-evident that if, while the higher classes were predominant, they made laws which in one way or another favored themselves, it followed that now, when the lower classes are predominant in the British electorate, they also will give legislation a bias to their own advantage. Manifest as it always was, it seemed to Mr. Spencer still more manifest in the later decades of the nineteenth century, that, so long as governmental action is unrestricted, the thing required is an equitable representation of interests; and that a system in which one interest is overwhelmingly represented (whether it be that of a smaller or larger section of the community) will issue a one-sided law. Mr. Spencer, writing in the nineties, predicted that his fellow countrymen would soon see the injustices once inflicted by the employing classes paralleled by the injustices inflicted by the employed classes. During a long past the superior classes had inequitably profited at the cost of the inferior; but now, as Mr. Spencer believed, one of the rhythms displayed in movements of every order would shortly bring about a state of things in which the inferior classes would inequitably profit at the cost of the superior.

And besides this there was still another overlooked truth which, to Mr. Spencer's vision, had of late become conspicuous enough. Often, he says, had he reproached politicians with contemplating only the proximate results of legislation, and not seeing the remote results; but the time came when he acknowledged that in the sixties he should have reproached himself with a kindred blindness. He did not in those days perceive that one organic change tends ever to initiate another, and this other occasionally brings about a perpetual moulding and remoulding of institutions, and a too plastic state of society, until there eventually arises something approaching to political disorganization.

Returning to his paramount postulate, however, Mr. Spencer reasserts that, while character remains unchanged, change of institutions, however great superficially, cannot be fundamentally great; that is to say, while there is going on disorganization of one kind, there goes on reorganization of another kind, or, in other words, while the old coercive arrangements are being relaxed, new coercive arrangements are being unobtrusively established. For the concomitant of the legislation which more and more advantages the employed classes at the expense of the employing classes, is the growth of an administrative system, becoming ever more powerful and peremptory—a new governing agency which the emancipated people are unawares elaborating for themselves, while thinking only of gaining the promised benefits. Mr. Spencer came to be convinced that unceasing development of this new governing agency, daily more rapid, has become inevitable, for the reason that both the electors and their representatives invoke with increasing urgency public help, public expenditure, and public regulation, which all imply a continually augmented army of officials—an army which, by the restrictions and dictations its members enforce, gradually decreases the freedom of citizens, at the same time that it further decreases this freedom by demanding that more and more of their labor shall be devoted to maintaining the official regulative army, and paying for the work of superintendence.

The ultimate forecast of the author of the "Synthetic Philosophy" was that the insidious growth of an organized consolidated bureaucracy would go on, because the electorate cannot conceive the general but distant evils it must entail, in contrast with the special and immediate advantages to be gained by its action. For the masses can appreciate nothing but material boons—better homes, shorter hours, higher wages, more regular work. Hence they are in favor of those who vote for restricting time in the mines, for forcing employers to contribute to men's insurance funds, for dictating railway fares and freights, for abolishing the so-called sweating system. It seems to them quite right that education, wholly paid for formerly in England by local rates, should be state-regulated; that the state should give technical instruction; that quarries should be inspected and regulated; that there should be sanitary regulation of hotels. The powers which local governments now have in Great Britain to supply gas, water, and electric light, the masses think, may quickly be extended to making tramways, buying and working adjacent canals, building houses for artisans and laborers, lending money for the purchase of freeholds, and otherwise adding to conveniences and giving employment.

While all this implies a widespread officialism, ever growing in power, Mr. Spencer pointed out that it also implies augmented burdens upon all who have means, burdens practically constituting an indirect redistribution of property. There is, in fact already in force, so far as Great Britain is concerned, the policy which was advocated by Mr. Henry George when he declared it to be a community's duty not to turn out the landlords, but to "tax them out."

Joseph Pulitzer on a College of Journalism

It will be remembered that not long ago Mr. Joseph Pulitzer, the proprietor of the New York *World*, made a gift of one million dollars to Columbia University for the purpose of founding a "College of Journalism," and that he made a promise that, if at the end of three years the college should be in successful operation, he would endow it with an additional million. That, in organizing such a college, Mr. Pulitzer was actuated by a high and exemplary aim, and that he is preeminently qualified by experience to forecast the utility of such an institution, has been by no one disputed. Touching the practicability of the project, however, opinions have varied. In some quarters the plan has been acclaimed with approval and sympathy; in others, it has been received with scepticism, if not with ridicule. It was fitting that Mr. Pulitzer should reassure his friends and refute his critics by undertaking an exposition of his object, and of the probable efficiency of the means proposed for its attainment. This he has done in the May number of the *North American Review*. His article occupies some forty pages of that periodical, and it is but justice to say that not one of them could be spared. His discussion of the practicability of a "college of journalism" is so nearly exhaustive that it merits the term, so often misapplied, of a "monograph." Not one of the suggested objections to his scheme is overlooked; all are fairly stated, if not decisively answered.

To the fundamental objection that a "newspaper man" must be "born, not made," Mr. Pulitzer replies that he should be glad to hear the name of some great editor who was born full-winged like Mercury, the messenger of the gods. He, personally, knows of but one position which in our republic a man can fill successfully by the simple fact of birth, namely, that of an idiot. He knows of no other position for which a man does not demand and receive training. The process by which the profession of journalism at present receives useful recruits is by the elimination of blunderers, costly alike to employers and employed. It works by natural selection and the survival of the fittest: its failures are strewn along the wayside. He reminds us that the typical "born editor," Horace Greeley, was, in the strictest sense, an educated man, only he had substituted self-education for tuition received from others. It is submitted that, even in his case, much time and labor might have been saved by a well-planned system of instruction. It has further been asserted that the "instinct for news" must be innate. This Mr. Pulitzer concedes, but he adds that if a "nose for news" were turned loose in any newspaper office in New York without the control of sound judgment, bred by considerable experience and training, the result would be much more pleasing to the lawyers than to the editor. Then, again, we are told that moral character, like the instinct for news, cannot be made, but must be born. Mr. Pulitzer queries whether the critics who advance this objection have not themselves reached their present moral attitude by degrees. He concedes that training cannot create, or, perhaps, radically change, temperament, but is not conscience, he inquires, something different from temperament? Is it not largely the outcome of education; may it not be considered more an acquired than an inherited quality? Evidently Macaulay assumed that conscience is largely a question of climate and geography, when he pointed out that "child murder leads in London to the scaffold; on the Ganges, it is an honored religious sacrifice." To the contention that moral courage cannot be taught, Mr. Pulitzer replies with the question, Why not, as well as physical courage? It is not to be supposed, he says, that every young man who enters West Point or Annapolis is a born hero, yet the student at either of those schools is so braced in the direction of courage, that, by the time he graduates, it is practically certain that he will not flinch under fire. If, then, he argues, the mind can be taught to expose the body fearlessly to death, cannot the soul be taught to cling to its convictions in the teeth of prejudice, temptation, obloquy, and persecution?

Mr. Pulitzer proceeds to examine the assumption that such making as a newspaper man needs after he has been successfully born can be done only in the actual practice of the office or "shop." He reminds us that, as a matter of fact, it is not intentional, but only incidental, training that is obtainable in a newspaper office. Nobody in such an office has the time or the inclination to teach the raw reporter the things he ought to know before undertaking even the humblest work of the journalist. Incidentally, Mr. Pulitzer mentions that, in his own experience as a newspaper reporter and editor, he never had a single lesson from anybody. From this point of view, journalism, as hitherto organized, differs fundamentally from the other professions. A doctor, for instance, does not learn to practise at a medical school, but he does learn there the principles, theories, rules, and results of others' experience that constitute the foundation of his calling. After leaving college, he must work in hospitals in order to acquire the art of applying the knowledge practically. In journalism the newspaper offices are the hospitals, but the students come to them knowing nothing of principles or theories. The newspaper hospital is extremely accommodating. It furnishes the patients for its bright young men to practise on, puts dissecting-knives into the hands of beginners, who do not know an artery from a vermiform appendix, and pays them for the blunders by which they gradually teach themselves their profession. We may sympathize with the students in their industrious efforts at self-education, but may we not also, asks Mr. Pulitzer, sympathize with the unfortunate editor who has to work with such incompetent instruments? To the specious objection that, even if a college education be desirable, everything needed is already provided in the existing colleges, and no special department is required, Mr. Pulitzer replies that the existing university courses in history, law, and political science do not furnish what is really needed by a specialist in journalism. They give him only a fraction of the knowledge he requires, and they swamp that fraction in a flood of details whereof he can make no use. To fit these courses to his purpose they must be remodelled and specialized. This is precisely what a college of journalism would propose to do.

That there are some things that a college of journalism could not teach Mr. Pulitzer would not deny. He admits that no college can give imagination, initiative, impulses, enthusiasm, a sense of humor, a capacity for irony. These things are inborn, but they need to be developed, and we witness their development everywhere in intellectual life. Have we not read that Demosthenes, who was a born orator, if ever such a man there were, transcribed seven times Thucydides in order to gain a vocabulary and a method? Does not a born painter gain a mastery of the brush by studying the work of his predecessors in his art? To Mr. Pulitzer's mind it seems that the more conclusively critics prove certain things to be unteachable, the more do they demonstrate the necessity of teaching everything that is teachable. This is all that any education can do, but it is enough.

We observe, finally, that, among the things which, in his judgment, should not be taught in a college of journalism, Mr. Pulitzer enumerates typesetting, the methods of business management, the ordinary courses of a commercial college. On the contrary, in his conception of a school of journalism, it should not only be not commercial, but anti-commercial. The aim of such an institution should be to exalt principles, knowledge, culture, at the expense of business success, if need be. It should aim to set up ideals, to keep the counting-room in its proper place, and to make the soul of the editor the soul of the newspaper. It cannot be denied that, if a college of journalism should be so inspired and managed as to cause such a conception of the profession to predominate, Mr. Pulitzer would be justified in saying that our republic and its press will rise or fall together. An able, disinterested, public-spirited press, with trained intelligence to know the right, and courage to do it, can alone preserve the public virtue, without which popular government is a sham and a mockery.

King Edward in Ireland

We have often had occasion to speak of the admirable influence which King Edward has exercised on the foreign policy of England, not merely by instilling wise counsels and precepts of moderation into the ears of his Secretary for Foreign Affairs, but far more by taking things boldly into his own hands, appointing himself envoy extraordinary of the nation, and going boldly abroad to conquer new spheres of moral influence for England. A year ago he had a signal triumph in Rome, Paris, and in July last, as a result, the streets of London were gorgeous with tricolor flags and Venetian masts, and the initials of the French republic, on heraldic shields, adorned the lamp-posts of Pall Mall.

King Edward is now facing a problem even more serious than the relation of England to France; a problem, the essence of which is that it is at once a difficulty of home and foreign policy. Ireland, though an integral part of the United Kingdom, is yet, for England, a foreign country, one much more obstinately foreign in feeling than France, though France is accounted the secular foe of England, and was, in fact, at war with England during centuries. But France was England's ally in the Crimean war, and in the Prussian invasion the feeling of England in general was strongly in favor of the French. Moreover, every English schoolboy learns French from his earliest years, and, while never framing his tongue to pronounce it aright, yet gains a thorough knowledge of the masterpieces of Molière, Racine, Voltaire, Corneille, and the great names of the French classics. This enables him, when he arrives at years of discretion, to pass by an easy transition to Flaubert, Zola, Maupassant, Daudet, Ohnet, and the rest, imbibing from them the cult of Paris, whither he presently goes to worship in person.

There is no such interest of culture to make Ireland intelligible to England, nor has there been a single mitigating circumstance to bring the two countries nearer to a common understanding. This is not at all because there is any radical hostility or difference between the Celt and the Saxon, for in reality Celtic Ireland was on the best of terms with Saxon England before the battle of Hastings, and the political and legal systems of the two lands were identical. In those days Ireland was England's superior in

culture, to a very marked degree, so that in The Venerable Bede's time it was the custom for well-born Englishmen to go to Ireland for their education, and to learn Irish Gaelic, in order that through that tongue they might study Latin and Greek. The beginnings of classical learning at Oxford were laid by a famous Irishman, Johannes Scotus Erigena, who was, in philosophy, the predecessor of another famous Hibernian, Bishop Berkeley.

The Saxons and Angles were on excellent terms with Ireland, whence they had learned the arts of writing, illumination, and music; for the harp, which is the national symbol of Ireland, is really the record of centuries of musical culture. It was with the coming of the Normans that the real schism between the two countries began. England was invaded, summarily conquered by the Normans, and studded with strong castles, of which the Tower of London is the type and first example. All the land of England passed into Norman hands, and the landholders of England, to a large degree, maintain the tradition of Norman blood unto this day. Those whose ancestors inscribed their names and escutcheons on the Battle Abbey Roll are justly proud of the fact and of the Norman tradition. Norman feeling and Norman law triumphed in Ireland, and the Saxon tribal system was broken up once for all, the Anglo-Saxon tongue soon vanishing in its wake. English, which it has become the fashion to speak of as "Anglo-Saxon," is really nothing of the sort, but a tongue at least half Latin, and owing its richness to the Latin admixture, the genuine Anglo-Saxon being as unintelligible to most of us as Mœsogothic, which it greatly resembles.

The Norman system completely dominated England, and dominates it to this day. England is an oligarchy, ruled by the great Norman families, under the forms of democracy. The descending pyramid of king, lords, and commons is the Normal feudal system, and now that England has a King who rules as well as reigns, the likeness is complete. To this domination by Norman discipline, Norman law, Norman order, England has owed her greatness and power through centuries.

To Ireland the Normans brought discord, not unity. The Saxons were completely conquered by the year 1087, when William the Norman died. The conquest of Ireland was only partial, so late as 1603, when the last of the Tudor monarchs gave place to the Stuarts. During the five centuries between, Irish princes ruled in many parts of Ireland, under Irish law, and in territories permeated by the Irish spirit and using the Irish tongue. Ireland was thus divided against itself, and felt the weakness that comes of division. Then followed the great religious feud of the Reformation. England accepted wholly the new order. Ireland remained in great part loyal to the old. Here was another element of discord, which brought about endless misery in its train. Then came the struggle between Irish and English law, which added the third principle of strife. Ireland's law was based on the modern elective system, on the choice of the fittest as heir, rather than the eldest. We all remember Darwin's famous attack on English primogeniture, as the system best fitted to neutralize natural selection and secure the supremacy of blockheads. The Irish brehons anticipated Darwin's idea and its application. Again, Irish law substituted fines for capital punishment, which was a terrible stumbling-block to English legislators.

The result was that England attacked and rendered invalid all land titles in Ireland, following this by wholesale confiscation. Thus to difference of policy and difference of religion insecurity of law was added, and this was finally capped by the forced destruction of Irish commerce, begun by Wentworth in the reign of James I., and continued to the close of the eighteenth century.

These are some of the causes of the great discrepancy between England and Ireland at the present day, in wealth, prosperity, culture, and prestige. To bring about a better understanding between the two nations King Edward must fully understand where the real trouble lies, and do justice to the causes which have brought about the present misery and poverty of Ireland. If he can accomplish this he may lay claim to be considered the greatest of English kings, succeeding where all his predecessors have signally failed.

Goethe and the Poetic Temperament

THERE are great poets whose experimental daring finds vent only in the world of ideas and whose external life flows as uneventfully as that of the veriest sage. The recent biographies of Browning place him plainly in this category. If he was pure poet in sensitive perception and daring flight of fancy, he was a philosopher in his convictions of the limitation set to human action. He had an almost philistine comprehension of the necessity of rules, and he was a man of affairs in his grasp upon practical living. He was never in debt, and the virulent outbreak against Fitzgerald, to the contrary, he was useful and peaceful in all human relations. As Mr. Chesterton points out, Browning was equally happy in his capacities as man, liberal, Englishman, author, gentleman, lover, and husband. It is beautifully recorded of him that he was most vain of being a good husband. With all his intellectual zest for the conglomerate, for faiths and heresies, virtues and vices, joy and suffering, he delighted, as Mr. Chesterton points out, "in the great agreements, the great conventions." His intellect, cordial and open, ready to greet every aspect of life, when it reached matters of conduct was ruled by a judgment heartily at variance with all kinds of eccentricity and irresponsibility. If he appeared at times to be holding a brief for the universe as it stands, with all its contrasts and varieties, he accepted, and in the main he lived by, the rules of the majority.

It is noticeable that Dowden's recent book on Browning is devoted chiefly to a serious weighing of his work, and that Mr. Chesterton, in his chase for an adventurous act in the poet's career, absurdly magnifies the risks of his elopement. In Shelley's life, on the contrary, adventurous acts far too much abound. For one person capable of reading and appreciating Shelley's poetry there are hundreds conversant with the half-assimilated, petty gossip of his life. His habits, or better, his erratic lack of habits, his swift following out of the idea, his exaggerated trusts and affections and equally impetuous hatreds, his adventures by land and by sea, with robbers and murderers and tempests, his atheistic tracts and political pamphlets, his abstemious diet and paper boats are the common property of multitudes as incapable of guessing at the seething world of thought and profound devotion to the ideal back of these casual externalities, as were the parents, justices, and university dons of his own day. In the face of the irregularities of Shelley's life it would be absurd to deny the dangers that beset the poetic temperament when immediately translated into action.

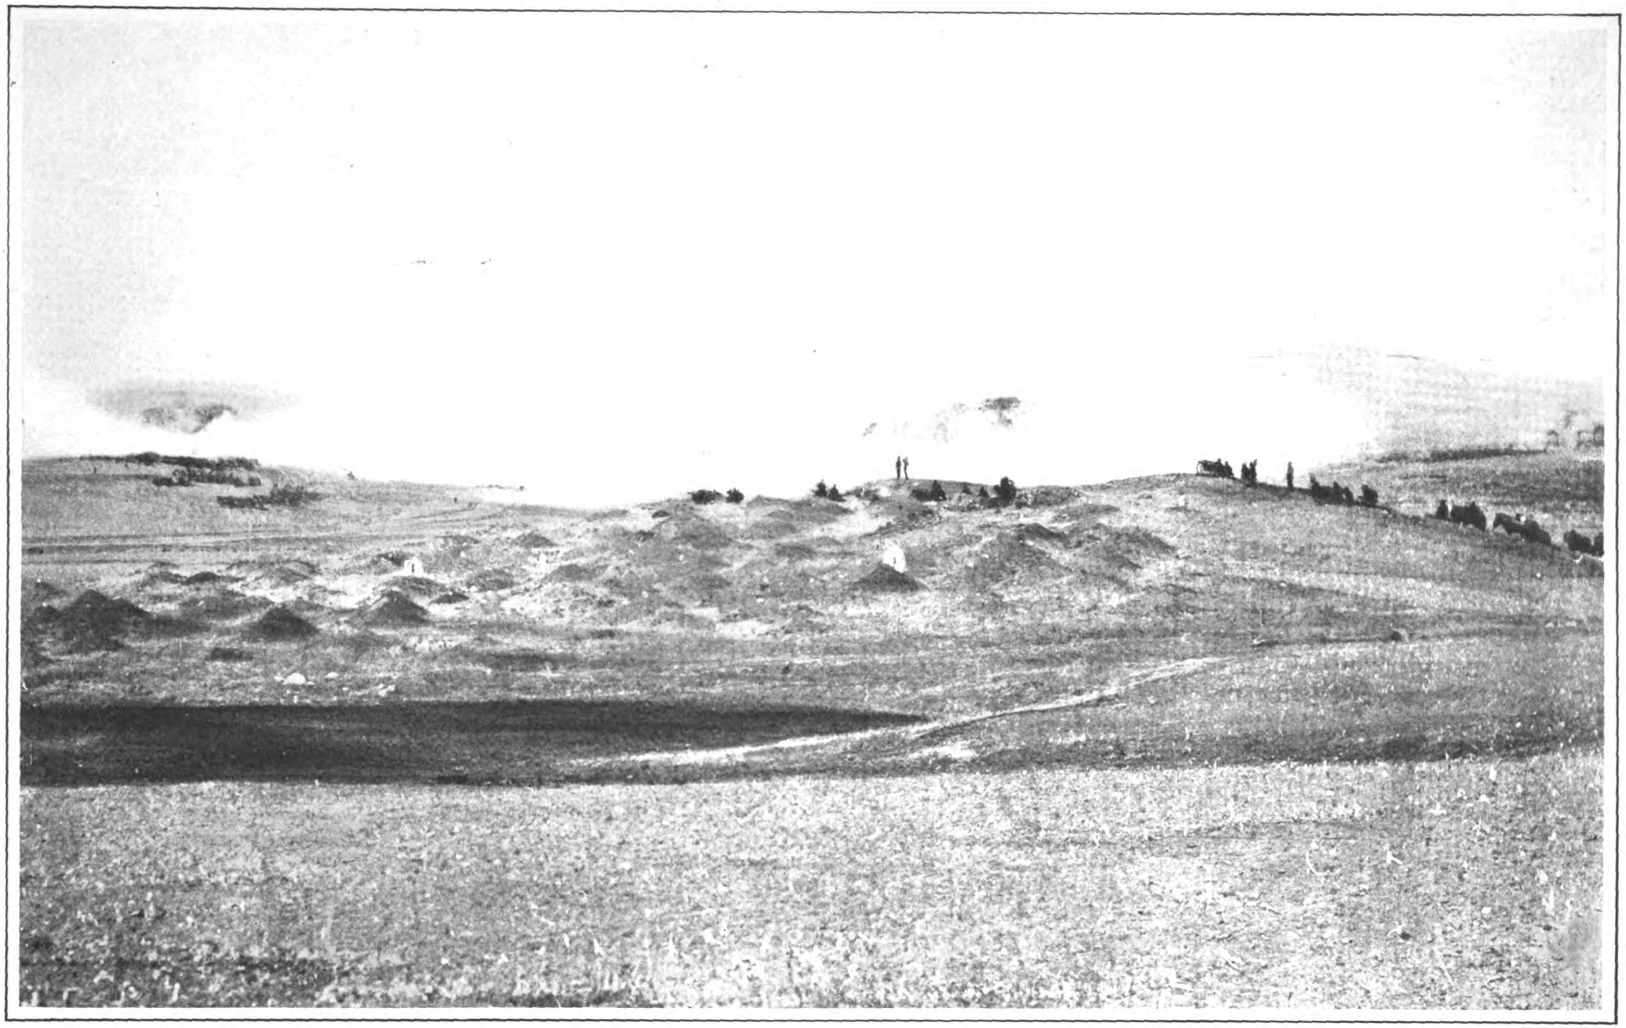
On the same side we could quote the career of Marlowe, he of the

Unbowed, bright, insubmissive head.

Shakespeare, Milton, and Wordsworth, all poets of first rank, lived lives where the world of poetic perception interfered but little with a due acknowledgment of the usual rules of conduct.

A recent book published in Munich called, *Ulrika von Levetzow and Her Recollections of Goethe*, shows us Goethe at the age of seventy-four, possessing still a youth's capacity for emotion, which Eckermann refers to as "a fresh vivacity of heart." It was for the seventeen-year-old Ulrika that Goethe wrote the impassioned "Elegy of Marienbad," a poem compact of stress and intensity, having, says Eckermann, "something immediate about it as of a single jet of feeling."

Ulrika denies that she was, at seventeen, a sentimental Charlotte and Goethe an aged Werther. She tells, very ingenuously, of being called from her embroidery one day by her grandmother to meet an old gentleman. Unaware of his name and his celebrity, she met him with the utmost unconcern and indifference. It was doubtless this ingenuousness coupled with a childlike and charming appearance which won the poet's heart. The acquaintance ripened "into friendship and into a deep devotion on the poet's side. The two took long daily walks together." Goethe, in his mineralogical excursions, has found an "immortal violet," writes a contemporary. "He is distractedly in love with a young girl, and wants to marry her. A poet's folly!"



According to Ulrika, the formal proposal followed, accompanied by persuasion from Duke Karl August, of Weimar, but it was, reasonably enough, rejected by the young girl herself.

In the course of the friendship the poet told Ulrika the first volume of *Wilhelm Meister's Travels*, deeming it unfit for her to read. "How often I have regretted," writes Ulrika, "that I did not write out his words. This would have had a far greater interest to-day than the notes and letters people make such a fuss about." But in reality the highest interest attaches to this proof of the persistence of youth in the poetic temperament, and it is a more valuable point to note than the exact words in which he chose to adapt Wilhelm Meister to the intelligence of seventeen.

It is the especial quality of the poetic temperament that is keenly alive. A poet is not so much different from other men as he is *more* than other men. He sees more in quantity and he feels more in intensity under the same circumstances. The service of the poetic temperament is that it revivifies what is dead or half-dead. Its gift is the life more abundant. Whether merely by creation, by daring questioning of accepted codes or by bold deeds and painful downfalls it sets a question mark after all established values. With its tremendous fertilizing power it sets men to questioning all that is crystallized in dogma and conventions, to raking up and revitalizing the underlying reasons for the faiths that are in man.

The second quality of the poetic temperament is its perennial buoyancy. Goethe, at seventy, was alive with the living capacity for emotion of a youth. Browning, though less swift at translating emotion into life, shows in "La Saisioz," written at the age of sixty-five, a whole world of feeling, pain, and uncertitude still at its keenest. The poetic temperament, by its intensity and its buoyancy, remains one of the greatest creative forces of the world.

PHOTOGRAPH OF JAPANESE FIRING-LINE IN A SKIRMISH NEAR THE YALU

The photograph shows the Japanese firing-line in a skirmish with the Russians near the Yalu River in northern Korea. The most recent information concerning the progress of the Japanese in Korea is contained in the news, received as this issue goes to press, of a six-day battle culminating on May 1 in which a Japanese army, under General Kuroki, crossed the Yalu and forced the Russians from Chiu-Tien-Cheng, ten miles above Antung. The Russians retreated toward Feng-Wang-Cheng. No trustworthy report of the losses has been received

RUSSIAN TROOPS IN THE FAR EAST—INFANTRY PARADING AT BLAGOVESTCHENSK

It is estimated that within three months Russia will have not less than four or five hundred thousand men at the front. According to the most reliable reports, the Russian forces in the Far East are divided as follows: at Port Arthur and Vladivostok, 30,000 men; guarding the railroad, 40,000; at various garrisons and fortified points, 20,000; available for the field, 135,000

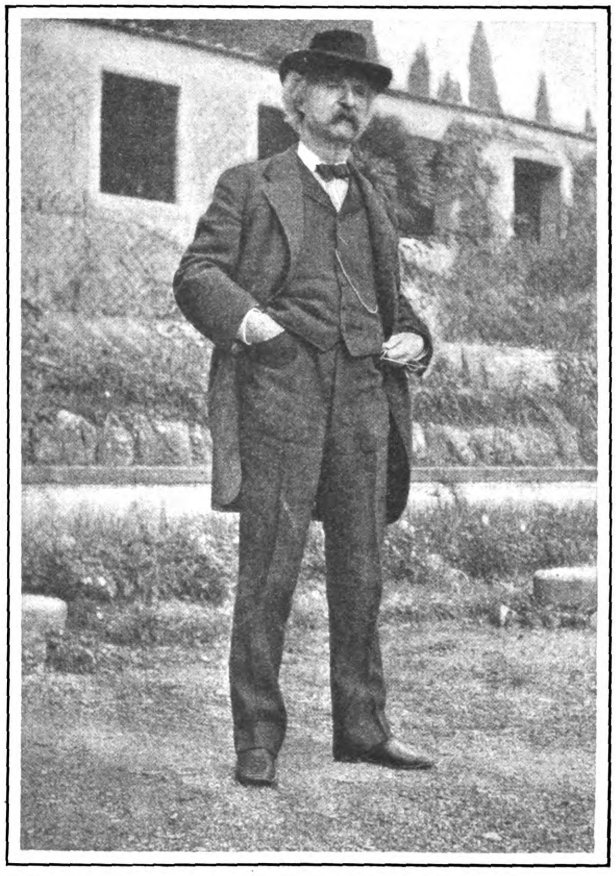
RUSSIAN TROOPS IN THE FAR EAST—INFANTRY PARADING AT BLAGOVESTCHENSK



Books and Bookmen

By James MacArthur

HALF an hour's journey from Florence in the Sesto train, and then another twenty minutes gentle up-hill walk along a lane, will bring you to a small iron gate in a wall—the wall which encloses the grounds of the Villa di Quarto, where Mark Twain has been spending the winter. Here a special representative of the *Sketch* visited the great humorist recently, and obtained the new photograph and interview with him which are herewith reprinted for the benefit of Mr. Clemens's host of admirers in this country.

It was raining dismally when I arrived (writes the representative of the *Sketch*), as it can rain sometimes in Florence; the chrysanthemums round the villa were wofully bedraggled, and there was a general feeling of damp discomfort in the air, so that I was scarcely surprised when I was told that the famous humorist was confined to bed with a sharp attack of rheumatism. Fortunately, however, he sent word that he would receive me. The first thing that impressed me was his eyes. What wonderful eyes Mark Twain has! At times, in repose, seeming to be set far back in his head, dull, dead of expression, and then, of a flash, shining out keen, piercing, full of life. I recognized at once the mass of long hair inclined to curl, the heavy mustache, and the shaggy eyebrows of lighter hue, which go to make up the characteristic head so familiar in portraits. He has extraordinarily expressive hands, full of nervous force, seeming to point his meaning even more than the vigorous "By George!" with which he would introduce a more than usually interesting comment. On my entrance, I made some stumbling apology for my intrusion, and he said, rather severely, that he had made it a rule never to be interviewed between whiles, but that during the twenty-four hours preceding his departure from one country and the twenty-four hours after his arrival in another country he was open to all comers. I ventured to hope that my visit would not result in his undoing, and inquired if he knew Italy well.

"No," he replied, laboring with a recalcitrant pipe; "I should like to very much, but this is the only part of Italy that I know. A very pleasant race the Tuscans are, and I get on well with them in a deaf-and-dumb fashion; not that I did not carry on long conversations with every Italian I met when I was in Settignano eleven years ago, only I spoke English and the Italian spoke Italian, and neither of us understood what the other was saying. But we never bore malice and always parted friends." After applying a fresh match to his pipe he went on: "The world, of course, is the same all over, and I have my singular correspondents here, too. To-day I have received a letter from a Florentine gentleman in which, as far as I can make out with the aid of my daughter, he asks me to pay him twenty francs for some copies of his paper which he sent to me and as recompense for five visits which he has made to my house 'at grave risk from your dogs.' I did not ask for his papers, I did not ask him to pay me those visits, and the dogs who threatened his life belong to my neighbor!"

Mark Twain in the Garden of the Villa di Quarto, near Florence

Speaking of the followers of Mrs. Eddy, who do not reason but blindly believe, he said: "For the matter of that, the ordinary followers of any religion may be accused of the incapacity to reason clearly about it. The opinion of 'The Man in the Street' is worthless on a subject of which he has not made a special study. Lawyers, perhaps, and college professors may be listened to with attention on their own subjects, for their training has been long and in one direction, but this is true of scarcely any other men." The pipe was going easier now. "Take, again, the burning copyright question. Why, when I want some plumbing done in the house, do I go to the expense of getting the plumber out from the town, if the village carpenter who lives next door could do the work as well and cheaper? It is just because he does not understand the mysteries of pipes and soldering that I do not ask him for his opinion. And why should we expect the seven hundred or so Members of Parliament or Congress to settle satisfactorily the intricate question of copyright? Perhaps there are twenty-five out of the whole number who have written a book that has achieved success; of these twenty-five certainly not more than five have written a book that will outlast the statutory forty-two years. The remaining six hundred and seventy-five may be gifted with more than average intelligence, but that is not sufficient if they are to adjudicate on a matter outside their own special province. Now the learned Law Lord who examined me when I appeared before the House of Lords made a point that the owner of land, for instance, had a right to perpetual freehold, but not the author of a book, the value of which depended on an *idea*, on something evanescent. I objected at once that the value of real estate was as much dependent on an idea as any book was. Take a simple example: A shrewd traveller in the heart of Africa comes upon some land, which he foresees will some day become the centre of a network of railways, and purchases it from the local chief. At that moment it is not worth a cent, but will be valuable in the future, in his children's or his grandchildren's time, years after some wretched writer, perhaps, would have ceased to have any property in a book he had written at the same time. And yet in both cases it was an *idea* which gave the value, and why should there be this discrimination? I cannot understand why Lord Macaulay, who *was* qualified to judge, and whose advice was listened to, favored the forty-two rather than the sixty years' limit in copyright. But, even with forty-two years, the English are better off than we with our twenty-eight years in America. It is true that we can extend our copyright for another fourteen years, but the application has to be made, personally, within the last six months of the term, and it is not always easy to remember dates."

I rose to go, and, looking out of the window at the incessant rain, expressed a regret that Florence was treating him so unkindly with her weather. "Well," quoth the humorist, "it is rather an incentive to imaginary rheumatism. Mother Eddy has not taught me yet to suppress my imaginings." Whereat I laughed, and so ended a long visit in which all my preconceived notions of the great writer had been upset, and a new Mark Twain showed himself to me, not solely humorous, but intensely earnest.

Since Mark Twain published a portion of Adam's Diary a few years ago in HARPER'S MAGAZINE, he has, as he puts it, "deciphered some more of Adam's hieroglyphics," and they now appear in book-form, with comic drawings by the humorous illustrator, Mr. F. Strothmann. *Extracts from Adam's Diary*, "translated from the original MS," and illustrated "with photographic reproductions of the original Diary carved on stone," is conceived in a spirit of broad fun, and yet it is not without its touches of tender seriousness. Adam had his doubts about Eve for a long time, but "after all these years," he concludes, "I see that I was mistaken about Eve in the beginning; it is better to live outside the Garden with her than inside it without her."

Japanese Women in the War

By William Dinwiddie

Special Correspondent of "Harper's Weekly" in the Far East

TOKYO, *April 9, 1904.*

WITH all social barriers down, hand in hand and heart to heart, the millions of Japan are working for one common end—the crushing defeat of Russia and the glory of their country in victory.

Royalty and nobility are actually commingling with the common people in closest union, for the first time in the history of the nation, in many philanthropic undertakings, for the alleviation of the sufferings of the sick and wounded soldiers in the field and at the home hospitals, and for the support and care of the helpless and destitute soldiers' families, left alone to struggle, as best they can, with scanty larders, by the men who have answered the war call to arms of their government.

This levelling of social distinctions and breaking up of caste lines under the overwhelming necessity for national self-preservation will be a good thing for Japan, and, though she be tried in the furnace and her very existence be torn on the rack of war, if she ultimately succeeds she will have done more than simply sustain her integrity—she will have coalesced her people, from the highest to the lowest, into a democratic comity whose every heart-beat will signify a national desire for rapid progress.

The practical, every-day side of the situation, divested of possibly fine-spun theories, is that the wealthy and aristocratic men and women are working with the humbler classes to organize relief and aid societies.

The oldest and best known of these is the national Red Cross Society, founded in 1887 by the government, and presided over by his Imperial Highness, Prince Komatsu, until his death a year ago. The present president is his Imperial Highness, Prince Kanin. The organization is supported by the subscriptions of the members, who number between one and two millions; it has, at the present time, a large reserve fund of between three and four million dollars gold.

The Red Cross Society has a branch or auxiliary known as the Ladies' Volunteer Nursing Association, which was established shortly after the parent society.

An interesting fact is that all the princesses of royal blood are enlisted among its members and practically all the ladies of the nobility. Marchioness Nabeshima is the president and manager of the society. There are four hundred women in Tokyo alone who are both contributing members and actual workers, and the association has branches all over the empire, including the island of Formosa.

The object and purposes of the society are extremely practical and praiseworthy, as it undertakes to turn out trained army nurses, compound all the lotions and salves, and make all the antiseptic bandages and first-aid-to-the-wounded packages used by the army.

Five days in every week—whether there be war or not—the nursing association members (who must also be members of the Red Cross) have to go to the great Aoyama Military Hospital and attend lectures on first aid to the wounded, be present at clinic and operations, take lessons in practical pharmacy, and roll bandages for the army.

Almost any day a dozen princesses may be seen among a hundred other Japanese ladies of various gradations in title working with might and main rolling bandages—all in the regulation white cotton dress and cap. On the street, when engaged in work connected with the association, they wear black uniforms trimmed with blue, and a fetching bonnet upon their heads of the same material, relieved with touches of white, "Because we have such very black hair," one small lady coquettishly vouchsafes.

The work is carried on systematically and scientifically, and it is neither an afternoon tea-party nor a gossip club, but a workshop in which every woman tries to turn out good work, and, in these trying times, lots of it. As the previously medicated bandages are rolled loosely by hand and again on the machine, they are gathered together and put in a sterilizing oven; they are then tied in small bundles of nine and again sterilized, so that the final product is quite as perfect, from a surgical standpoint, as those handled by professionals. The output for the month of March was eighteen thousand bandages, and every particle of the labor—from the bolt of cloth to the finished bandage—was done by these volunteer nurses.

That the training-school of the Ladies' Nursing Association stands for substantial learning on the part of the pupils was exemplified when the American minister, Hon. Alfred Buck, expired suddenly while out on a duck-hunting expedition with the Emperor on some of the royal preserves; it was the court ladies who took the initiative in trying all the known methods of restoring suspended animation, by rubbing, hot applications, and mechanical respiration, and it was the verdict of the physicians who arrived later that these royal ladies had done everything known to science.

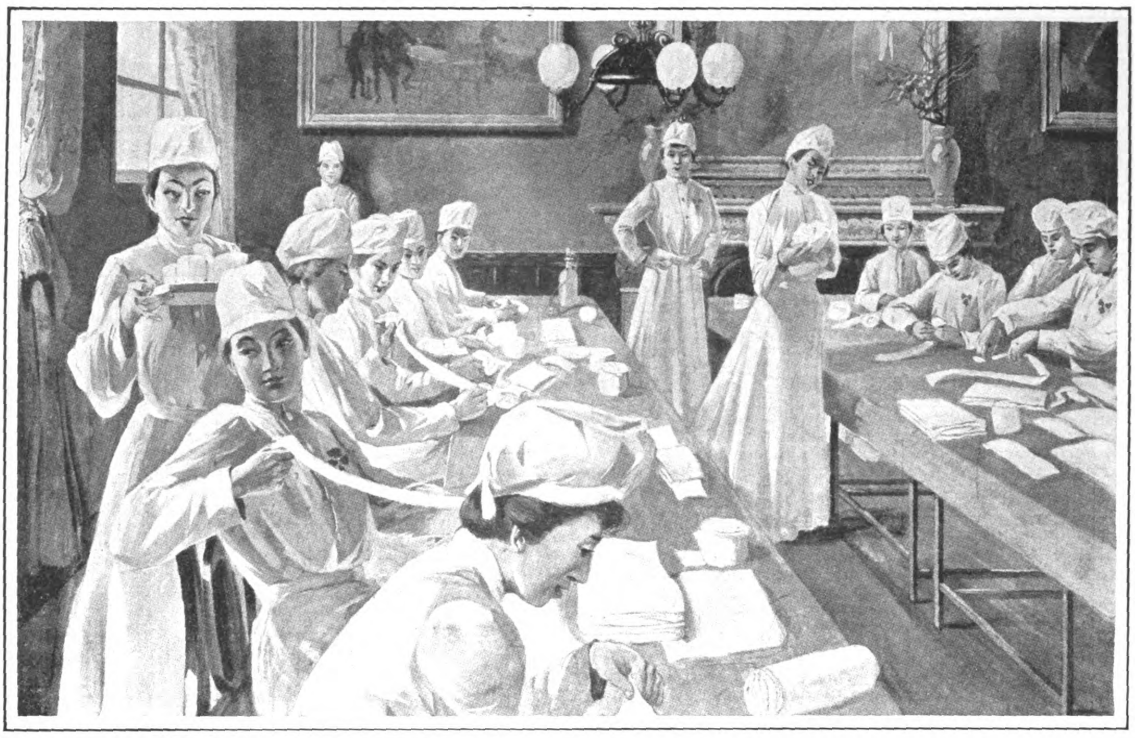
The hospital has a regular training-school for army nurses, who take a systematic four years' course, and may, at the end of that period or when they have passed the examinations successfully and secured a diploma, be taken into the regular army service.

The ladies of the association, in time of war, pledge themselves to help in some way, such as visiting certain hospitals one, two, or more days in the week, or for one month, or any other time they may feel they have strength to undertake, or even, in some cases, to go to the front should the authorities at the War Office desire it; they volunteer the amount of service themselves.

Regular members of the Ladies' Nursing Association pay a fixed sum per year, ranging from three to twelve yen, depending upon what each feels her station in life enables her to contribute, and they pay this fee for ten years, when they become life members. In addition, all members pay 2.40 yen for ten years, and all women from the Empress down may join.

A cash payment of twenty-five yen makes one a life member, and those donating two hundred yen or more become special members, while honorary membership may be conferred upon those who have done some distinguished work for the organization.

Not only do these noble women work like trojans in the bandage-room and tirelessly attend lectures, but, at the present time, hundreds of them are engaged in making warm clothing, caps, and heavy woollen socks for the soldiers in the field. Ear-warmers made of rat skins are being sent out by the thousand; it seems that, in a recent plague scare, a tremendous onslaught was made upon the rodents, with a view of exterminating, if possible, these carriers of the dread disease, and, as a result of the government's efforts and the offer of a small premium, vast numbers of pelts were secured, and are now being turned into nice furry little mufflers, by the aid of the nimble fingers of princesses, marchionesses, countesses, etc.



Princess Nashimoto, Honorary Member of the Red Cross of Japan

The work of these women whose hearts are fired with patriotic sentiments does not stop here, for they have given concerts, recitals, musicales, and garden-parties galore. One amateur concert netted them over seventeen hundred yen. Private gardens from which the public have always been excluded have been opened for the purpose of raising funds and bringing the Japanese women together. The Empress has graciously, on one or two occasions, extended the use of her royal private gardens for sweet charity's sake.

What is known as the Japanese Ladies' Aid Association has been recently created, for the sole purpose of ministering to the wants of officers and soldiers' families, and that such an association is urgently needed is evidenced by the fact that, during an interval of less than ten days, the number of families in Tokyo alone reported as needing some assistance jumped from

Japanese Women of Title working as Red Cross Nurses—Making Lint and Bandages at the House of Princess Komatsu

four hundred odd to nearly fourteen hundred, and, with the soldiers leaving steadily by the tens of thousands, the suffering among the women and children left behind with no surplus savings must increase proportionately, and the tales of self-sacrifice and denial, of woe and hardship, will multiply until the heart of the world will be wrung with pity and sympathy.

There is still another organization of Japanese women known as the Aikoku Fujinkai (Ai, love; koku, country; fujin, ladies; kai, society) or the Ladies' Patriotic Society. It was founded three years ago for the purpose of benefiting the destitute families of soldiers who had been killed or had died.

The members pay annual dues of either one yen or two yen, the smaller sum conferring the privilege of wearing a silver medal, and the larger a gold one. There are several thousand members in the society, and any woman in Japan can join.

The officers are all members of noble families, and the president is her Imperial Highness, Princess Kanin. Every spring an out-door mass-meeting is held, and this year, on March 27, the society met in the gardens of H. I. H. Princess Kanin, but, in view of war conditions, the usual festivities which accompany the gathering were curtailed, her Imperial Highness simply thanking the members for the assistance given in the past, and urging them to greater effort in securing new members.

Small sweetmeats, or, rather, cakes of rice-flour, were distributed among the concourse—one of pure white bearing the imperial crest of the sixteen-petalled chrysanthemum in gilt. Each member was also given two tickets of admission to the imperial botanical garden, and the ceremonies closed by the multitude singing the national anthem, the Kimigayo, accompanied by the imperial band.

Though, all in all, there are several million men and women in Japan enrolled in the philanthropic movements to aid the soldiers and those ordinarily dependent upon the soldier when he is on a peace footing and an earning factor in the daily struggle for bread, times will be hard in this country for several hundred thousand families should the war be one of long duration.

The generous aid-workers of Japan will make a mighty effort to prevent much suffering or destitution among those who have given their nearest and dearest for the glory of the nation, but it is a lean, gaunt monster of poverty with which they are confronted, and, unfortunately—in this land of scanty earnings and no surplus—he was hungry before the war came to brush away the little at hand.

The British Budget

By Sydney Brooks

LONDON, *April 27, 1904.*

ANOTHER penny on the income tax. An extra twopence on every pound of tea. Some new duties on tobacco which I do not pretend to understand. A realized deficit on the year that has just closed of about $27,000,000. An estimated deficit for the year that is to come on the existing basis of taxation of about $19,000,000. Such, roughly, is the gist of the financial statement which the Chancellor of the Exchequer, Mr. Austen Chamberlain, submitted recently to the House of Commons. It is gloomy reading. Tory governments are traditionally extravagant, and this year's budget shows that the tradition has its basis in fact. After nine years of Tory rule the financial condition of the United Kingdom is worse than it has been for half a century. British credit stands lower to-day than at any moment in the last twenty years. Since the Tories came in in 1895 expenditure has increased fifty per cent.—an increase out of all proportion to the growth of population or wealth. Something over $135,000,000 of additional taxation, imposed as a "war measure," is now kept on in time of peace. And yet in spite of this, and in spite of the huge increase in the national debt, the country is not paying its way from year to year. Rarely has the British House of Commons listened to a more hopelessly depressing summary of the national balance-sheet. It speaks well for "Master Austen," to give him his lobby nickname, that he was able to hold the House from the opening sentence to the last of his long and lugubrious speech. Budget-day is always marked in white on the Parliamentary calendar. This year it was not merely marked, but underlined. A combination of personal and political circumstances, quite unique in their way, had united to make the day an occasion altogether out of the ordinary. It was, for one thing, Mr. Austen Chamberlain's first budget. There was the greatest interest to see how he would acquit himself. For the first time in Parliamentary history a Chancellor of the Exchequer was delivering his budget speech with his father as a fellow member and under the paternal eye. That lent to the proceedings an unusual and appealing touch of sentiment. And, finally, there was the political situation to point and emphasize the zest of the occasion. Mr. Austen Chamberlain is the Protectionist Chancellor of a government, that, nominally, at any rate, has excluded protection from its official policy. Would

his budget be a budget "for revenue only," or would he contrive to work into it a spice of protection? It was known that he would have to face a deficit. How would he meet it? What new taxes would he impose? What untapped sources would he discover and lay under contribution?

I was not myself present at his speech, but I have talked with M.P.'s who heard it, and they are unanimous in thinking it the best thing that Austen Chamberlain has yet done. The witchery that Mr. Gladstone was able to throw over his famous budgets his young successor does not even pretend to. Austen Chamberlain is a popular man on both sides of the House, but even after making full allowance for personal partiality, there remains a very general opinion that his effort was a great success—a plain, lucid, unambitious, businesslike statement of the facts of the case. Success must have been all the more welcome as since his appointment to the Chancellorship he has not risen to the height of his chances. At the beginning of the session, when Mr. Balfour was down with influenza and Chamberlain *père* away on his holiday, the Chancellor of the Exchequer had a great opportunity to make his mark as a debater and party leader. He quite failed to take it. His speeches were flat and nerveless, and showed none of his father's cool incisiveness—in fact, nothing of his father at all except a few mannerisms. Men quoted Burke's time-worn criticism—"All his pomp without his force; all the nodosities of the oak without its strength; all the contortions of the sybil without the inspiration." There was the eye-glass and the wagging forefinger, the front-bench attitude, and the perky style—but nothing else. It even came to be thought that under the ordeal of the budget speech he might absolutely collapse. Perseverance, however, and careful preparation pulled him through. I do not by any means regard Austen Chamberlain as a heaven-born minister of finance. He is in his present position mainly because he is his father's son. When he went to the Treasury I doubt whether he knew much more about finance than Randolph Churchill, who scandalized the permanent officials by pointing to the decimal signs and asking, "What are those damned dots about?" But ever since his appointment he has grappled, bull-dog fashion, with his task. Fairly quick to take a point, he has also the virtue of taking pains and of surrendering himself without reserve to the business on hand. His success was the success of the industrious apprentice, and very cordially welcomed as such by all parties and sections. Mr. Austen Chamberlain is a capital example of the English public man. His character is cast in a finer mould than his father's, his manners are exceptionally polished and agreeable, his flow of talk easy and attractive in a mundane way, and all his tastes are wholesome. He has a good head for affairs, though not a remarkably good one, lacks his father's force, but has the knack of proving adequate to the duties of whatever post he may be holding. Rugby and Cambridge and an early mingling in good society have left their pleasant stamp upon him, and, on the whole, I know of no man in English politics of whose essential soundness people are more convinced or for whose success there are more general good wishes.

Naturally what most interests the country in the new budget—it is at best but a painful interest—is the extra penny on the income tax. It interests me. Every now and then the British government becomes most flatteringly aware of my existence, and desires a closer acquaintance with a zeal I have some difficulty in evading. Taking stock of all the resources that may be drawn upon to meet the expenses of the "little war" in Somaliland, a new army reform scheme, the expedition to Tibet, and what not, it lights upon my insignificant self and still more insignificant income as an asset that should be turned to account. I find myself accordingly placed under Schedule D of the income-tax assessment, am *bom*barded with official documents that have to be filled up and returned within seven days to the local surveyor of taxes, and am threatened with a host of penalties if I assault the collector or make "*an* untrue return." Schedule D seems to be quite comprehensive in its scope, and it would puzzle even an Armenian to get around it. It does not matter whether you are a British subject or not, whether you live in the United Kingdom or outside of it, whether your "trade, profession, employment, or vocation" is carried on in England or abroad. Your income may come from the United States, and you yourself be an American citizen, but if you live in England Schedule D will get you. Or you may be a Frenchman living in France, but if your income is derived from any form of business carried on in Great Britain Schedule D will still circumvent you. All that you can do is to take the fullest advantage of the various abatements and deductions that are permitted or else to juggle frankly with your conscience. Most Englishmen do both. When the present budget is passed the income tax will stand at one shilling in the pound—in other words, at five per cent. It has in previous years been as high as one shilling and fourpence—that was during the Crimean war—and it has also been as low as twopence. The way in which under Schedule D the amount of assessable income is calculated is simple and fairly equitable. You begin by striking an average of the profits of the three past years arising from your "trade, profession, employment, or vocation." From this you are entitled to make deductions (1) for the repairs of premises occupied for the purpose of trade and manufacture and for the supply and repair of implements, articles, or utensils employed; (2) for bad and doubtful debts at their estimated value; (3) for the rent of such premises as are solely used for business; (4) for two-thirds of the rent when the premises are only partly used for business; (5) for wear and tear of machinery and plant; (6) for life-insurance premiums; and (7) for "any other disbursements or expenses wholly and exclusively laid out for the purposes of the trade, etc." Thus if you are a doctor and receive patients at home you may deduct two-thirds of the rent of your house, the whole of the rent of an outside office, the sums paid out in local rates and taxes, the salaries of your assistants and locum-tenens, the wages and board of your coachmen and servants, the cost of drugs, medical books, and instruments, the keep or hire of your brougham, and so on.

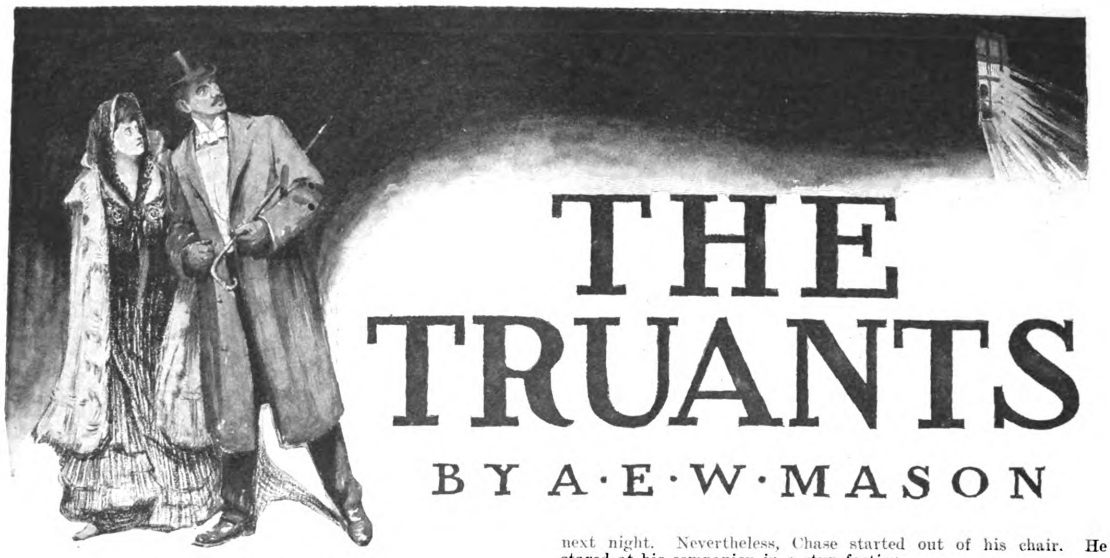
The income tax was introduced into England by William Pitt—who otherwise had his points—in 1799 under the stress of the French war. It ceased in 1816, but was revived by the dastardly Sir Robert Peel in 1842, and extended by the iniquitous Gladstone in 1853. From being a temporary war-tax it has now become a permanent part of the British financial system, and is resorted to by every Chancellor who finds himself in difficulties. It is not such an inquisitorial tax as you would think, as over half—I have seen it stated two-thirds—of the amount collected is not assessed directly on the ultimate payers, but at the source of origin. I own stock, let us say, in a railroad and industrial company. The income tax is assessed on and collected from the railroad company in one sum, and the burden of it distributed among the stockholders in proportion to their holdings. My dividends, that is, *reach me* "less income tax." In this way evasion is made extremely difficult, the productivity of the tax is largely increased, and its incidence is deprived of that personal element and that direct contact between the individual and the tax-collecting agency which are usually responsible for the unpopularity of imposts. On the whole, it is probably true to say that in no other way can the wealth derived from property and investments be so adequately, so regularly, and so equally laid under contribution. Incomes of less than $800 a year are exempt from the tax, and there is a graduated scale of abatements of the duty on incomes up to $3500 a year. The latest available figures put the gross income from all sources sworn to by the people of the United Kingdom at $4,334,967,265. From this sum abatements of one kind or another were made to the amount of $1,297,212,670. Income tax was therefore paid on $3,037,754,595, and produced at a shilling in the pound the sum of $177,202,350. An extra penny on the tea is reckoned as equivalent to $10,000,000.

The Science of Gas

By Sir Hiram Maxim, C.E., M.E.

A GAS-MACHINE is generally understood as an apparatus for producing carburetted air, which may be used like carburetted hydrogen or coal-gas for illuminating purposes. When gasoline, which is a very light and volatile product of petroleum, comes in contact with the air it is dissolved by the air—in other words, the air becomes charged with its vapors to such an extent that the air and vapors form a fairly good substitute for coal-gas, requiring a slightly different burner.

Oliver P. Drake, a philosophical instrument-maker of Boston, Massachusetts, was the first to use gasoline for this purpose. The Drake machine was made in the form of a cylinder with a partition through the centre. One end was provided with a water-metre wheel driven by a weight and clockwork. This metre-wheel pumped air, which was taken into the other end of the cylinder, where it came in contact with the gasoline, the gasoline being constantly presented to the air by a rotating evaporator made of wicking. The air in passing took up sufficient of the vapors to enable it to be used for illuminating purposes. These machines went into use to a limited extent. They were followed by numerous other forms, of which the Springfield was the best known. This had all the features of the Drake machine, except that the carburettor was separated from the metre-wheel or air-pump.



In 1870 I brought out a totally new form of gas-machine.

The gasoline was first converted into a vapor under a pressure of about thirty pounds to the square inch, and the escaping force of the vapor was made to suck in the necessary air, thus doing away with the air-pump. This was the first machine in which the quality of the gas was uniform. It was, however, only suitable for large purposes. A considerable number of these machines were used in large manufacturing establishments, hotels, etc., one of them being employed at the Post-office, New York.

Light-machines have also been used in hotels in New York and elsewhere.

Gas-machines of this type, however, have now been supplanted by acetylene-gas and electric light.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She wires Warrisden to come by an early train, and asks him to find Tony and bring him home. Warrisden accepts the commission. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure. Warrisden learns from Mr. Chase that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. He starts out to find him, and finally reaches him far up in the North Sea. Warrisden uses every argument to prevail upon Tony to come back, but he refuses, and Warrisden is forced to return alone. He reports to Pamela the failure of his mission, but, to his surprise, she does not seem disappointed. He thinks it is because of the news which he hears from her—that Sir John Stretton has died, which will naturally bring Tony home. But that is not the whole explanation: for Pamela is overcoming her old indifference toward life, and in her life are being aroused new sympathies and emotions. Tony remains on the trawler until the term of his cruise is over, and then, after much perplexity and indecision, decides to return to London, feeling that he has seen a way out of his difficulties. On his arrival in London he calls on Mr. Chase, and tells him that he has decided not to return to Millie until he has succeeded in winning distinction in some field of work. He feels that he would deserve Millie's contempt if he returned at the moment when life had suddenly been made easy for them by his father's death.

CHAPTER XIII.—*(Continued.)*

IN STEPNEY

STRETTON seated himself again in his chair and took out a briar pipe from his pocket. The pipe had an open metal covering over the bowl.

"I need that no longer," Stretton said, with a laugh, as he removed it. Then he took out a pouch, filled his pipe, and lighted it.

"Have a whiskey and soda?" said Chase.

"No thanks."

Chase lighted a cigarette and looked at his friend with curiosity. The change which he had noticed in Stretton's looks had been just as noticeable in his words. This man sitting opposite to him was no longer the Tony Stretton who had once come to him for advice. That man had been slow of thought, halting of speech, good-humored, friendly, but a man with whom it was difficult to get at close quarters. Talk with him a hundred times, and you seemed to know him no better than you did at the moment when first you were introduced to him. Here, however, was a man who had thought out his problem, was, moreover, able lucidly to express it.

"Well," said Chase. "You are determined not to go back."

"Not yet," Stretton corrected.

"What do you propose to do?"

The question showed how great the change had been, begun by the hard times in New York, completed by the eight weeks in the North Sea. For Chase put the question. He no longer offered advice, understanding that Stretton had not come to ask for it.

"I propose to enlist in the French Foreign Legion."

Stretton spoke with the most matter-of-fact air imaginable: he might have been naming the house at which he was to dine the next night. Nevertheless, Chase started out of his chair. He stared at his companion in a stupefaction.

"No," said Stretton, calmly. "I am not off my head and I have not been drinking. Sit down again and think it over."

Chase obeyed, and Stretton proceeded to expound that inspiration which had come to him the night before.

"What else should I do? You know my object now. I have to reestablish myself in my wife's thoughts. How else can I do it? What professions are open to me in which I could gain, I don't say distinction, but mere recognition? I am not a money-maker, that, at all events, is evident. I have had experience enough during the last few months to know that if I lived to a thousand I should never make money."

"I think that's true," Chase agreed, thoughtfully.

"Luckily there's no longer any need that I should try. What then? Run through the professions, Chase, and find one, if you can, in which a man at my age, twenty-nine, with my ignorance, my want of intellect, has a single chance of success. The bar? It's laughable. The sea? I am too old. The army? I resigned my commission years ago. So what then?"

He waited for Chase to speak, and Chase was silent. He waited with a smile, knowing that Chase could not speak.

"There must be an alternative," Chase said, doubtfully, at last.

"Name it then."

That was just what Chase could not do. He turned in his mind from this calling to that.

There was not one which did not need a particular education; there was not one in which Stretton was likely to succeed. Soldiering or the sea. These were the two callings for which he was fitted. From the sea his age debarred him. From soldiering, too, except in this one way. No, certainly, Stretton was not off in his head.

"How in the world did you think of the Foreign Legion?" he asked.

Stretton shrugged his shoulders.

"I thought of most other courses first, and one by one rejected them as impossible. This plan came to me last of all and only last night. We were passing a light-ship. In a way, you see, we were within sight of home. I was in despair. And suddenly the idea flashed upon me, like the revolving blaze from the light-ship. It is a sound one, I think. At all events, it is the only one."

"Yes," answered Chase, slowly. "I suppose there will be chances. For there's always something stirring on the Algerian frontier."

"There or in Siam," said Stretton.

"What arrangements are you making here?"

"I have written to my lawyers. Millie can do as she pleases with the income. She has power, too, to sell the house in Berkeley Square. I made my will, you know, before I left England."

Chase nodded, and for a while there fell a silence upon the two friends. A look of envy crept into the face of the clergyman as he looked at Stretton. He could appreciate a motive which set a man aiming high. He admired the persistence with which Stretton nursed it. The plan it had prompted might be quixotic and quite fruitless, but, at all events, it was definite. And a definite scheme of life based upon a simple and definite motive was not so common but that it was enviable. Stretton was so sure of its wisdom, too. He had no doubts. He sat in his chair, not asking for approval, not caring for censure. He had made up his mind. The image of Stretton, indeed, as he sat in that chair on that evening with the firelight playing upon his face was often to come to Chase's thoughts.

"There will be great risks," he said. "Risks of death, of trouble in the battalion."

"I have counted them," Stretton replied. And he leaned forward again with his hand upon his knees. "Oh yes, there will be great risks. But there's a prize, too, proportionate to the risks. Risks! Every one speaks of them," he went on, with a laugh of impatience. "But I have been eight weeks on the Dogger Bank, Chase, and I know—yes, I know—how to estimate risks. Out

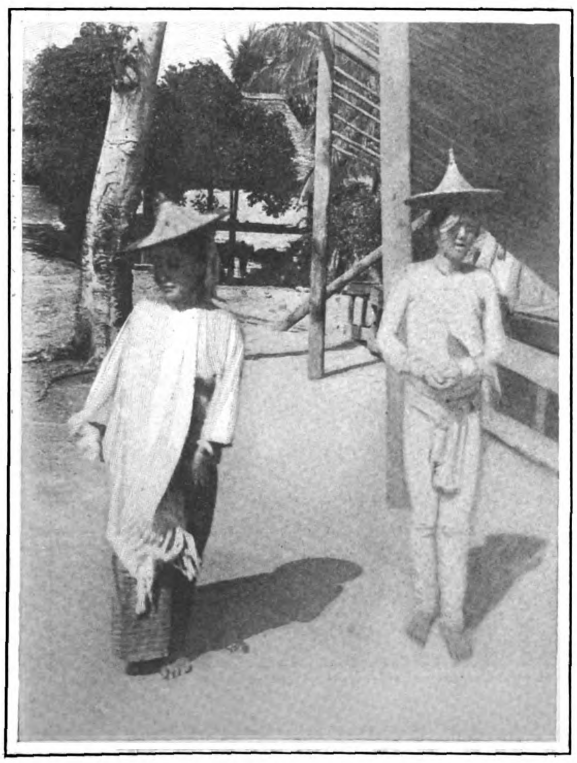
Experiences in the Philippines

A Quaint Trial in Moroland

By A. Henry Savage Landor, F.R.I., F.R.G.S.

PERHAPS to those few who know the Moros well, the organization of the new Moro Province, comprising a great part of Mindanao, the Sulu Archipelago and other islands, and the Tawi-Tawi group, with the establishment of a civil government, may seem a hasty step, and suspicions are current that such a measure has been dictated principally by political necessities. As regards the welfare and peace of that portion of the country, the experiment at such a premature moment may give unexpected results. The Moro country is nowhere in a condition at present to adopt up-to-date modes of self-government—such as may possibly answer well in the United States—in the way of municipalities, the establishment of schools, the imposition of absurd taxes for the raising of revenue, and the enforcement of certain irritating forestry regulations which (in the Philippines) do not protect forests in the slightest degree, and bring in but a miserable revenue, hardly sufficient to compensate the government for the expense and trouble caused by riot, murder, and destruction of property directly or indirectly brought about by what is considered by the natives as a grave injustice. And, indeed, when you come to think of it, an injustice—a great injustice it really is—especially when the law is carried to such ridiculous excesses as it is by some ignorant forestral underlings, such as I have unfortunately once or twice met in my travels in the Moro country.

The actual forestry regulations provide rightly, in order to preserve good and valuable timber, that certain permits must be obtained for cutting wood, but a good deal of red tape is experienced in some places by the natives in obtaining such permits. Moreover, instances have occurred where Moros who have been found carrying a few dried branches of trees for firewood have been subjected to much unnecessary annoyance, besides being heavily fined, or sentenced to imprisonment. To people who have been for centuries and are *au fond* to-day the rightful owners of those forests, such rigor cannot but appear unjust, and every one knows, or can well imagine, that such trifling, narrow-minded officialdom on the part of a supercilious clerk has often roused the revengeful spirit of natives, and has usually cost the lives of several innocent Americans.



Nothing, however, has created and will in the future create more discontent than the laws for the abolition of slavery—which is not slavery at all in the true sense of the word; and still more the strict enactment of laws for the organization and procedure of district courts, to consider and decide civil and criminal actions between Moros, or between Moros or other non-Christian tribesmen and Christians.

The new enactment of laws, *if made simple enough*, and if the customs and manners of the natives were taken to some compatible extent into consideration, would, I think, in a certain degree, be an improvement on the present mode of procedure—the Spanish penal code being in operation at present until a code is issued by the Philippine Commission.

I will give here an instance of a most interesting arson case—a trial of Moros before the Court of First Instance at Jolo—a case which, according to the present way of administering justice, could not have been settled otherwise, but which, even in the opinion of the judge himself, could have been settled more satisfactorily for all parties concerned, and greatly to the advantage of the sufferers, had a simpler and more perfect code than the Spanish been in use. The case will be better understood by quoting what occurred.

The Chinese settlement of Parang was wilfully destroyed by fire, and this being a case of Moros against foreigners, the proceedings were brought before the American court. Warrants were issued on the sworn complaints of several Chinamen against the Moros Serabi, Ouad, Lan Hiri, and Pawaki for arson, and against Selungan for robbery, while Gagji, Hali, Ajadin, and Perog were accused of theft. These prisoners were brought into Jolo on the demand of Colonel Wallace, commanding officer at Jolo, they—the prisoners—being captured by Moros and by them turned over to the American court for trial.

The official language of the American court is Spanish, and all records are reduced to that language, which fact necessitated the services of no less than three official interpreters—English, Chinese, and Moro—to convey all proceedings, so that every party interested in the trial should at once have a knowledge of what went on and of the examinations of witnesses—a regular tower of Babel. Thus the court first, then the accused would know the question of the *fiscal* (or prosecuting attorney) before the question was put to witness and by him answered. So far so good, but here came the trouble and evident disadvantage to the several accused, which was regretted by the judge, who was unable materially to help them. The accused—absolutely ignorant of American, Spanish, or other ways of procedure but their own—were informed that they had the right to have counsel—what the use of a counsel is the Moros are yet too wise and to uncivilized to know, and may Providence spare them for a long time to come; but Jolo is neither New York nor Manila, and the court could appoint no attorney of the Philippine bar, for the reason that there were none in the judicial district. An accused in a New York court might with equal justice be asked at a moment's notice to produce a Moro chief, and with as much hope of success. However, they were further told that if they wished any person to see that they had a fair and impartial trial, and who could assist them in their defence, he would

Native Filipinos in Moroland

A Filipino Family—Scene in a Native Village

be appointed by the court. Now all this sounds legally fair, but as law is not always justice, but often a mere skilful fencing of words, this reminded one of the adept swordsman or pistol-shot who fights a duel with an adversary who has never seen nor heard of a sword or a pistol. As it was, the Moros selected Azu Taibe, the generalissimo of the Sultan's army; Panglima Damang—the panglima (a title) or admiral of the Sultan's forces at Parang; and Bontoca, the old chief of Parang. These chiefs, like the accused they defended, knew nothing, or next to nothing, about Spanish law or any other law besides their own. As was to be expected, they all pleaded not guilty on arraignment. The evidence in the case developed the fact that the Chinese village of Parang was totally destroyed by fire on the night of the 10th of February, 1903, and the goods of the Chinamen, when conveyed from the burning buildings to a place of safety, were stolen or maliciously carried away by the Moros. The evidence showed that even little children were seen making off with loot. A great many Moros were engaged in robbing the Chinamen of their furniture and goods, but only the present accused were actually identified, though several of the Chinamen swore that they could easily recognize others if they could see them, whose names were unknown to them. The Moros themselves were not likely to give any information on this point.

The motive of the crime on the part of Serabi, in addition to "loot," as deducted from the evidence, was revenge, because, being a confirmed opium-smoker, he had become indebted to Hoo Chin (a Chinaman) in a sum of two *pesos* (about one gold dollar) for opium consumed, and Hoo Chin refused to sell Serabi any more until he was paid. Thereupon threats and the attempt to burn down the Chinese settlement.

The trial brought out a curious point, namely, that the leading Moros, or all the Moros who can afford it on the island of Jolo, are much addicted to opium-smoking, a habit which they have undoubtedly acquired from the Chinese.

Serabi himself, while in prison, had to be supplied with opium, as he and his friends, the agus and panglima, declared the accused would collapse without it, so the commanding officer very obligingly had the soothing pills provided for the Moro's pipe while the trial lasted. It was also noticed by the court that the distinguished counsels of the accused were never on time to resume business of the trial on the convening of the court after lunch at noon, and being admonished that they were officers of the court for the time being and must be prompt with their business before the court, dolefully explained that they had no timepieces, and were unable to keep up with the lapse of time. Their sleepy, dreamy countenances and glassy eyes aroused suspicion in the learned judge. The following day, upon their being late again, an interpreter was despatched for them. The suspicions came true. The Moro chiefs and their friends were discovered placidly, happily, and most industriously smoking opium to their hearts', or rather lungs', content.

A Snap-shot of Filipinos in a River-boat of Native Construction.

From my own observation, and also in the more weighty opinion of Judge Powell, it was really astounding how quickly the Moro counsels, up to a certain point, grasped the "trick of the law," as it were, but their mode of defence was at first somewhat startling for an American court. They seemed particularly good at cross-examination of the witnesses, seeing clearly the point in the case and the weight of contrary evidence, attacking it in a most violent manner when it was most damaging. To begin with, they would invariably complain to the court that the witness was an absolute liar, and, whether truthfully or not, could always find a seemingly plausible reason to prove, in their opinion, that he was; then, open and most violent threats to kill any witness who spoke against the accused was another effective mode of defence, until the learned judge, fearing that blood would soon be shed in court, pointed out to the counsels that this was the wrong way to proceed, and patiently taught the Moros the possibly less effective but more legal way of entrapping a lying witness. They were also warned that no witness must be insulted or threatened in court.

In a short time the Moros showed surprising intelligence and cunning in cross-examining witnesses, but another difficulty arose. Both counsel and bystanders, although warned over and over again, would insist on answering for their witnesses and prompt their replies in answer to the judge. Many explanations failed to stop this evil, which seemed to strike the Moros as being the most absurd thing they had ever heard of, and nothing short of a promise to the prime-minister by the court, to let him reflect over American legal procedure in jail if the offence were repeated, made him understand and adopt the rule of law regarding witnesses and their testimony.

The Moros then explained that it was the custom for the chiefs to speak for witnesses, because they accept as evidence only that which they "see with their own eyes, hear with their ears, and believe in their hearts." Under their custom, the Moros have no written laws or anything like an accepted precedent, but Sultan and datto have customs to suit themselves, as the case in hand—a simple mode of procedure, which to me personally seems to be well fitted for such a people, crude as it may seem to a man legally inclined, and to the home-staying Britisher or American. Certainly there are points in the Moro criminal customs which would hardly be applicable to a white race, such as that "no one can be convicted of crime unless some one saw it committed"—that is to say, provided the accused would take the oath, and his kindred and friends, believers in his innocence, would join him in taking such an oath, calling all the curses of the chapters in the Koran down upon themselves if a lie were sworn to. But it must be remembered that even if a champion lying, thoroughbred Moro — I am not certain about semi-civilized ones — would not stop short of taking such an oath, his kinsmen certainly would if he were guilty; whereas it is difficult to prophesy what white men would not swear to in order to protect their own interests.

Another amusing incident occurred during the trial. American law provides for an oath or affirmation, and the Moro counsel strongly objected to Chinese taking the oath in American fashion, on the ground that the Chinese do not consider themselves bound by it—in which there was some truth — and they insisted that they be given the oath according to Chinese custom, namely, by burning joss-sticks or incense, besides killing a chicken and being sprinkled with its blood. Other such or more complicated methods were also suggested. However, the learned judge satisfied himself that the Chinese would tell the truth under the American law form of oath as well as by the chicken process, and the Moros then agreed that the American form would also be considered binding by them.

Reckoning time and distances is done in a primitive way by the Moros, and the particular case before Judge Powell afforded a great many amusing incidents, as well as several graphic illustrations —too graphic, some of them. Distances were computed "by the time it would take to boil one or two or more pots of rice," or by "the enjoyment of one or part of one or more cigarettes"; whereas the time when a journey was begun was identified by pointing at the position of the sun upon the sky, or, if at night, by one-half or one-third or two-thirds of the night.

One very remarkable point with these so-called barbarous people was the intense respect they showed for American law—notwithstanding the fact that they knew nothing about it—and their absolute readiness to accept the law as binding when they were told what it was; and, above all, the assurance of their willingness to accept whatever decision the court should arrive at—a compliment which personally was partly due, I think, to the very honest and confidence-inspiring face of Judge Powell himself. The Moros, like all other savage or semi-barbarous tribes, can never dissociate what they hear from what they see at that particular moment. When the Moro hears of laws of the great American nation, naturally he instantly resembles and compares them to the individual powers of one of his dattos or chiefs. So that what an American judge tells him, are mere words of a particular man's wisdom, rather than the formulated laws of a distant foreign land and people whose powers and influence the Moros are very far as yet from grasping.

It is known to every one that the Moros go armed at all times, and when the Sultan, dattos, or panglimas call on the general (on his visits to Jolo), or on the commanding officer, they bring a body-guard armed with rifles, spears, and evil-looking *barongs* and *kris*. They all crowd into the audience-room without for one mo-

ment even dreaming of laying down their weapons. When they entered the court they were told that armed men were not allowed in a court of justice. They demurred on the ground that it was a disgrace for a chief to be without his weapons, but when told that the law protected all people alike and that arms were a profanity in the courts of justice, and that no one should be intimidated by a show of force, or the timid prevented from giving the whole truth to the court, they instantly agreed to lay aside their arms, and none were again worn during the entire trial. This showed the remarkable fact that for wild people the Moros are easily amenable to reason when properly coached.

It seems to me that with such people—mere children, after all—it is hardly fair to apply white men's laws made purely for white men. Take the particular case above referred to. On seeing that the accused had committed a great wrong and fully recognizing the fact, the Moros offered and promised to make good all losses of the Chinese, undertook to rebuild their houses, supply them with new furniture, and compensate them in every way, so as to reestablish them in the same financial position they occupied before. The Chinese were apparently glad to accept such terms, but it was too late and the trial had to have its course.

Serabi was found guilty of arson—burning a dwelling-house at night in a populous district—and, according to the Spanish penal code in use, was sentenced to the minimum of life imprisonment—death penalty being the maximum prescribed. Omad and Lan Hiri, slaves of Serabi, and his accomplices, were given minimum sentences under the code—twelve years each; Pawaki, brother-in-law of Serabi, accessory, twelve years (minimum), while Selungan, for robbery, got the minimum sentence, six years; Gagji and Hali, for theft, two years, proved by amount of stolen goods; Ajadin, for theft, one year, and Perog, for theft, acquitted.

The judge naturally had to carry on the law as instructed, and could in no way help this, but the result of the trial caused intense dissatisfaction among the already restless Moros of Jolo Island. They failed to see in what way such an exaggerated punishment could benefit the Chinese, and the accused and their defenders seemed staggered that their offer of fully compensating the Chinese was not taken into consideration. Of course the Moros cannot grasp the fact that the judge has no power whatever besides carrying out the law. As for the Chinese themselves, besides being out of pocket altogether, and instead of having protection insured, their position became rather precarious in the island, for the Moro is nothing if he is not revengeful, and the spirit of revenge descends from father to son and from tribesman to tribesman. Most of the Philippine Moros and Chinese, and many thinking Americans too, are at a loss to realize why in a country over which flies the Stars and Stripes, an ill-balanced Spanish code should be used at all in preference to the American—which, although not quite suitable, would still be better than the one now in use—or, best of all, in preference to a patriarchal government based on common sense and compatible with local customs and manners, which would, I think, create good feeling and respect for the ruling nation, instead of hatred, ridicule, and a spirit of revenge. The judges themselves, I think I am right in saying, are of this opinion; but, as I have already said, they have to do what they are told and follow instructions from superior authorities, who, although worthy in themselves, have no clear idea of local conditions and necessities.

How Shall I Educate My Daughter?

By Charles F. Thwing, LL.D.

President of Western Reserve University and Adelbert College

THE future of my daughter is at once more and less uncertain than the future of my boy. It is more uncertain: for it is less under the immediate control of her own preconceived and foreordained plans. It is less uncertain: for, married or unmarried, my daughter should be the head of a home. It may be the head of a home which she and some man will agree together to make; it may be the head of a home which she herself makes alone. But, at all events, wherever she is, however she is, whosoever she is, she herself will be the head of a home. Such headship belongs to her womanhood. I would not have her prepare for marriage, for she may never be married. It is not well for her to think much about marriage. The man who may wish to marry her, if there be any such, she may not wish to marry, and I hope she does not *think* much of marrying any man. But, wholly apart from marriage, she is to embody a domestic headship.

The kind of education, therefore, which I shall give my daughter has relationship to what is her assured general calling, as the head of a home. In the constitution of such a headship are at least four important elements—first, appreciation of the needs of the persons who constitute the home; second, economic efficiency or efficient economy; third, ability for details; and fourth, a largeness of conception of the place of the home.

The first element is at once intellectual and ethical. It represents an understanding of the personalities which fill the house, of their relationship to each other, and it also includes a desire to minister to these personalities. It represents unselfishness. The second element embodies the power to secure from every utility the largest advantage. The third quality stands for the genius for little things. It represents a drudgery which does not belong to the drudge, but that is a form of careful faithfulness. The fourth part embodies a thought of the home as a constituent element of civilization. For the home is the origin, the result, the noblest form and the most potent force in the highest civilization.

The education, therefore, of my daughter shall be determined by these four elements or conditions.

In the securing of these conditions, for the first fifteen years of her life the education of my daughter should not differ from the education of my boy. They shall both be taught the elements of the fundamental studies. She shall know her arithmetic and her algebra, her history and geography, her English grammar, and the other subjects of the ordinary curriculum. She shall be taught them in the same way in which my son learns them. But, not far from the first years of her teens, I may begin to make a difference between her education and that of her brother.

Scholarship is a purpose commonly held in the school and college for boys. Although not one boy in a thousand will become a scholar, yet it is well that the purpose is general. If one boy in a thousand becomes a scholar, one girl in ten thousand becomes a scholar. Small is the chance that my boy will become a scholar, and so infinitesimal is the chance that my daughter will become a scholar that I have the right, and perhaps am bound by the duty of, eliminating it from my calculations. But if my daughter cannot become a scholar, there is one thing which my daughter may become: she may become a thinker. It is as much more important, as it is more probable. For the opportunities for the use of scholarship are few, sporadic; but the opportunities for the use of the power of thinking are constant. In no better way can I prepare my daughter to undertake the joys and responsibilities of the headship of a home, either for herself alone or for herself in combination with others, than by making her a thinker. The appreciation of others' needs is most readily secured by thinking. Wise thoughtfulness saves, or helps to save, one from selfishness. Effective economy, or economic efficiency, is the result of discrimination, and discrimination is a form of thinking. Attention to details is primarily an intellectual quality. The largeness of conception which my daughter should embody in her life in the home represents the power of thought. Therefore I wish my daughter to think. Her knowledge at the utmost will be slight. From year to year it will prove to be a changing quantity; what she knew yesterday she forgets to-day, and what she learns to-day will be no longer known to-morrow, and the quantity will gradually lessen. But the result of her having learned and of having known will be embodied in her power of intellectual penetration, interpretation, and discrimination. Such results are infinitely precious.

In making and aiding my daughter to become a thinker the question emerges: shall she go to college? To this question no unvarying answer is to be given. To make themselves thinkers most girls find the college a very efficient agency. I hope my daughter will be among them. For the college represents those studies and that combination of studies which, on the whole, tend to create and to nourish intellectual strength. The reasoning of the mathematics,—and mathematics is only reasoning,—tends to promote clearness and accuracy in perception, inevitableness in inference, a sense of logical orderliness. The study of the languages represents the element of interpretation. What does the author mean, in what form can his meaning be most adequately expressed, what is the significance of his message? are the questions constantly asked in the study of either Virgil or Livy, Thucydides or Plato, Goethe or Racine. Language may not so directly promote correctness of thinking as other studies, but language does enrich and fructify the mind, giving to it materials for thought as well as nourishing the power of thinking itself. The student of language gains a certain citizenship in the empire of knowledge, familiarity with its elements, conditions, and limitations, an unwonted power in understanding the origin and the progress of things, and an adequacy in the expression of his thought which does not usually belong to one who feels himself at home in the domain of only his native tongue. A similar result belongs to the student of history. By history one does not mean facts, but one means the interpretation of life. As the writing of history has passed over from being a record of the risings and the fallings of rulers, of the declaration, continuance, and conclusion of wars, so the study of history has ceased to be a learning of bare facts and has become an appreciation of the elements and forces which constitute the life of a people. I wish my daughter to know her own American people. I wish her to know of the sufferings and the hardships patiently borne and the simple lives lived, at Plymouth and Boston, by her grandparents in the former generations. I wish her to be able to conceive of the unique progress and development of the American nation. But she cannot know America unless she knows England, and in knowing England she will necessarily come to know a large part of the world. From one she may learn all. She cannot know one without knowing somewhat of all. Economics, sociology, political science, government, this vast yet diverse field, complex, an unmapped territory, an uncharted sea,—I would have her to some extent enter upon. No study is better fitted than economics or sociology to cause an appreciation of the value of facts. The subject quickens one to relate fact to fact, to infer from two

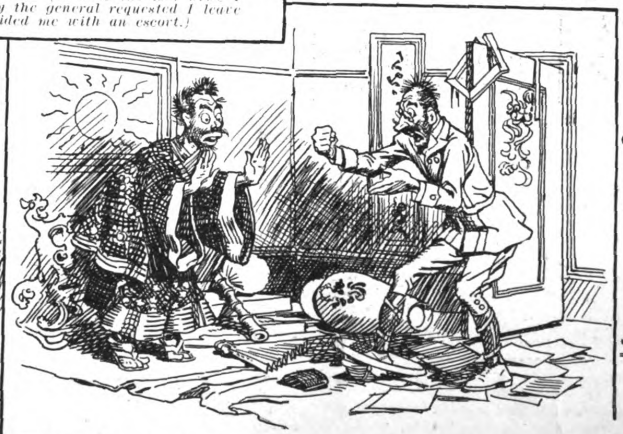
NEWS FROM THE WAR

PROGRESS OF THE SPECIAL CORRESPONDENT AT THE FRONT

SKETCHES FROM TELEGRAPHIC DESCRIPTION BY ALBERT LEVERING

April 27 (special).—There will be a great battle to-day; I am on the ground in my news-automobile; may I accept decorations from the Mikado if I get them?

April 30 (special).—To decide beyond dispute hereafter reason for sinking of Russian cruiser "Knockemoff," I raised her, and found a hole sixty-five by seventy-eight feet in her hull. This is doubtless why she sank; cannot say what caused the hole.



Chow-Chow, May 1 (special).—Troops will move somewhere to-night; I learned this from the Chinese camp cook. (This is the last news I will send from here; for my own safety the general requested I leave his headquarters. He thoughtfully provided me with an escort.)

May 3 (special).—We are marching on Goodoldstock. Great suffering among correspondents.

May 4 (special).—Great luck! Your correspondent was mistaken for a spy to-day, and shot in eight places. (This is the first real action any correspondent has been in.)

Tokyo, May 6 (special).—I had a heart-to-heart talk with the Mikado to-day, in which I insisted that the present inactivity must cease, and that St. Petersburg be captured at once. (You are authorized by me to state that by this time the Czar is a prisoner of war.)

(Very special.)—I am once more afield for important news.

A Scene from "A Venetian Romance," at the Knickerbocker Theatre

"A Venetian Romance," a new "comedy-opera" by Cornelia Osgood Tyler and Frederick Coit Wright, was produced at the Knickerbocker Theatre on May 2. The story concerns "Antonio Philipe Foscari," a poor poet of Palermo, and "Nanetta," the beautiful young "Marchesi di Santa Molina." The signet ring which "Antonio" has brought to prove to "Nanetta's" parents that he is of noble birth is stolen by robbers at the instigation of "Antonio's" rival, "Count Von Hauptman." The outlaws make "Antonio" captive, and are about to murder him when "Nanetta," who has disguised herself as a roving minstrel, offers to avail herself of the alternative of saving her lover's life by marrying "Von Hauptman." In the end the lovers are happily united

The Revival of "Wang," at the Lyric Theatre

The operetta "Wang," which was popular thirteen years ago, was revived on April 18 at the Lyric Theatre, with Mr. De Wolf Hopper in his old part of the crafty Regent of Siam. Miss Madge Lessing has the part of "Mataya," originally played by Miss Della Fox. The humor and fun of "Wang" are built on a slender plot. "Wang," who is reigning as Regent until his nephew, the Crown Prince "Mataya," comes of age, marries the unprepossessing widow of the French counsel in order to obtain possession of a treasure-chest which has been left in her care for "Mataya." The Regent is pursued by debtors, and his efforts to elude them, and, finally, his plight when he finds that the chest is empty of treasure, furnish the humorous material of the piece

Correspondence

A LIVE ISSUE

MECHANICSBURG, PA., *April 27, 1904.*

To the Editor of Harper's Weekly:

SIR,—I have been reading with a great deal of interest your recent comments and the letters published by you in relation to the problem presented by the race question, and wish to say that there is no lesson so important for the whites to inculcate into the minds of the negroes as respect for and obedience to law. It is absolutely necessary that this be done, both by precept and by example; and this is, also, necessary as well in respect to the processes of the formation of law as in obedience to its mandates.

The question of eligibility for the suffrage is, however, the living issue at the present time; and in this, I think, the South has suffered wrong through some of the later Federal amendments, in a manner as by attainder. Yet her deliverance appears to be at hand, and if her methods are not too reactionary it is very probable that her appeal may be heard and a measure of relief afforded by interpretation and in default of negro puissance. It is a question of very great moment, and there appears no champion of the cause of equality who can certainly appeal to the moral sense of our people effectively in behalf of the negro as the equal of the white. Before the law, in its administrative functions, every man is and should be equal; but in the making of that law and the voicing of the sentiment of the commonwealth, there appears no sufficient reason why the negroes should, as a class, be permitted to partake. There are, however, amongst this race certain educated and highly intelligent individuals; and these, it would seem, should exercise a function, which, for the welfare of the State, as an expression, if nothing more, of the opinions of these negroes, may be denominated *advisory*. For this purpose it would be well to permit such to exercise the franchise.

I am, sir, H. A. MUMPER.

A REMONSTRANCE FROM CINCINNATI

CINCINNATI, *April 20, 1904.*

To the Editor of Harper's Weekly:

SIR,—In this week's HARPER'S you have a series of very delightful and excellent articles on Ohio, but you leave Cincinnati and the southern part of Ohio out. Cincinnati is the first city in the State of Ohio, although, according to the last census, its population is less than that of Cleveland. We Cincinnatians and other people that are not avowedly partisans, but who are familiar with the two cities, would not for one moment consider Cleveland as the larger. Even if the census were correct, Cincinnati has on the south bank of the Ohio River in Kentucky, just the way New York used to have over in Brooklyn, a population exceeding 150,000, in the enterprising cities of Covington, Newport, Bellevue, and Dayton. These are simply Cincinnati suburbs connected with Cincinnati by bridges and distant by trolley-car not ten minutes from the heart of this city. Our bank clearings each week exceed those of Cleveland by from seven to ten million of dollars. Not for one moment would we Ohioans take from Cleveland. It is a great and wonderful city, full of enterprise, full of progress, and with a population that in intelligence and progress ranks with any city in the Union. Cincinnati, however, is likewise a wonderful city. It was the first of the great Western cities, and has its old families that have been rich, cultivated, and foremost in public affairs for four generations, which from a Western standpoint is a great deal. But whatever may have been its standing in the past, Cincinnati in the present is thoroughly abreast of modern thought and endeavor.

We are rebuilding the city, and in every way we are bringing it up to date. At the close of the war Cincinnati really had to begin over again. We were, in ante-bellum days, the great distributing-point in Southern trade. The war left the South barren and desolate, and more than one-half of our potentially productive territory was valueless. To help in the development of the South, to make more firm our hold there in the future, the city of Cincinnati did what no other city in the world has ever done—constructed a railroad to Chattanooga at an expense of thirty million dollars. This to-day is one of the greatest assets owned by any municipality. In the past ten years the South has had a new birth, and Cincinnati, in consequence, has developed amazingly, as fully half of our business is with the South. To-day nine-tenths of all the Southern iron is marketed here. The bulk of the Southern coke and coal are handled here, and the list might be extended indefinitely. Of course Cincinnati is so old and well established that what may be said or what may not be said is not a matter of any great moment; and yet in an Ohio number Cincinnati is deserving of a great deal better treatment than it has just received at your hands.

I am, sir, JAMES A. GREEN.

A CHRISTIAN SCIENTIST'S REPLY

OFFICE OF THE CHRISTIAN SCIENCE PUBLICATION COMMITTEE,
NEW YORK, *April 23, 1904.*

To the Editor of Harper's Weekly:

SIR,—In your issue of the 23d inst. you made some editorial comments upon Dr. J. W. Churchman's article on "Christian Science," published in the *Atlantic Monthly* for April. It is by no means remarkable that such an able scholar as our critic, Dr. Churchman, should take sides against Christian Science, for the reason that his mind is filled with materialistic learning and human hypotheses, all of which are a stumbling-block in the way of true spiritual progress, and prevent one from accepting the teachings of Christ with the simplicity of a little child.

In his first Epistle to the Corinthians St. Paul sums up the question in the following characteristic and deeply metaphysical language: "But the natural man receiveth not the things of the spirit of God; for they are foolishness unto him; neither can he know them, because they are spiritually discerned." Attempts to master the divine intelligence with a limited human intellect, is, to use a Bible simile, like trying to put new wine into old bottles. The pride of material knowledge must be made to give place to "a broken and a contrite heart," which is deeply conscious of its own unfitness to comprehend the "beauty of holiness," and the "mystery of Godliness." As a matter of fact, a mere intellectual discussion upon the subject of science or religion can do nobody any good. What we really want is the practical evidences of demonstrable truth.

Would it not be well, in view of the overwhelming testimony afforded by past history and experience, to concede to Christian Science the benefit of the doubt, and let it rise or fall according to its own inherent vitality? The most skilful attempts to intellectually disprove the truth of Christian Science must always be met with the unanswerable demonstrations of physical healing and moral regeneration constantly being brought about by its means. An unbiased investigator can gather abundant evidence at any Wednesday evening meeting of a Christian Science Church, when testimonies are given by those who have been healed and benefited by Mrs. Eddy's system of divine metaphysics.

Is the world so overflowing with brotherly love and good-will that we can afford to take sides against a movement which is shedding light all around us, restoring to health many invalids, and giving moral courage to those who are weak? Too much intellectual development is apt to chill the inspiration of man's spiritual age, and, like a visitor who is not hospitably received, this beneficent influence, if not welcomed, will soon cease to make its visitations. I am, sir,

RICHARD P. VERRALL.

[No doubt Christian Science will rise or fall according to its inherent vitality, but demonstrations of physical healing, or even of moral degeneration, are not unanswerable in the sense that they prove that the metaphysical system that they are geared to is faultless. The system may include defects of profound importance and yet yield some good results. Our correspondent's apparent feeling that the teachings of Mrs. Eddy should be accepted with the same simple trust as the teachings of Christ need not be discussed.—EDITOR.]

THE WORK OF WOMEN

NEW YORK, *April 30, 1904.*

To the Editor of Harper's Weekly:

SIR,—Dogs walking upon their hind legs were considered by Dr. Samuel Johnson to typify women's work when it attempted to step out of conventional bounds. It was not, he said, surprising that the dog did it so well, but that he did it at all. In accordance with this idea women's work in exhibitions has been segregated that our admirers might pause and exclaim: "Wonderful, wonderful. It was done by women!" Thus have women and their work suffered by lack of instructive comparison, of developing competition with the work of successful men, and women have deplored the fact. It is good news, therefore, that appears in your last number in the article by Mrs. Margaretta Manning: that women's work will be exhibited at the St. Louis Exposition with the work of men, that it will challenge critical judgment, not beg a patronizing admiration. This is a distinct step forward, and a high credit mark for the brains behind the Exposition.

I am, sir, MARGARET BUCKINGHAM.

WHY WOMEN HAVE NOT WRITTEN GREAT MUSIC

NEW YORK, *April 29, 1904.*

To the Editor of Harper's Weekly:

SIR,—I was interested in reading the comment on women as composers in the review of the songs of Miss Gertrude Norman-Smith which appeared recently in your music column. That women have done nothing of first-rate importance in creative music, you say, is a commonplace of critical history. As to why they have not, there are, you say, many theories, the fact itself being undisputed. In this connection let me suggest a theory propounded to me the other day which seems to throw some light on the question from rather a novel point of view. The argument ran, in the main, like this: Almost all great modern music has been inspired, in a greater or less degree, by the ideal of sex, and that ideal has necessarily, for the masculine composer, been feminine. The most intense and eloquent music we have was written as an idealized expression of sexual love. Think of the "Spring" symphony of Schumann, certain songs of Schubert and Brahms, the greatest passages in the music dramas of Wagner—would they have been possible without the stimulus of some personal ideal of feminine loveliness? Women did not begin to compete with men in the field of composition, to any extent, until music had ceased to be merely decorative or religious, as it was before Beethoven's time, and had begun to serve as a medium for emotional expression; therefore there was little opportunity for the development of a female Haydn or Bach. So it happened that when they did begin to turn their attention to the writing of music, they found it an art which was essentially a vehicle of expression, and only incidentally an art of formal beauty. What was it, then, that was lacking in the equipment of the woman composer that interfered with her producing music of authentic power and intensity? Is it not fair to suppose that it was the lack of that compelling inspiration which she herself furnishes to her brother composer? Obviously the ideal of masculine personality does not occupy a place in women's imagination analogous with the ideal of feminine personality in the imaginations of men. I should be glad to know your readers' opinions of this theory, which to me is a suggestive one.

I am, sir,

H. C. WOODWARD.

Progress of the War

FROM the beginning of the war, February 9, to April 26 fifteen Russian war-ships have been sunk or disabled — the *Petropavlovsk*, *Pobieda*, *Czarevitch*, *Retvisan*, *Poltava*, *Pallada*, *Novik*, *Askold*, *Diana*, *Variag*, *Boyarin*, *Korietz*, *Yencsei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik*, *Askold*, and *Diana* are known to have been repaired and are again in commission. Japan has lost one torpedo-boat, and several of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. Admiral Togo has made two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor. The first land engagement of importance took place at Chongju, Korea, on March 28 and resulted in a Japanese victory.

April 27.—Admiral Skrydloff, who is to command the Russian naval fleet in the Far East, left St. Petersburg for Port Arthur to-day.

April 28.—It was announced at St. Petersburg to-day that on the night of April 26 Russian torpedo-boats belonging to the Vladivostok squadron sank the Japanese military transport *Kinshiu Maru*, laden with coal and military supplies. The Russians captured seventeen officers, twenty soldiers, eighty-five military carriers, and sixty-five of the crew. The rest on board, said to be a Japanese company of soldiers, refused to surrender and were drowned. The Russian government places the number lost at 200; the Japanese say there were not more than seventy-five drowned. The Russian squadron is reported to have returned safely to Vladivostok.

Japanese torpedo-boats were again sighted off Port Arthur this morning. A few shots were fired without damage. Many skirmishes are also reported along the Yalu River. No official announcement of the number of casualties on either side in these preliminary land encounters has been made.

April 29.—The Russian government to-day issued a circular to the Russian representatives to foreign powers announcing officially that she will not accept mediation to terminate the war with Japan.

Admiral Alexeieff reports that Japanese war-ships have again appeared off Port Arthur, and that ten Japanese cruisers and six torpedo-boats were lying in Ussuri Bay, opposite Vladivostok, this morning. No attack has been reported.

April 30.—Official reports say that the Japanese have been crossing the Yalu in large numbers since April 26. They have constructed a pontoon-bridge southeast of Wiju, over which several battalions have passed under Russian fire.

The State Department at Washington has received a cable despatch reporting that a battle between the Russians and the Japanese has taken place on the Manchurian side of the Yalu. No details of the engagement were given.

May 1.—The first great land battle between the Russian and Japanese armies took place this morning, and resulted in a Japanese victory. General Kuroki, commanding the first Japanese army, forced a crossing of the Yalu, and at daybreak began an attack on Chiu-tien-Cheng, ten miles north of Antung. The Russians made two stands, but in each case were forced back. They were compelled to abandon Antung, and after burning the town retreated to Feng-Wang-Cheng. The loss was heavy on both sides. General Kuroki, in his official report, gives the Japanese casualties as about 700 and the Russians more than 800. The Japanese captured twenty-eight quick-firing guns, twenty officers, and many men. The Japanese now control the estuary of the Yalu.

May 2.—The Japanese continue to advance along the road running west from the Yalu River towards Liao-Yang. General Kuroki reports that several skirmishes have taken place in which the Japanese losses were fourteen killed and forty-six wounded.

The Japanese fleet under Admiral Kamimura, which was seen near Vladivostok on April 29, has returned to Gensan, Korea.

May 3.—In General Kuropatkin's official report of the battle of May 1 near the Yalu River, the number lost on both sides is estimated at from 3000 to 4000 men. Up to the time General Kuropatkin's telegram was sent, 800 wounded, including fourteen officers, had been brought to the hospital at Feng-Wang-Cheng. The Japanese were aided by their gunboats, which sailed up the Yalu and bombarded the Russian positions. It is admitted that the Russian generals Zassalitch and Kashtalinsky were wounded and that twenty-seven guns were captured by the Japanese. General Kuroki, in command of the Japanese forces, has advised his government that a preliminary report from the chief surgeon of the first Japanese army shows that 798 men were killed and wounded. A large number of Russian officers and men were made prisoners.

General Kuroki also reports that his forces pursued the retreating Russians yesterday. The latter offered a stubborn resistance, and about 300 were added to the number of Japanese casualties.

Viceroy Alexeieff reports that at 1.45 this morning the Japanese made another unsuccessful attempt to block the entrance to Port Arthur. Eight fireships were sent out by the Japanese, under the protection of a number of torpedo-boats, but all of the steamers were sunk by the Russians before they reached the channel. According to Admiral Alexeieff two of the Japanese torpedo-boats were also destroyed.

It was reported to-day in London that the Japanese landed troops at Yin-kow on May 1, and have attacked Newchwang. The report has not been confirmed.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

MANY APPETIZING DISHES can be made doubly delightful and nutritious by the use of BORDEN'S PEERLESS BRAND EVAPORATED CREAM, which is not only superior to raw cream, but has the merit of being preserved and sterilized, thus keeping perfectly for an indefinite period. Borden's Condensed Milk Co., proprietors.—[*Adv.*]

EACH returning season—every season of the year—brings demand for Abbott's Angostura Bitters—the best blood and nerve renewer.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

MANY actors and singers use PISO'S CURE to strengthen the voice and prevent hoarseness.—[*Adv.*]

ADVERTISEMENTS.

Pears'

It is a wonderful soap that takes hold quick and does no harm.

No harm! It leaves the skin soft like a baby's, no alkali in it, nothing but soap. The harm is done by alkali. Still more harm is done by not washing. So, bad soap is better than none.

What is bad soap? Imperfectly made; the fat and alkali not well balanced or not combined.

What is good soap? Pears'.

Drawn by Sydney Adamson

I KNOW men who, when they find themselves by accident or through necessity in a troutless region, sit down and damn everything and everybody included within the desert mentioned. They have my sympathy, not my respect. Yet of the two evils, a troutless country, or a country the streams of which are overcrowded with trout that take anything at any time, I have thought that I should perhaps prefer the troutless region. For there is always hope even where there are no fish, and we all know that the greatest pleasure in life is in anticipation.

A troutless region is an unkind place to dwell in; but, thanks to the greatest of all Game Protectors, such gruesome territories are few in zones where trout find a natural home. Of course, nobody expects to find trout south of the Carolina mountains, and nobody wants to, any more than to see our Northern valleys set with cocoanut palms and monkeys chattering in our Northern forests. However, there are, as everybody knows, places where trout are so few, so shy, so unresponsive that they are practically extinct. In such places the small boy fishing for bullheads at night under the village dam usually secures the only pair of trout likely to bite during the season.

Now, these being the conditions, the writer argues that it is neither seemly nor wise to damn everything, or, with uplifted muzzle, howl calamity to the four winds. Myself, when young, did eagerly frequent anglers and sich, and heard great argument about it, and about. The result is that in maturer years I prefer a fly to a bait and a trout to a perch, but am no bigot. In this liberal state of mind one's attitude toward sport is changed. When it is a science tainted with rivalry or intolerance, angling becomes a nuisance to everybody except the angler, and it often becomes so to him. When angling remains a harmless sport, then is it wholesome, because true sport can never be anything except pure recreation.

Now this unasked-for sermon has this for a text: our attitude toward anything determines its value as a producer of pleasure. This sounds horribly like Tupper,—but, thank God, there are people yet living whose attitude toward Tupper transmutes the maxims of that great philosopher. The humbler fish, chub, perch, dace, pickerel—I was going to say black bass, but did not dare!—are, as a rule, unknown quantities to anglers,—and unknown qualities, too.

When an angler is face to face with the fact that he can take no trout in the waters accessible to him, it cannot harm him or his dignity to learn a little about these humbler fish. Chub will take a fly, so will perch, sunfish, dace, pickerel,—I was going to say black bass, but dare not! I never knew an eel to take a fly unless the point of the hook had been loaded with bait; the same I may say of that pest, outcast, pariah, that pig of fresh water, that destroyer of trout, the unspeakable sucker, whose gluttonous crimes place him far outside the pale. But, all of these fishes do not always take the fly. And, in that case, consolation and good sport (provided one's attitude is wholesome) may be had through the lightest of light tackle consistent with conditions.

Some years ago a pickerel was an objectionable fish to me. My general impression remained that he struck like a shark, and came in like a log. Everything was against him, his villainous habits, his havoc among other fish, his wicked eye, lean wide jaw set with teeth, and the slimy varnish which covers his golden-green scales. I learned to find amusement in taking this fish; I learned that he was uncertain, never to be depended upon, that he was shy as often as stupid, timid as often as bold, varying in game qualities according to season, food, environment, and latitude. Since then I have had many an uninteresting day with the pickerel, and some remarkably interesting days.

One of the latter kind was a gray windy November afternoon on a small body of water in the northern part of this State. The water looked black and forbidding; catspaws played over the surface, turning it lead color; every now and then a miniature squall struck the canoe, heeling it or spinning it around, and often we dragged our too light anchor. At the first cast,—a very small live minnow on a twelve-foot gut-leader,—a pickerel rose in a swirl of black water, seized the minnow, and set off, taking out line in fine fashion. Checked with the full force of the four-ounce rod, the fish flung himself clean out of water in noble style, sounded, then started full tilt for the canoe. Checked again, again he shot up clear above the water, then darted off, taking line. It was really fine; for the fish proved worthy of every ounce on him. Once or twice he tried the weed game, but was turned aside; once or twice he sulked, but most of the time he fought continually, not doggedly and stubbornly resisting, but forcing the fighting. And he came to net in a gallant fashion, spattering us well.

What that fish did, fourteen other fish repeated that afternoon before sunset. There was little difference in their weights; almost every one jumped from one to three times. We lost several because of our single-strand gut-leaders, but that made it all the more interesting; and I hardly think, considering the tackle usually employed against pickerel, that these fish lost through severed leaders could count against us. The fish were strong, vigorous, in splendid condition, and, as they came from the water, ice cold to the touch. Their quality as food was pronounced excellent by others than myself who seldom touch fish or game of my own procuring except from necessity.

On another occasion, in the same waters, my companion took thirteen fish with artificial lure, and these fish fought to the end as gamely as any fish that swims. Fishing in that and adjacent waters we found the pickerel exceedingly variable, sometimes fighting like demons, sometimes merely resisting with one or two savage jerks and perhaps a half-hearted run. One day, under certain conditions, the fish would take what we offered freely; another day, under conditions apparently exactly similar, not a fish would budge. At one time we decided that low water and a wet boisterous east wind was what we wanted; later we pinned our faith to mild weather and south wind. But there was no telling; the fish sometimes gave us fine sport in high water under a blazing sun.

One thing we could always depend on: sundown settled the fishing. There was, also, a certain time lasting sometimes ten minutes, sometimes an hour, when the water would be covered with circles from the splashes of rising pickerel. At this "magic hour," as we called it, every cast brought its response. Sundown ended it, although on one or two rare occasions I have taken pickerel at dusk. In striking, the fish were exceedingly variable, some days bolting the minnow at once, other days holding it for five minutes before reversing it to take it head first. They were variable, too, in selecting minnows, usually disdaining anything except shiners. Yet I recall one day when our minnow-can contained only suckers, and the pickerel took them at every cast; and another day when they actually jumped out of water in their eagerness to seize sunfish.

Of all artificial lures, the fluted spoon, the buck-tail, and the mouse were the most deadly. Flies and spinners they took at times,—usually a red ibis, Montreal, Parmachene, or some fly with red in it. On one occasion a "yellow kid" seemed to attract them.

The maskalonge we took preferred a spoon every time; the very large pickerel—those that scale at twelve to sixteen pounds dressed—take large live bait by preference, although I knew of several being taken on a spoon. I took no large fish. I have an uncomfortable feeling, too, that some of those very large fish brought in by country folk had curious holes in their backs—in fact, I have heard confessions, since, concerning the use of spears and rifles among the guileless and untutored natives.

There is no denying it; a small-mouthed black bass outfights a trout of his own weight almost every time. Yet, after all, that does not make him the beloved of anglers,—this "bronze-back" who is more often mud color,—this perch-shaped, spiny-backed, leather-lipped haunter of rock bottoms. I have no love for him or his habits; I have no friendship, no comradeship for him, and not very much respect. He lies like a sunfish, swims like a perch, hangs about uninteresting places, often takes the bait without giving you notice, and when he does act decently and rise to a fly, the reward of the battle is a blue-bellied creature who was apparently built for salt water and tropical inlets. As for eating him—I'd prefer a "pumpkin-seed."

Now this assault upon the black bass is made only because he is a "game fish," and a favorite with some people. Were he, like

The Truants

(Continued from page 757.)

there men risk their lives daily to put a few boxes of fish on board a fish-cutter. Take the risk half-heartedly and your boat's swamped for a sure thing. But take it with all your heart and there are the fish-boxes to your credit. Well, Millie is my fish-boxes."

He ended with a laugh, and rising, took his hat.

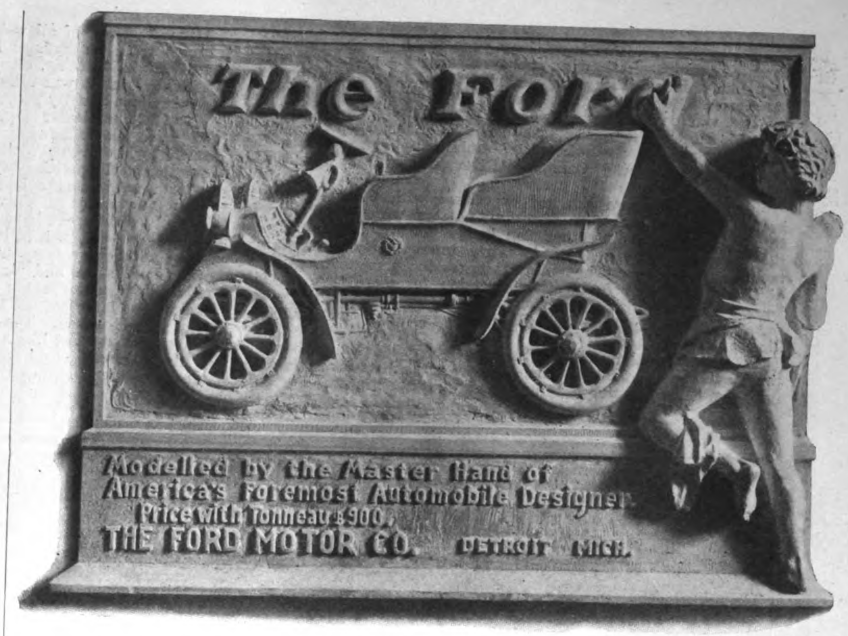
"Shall I put you up for the night?" Chase asked.

"No thanks," said Stretton. "I have got a bed at a hotel. I have something else to do to-night." And a smile rather wistful and tender played about his lips. "Good-by," he held out his hand and as Chase took it he went on: "I am looking forward to the day when I come back. My word, how I am looking forward to it. And I will look forward each day until it actually at the long last comes. It will have been worth waiting for, Chase, well worth waiting for, both to Millie and to me."

With that he went away. Chase heard him close the street door behind him and his footsteps sound for a moment or two on the pavement. After all, he thought, a life under those Algerian skies, a life in the open air of activity — there were many worse things, even though it should prove a second failure.

Chase stood for a little before the fire. Then he crossed slowly over to that cupboard in the corner at which Stretton's movement in the chair had stayed his hand. Chase looked back to the armchair as though he half-expected still to see Stretton sitting there. Then he slowly walked back to the fire and left the cupboard locked. Stretton had gone, but he had left behind him memories which were not to be effaced, the memory of a great motive and of a sturdy determination to fulfil it. The two men were never to meet again, but in the after time more than once of an evening Chase's hand was stayed upon that door. More than once he looked back towards the chair as if he expected that again his friend was waiting for him by the fire.

To be Continued.



Serum Treatment for Hay Fever

THE treatment of hay fever by an anti-pollen serum has been successful in a number of cases, and in a list of 285 patients to which it had been given under different circumstances and in different countries, recently compiled in Germany, 60 per cent. are reported as completely relieved, 29 per cent. partial cures, and 11 per cent. failures. Hay fever is supposed to result from the pollen of various plants, and the serum was prepared by inoculating horses with this pollen. It may be used in liquid or powdered form, and is applied locally, no attempts having been made as yet at subcutaneous injection. There is strong evidence to believe in the efficacy of the serum, and in the majority of cases it was found possible to relieve the patient and to shorten materially the seizure. Although it does not, however, prevent a recurrence of the attack, it has great value as a prophylactic.

His First Experience with Wagner

A HUMOROUS writer of reputation, whose operatic experience has been limited, was induced to accompany his wife to a performance of Wagner's "Tristan und Isolde" during the recent opera season in New York. A friend, meeting him the following day, asked with interest what his impression had been.

"Well, it didn't hit me," remarked the writer, musingly. "I couldn't see it at all. I didn't mind so much when the captain steered the ship for ten minutes standing with his arms folded twenty feet from the tiller. But when they came to the place where *Isoldy* puts poison in her lover's tea, I threw up the game and smoked in the lobby till the act was over."

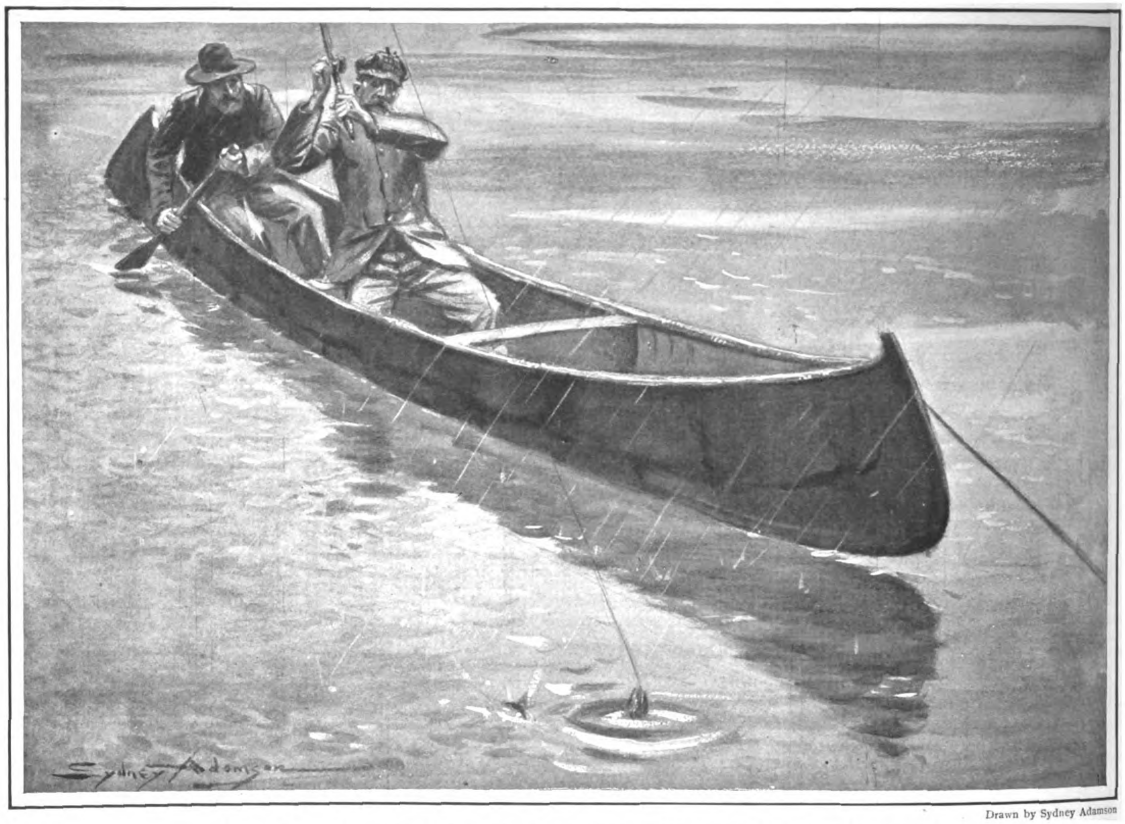
(Continued from page 768.)

the pickerel, friendless, with nobody to sing his praises, I might very likely undertake a song in his defence, if not in tribute to his glories. But he has friends enough without adding an unwilling one, who really classes him with the pickerel and maskalonge. For, by all that is sacred, the black bass has no place in the charmed circle of the *salmonidæ*,—unless in company with the Scotch charr, or the Columbia River salmon, or our Maine "laker."

Every fly fisherman has had experience with the great bullet-headed, puffy-gilled chubs that rise in trout waters and gulp in the fly. These, and another fish known locally and vaguely as the "blue dace," can be made fairly interesting with gossamer tackle and dry fly casting. But it takes the persistent optimism of Mark Tapley to follow this diversion for more than an idle hour. And I think it a shame for a man not to return to the water, unharmed, these lubberly fish who have unwillingly contributed to his amusement.

As for eels and bullheads, two Tapleys rolled into one might pursue the sport of taking them; yet even that has its attractions for those fishermen who habitually eat what they catch. For bullheads from cool, clear, sweet water are really delicious, and delicate as any trout. Eel, I believe, is an acquired taste. Which reminds me that I once knew a worthy and persistent quay fisherman on the Seine who preferred gudgeons caught near *lavoirs* because in his youth he had acquired the taste for gudgeon that swam in waters tainted by soapsuds. *De gustibus*—disputing is bad taste, as another worthy friend translates it.

There are, in some clear, cold streams of the North, certain fish known locally as "Mohawk chubs." These fish are the ideal fish in shape and color,—graceful, slim, elegant creatures, pure silver except on the dorsal ridge, which is the tint of oxydized silver. They are tender-mouthed, and remind me somewhat of the grayling, although they have not the great dorsal fin nor the fragile mouth of that fish. They often inhabit trout waters, and I have an idea that trout feed on the smaller ones, although I have no absolute proof that this is true. I know, however, that pickerel, maskalonge, and black bass strike at them eagerly.



These fish rise to a fly, and are often quite as gamy as grayling. Often and often I have struck them in trout waters, and have found them interesting fighters when tackle is light and water cold and swift. I remember one occasion on a stream noted for its trout. Below a certain point there were supposed to be no trout, although two heavy creels of speckled trout were taken from that part of the stream by the writer. In this water lurked many Mohawk chubs, of all weights and dimensions. Curiously enough, many small maskalonge lived there too, and these fish at times took an artificial fly, although they never showed fight after being hooked. But it was different with the Mohawk; he fought like a good fellow, usually proving worthy of his name.

On this particular day, there being no prospect of trout-fishing, we tried the Mohawks. And they were a wary, yet savage lot, striking like trout, with a leap and a spatter, boring away upstream, battling with every fin and every muscle. The further downstream we went the larger and gamier the Mohawks. I do not know how many or what weight of fish we might have taken had we tried; but sport is sport, and a couple of hours sufficed. About the eatable qualities of the fish I know little. The natives devour them with every symptom of satisfaction, but the natives also devour fried steak and pie with similar symptoms. A man told me that early in the season a Mohawk chub was firm and sweet as a trout, but later became too soft to make good food. I once tasted one in mid-season. The fish was fairly firm, and, I thought, was flavored somewhat like a smelt.

Animals and birds appear to be very fond of them, or at least are often seen eating them, perhaps because they may be easier to catch than trout. Where Mohawk chubs are herons and kingfishers congregate. The only time I ever saw an osprey in that region was once when whipping that stream. The osprey dashed down within a rod of me and seized a Mohawk chub that must have weighed a pound at least, bearing him up out of the pool and away across acres of swamp toward the distant forest.

Mink haunt that part of the stream; herons are thicker there than anywhere that I know of within many miles. Where, when, how these fish spawn I do not know, although I have detected them on the trout's spawning-beds in October; and, on one occasion, I noticed a large Mohawk chub, which I took to be a female, apparently guarding a certain depression in the bottom-sand, which might have contained spawn. It would not be very difficult to find out what the spawning habits of this fish are, I imagine. And it has occurred to me that, as they themselves are not predatory fish, it might be well to experiment with them, and discover what effect they have on game fish.

One thing I have noticed is that trout taken in water inhabited by Mohawk chubs are always, within my experience, free from disease, fine, hardy, active, and in the very pink of wholesome plumpness. Does a diet of flies, worms, and water larvæ, varied by an occasional Mohawk chub, produce this desirable condition?

Drawn by Sydney Adamson

He fought continually, not doggedly and stubbornly resisting, but forcing the fighting

How Shall I Educate My Daughter?

(Continued from page 762.)

facts a truth, and from a third truth to bring out a duty. The study of the sciences, in their manifold forms, of chemistry, biology, physics, geology, I would not let her neglect. For science represents that which seems to her more tangible, visible, audible, realistic than the study of mathematics or of economics. Those subjects teach her the inevitableness of physical law and proportion, as algebra teaches her the inevitableness of the laws of the human reason. Nor shall she neglect philosophy, the science of the sciences, the queen of all subjects, comprehensive of all truth, including first of all the truth and character of herself.

I know that in saying all this I have laid out a pretty stiff course for my daughter. One might say that it is, in many respects, the course which one lays out for his son. The remark has much truth. While I might ask my son to become a thinker in one department by devoting much strength to it alone, I ask my daughter to become a thinker by devoting much strength to several departments. For, if she can think, she is intellectually secure against all intellectual and most other assaults; if she cannot think, she is in peril of catastrophes of all sorts and conditions.

The power of thinking which I wish my daughter to embody is not of a base and barren character. I would not have her mind merely analytical, able to tear a truth into its constituent parts, or synthetical, able to constitute a truth of its elements. I would not have her mental constitution of merely mathematical type. I would have her thinking represent and be concerned with a fine and rich content of knowledge. It shall have the exactness of intellectual discrimination; it shall have the fulness of noble scholarship; it shall embody a culture which is at once emotional and æsthetic and ethical, as well as intellectual. Her thinking shall not be inanimate as things, but vital with life, delicate without being whimsical, vigorous without being boisterous, large without being visionary, noble without unworthy ambition, solid without stolidity, fresh without girlishness, and vital in obedience to law.

To create a thinker of such a sort is the primary purpose of the college for girls. I therefore believe that I cannot find a better use to make of the four years of my daughter's life following the age of seventeen or eighteen than to have her go to college. Of course she may have no inclination to pursuits at all intellectual. Of course she may prefer to spend these years in helping in the home. In this case I shall be filled at once with a sense of regret and a sense of parental obedience! Of course it is possible that she may prefer to go into society at the age of seventeen, but, on the whole, this choice is unthinkable. In case she did have such a preference, I should try to deal primarily with her father rather than with herself. Her origin and nurture have not been right.

But it may be asked will you have your daughter, while she is in college, undertake studies more directly contributory to the headship of a home than are the languages, mathematics, science, and philosophy? Will you have her taught "domestic science?" The answer is easy when the proper interpretation of the term is made. If, by domestic science one means a cooking-school or a school to teach the art of dusting, the answer should be a firm No! Cooking and dusting are arts which are very easily learned in the doing, if the pupil be at all apt. If the pupil be not apt the learning is hard. The method of getting the learning into the pupil is not by changing the learning, but by changing the pupil.

But if by domestic science is meant an interpretation of the home as the most important element in the social organism, and the family as the most important social institution, domestic science should be taught in the college. Society is composed of homes. The risings, declinings, and the fallings of society are the risings and declinings of the home. The progress of civ-

IN THE GARDEN OF CHARITY

By BASIL KING

Author of "Let Not Man Put Asunder"

This is a tale of the strange love of two women and a man—of the great love of both women and the great sacrifice of one of them. Charity Pennland and her soldier-husband and his mock-marriage wife—a charming half-Greek—are the leading figures in the story, which, in its idyllic beauty and intensity, recalls George Eliot's "Silas Marner." $1.50.

BOND & LILLARD
WHISKEY
IS THE BEST

ilization is most securely promoted through the family. The family is an historical, social, industrial, as well as domestic institution. It embodies most important elements. Into its bosom each of us is born, and from its portals each of us is borne forth to what is called the last home. The holiest interpretation to some spirits is the interpretation of heaven as a home. When, therefore, this institution, under the head of domestic science, is made to represent the largest, widest, highest, profoundest relations of humanity, it may well form a part of the academic curriculum.

If, furthermore, I have, in giving an education to my daughter as a thinker, succeeded, I have also succeeded, I hope, in doing for her a thing the importance of which cannot be overestimated—I have succeeded in making her a lady. Every one knows people who are ladies, but who were not thinkers, and also knows thinkers of the feminine gender who are not ladies. But the thinker constituted in the way I have suggested is thereby, under ordinary conditions, a lady. Without entering into any definition of the term, I do wish to say, even as a college man, that there are three things which my daughter should embody—she should walk well, she should talk well, she should dress well. What good walking and good talking and being dressed well are every man and woman knows, or thinks he knows. Her walking should represent good health, precision and freedom, firmness and flexibility. Her talk should be apt without frivolity, wise without pedantry, appealing to the best interests of those within hearing without conveying any intimation of presumptuous mastery, affluent and wholesome. It should also not be passed over that the tones of her voice should be sweet, tones that are a most pleasant thing in either woman or man. She should also dress well. Regarding the elements of this condition I have little knowledge, but regarding the results of it I am not without feeling. For dressing well I am told that a woman must spend either much time or much money. My daughter has not much money; she has the same time that other girls have. Upon these two elements she will have to make such a proportional levy as to secure the proper comprehensive result.

When my daughter has thus been educated I must leave her to herself. For richer or for poorer, for better or for worse, for sickness or for health, for life or for death, she becomes the minister and master of her own fortune. But I am sure that it cannot but be for better, for richer, for health, and for life, present and lasting, if only I, as her parent, have done well for her in the first score of years.

Radium and Blindness

RADIUM rays will not at present furnish a cure for blindness, reports Professor Greeff of Berlin in a published account of an official investigation of the optical properties of radium. This research was largely undertaken as the result of a paper by Professor London of St. Petersburg, in which he claimed that there was hope for the blind in radium. According to Professor Greeff the rays given off by a fluorescent surface excited by radium rays are simply those of ordinary light, and as such cannot affect a blind eye. The actual radium rays, however, are sent out in all directions, penetrating all structures, and the effect, a sort of sea-green radiance, is the same whether the radium is held in front of the eye or at the side of the head. It has been asserted that fluorescence actually occurs in the eye and that rays of ordinary light are accordingly emitted, but this view is opposed by Professor Greeff, and the fact is cited that the radium rays do not bleach the visual purple of the retina. He also states that when the function of the rods and cones which transmit visual concepts from the retina to the nerve centres is destroyed the eye is unable to provide for the sensation of sight. Furthermore, the radium rays are not refracted, consequently, even if they did stimulate the retina they could not be employed to furnish a visual picture.

An Anecdote of Richard Strauss

AN amusing story is told of Richard Strauss's early experience as a conductor in Germany. Strauss's favorite Wagner opera was "Tristan und Isolde," the score of which he knew intimately; but with the other Wagner works he was not so familiar, although he had already gained a considerable reputation in Germany as a "star" conductor. On a certain occasion he was called on unexpectedly to direct a performance of "Die Meistersinger," which he did with much apparent self-possession. Another eminent conductor who was in the audience noticed that in a certain passage in the third act the bass tuba, to which was allotted a very important phrase, did not make any effect with it at all. After the performance the visiting conductor, wondering if the orchestral player had been at fault, mentioned the circumstance to Strauss. The future composer of the "Symphonia Domestica" looked embarrassed.

"Why," he said, "to tell you the truth, I was so absorbed in bringing out the broader effects that I didn't notice that tuba part."

A Useful Feature

Two New York women went apartment-hunting not long ago, and were pleasantly surprised to find at the end of their first day's search an apartment which seemed to be exactly suited to their needs. It was new, desirably situated, and inexpensive—three rooms and bath, said the janitress, all with outside exposure. The prospective tenants walked through the rooms, examining every feature.

"But where is the bathroom?" they inquired.

The janitress pointed to an alcove which was furnished with gayly colored hangings and an awkward-looking divan covered with pillows.

"There it is," she explained; "my last tenants said it was in the way, so they made a cozy corner out of it. Of course, if you want to use it as a bathroom you can take the cover and pillows off the tub."

An Anecdote of John G. Saxe

WHEN the Hon. John W. Stewart was a young man he was associated with John G. Saxe, who was then a student in Middlebury College, Vermont. At one of the annual Commencement exercises they were sitting together in the gallery of the church when the poet of the occasion was reciting his poem. During the recital the poet declared,

"The world is full of change."

Immediately, without any hesitation, Mr. Saxe turned to Mr. Stewart, and extemporized:

"The world is full of change
The poet sings;
But if he had his vision cast
Into his vacant purse
(Than which no vacancy
On earth is worse)
He could have told us
In a minute
There was one place
With no change in it!"

What Causes Fires

THE annual losses by fire in the United States, which have averaged as high as $100,000,000 a year at certain periods, were attributed during a single year to the following causes, the number of fires from each cause being given: Incendiarism, 1,927; defective flues, 1309; sparks (not from locomotives), 715; matches, 636; explosions (of lamps, etc.), 430; stoves, 429; lightning, 369; spontaneous combustion, 326; prairie and forest fires, 280; lamp and lantern accidents (other than explosions), 238; locomotive sparks, 211; cigar stubs and pipes, 203; friction, 179; gas-jets, 176; engines and boilers, 150; furnaces, 135; and from firecrackers, 105.

Music

Antonin Dvorák

ANTONIN DVORÁK, the Bohemian composer, by many ranked among the most important of modern music-makers, died at Prague on May 1. Dvorák, the son of an innkeeper, was born at Mülhausen, Bohemia, in 1841. Under the instruction of the village schoolmaster he learned something of violin playing and singing, afterwards supplementing these studies by a course in organ, piano, and theory with the organist at Zlonic. His father discouraged his musical aspirations, and tried to make a butcher of him; but young Dvorák persisted, and in 1857 his father consented to his attending the Prague Organ School. Five years later he was graduated from the school, and took a position as violinist in the National Theatre orchestra, and by 1865 he had written a string quintet and two symphonies. In 1873 his setting of a patriotic hymn by Halek, for male chorus and orchestra, was publicly performed, gaining him recognition as a composer of consequence, and securing him the position of organist in the church of St. Adelbert. Then followed several one-act operas, the F major Symphony, the "Stabat Mater," the Slavonic dances commissioned by the publisher Simrock, the "Husitska" overture, the opera "Dimitrije," and two choral works—"The Spectre's Bride" and "St. Ludmila," composed for the Birmingham and Leeds festivals, together with various instrumental works.

Dvorák came to America in 1892 as director of Mrs. Jeannette Thurber's National Conservatory of Music. His "Te Deum" and the E minor symphony—"From the New World"—were first performed in this country,—the latter, suggested by American negro melodies, being intended as a hint to native composers of the possibility of basing a national school of composition on negro and Indian folk themes.

Dvorák was a master of coloring and rhythmic invention, a composer of keen poetic sensibility and imagination. His bent was romantic, after the older manner of romanticism, although in such a work as the "New World" Symphony—his most beautiful production—the romanticism is admirably fresh and vital. He was not a composer of the first order, for he lacked in significance, in depth, and in seriousness of subject-matter. But he was, within his range, a musician of individuality and sincere feeling.

Elgar's "King Olaf"

Mr. Edward Elgar's secular cantata, "King Olaf," was given at Carnegie Hall, for the first time in America, on April 29. We had heard, earlier in the season, Mr. Elgar's latest work in oratorio form—his "Apostles"; and the preceding year we heard, for the first time, what seems now to be his best achievement: "The Dream of Gerontius." In reviewing Mr. Elgar's work, in the past, we have expressed our feeling that his talent is too often colored by the thoughts of other and greater men—notably by Wagner; and it has seemed that in the phases of his work which most definitely represent his own artistic personality, he has drawn upon a very meagre store of native inspiration. A hearing of "King Olaf" (his opus 30, composed in 1896 for the North Staffordshire Festival) has failed to yield more favorable impressions. The work is based upon "The Musician's Tale" in Longfellow's "Tales of a Wayside Inn," and is appropriately Norwegian in impulse and characterization. Mr. Elgar's feeling for the dramatic, and for the more obvious phases of scenic appropriateness, find here an effective expression—effective, that is, if one were content with what, in creative music, passes for second-hand goods.

There is some vigorous and effective writing in this score; but it has no distinction, no beauty that is properly its own; and there is much that is obvious, banal, flatly sentimental. One must concede, of course, the unpromising nature of the subject-matter; but one cannot help feeling that, even with such uninspiring material, a master might have done better things. Unfortunately, though, Mr. Elgar has yet to prove himself a master—outside of England, that is, where he is regarded by some as the peer of Beethoven.

TWO BOOKS BY GEORGE ADE

(Imprint of R. H. RUSSELL.)

THE GIRL PROPOSITION

A Bunch of He-and-She Fables

George Ade's fables are read the world over. The present volume is, as its title indicates, a series of extraordinarily clever sketches on a theme that is very dear to the author's heart, and which is vastly interesting to most people.

The Girl Proposition is packed with sense and wit and entertainment, all in the inimitable Ade vein. Profusely illustrated by Holme and McCutcheon. $1.00.

PEOPLE YOU KNOW

GEORGE ADE'S LATEST

No living writer could duplicate the work done here by this keen and humorous observer of American life. Among the twenty-six "people you know" are The Patient Toiler, The True Friend, the Self-Made Hezekiah, The Married Couple, The Samaritan, The Work Horse, and The Two Young People.

Over fifty quaint illustrations by McCutcheon and others. $1.00.

HARPER & BROTHERS. PUBLISHERS. NEW YORK CITY

A Chance Courtship

is a story of an unconventional love match, well told and beautifully illustrated. The small picture above only ***suggests*** the real charm of these illustrations. As a bit of readable fiction the story is well worth writing for. It is contained in a handsomely bound book of 128 pages, a portion of which is devoted to the attractive mountain and lake resorts along the Lackawanna Railroad. It is a book you will like to see. It may be had by sending 10 cents in postage stamps to T. W. LEE, General Passenger Agent, Lackawanna Railroad, New York.

A LITERARY EVENT

MRS. HUMPHRY WARD'S

NEW NOVEL

"THE MARRIAGE OF WILLIAM ASHE"

BEGINS IN THE JUNE NUMBER OF

HARPER'S MAGAZINE

THE scene of this story is laid in the midst of the society world of London. The heroine, Lady Kitty Bristol, is one of the most fascinating and original characters in all fiction. The story moves with the same breathless rapidity which made "Lady Rose's Daughter" so notable a success, and in the very first instalment the reader is brought face to face with a situation which promises an even more dramatic outcome.

Other Notable Contributions to This Number:

A REMARKABLE NEW POEM BY

Algernon Charles Swinburne

"A VATICAN SERMON"

COMMENT

THE name of William R. Hearst is about as well known as any in the United States; of the man William R. Hearst few people know anything beyond the fact that he is the son of admirable parents and the creator and exponent of so-called yellow journalism. He owns more newspapers than anybody else and he sells more of them. He has a seat in the House of Representatives, and has a barrel of money, most of which he inherited but some of which he has made himself. He is also at the moment a candidate for the Democratic nomination for the Presidency. Something like a hundred delegates are already pledged to vote for him, and others will doubtless fall in as the result, partly of liberal expenditure of money and partly of the vigorous support of the New York *Journal*, the Chicago *American*, the San Francisco *Examiner*, etc. It is the most audacious candidacy the country has ever beheld. Mr. Hearst has had no experience in public affairs, his service in Congress having been wholly perfunctory, and his knowledge of political history, political economy, and political everything seems to be as limited as his opinions surely are crude. Nevertheless, he will certainly control nearly a third of the votes in a great national convention, and it is well to know the manner of man he is as judged by his intimates. The personal sketch printed elsewhere, therefore, will interest, even though, as we suspect, it will fail to convince. It was written by one of the very brightest of the young men in Mr. Hearst's employ, and naturally presents his best side. To such a presentation any conspicuous and ambitious American has a fair claim.

But there is another and very dark side. Mr. Hearst has no particular desire to become the Democratic candidate; a Republican nomination would suit him quite as well. He wants to be the candidate of a class, and since classes have not hitherto been recognized as existing in this country, he has bent his energies and given his own talent and hired clever men of specious minds and spent freely of his money in an endeavor to create one. His newspapers are characterized by appeals to ignorance and prejudice, to hatred of the rich simply because they are rich, not because they are wrong, to socialism, discontent, and envy, to the basest of human passions. From the standpoint of a patriot, a lover of his country, the great and free, although still experimental republic, this is dastardly work. One shudders to contemplate the logical conclusion of its successful continuance.

That such a condition should give rise to apprehension in many minds is but natural. Indeed, if Judge Parker should be nominated, he will be able to trace the result directly to the prompt and resolute unification of thinking men in resistance of "the yellow peril." That it should be resisted goes without saying, but frankly and in the open, by appeal to reason, common sense, and patriotism, not by insidious, venomous personal assaults such as the *Evening Post* recently scandalized its readers with. The time has not yet and never will come when it is necessary to fight yellow journalism with its own weapons. Indeed, to tell the truth, we do not now experience the sense of alarm experienced by others. We do not believe that all of Mr. Hearst's papers combined exercise as much real influence as any one of a dozen journals we could name. Moreover, Mr. Hearst himself is only forty-one years old, of gentle and generous disposition and engaging personality; that he should fail to grow wiser as he grows older, ultimately perhaps even reaching a full appreciation of his true responsibility and duty, is little less than incredible. So let us cheer up!

There are some shrewd observers of the existing political situation who are inclined to believe that, whatever may be done at St. Louis, a bolt is unavoidable. The belief is based not so much on the surprising strength developed by Mr. Hearst in the contest for delegates to the Democratic national convention as on the fundamental reasons to which the unexpected strength is attributed. As was recently pointed out in a remarkable letter contributed to the Philadelphia *Public Ledger*, it matters not what one may think of Mr. Hearst personally, or of his political attitude; only blind prejudice can deny that he threatens to become—if he is not already—a weighty factor in the problem to be solved at St. Louis. The truth is that what the supporters of Mr. Hearst are demonstrating by their numbers and their energy is the widespread distribution and the unlooked-for power of the radical element in the Democracy. What we are witnessing, in fine, in the present contest for delegates to the St. Louis convention, is not so much a rivalry of men as a collision of antagonistic principles, an irrepressible conflict between conservatism and radicalism. It is because the difference between the radical and conservative elements of the Democracy are so deep-rooted as to seem irreconcilable that, as we have said, some close observers deem a bolt inevitable, no matter which side shall win at St. Louis.

It is true that some weeks ago the nomination of Mr. Fairbanks for the Vice-Presidency seemed to be fixed upon, but when interviewed in New York city, on May 7, he declined to say a word concerning his alleged candidacy. As we have formerly pointed out, it was the Senator's personal friends who prevented the Indiana Republican convention from instructing its delegates to present his name at Chicago on June 21. On the other hand, it may be said that Speaker Cannon has declared repeatedly that under no circumstances would he accept the nomination for the Vice-Presidency. It will be remembered that in 1900 Governor Roosevelt and his intimate friends made similar declarations. The truth, of course, is that, with the exception of Silas Wright, of New York, no man has ever refused a nomination for either of the great Federal offices after it was definitely made by a national convention. There are several reasons why shrewd Republicans feel more confident of carrying Indiana than of carrying Illinois. A great deal of bitterness has been generated in the former State between the supporters of Parker and the advocates of Hearst. In Democratic county conventions held on May 7, charges of attempted bribery were made against the Hearst managers. Mr. D. W. Sims averred that one of Hearst's agents offered him the nomination for Governor if he would take the lead of the Hearst forces in Indiana, and further agreed to deposit in the Indiana National Bank two hundred thousand dollars, subject to his check, for use in the campaign. The agent seductively added that no report would be asked for as to the use made of the money.

This week Mr. Bryan's bitterness is reserved for Chief-Judge Parker, whom he castigates in a letter nominally written to Judge McCabe of Indiana, but obviously meant for publication, and intended to influence, if possible, the State convention to be held on May 11 at Indianapolis. He pronounces it impossible to conceive of a Democratic campaign fought under the leadership of a muzzled candidate. The excuse offered for Chief-Judge Parker that his judicial position makes it improper for him to discuss public questions in advance of his acceptance of a nomination is rejected by Mr. Bryan with contumely. The Nebraskan points out that other judges have not been so hampered by a similar conception of judicial ethics, and he adds that Chief-Judge Parker by resigning his

office on the bench can free himself from the restraint put forward to justify his lack of frankness. Mr. Bryan predicts that "the Judge's attack of lockjaw" will not save him. He goes on to remind his correspondent of the "simpleton who, when leaving home, was told by his mother that if he would not say anything, nobody would learn that he was foolish." When he returned home, however, he had a sad report to make. "It was no use, mother," he cried. "I was found out just the same. I met a man who asked me my name, but I did not say a word. Then he asked me where I lived, and I did not answer. Then he said, 'What's the matter with you—are you simple?' So, you see, it was all no use, mother; I couldn't hide it even when I tried." According to Mr. Bryan, a Democrat can no more ignore the right of the members of his own party to know his views before he receives a nomination than he can question the right of all the voters of the country to know his views when he goes forth as the nominee of his party. There is something to be said for this view of the question.

Mr. E. F. Ware, Commissioner of Pensions, discloses a curious confusion of thought in a letter addressed to the New York *Sun*. He evidently imagines that he has refuted that paper's criticism on the Executive order making the attainment of the age of sixty-two *prima facie* proof of the disability qualifying for a pension when he asks whether the *Sun* is not aware that Congress, after due consideration, voted the money to carry it out. Mr. Ware points out that the House of Representatives did thus by implication endorse the order, after Mr. Bourke Cockran had demonstrated that the ancient boundaries of legislative power had been encroached upon by the Executive. In other words, according to the Commissioner of Pensions, the fact that at the opening of a Presidential campaign the dominant party in both Houses of Congress deems it prudent to approve of an act performed by its candidate for President, the act is thereby irrevocably adjudged to be wise and legal. In what section of the Federal Constitution is Congress invested with the power of defining what acts are or are not constitutional on the part of the Executive? It is certain that the power of making such a definition is, in practice if not in theory, reserved to the United States Supreme Court. Nor have we any doubt that if a case could or should be made which would require that tribunal to say whether the Age Disability Pension order, known as No. 78, is constitutional, it would answer in the negative. Meanwhile the circumstance that partisan majorities were willing to appropriate the money to carry out the order proves nothing except that politicians will go to great lengths in an emergency. Not only Republicans but many Democrats cooperated in appropriating the money needed to pay the anthracite strike commission appointed by Mr. Roosevelt, although we do not believe there is in either party a constitutional lawyer who regards that performance of our Chief Magistrate as warranted by the Federal organic law.

In the course of the last quarter of a century we have felt constrained to comment with severity on certain incidents in the career of Senator Matthew Stanley Quay, of Pennsylvania, but we have never underrated his political capacity. There are indications that his career is now drawing to a close. He is known to be suffering from cirrhosis of the liver, and the malady, always serious, has thus far in his case proved intractable. Should the end be near, his exit will take place under dramatic circumstances, for never has he been so powerful as he is to-day, and but two steps, easily taken, are needed for him to reach the summit of his ambition. When we reflect that at one time he was tried for a breach of the law, and that had he been convicted of it he could not have escaped the penitentiary, we cannot but recognize in the suddenness and completeness of his political rehabilitation an astonishing phenomenon. From this point of view he may be compared with Edward Livingston, first of New York, then of Louisiana, and ultimately of Washington; and with Senator Mitchell of Oregon. As regards the conjunction of broad culture and accurate historical knowledge with extraordinary expertness in the art of political organization, he reminds one of Aaron Burr; but Burr never recovered from the odium of his duel with Hamilton and of his trial for treason; and from this point of view Mr. Quay has a marked advantage over the grandson of Jonathan Edwards. As regards the length of the period during which Mr. Quay has been the absolute master of a great commonwealth, his only counterpart is to be found in his predecessor, Simon Cameron. It may be remembered that Mr. Cameron rounded out his autocratic life by accepting a place in the cabinet of President Lincoln, and by transmitting his seat in the United States Senate to his son, who, in his turn, was to be a Secretary of War. It is no secret that Mr. Quay has contemplated a similar culmination of his own political career. He, too, is believed to have looked forward to a place in the cabinet of the Federal Chief Magistrate should Mr. Roosevelt be elected President, and in that event he designed to turn over his seat in the United States Senate to his son, Richard R. Quay, who has evinced ability and energy in business affairs, but who, as yet, has been by no means credited with his father's talent for politics. Should Matthew Stanley Quay live a twelvemonth, it is possible that both intentions will be fulfilled, and that a Quay dynasty may succeed a Cameron dynasty in Pennsylvania.

There seems to be no doubt that the property of the Panama Canal Company now belongs to the United States. On May 7 a cable despatch was received in New York from Paris announcing on the part of William Nelson Cromwell, one of the counsel for the company, that the delivery to the United States of all the plant and franchises of the new Panama Canal Company, as well as of 98 per cent. of the shares of the Panama Railroad Company, had been completed in all details. On the same day, Secretary Shaw signed a Treasury warrant for forty million dollars, which was to be delivered on May 9 to J. P. Morgan & Company, of New York, disbursing agents of the Federal government on account of the Panama Canal purchase. This warrant is much larger than any other issued by the Federal government. In 1899, the United States Treasury paid Spain, through the French ambassador, twenty million dollars for the Philippine Islands, but this sum was represented by four warrants of five million dollars each. The fifteen million dollars which constituted the purchase-money for the Louisiana territory was paid by the assumption of the claims of citizens of this country against France, amounting to $3,750,000, and by the issue to France of certificates of stock which, in the aggregate, were valued at $11,250,000. In 1868 a single government warrant for $7,200,000 was paid to Russia for Alaska. In 1876 the British government received a Treasury warrant for $5,500,000 on account of the Halifax award under the Treaty of Washington for infringements of fishery rights in Nova-Scotian waters. Of the ten million dollars payable under the treaty recently concluded to the Republic of Panama, a part has been paid, and six million dollars will presently be received by a special commission which has been appointed for the purpose, and which is to invest the sum in American securities.

The fifty million dollars thus far accounted for do not constitute the total of the preliminary outlay on the isthmus. Our government is still confronted with the question of reimbursing the new Panama Canal Company for the expenditure on additional construction work, and on protection and repairs, which have gone on since the date named in the estimate on which the offer to sell for forty million dollars was based. Mr. W. N. Cromwell has cabled from Paris that, on behalf of the company, he has offered to leave the disposition of this matter to Mr. Roosevelt, and that the proposal has been accepted by the President. The next disbursement will be for sanitation. Colonel Black of the United States Engineer Corps, who, for the present, will have charge of all sanitary regulations on the isthmus, and who has lately returned from an inspection of the canal zone, has reported to the President that the sanitary problems may easily be solved. He is convinced that no serious trouble need be apprehended from mosquitoes. He found that the swamps between Colon and Panama were not infested by those disease-carrying insects to the degree generally supposed, for the reason that the native animal life is so prolific that it destroys the larvæ. The efforts made by him last year to destroy mosquitoes in the railroad reservations were so successful as to lead to the belief that the whole of the canal zone can be freed from the pests without much difficulty. Admiral Walker, chairman of the Panama Canal Commission, has also made a report to

the President, in which he recommends the employment of the negroes now on the isthmus—some fifteen thousand in number—because they are already acclimated. It seems that day-laborers on the isthmus now receive in wages some fifty cents a day, United States currency.

Have we made the costly blunder of placing the batteries of our coast forts too near together? That is a question to be answered by ordnance experts at the army proving-ground at Sandy Hook when they have completed certain tests to determine the extent of shock and concussion arising from the discharge of guns. It is found that the firings in one emplacement interfere with the gunners of the adjacent one to such an extent that the men find their work full of peril. The noise from the discharge of the guns is terrific, and it is a frequent result that the ears of those near at hand are injured and sometimes the hearing permanently impaired. The commonest means of protection is the stuffing of cotton in the ears, with the variation of standing on tiptoes and keeping the mouth open at the moment of firing, but this gymnastic and dental precaution becomes tedious when the firing is rapid or continuous. There is a rare opportunity for the inventive faculty of some genius who will furnish a substitute for these provisions of safety. Strange to say, the worst results from gun-firing are not produced from the fire of the biggest guns, but from the guns of three and five inch calibre, which have a "crack" in their detonation which is peculiarly penetrating and more disastrous to the ear than the heavier thunder of the largest ordnance. There is a suspicion on the part of some of the artillerists that the batteries are placed too near together, and that greater distance between them would enable the gunners to retain their positions without the artificial aids to comfort. It is quite out of the question to clog the ears on all occasions, especially in time of action, when it would be essential to preserve the hearing that men may understand orders given them. It would be a serious and expensive proceeding, too, to move emplacements now installed with all the enduring solidity of cement and metal. The question is consequently a vital as well as a perplexing one.

When Lieutenant-General Kuropatkin visited the Far East a year ago and passed some time in the empire of the Mikado, he formed a very high opinion of the fighting value of the Japanese army. He himself was very far from sharing the anti-Japanese feeling of Viceroy Alexeieff, and had almost as little sympathy with the whole policy of absorption and veiled annexation for which Alexeieff stood. General Kuropatkin heartily disliked this policy, and was against the war, sharing and supporting the view of Minister Witté, but unfortunately failing to persuade Nicholas II. to his view of the case. When the proposition was first raised that Kuropatkin should leave the War Ministry and take the field at the head of the Czar's forces in Manchuria, it is credibly reported that he consented with extreme reluctance; and that, in spite of the Czar's brave words that he expected Kuropatkin to return a field-marshal, the experienced War Minister himself expected to bury his reputation as a victorious warrior in the Manchurian wilds, clearly seeing the immensity of the task which had been forced upon the Russian army, and the small chance of carrying that task to a successful issue. We begin to realize the cause of General Kuropatkin's misgivings and reluctance, as the large unpreparedness of the Russian army at all points becomes more and more manifest. It had been known for months that the Yalu must be crossed by the Japanese army; yet the Russians were prepared neither to resist adequately nor to retreat without loss. By a mixture of obstinacy and profitless bravery, General Zassulitch turned what was to have been a retreat into a fiercely contested battle, in which the losses of Russia were immense, in men, in guns, and most of all in prestige. General Kuropatkin, who is acquainted with the localities involved, must have realized the hopelessness of the position then occupied by the Russian advance-guard, and the necessity of withdrawing and taking the appearance at least of defeat and disaster.

Immediately on the heels of General Kuroki's success came the occupation of the Liao-tung peninsula by General Oku, and the severance of connections between Port Arthur and Mukden. This also must have been foreseen, but nothing adequate was done to prevent it, presumably because nothing adequate could be done, Russia lacking either the transport, the commissariat arrangements, or the guns which would have been needed to make a successful stand against the landing parties on the Liao-tung coast. It is not very clear whether Port Arthur is really blocked, or only partially obstructed; but the difference is slight, for it is evident that the ships there are not in condition to make an effective attack on the Japanese fleet. The two battle-ships *Czarevitch* and *Retvisan* have taken no part in recent actions, though it is said that they are being repaired, and will soon be in condition to re-enter the fight. But since, so far, the Russian battle-ships have succeeded in inflicting no appreciable injury on Admiral Togo's squadron, it seems hardly worth while counting the possible damage they may still inflict, in case it be possible to repair all the ships which are now injured. Nor is it certain that the arrival of the Baltic fleet will put a very different complexion on affairs. To begin with, the journey to the Far East presents immense difficulties. Within a few weeks the June monsoon will break over the Indian Ocean, turning it into mountain ranges of rain-drenched waves, the passage through which for battle-ships and torpedo-boats will be enough to make even tough old salts hesitate. Coaling in the wild and whirling ocean will be a feat of extreme danger; and nothing awaits the fleet on its arrival in the East but a combination of hurricanes and Japanese torpedoes. It cannot be said that the prospect is one which would tempt any experienced and wise commander.

The evacuation of Newchwang is a like symptom. It means, once more, unpreparedness and inadequacy on the part of Russia, and the clear perception of that unpreparedness on the part of Kuropatkin. There is every reason to believe that Vladivostok will soon be cut off, as Port Arthur is, and the Russian army will tend to cluster more and more around Harbin, withdrawing, perhaps, even from Mukden. There is no reason why the Japanese should at present attempt to storm either Port Arthur or Vladivostok. They have the example of Plevna before them—an assault which disastrously failed, and an investment which brilliantly succeeded. The Russians now in Port Arthur about equal in numbers the army of Osman Pasha at Plevna, and in view of the many disillusionments which Russia's conduct of the war has already afforded, one cannot be certain that Port Arthur is any better provided with food and ammunition. It may, of course, hold out until relieved both by sea and by land, but revolutionary changes will have to come over the Russian conduct of affairs before this is thinkable.

The deadlock in the Hungarian Diet has been overcome by the tact and energy of Count Tisza, the Premier. The trouble was about the use of the Hungarian language in the army, the patriotic Magyars insisting that, since they form a separate kingdom, their tongue should be used in all Hungarian regiments, in the words of command. Kaiser Franz Josef has stood out obstinately against this, not only from a sense of Teutonic dominance and to assert the hegemony of the Hapsburgs, and the German tongue in which they have written their red history across eight centuries, but for the more practical reason that once the door is opened for local tongues in the Austrian army, the other idioms of the Dual Monarchy will clamor for admittance on equal terms. These languages are, in addition to German and Magyar, Polish, Moravian, Bohemian, Ruthenian, Slovenish, Italian, Slavic, Croatian, and, finally, Roumanian. The worse than Babel that would result from the attempt to give army orders in all these tongues at once may well make Franz Josef shudder.

Word comes from London, *viâ* the *Sun*, of a disposition among the most competent European observers to regard the battle of the Yalu as marking an epoch in modern history. While of no great intrinsic importance, it may suffice, the *Spectator* thinks, to modify for all time the relation of Europe and Asia. What the *Spectator* thinks on this subject will be conjectured to come from the mind of Mr. Meredith Townsend, one of its editors, whose book, *Asia and Europe*, is the product of thirty years of thinking on the subject that it treats of. The whole purpose of the book is to try to make the Asiatic a little more comprehensible to the European.

The European, Mr. Townsend says, neither comprehends nor likes the Asiatic. The Asiatic understands but does not like the European. The European endures Asia while he has to live there, but never likes it. The Asiatic endures the European while he must, and is glad when he goes home, and wishes he would stay there. In an essay on the influence of Europe on Asia, Mr. Townsend reaches the conclusion that Europe has never had any permanent influence on Asia, and he doubts if it ever will have. He represents the Asiatic as fatigued and bored by Europeans and their ideas and ideals. He considers the toleration of British rule by the peoples of India as a daily miracle, and is at much pains to explain, in so far as he can, how it is that this miracle continues to be worked. He does not believe that it is a lasting arrangement, but is prepared for its termination at any time. The idea that runs all through this thoughtful and suggestive book is that the Asiatic is different from the European with a difference so deep-seated that it can never be overcome; that the European can never truly and permanently conquer, overrun, and Europeanize Asia, and that in the course of time Asia is sure to get in motion again and shake Europe off and out.

Somehow Asia sat down and ceased to progress. Until lately the only Asiatics to be modernized have been the Jews, who had wandered away from Asia, got in the current of progress, and gone along with it. But they lost their nationality, and do not count as a political force. But now come the Japanese, forty millions of them, alert, trained, cultivated, geographically Asiatic, and yet modernized; using the tools and the arms of Europeans, learning greedily the knowledge of Europeans, adopting apparently the ideas of Europeans, fighting Europeans on sea and land with their own weapons, and beating them, on the sea first, and now on the land. The battle on the Yalu broke a record that had lasted for three centuries. No wonder it has made thoughtful men speculate on its effects upon the mind of Asia. Are the Japanese true Asiatics? Are the thoughts that are at the back of their minds the thoughts that prevail in India and China? The Jews are Asiatics. Modernized and denationalized as they are, scattered, mixed up in the business and politics and daily life of the European peoples, the Jews merge very imperfectly with them. Not even here in America is the barrier between the European and the Asiatic Jew quite levelled. Does there exist between the Japanese and the European this same instinct of race repulsion, which is the instinct of race preservation? The Japanese have adopted European tools and methods, but have they adopted European ideas, and do they think the thoughts of Europe or of Asia?

These are the thoughts with which the minds of thinking Europeans are occupied; the thoughts that stir the *Spectator* to consider whether the battle on the Yalu may not have modified for all time the relation of Europe and Asia. The results that may come even in the course of twenty-five years as a result of Russia's expulsion from China by Japan embarrass the imagination to define. What results will come, if Japan's present successes continue, will depend, of course, on her ability and inclination to awaken in China and India the ideas and spirit which have lately actuated her. Further than that it will depend on whether India and China are capable of the sort of progress Japan has made. Finally, it will depend on whether Asiatics can adopt European methods and move ahead on European lines as Japan has done, and still continue to be Asiatic in temperament, feeling, and thought. It may be that the Japanese victories, which seem likely to rouse Asia against European aggression, may themselves be the unequalled means of introducing the European leaven into the Asiatic dough.

Some of the newspapers have reported at some length the informal discourse made by Mr. J. D. Rockefeller on Saturday, May 7, to members of his son's Bible class at the club-house of the class on Forty-sixth Street. It is amusing how large a proportion of the discourse made before that Bible class turns on the mammon of unrighteousness and the best ways of acquiring it; but that is neither here nor there, though the elder Mr. Rockefeller's thoughts drifted in that direction on the evening in question. He told the class about his early training, and what a remarkably good business training it was. It was peculiar, he said. He was taught to do things; to be self-reliant. At the age of seven he was taught to milk a cow, at eight to drive a horse, "and to drive him just as carefully as a man could drive him." At ten he was trained to do business; was sent over the hills, for example, to buy cord-wood for the family, with careful instruction as to the quality of body-maple and beech that he should buy. That certainly was rare training for a ten-year-old boy. When he was a little older his father said to him: "I want you to build a good brick house that will make us a home. Here is the money." The lad took the money, employed an architect, and built the house, having no trouble either with architect or contractor. "That," said the narrator, "gave me a great deal of confidence." The father went on providing business experiences for this apt pupil. Presently he began to allow the lad to loan money for him, and "meanwhile," says the son, "I was saving a little money from what I earned myself. I soon learned that I could get as much interest for $50 loaned at seven per cent.—the legal rate then—as I could earn by digging potatoes ten days. The impression was gaining ground with me that it was a good thing to let the money be my slave, and not to make myself a slave of money." He went on to tell his first formal start in business as helper to the bookkeeper in a commission-house, and how at the end of the second year, in default of the increase of salary he asked for, he set up for himself with a partner and did very well from the start.

We have quoted enough for our purpose, which is to point out that if Mr. Rockefeller chose to do it he could write an autobiography of extraordinary interest, which would be sure to be profitable as a published book, and might prove to be a piece of lasting literature. It is evident that his memory is remarkably tenacious of all the details of his early experience. It was so with the late C. P. Huntington, who used to tell the most entertaining stories of his early feats in commerce. There was one about a canal-boat cargo of butter that he bought, and how he sold it in New York, and he remembered every wile by which he beat the local dealers, and every boarding-house-keeper to whom he sold a chunk of it, and how much the chunk weighed, and what he got per pound for it. The late Calvin Brice used to tell similar tales about his beginnings, and if either of those men could have been persuaded to talk his early life off to a stenographer as he talked passages of it to his friends, there would have been a remarkable book as the result. Franklin wrote an autobiography that is a classic; General Grant wrote his war memoirs, and they constitute another great book. It is obvious from the odds and ends of his biography that Mr. Rockefeller lets fall from time to time that he, too, could do a great piece of book-making if he chose to do so. The reminiscences of an ordinary man are apt to be tiresome, partly because nothing out of common results from the early experiences of the ordinary man. But Franklin and Grant and Huntington were worth knowing about, and had the vigor of mind that qualified them to make good books. So is Mr. Rockefeller worth knowing about, and he, too, has the requisite vigor of mind—or whatever the faculty is—to make his stories vastly readable. These tales of his early training and of his father's labors with him are not common stories at all. If he will only make a book of them, and put in his early diaries and account-books, and show piety and thrift as yokefellows in pulling him out of the ruck of mankind, we shall get some remarkable reading, and will be the better able to sustain the lack, recently noted, of a competent American humorist. It was a great loss that Mr. Huntington did not put his memories on record. If Mr. Rockefeller can be induced to put down what he knows about himself, another serious, and perhaps greater, loss will be averted.

A record of the life of Sir Henry Morton Stanley is given in another column. It was a life packed full of romance and adventure; a rare life in these days which some observers hold to be prosaic. Stanley's progress from an English workhouse through the United States and its civil war, through Europe, and then back and forth through mid-Africa to fame and ease and Parliament, has seldom been matched in any generation in extremes of vicissitude and importance of accomplishment. He did great things which have had great results, and if he is to lie, as may be, in Westminster Abbey, he will have fairly earned that tribute.

Ex-President Cleveland's Latest Utterances

BEYOND the charges that he has held the Presidency for two terms, non-consecutive, and that, deeming public office a trust, he has not permitted politicians to use him against the people's interests—not very damaging imputations—we have never heard Mr. Cleveland accused of anything except that in 1894 he employed Federal troops to enforce order in the teeth of a violent uprising of organized labor at Chicago, and that, also during his second administration, he issued in time of peace bonds to the amount of many scores of millions of dollars. Those are deeds which, as he has lately told his fellow countrymen, he is not ashamed of, but proud of. It was in a lecture which he delivered on May 2 at Princeton University that he discussed the action of the Federal government in the Chicago strike of 1894. He pointed out that the course pursued by him at that time was based on the assumption that a Federal court has the right to restrain by injunction any interference on the part of rioters with interstate commerce or with the carriage of the United States mails; and, further, that if the mandate of such a court be disobeyed it can and should be enforced by the military strength of the Federal government. He went on to show that the course taken by him on that occasion, when he sent troops to Chicago to make good the injunction of a Federal court, though it provoked strenuous remonstrance on the part of Governor Altgeld of Illinois, was subsequently adjudged legitimate and proper by the United States Supreme Court. That august tribunal declared that Mr. Cleveland acted strictly within the limits of his constitutional powers; that, in other words, he exercised a right and performed a duty.

No sharper contrast could be presented than that which is exhibited by President Cleveland's attitude at Chicago in 1894, on the one hand, and by President Roosevelt's interposition in the anthracite-coal strike on the other. The former act, as we have said, has been proclaimed constitutional by the highest authority, whereas there is not a constitutional lawyer in this country, whatever may be his political prepossessions, who does not regard the latter performance as a glaring violation of the Federal organic law. We know very well that Mr. Cleveland's course was and is offensive to many ostensible spokesmen of organized labor, and we know that Mr. Roosevelt's intervention, which practically, if not avowedly, was calculated to benefit the strikers, seemed, for a time, likely to make him the idol of walking delegates. Time clarifies and purges, however, the minds of even the representatives of class interests, and it is patent that with organized labor Mr. Roosevelt is much less of a favorite than he was fifteen months ago, while Mr. Cleveland is far less unpopular than he was a decade since. As regards, moreover, the great mass of the community, who were not themselves directly and personally concerned, either as employers or employed, in the Chicago strike, or in the anthracite-coal strike of Pennsylvania, there has ceased to be any doubt as to which of the two Chief Magistrates bore himself with the more clear-sighted and loyal regard to constitutional limitations and a sense of public duty.

It was in a Philadelphia newspaper, the *Saturday Evening Post* of May 7, that ex-President Cleveland set forth a history of the bond issues made by the Federal government in his second administration, for the purpose of replenishing the stock of gold in the public Treasury. He begins by pointing out that there had long been a deep-seated and seemingly irremovable belief throughout the American community that a reduction of the gold reserve in the Treasury to an amount less than $100,000,000 would in some way bring about a disastrous situation, and, perhaps, justify misgivings, at home and abroad, concerning our nation's financial soundness. Now it happened that from June, 1878, this reserve had never fallen as low as $100,000,000 until on January 17, 1894—owing to a legislative concession to a mischievous demand for an unlimited coinage of silver—the Federal government was confronted by a disquieting emergency. The gold reserve had fallen to less than seventy million dollars, against which slender fund gold demands amounting to not less than $450,000,000 in United States notes and Treasury notes were in actual circulation, while other notes, redeemable in gold, and amounting to about fifty million dollars more, were held temporarily in the Treasury, subject to reissue. Nowhere was there visible any promise of a cessation of the abnormal and exhausting drain of the yellow metal. Another perplexing and dangerous factor in the situation was the rapidly growing distrust of the wisdom and stability of our whole scheme of finance. As an outcome of all these conditions there loomed in sight the menace of the destruction of our gold reserve, the repudiation of our gold obligations, the humiliating fall of our nation's finances to a silver basis, and the degradation of our government's high standing in the respect of the civilized world.

Ex-President Cleveland goes on to say that, in order to avert the country's disgrace, his Secretary of the Treasury sold through New York bankers fifty million dollars' worth of bonds for $58,660,917 63 in gold, thus bringing the gold reserve on March 6, 1894, to $107,440,802. In less than three months, however, the gold reserve was again depleted, amounting on November 14, 1894, to $61,878,374. Thereupon a second fifty-million-dollar bond issue was made, but in January, 1895, the reserve had sunk so alarmingly that Mr. Cleveland sent to Congress a special message, which, however, was unavailing. Thus it came to pass that on February 8, 1895—that is to say, only two months after the proceeds of the second sale of bonds had been added to the fund—the gold reserve had dropped to the frightfully low sum of $41,340,181. Then it was that Mr. Cleveland and his Secretary of the Treasury entered upon negotiations with J. P. Morgan, August Belmont, and other New York bankers, with a view to see whether it was practicable to improve the condition of the Federal exchequer. After a careful consideration of the suggestions made, Mr. Cleveland, some months later, entered into an agreement with the bankers named and others that they should sell and deliver to the government 3,500,000 ounces of standard gold coin of the United States, to be paid for in bonds bearing the annual interest of four per cent. per annum, and payable at the pleasure of the government after thirty years from their date, such bonds to be issued and delivered from time to time, as the gold coin to be furnished was deposited by the said bankers in the subtreasury or other legal depositories of the United States. By the execution of the contract made in pursuance of this agreement, $65,116,244 62 was realized from the issue of $62,315,400 in bonds.

Now it is true that the bankers got these sixty-two odd millions in bonds at a lower price than was paid for the one-hundred-million dollar four-per-cent. bonds subsequently purchased by popular subscription. What is often overlooked, however, is the memorable service which those bankers privately covenanted to render, which, as a matter of fact, they did render, and for which they deserved to receive, as they did receive, a kind of bonus. What they agreed to do, and what at a critical conjuncture and for a considerable period they did manage to do, was to stop the incessant and threatening outflow of gold from the United States to Europe. The bankers concerned formed a syndicate for the purpose of applying an artificial check to the gold exports which were draining the Treasury's reserve, and it was really for this purpose that an indirect commission was allowed to them. By the banding together of the bankers engaged in transacting the business of exchange between this country and Europe, for the purpose of drawing on their European credits and for supplying remittances which otherwise would have required gold exports, the syndicate's object was attained during at least six months. The respite was important: it allayed the existing panic, and put the Treasury on its feet again. Whatever may or may not be said for the soundness or permanence of such an expedient from a banking point of view—it was, as the New York *Evening Post* has pointed out, an effort to dam up the natural flow of international exchange—there is no doubt that it well served its purpose as an emergency measure.

Summing up in a few sentences the history of the "crime" imputed to his second administration, the alleged crime of "issuing bonds of the Federal government in time of peace," Mr. Cleveland declares that, without shame and without repentance, he confesses his share of the guilt. He adds that, although Mr. Morgan and Mr. Belmont, and scores of other bankers and financiers, who were accessories in the transaction related, may, as it has been alleged, be stooped in destructive propensities, and may be continually busy in sinful schemes, he, Cleveland, will always recall with satisfaction and self-congratulation his collusion with them at a time when our country sorely needed their aid.

The Aims and Limitations of Germany

WE recently discussed the opinions of Dr. Emil Reich concerning the vital condition of the Latin nations. He has followed up his essay on that subject with one—in the April *Fortnightly Review*—on Germany. Rightly he observes that the problem of the future career of this country is one which excites the keenest interest among the great nations. Every one would like to know whether she is destined to become a power which will be able to impose its dictates upon the whole of Europe, or whether the bond of unity by which she is now held together will, when the master hand now directing her policy is relaxed, burst asunder, leaving the component states in their primitive disunion. These are problems of more than academic interest; they touch the man of business in the dealings of every-day life just as much as they absorb the student of history. Within a generation Germany has risen from a level of comparative unimportance to a position in which she makes her commercial, political, and intellectual competition felt the whole world over.

After giving an account of the social and intellectual forces at work in the country, Dr. Reich sketches the political ideals by which the future of Germany is being moulded, and estimates what chances those ideals have of being fulfilled. Imperialism, he says, which has become the watchword of the external policy of several great nations of to-day, has laid hold of the German mind with especial force. Now that the Germans have assured the stability of their internal union, they have begun to aspire to a wide ex-

tension of their power. It is their ambition by the development of their naval strength, to carry their sphere of influence over the whole globe. For the last ten years they have been toiling unremittingly to attain to the rank of a first-class naval power. Their dockyards have been at work ceaselessly, building and equipping battle-ship upon battle-ship, cruiser upon cruiser, until to-day they have a very considerable fleet in commission, while their programme of naval construction during the next decade is upon grandiose lines. The drift of all this busy, unflagging preparation, Dr. Reich affirms, can hardly be doubtful. "For fifty years there was the same hum of an army making ready, the same keen attention to military affairs, the same drilling of soldiers and training of officers before Germany hurled herself irresistibly upon France, full of sanguine confidence in her success. In the same manner there can be no doubt that Germany is arming herself with patient, calculating, and laborious perseverance for the day when she shall at last feel ready to throw down the gauntlet of defiance in the face of England. Germany is of those that look, meditate, and prepare before they leap, in order that they need have to leap but once."

In order to realize her dream Germany would like to have direct access to the Adriatic. She could then put into execution the long-meditated plan of drawing a canal from the Elbe to Trieste, and she would thus sit astride of Europe, and could afford to make light of any Franco-Russian combination against her. By a trans-European canal, too, she would nullify the strategic value—to England and France—of the English Channel, and undermine the value of Gibraltar. Such a canal is the one remedy which will cure Germany's geographical deformity as a world power. The physical obstacles in the way of making it are great, but not sufficient to daunt the modern engineer; the political barrier is a harder matter to negotiate. Germany is cut off from the Adriatic by Austria, and the construction of the canal presupposes the downfall of that country. This may be brought about in two or three ways, but it is uncertain that any of them offers any considerable chance of success. If Germany did eventually gain access to the northern Adriatic she would be likely to get a warm reception from her Italian rivals, who are in a fair way to become arbiters of the Mediterranean.

Germany's over-sea policy is not the outcome of sheer ambition, a mere desire to participate in the game of grab. It is inspired by imperious necessity. Since 1870 her population has well-nigh doubled, the Fatherland is becoming overcrowded, and the energetic portion of the inhabitants is compelled to emigrate to America, where it ceases to contribute to the force of the home-country. It is of crucial importance to Germany that she should have fields of colonial expansion under her own imperial control. But where are such fields to be found? "In her distress her eyes have fallen upon the Nearer East. This is the explanation of her forbearance and solicitude for the Sublime Porte; it lies in no disinterested affection, but Germany would like to win a firm foothold in Asia Minor, already the scene of her brilliant railway schemes. And if eventually Germany should colonize the eastern end of the Mediterranean, she will have even more potent inducements for securing a naval base in the Adriatic." But if her designs on the Adriatic fail, her swiftly augmenting population must find an outlet, cost what it may. Almost her only other means of finding a dumping-ground for her surplus souls is in the defeat of England and in the seizure of her rival's colonies.

Dr. Reich discusses at some length the question of the possible absorption by Germany of Holland, and points out the different ways in which this might be accomplished and the effect it would have. In conclusion, he affirms that it is in the higher interests of humanity quite desirable that the type of civilization which the Germans have developed during the last four centuries should continue, and he gives reasons for his affirmation. On the other hand, he says, it is difficult to believe, judging from the past, that the Germans will ever be able to mature that ideal development of both man and woman which can alone be considered as the palm and prize of the highest form of civilization. The German woman, in spite of many a great national quality, has so far "not given proof or hopes justifying us in the assumption that she will in her proper sphere create the same charm of graceful idealism that so many German intellectual men have succeeded in creating in the sphere of intellectual idealism. More serious still is the deficiency of the Germans in that they have suffered their whole political life to be officialized and thus Byzantinized. Even within the last thirty years they have, outside Bismarck, produced not a single great political personality. We see a number of hard, steady, and honest workers; but not a single great personality. The over-bureaucratization of the whole of political life in Germany leaves, as a rule, little elbow-room for the growth of free, untrammelled, and elastic forces. Rome owed her greatness chiefly, as does England in our own time, to the great number of men who, unfettered by any bureaucratic routine, devoted all their strength to the great political and social problems of their country. Germany, therefore, runs the great danger of quickening but little the onward march of women towards the ideal, and of paralyzing the resources of her men by subjecting them to an excessive bureaucratism."

Is the Woman Worker a Frightful Failure?

THERE seems to be current some misunderstanding of the remarkable article, "The Truth About Women in Industry," contributed by Mrs. Flora McDonald Thompson to the May number of the *North American Review*. Nobody knows better than Mrs. Thompson, who herself is a successful journalist, that it would be absurd to describe every woman who undertakes to support herself by mental and physical work as a failure. No such term would be applicable to George Sand, Rosa Bonheur, or George Eliot. Neither would Mrs. Thompson dream of asserting that a woman who has neither a father, a husband, nor a brother to support her should be debarred from attempting to earn a livelihood in any field of industry. She is not writing, however, from a sympathetic or humanitarian view-point. She is constrained to eliminate exceptions, because she is endeavoring to formulate a general rule from the view-point of political economy. She is not the first feminine politico-economist, but it must be admitted that familiarity with the principles and methods of the "dismal science" is seldom exhibited by the agitators for the so-called "emancipation" of women.

The question mooted by Mrs. Thompson is this: What would be the effect on wages, salaries, and earnings if the movement for woman's "emancipation" were triumphant all along the line; that is to say, if every field of industry, intellectual and physical, were thrown open to her, and if the opportunities thus offered were turned to fullest account? Is it not evident that while the *demand* for labor in any given field of industry would remain constant—or increase very slowly with the increase of population—the *supply* of labor would be doubled by the influx of the gentler sex? It would inevitably follow that the price of labor would be cut down at least one-half, even if it were not driven lower through the stress of competition. At present the wages paid to a masculine toiler in any field of industry are practically calculated on the assumption that he will have to support himself, a wife, and at least two children. But, it may be said, though we admit that wages would be cut one-half by the entrance of women into the labor-market, yet, if the wages earned by a man and his wife were put together in a common fund, there would still be available about the same amount of money for the support of the family. Those who make this assertion overlook, as Mrs. Thompson points out, that, even if a man and his wife could between them earn as much as the husband now earns single-handed, their joint earnings would not go so far, for the reason that the cost of living would be increased. If a married woman had to work outside of her home from eight to ten hours a day during six days a week, it is obvious that some one would have to be hired to look after the children and the household. Some one would have to be paid to do the work performed by a wife and mother under existing conditions. There will thus be left from the joint wage fund a smaller fraction for nourishment, clothing, shelter, and the refinements of life. There is another point of view from which the husband practically suffers injustice through the entrance of his wife into the labor-market. Mrs. Thompson reminds us that while the wife's earnings might make good to the husband and the family a part at least of what the household loses by her want of application to household pursuits, yet whether her earnings shall be employed in this way is entirely *optional* with her; and it is a matter of common observation that, in general, she feels that what she earns is her own, to the exclusion of any right in it on the part of her husband. She does not perceive that, in equity, she is bound to yield her husband a right in her earnings equal to the cost of her support, and equal to the amount of the extra expense which the household undergoes through her engaging in outside business.

There seems to be conclusive evidence that the entrance of woman into the field of industry has not been an economical success; and that, for woman herself, it has had mischievous physiological consequences. A special committee appointed in New York to inquire into the condition of one hundred thousand families, each of which was dependent on a woman's earnings, reported that these earnings did not exceed, on an average, sixty cents a day. As for the effect of work outside of the home on woman's physical organism, the statistics collected by the Massachusetts Bureau of Labor indicate that her constitution is so ill adapted to men's work that her choice of occupation should be legally restricted. The reproductive organs in particular are injured by the strain of men's labor, and the human race deteriorates in consequence of woman's impaired physical ability to perform the maternal function. Indeed, the woman who aims to be a producer of wealth cannot logically be expected to bear children. This truth is clearly brought out by Mrs. Thompson. She recognizes that maternity would interrupt the woman worker's "career," while the demands of business are such that the chances would be against her making a success of her children. In the modern scheme of economics for women maternity is an error, almost a crime. Mrs. Thompson herself, for instance, as a journalist, is subject to business law. An editor will not wait for copy because a writer's child is sick. A newspaper must go to press in spite of the fact that one of its contributors has a baby in arms. It is not the demands of the

family, but the demands of the editor and the paper, that a feminine journalist is bound to heed. If she neglects her work, there are others ready to seize it, and they will get it. The editor will not be touched by any exhibition of fine maternal solicitude that may be put forward as a pretext for neglect of business.

What, then, have been, and are likely to be, the consequences of the movement which aims to throw open all the fields of industry to women? They are summed up briefly by Mrs. Thompson. For instance: The practice of so-called economic independence has achieved for woman financial results indicated by the depressing fact that her average earnings are less than a dollar a day. The effect of the practice on the economic interests of the community is to lessen efficiency and to increase the cost of production. The effect upon the woman herself is to impair her physical fitness for the maternal function, and to subject her to a false system of education which mentally and morally unfits her for what should be her economic office in the family. Finally, the effect upon society is to promote pauperdom, both by increasing the expense of living and by robbing men of the responsibility which gives them force and success in their natural office of exclusive dispenser of wealth to the family.

Two Men of Peace

In January, 1894, Hungarians of all classes and factions united in celebrating the fiftieth anniversary of the commencement of Maurus Jókai's literary career. We turn back now to the records of that event and read such expressions as these: To him, more than to any other living patriot, Hungary owes her well-being; his books, and the spirit of the author manifested in them, made for a splendid national regeneration. And again it was written that the man who was the centre of a national demonstration was not rewarded because he had been a great soldier or an eminent statesman—although, to be sure, military and political campaigns formed part of his long and varied experience—but he was rewarded because his books had given artistic form to the sufferings and the aspirations of his people, crystallizing the national sentiments. During that half-century he had written 350 volumes: his energy was as prodigious as the influence he exerted was noble. And his lifework might well have been regarded as complete at that time. "In triumphs," Browning's "Patriot" reminds us, "people have dropped down dead." Jókai, however, continued to live for more than a decade, his death occurring on the 5th of this month, when he was seventy-nine years of age; and to the last he was a man whom Hungarians—all who read the Magyar language and many who could not read a word of it—delighted to honor, though it was not exactly "roses, roses, all the way," since a certain amount of reaction was observed, and was, indeed, inevitable, after that extraordinary outburst of popular favor in Pesth ten years ago.

On the same day, May 5, another man of almost boundless energy—who also cultivated an art of peace during more than half a century, and whose name is inseparably connected with the latest heroic period of his native land—died at Munich. We refer to Franz von Lenbach, the great German portrait-painter. It has been truly said by one of his biographers that Lenbach's characteristic talent—a positiveness in modelling and a quick and sure perception of that which is individual in any phenomenon, distinguishing it from all others of its class—was shown even in some of the portrajts that he made before he was fifteen. The development of this gift of nature into the perfect mastery belonging to his later years the world owes in large measure to the artist's power of physical endurance: his burden of hard work that would have seemed too heavy for ordinary shoulders was always carried so lightly that there was strength to spare for studies in new fields. His was, in point of fact, the strength of a sturdy Bavarian peasant, for he was born (December 13, 1836) in the market-town of Schrobenhausen. While it was not his mission to inspire great movements in Germany, he did more than any other German, or all others combined, to depict for the benefit of coming generations the chief persons in the history of his country during his lifetime. If (unlike Jókai in this) he did not in any sense make history, he at least made some of its best illustrations. And, like Jókai, Lenbach grew to be the pride of his own good city and country. For a long time his villa was a favorite place of meeting for people of distinction in Munich. In that part of the world his has been the impressive central figure in demonstrations of popular appreciation.

Oxford Transplanted to Chicago

It is announced that Chicago University, at an expense of $2,000,000, is to alter its type of institutional life and set up on the shores of Lake Michigan another Oxford. It reminds one of Leland Stanford's question to President Eliot after he had looked Harvard over, asking how many million dollars it would take to set up another Harvard in southern California. Nevertheless, the statement is not without its interest, as it points out clearly that President Harper and his colleagues are realizing, as President Prichett of the Institute of Technology has realized since he came to Boston, that there are certain moral and spiritual gains that come with a distinctly college life and the dormitory its common home atmosphere which no institution existing without them in a large city can have. If, therefore, in due time the many students of the institution which Mr. Rockefeller has made possible are to have a more secluded and intensified academic life in separate colleges within the university, it will be because it has been found that attending lectures, working in laboratories, and taking degrees does not make up the whole of a liberal education, and that there is need of those conditions of daily human intercourse between older and younger men, and men with common ideals which no system such as now obtains in most of our universities located in cities can provide.

The details of the new University of Chicago scheme are not disclosed yet, but it has been said that the differentiations between the several colleges which are to be set up are to be arbitrary. That is one group of students interested in art will live and work together, those interested in science will do likewise, and those interested in literature will inhabit another set of dormitories and make another nucleus. An arbitrary division like this is easy, but is it natural, and will it conduce to the broadest culture ideal? Not so have the differentiations between the colleges at the English universities come to pass.

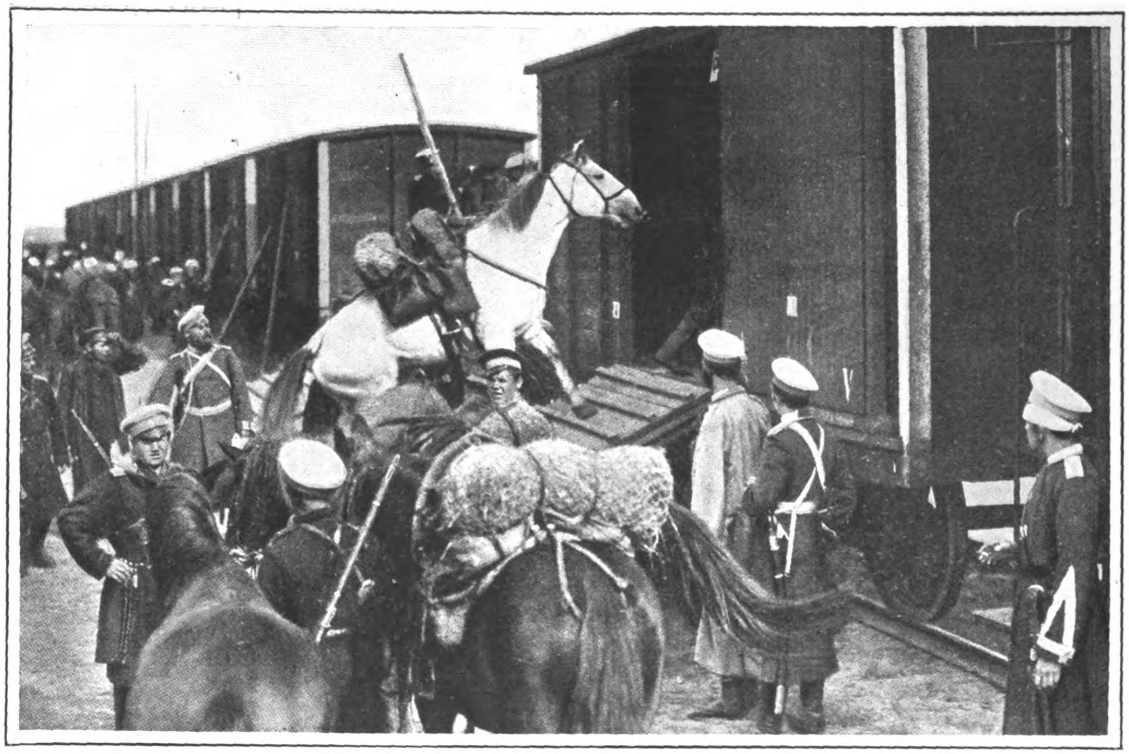
This move at the University of Chicago coming so soon after the announcement of a not dissimilar pedagogical ideal held by Princeton's new president, and after the setting up of a new system of tests for scholarships and fellowships at Northwestern University, where the emphasis is to be laid on moral and physical qualifications as well as on intellectual attainments, seems to indicate a wave of reaction against the individualistic and predominating intellectual standards which have dominated our higher educational life under the positive influence of President Eliot and Harvard University. The new ideal, or rather, the renewed emphasis on an old ideal involves the finding of great humanists once more as leaders of youth, as men who can preside over the colleges within the university, and shape youth as Jowett did at Baliol by daily intercourse in the common living-room or in the quiet of the master's study. It will be comparatively easy for President Harper to find brick and stone for his new dormitories and men to carry the scheme out on its executive side. But it will not be so easy for him to find the men who can preside over the destinies of these colleges. Still longer must he wait for that atmosphere to gather around them which so insensibly yet so powerfully alters the lives of men who enter the classic shades of Oxford.

The Democratic Presidential Candidate

Who will be the Democratic Presidential nominee
Is the question that now agitates the soul
Of the part who, on the making
Of a slate, is cogitating
In the interest of the Democratic whole.

There is Gorman, bland of manner, deep of purpose, bold in deed:
The leader of a recusant cabal.
But his boom has gone to pieces—
He made one too many speeches
On the subject of the Panama Canal.

Now Hearst has in his bonnet the Presidential bee:
And he sets a most exhilarating pace;
But the color of his "Journal"
In *décolleté* diurnal,
Lends a "Yellow Peril" feature to the race.



Bryan's usefulness is over, his friends are forced to say,
And the issue that he represents is dead:
Underneath the golden daisies
Let us bury him, and raise his
Cross of Gold—in retribution—at his head.

Now "the Judge" is wise and wary, large of thought and grave of mien,
He presents the endless silence of the Sphynx.
What he's said and done is history,
But the everlasting mystery
That worries all his friends is—what he thinks.

Then there's Harrison and Olney, Gray, McClellan, Williams, Folk:
Men of Presidential timber all and each;
But looking them all over,
Many think that good old Grover
Is the great and only pebble on the beach.

Norris Bull.

JAPANESE TROOPS DISEMBARKING FROM TRANSPORTS AT CHEMULPO

After the first landing of the Japanese at Chemulpo, on February 9 and 10, the occupation of the town has been continuous. With the Mikado's war-ships in practically complete control of the Korean coast, the disembarkment of troops at Chemulpo and other Korean ports has been carried on without any attempt at interference by the Russians

Japanese Cavalry starting on an Expedition

An Infantry Troop in Marching Order

Infantry in Position for Firing

A Detachment of Infantry in the Field

SNAP-SHOTS OF JAPANESE TROOPS AT THE FRONT

The photographs give some interesting views of the Mikado's troops at the front. With the advance of the Japanese on Russia's strongholds in Manchuria, interest centres in the land forces rather than in the navy. Recent reports of the advance of the Japanese army on Port Arthur estimate the number of men already landed on the Liao-tung Peninsula as over 20,000

William Randolph Hearst

By Charles E. Russell, of the Chicago "American"

ABOUT two o'clock of the hottest night of the famous hot summer of 1896, when all New York sweltered and the breathless air dripped with a rank humidity, a young man ran at fierce speed down the middle of Park Row. The panting wayfarers about the Bridge entrance and the tired newspaper men homeward bound looked at the running figure with manifest discomposure; his hot haste and hard work seemed to raise the temperature. He was a good-looking young man, well dressed, and, except for his exertions in such an atmosphere, apparently sane. He carried a straw hat in one hand and an open newspaper in the other, and wholly oblivious of disparaging comment, he held his way to the *Tribune* Building, up the steps of which he bounded three at a time, and disappeared.

I had never seen him before, but I knew from certain descriptions that this was W. R. Hearst, the new proprietor of the New York *Journal*. The next day Park Row buzzed with the cause of his feat of unseasonable athletics. It was so simple that it made men laugh and stare; yet nothing could have been more characteristic. Reading his paper on his way home from the office he had found something he did not like. With him there had been no time to waste in waiting for street-cars or cabs. From almost Chatham Square he had run to his office to have the error corrected in the next edition.

The incident had the true character color in more than one way. It was typical of the man's utter absorption in the work in hand, in which he was conscious of neither labor nor physical discomfort, typical of the indomitable resolution that is not balked by obstacles, because it does not stop to weigh them, and mostly typical of the tireless energy that, with very unusual gifts and capacity, have put Mr. Hearst in a position of unique and brilliant journalistic success.

Whether we like or dislike the success or whatever we may think of the means by which it has been achieved, as a fact it has passed beyond dispute. To be, at the age of forty-one years, the proprietor of eight prosperous daily newspapers, reaching in a chain from Boston by New York, Chicago, and San Francisco to Los Angeles, to have created these properties, sometimes from nothing, sometimes from the most unpromising materials, to address every day millions of attentive readers scattered over practically every State in the Union, may fairly be looked upon as a commercial and intellectual achievement without a parallel. In an industrial and peaceful age it is something like the constructive successes of a Tamburlaine in an age of violence, and nothing even in the traditions of old-time empire-building or in our own records of great fortunes and great enterprises is more expressive of persistent and formidable force.

Even this, however, is not quite all the story. The Hearst innovations in newspaper-making may be said to have revolutionized the business. They have affected in some degree at least practically every newspaper in the United States, even the newspapers most conscientiously and bitterly opposed to "yellow journalism." They have invaded Europe and South America, and it is an odd reflection that the cliff-dweller in the high houses of Genoa and the clerk at Hongkong are now entertained by ideas whereof the seeds were sown twenty years ago by a shy and reserved American youth just out of college. The influence of the new methods can be seen in London, the citadel of conservatism, as certainly as in Chicago; in Naples and Honolulu as in Los Angeles. The successful newspaper of Milan is very "yellow," in Bucharest is a daily journal modelled upon Hearst's New York *American*. To have laid touch in this unerring fashion and alone on what is evidently a universal though unsuspected nerve of human interest, vibrating wherever men toil and read—could there be a more curious example of the precision and instinct of success?

What manner of man is this, then, that has compassed these astonishing achievements and affected in so many ways the superficial interests of so many diverse peoples? As different as you can imagine from any ideal of him discernible in his newspapers. His newspapers, indeed, seem always to be shouting or roaring about something, always to be in a state of ferment and tension. The man that makes them is so quiet and modest of manner, so low of voice, of such an impeccable calm and grave, deferential courtesy, that, fresh from the reading of a howling extra, the patent incongruity of maker and product is to most persons that see him for the first time not less than a shock.

If you were to go into his working-room in the *Journal* office any afternoon when he is not in Congress, you would see him bent over his desk intent on a bundle of proofs or a bunch of reports, and at the first glance he would seem to you too young and too inexperienced to have been the creator of enormous properties and the potential champion of new ideas. But presently, if your experience were like that of most other visitors, you would begin to have an odd sense of duality as you looked at him, an odd sense of observing two men in one, such a sense as you have when you study a composite photograph, for instance. The quiet manner, frank and genial glance, and mildly abstracted air are of one man; back of these, and apparently of no kin with them, you begin to notice the long, powerful jaw; the firm mouth, with lines that show how habitually it is clenched; the steady, cool blue eyes; the resolute expression, with its curious indications of old combats; the extraordinary distance from the point of the chin to the crown of the head, and the head itself well developed in the regions of reflection and firmness. All these are of the other man, whose essential characteristic is obviously power.

This impression of latent power is augmented when he rises to receive you, for it is expressed again in another way in his towering height, broad shoulders, deep chest, and great fist; a well-set-up man (in spite of the cartoonists, who habitually represent him as slight), both muscular and easy, as if he might have had much to do with parallel-bars and dumb-bells, wholesome of face, wide-eyed, brown-haired, clean-shaven. He is six feet and an inch in height; he weighs 200 pounds.

As you talk with him you will infallibly take note of his eyes, large, luminous, and with an expression both keen and kindly. You will not escape noticing them, because they will look straight at you all the time you are speaking to him and he is speaking to you, and they will give you a peculiar and rather satisfactory suggestion that their owner is giving his full attention to every word you say and expects you to pay heed no less to his own remarks. If he becomes very much interested in what you say he will manifest his absorption by slightly tipping his chair back and absent-mindedly drumming with his finger-tips on the chair rails. You will note that he has an admirable habit of brevity in his observations; indeed, otherwise he would scarcely get through with the business he transacts; that for all his gravity he has good store of clean, dry wit, and when he pleases a rather remarkable facility in epigrammatic expression. It will probably appear that he knows men, knows affairs, knows history, and on questions of national policy he has postive opinions that he does not hesitate to declare.

But to apprehend the real man and rightly to gauge (or guess) the secret of his success it is necessary to understand his career, some features of which must seem to the worldly intelligence sufficiently unreasonable. He was born, it should be remembered, to a very great fortune, and in the natural order of things he had nothing to do except enjoy his wealth, and no heavier burden to bear than the dignified ease of its management. He might have shone among the class in this country similarly situated and with similar employments, for his father was a United States Senator, his Virginia family is old and honorable. But from the first the ordinary avocations and amusements of the wealthy seemed to have nothing to attract him. He promptly sold the stable of horses he inherited, and has never taken the least interest in the turf or in any other sport. He does not care for yachting; for the diversions of society he has not shown the slightest inclination; he does not dance, he does not go to parties or balls; he does not go to Newport; for a multi-millionaire, he has few friends among the rich. He lives from choice in an unpretentious old house in an unfashionable quarter. His closest associates have been newspaper men. His manner of life is the simplest. He cares nothing about display, keeps no carriage, drives an automobile to get fresh air, goes to the theatre to study what interests and delights people, and seems to find some kind of unintelligible amusement in his daily labors. To work hard, to study out intricate problems of newspaper detail, to get circulation and keep it, and to be anxious about many matters seems to be his ideal of existence. He might have led a life of comfort and rational enjoyment; instead he deliberately chose to involve himself in the most arduous and exacting of all human activities, in the business whose alternate symbols of toil and rest are a treadmill and a nightmare.

For this unusual, not to say erratic, choice there were, doubtless enough, good reasons. We go customarily with much avidity to the task of analyzing a man's motives, but no work of human ingenuity is harder. In this case we know that from boyhood he had entertained rapt illusions about journalism. At Harvard he had crashed into it, editing the *Crimson*, and setting all its traditions at naught with some genial novelties still well remembered. Once out of college, he importuned his father to buy for him the San Francisco *Examiner*, a junk-heap relic of Pacific-coast journalism, moribund, but with boundless capacity for losing money. Senator Hearst took it, I think, as a kind of plaything. Immediately the young man began to turn the coast cities topsy-turvy with a new kind of journalism. He sprang at the task with an insatiable appetite for hard work, toiling as one that has his dinner to earn, learning the business in its small details, and soon from the rattling of the dry bones the youthful magician evolved the beginnings of a great circulation and great profits.

I am aware that in all this is no adequate reason for his obsessions. He did not need money. The *Examiner's* profits were nothing to him. The kind of a paper he was making could add no whit to a rich man's social prestige, and speedily brought forth a fine crop of enemies. It plunged him into a long, expensive, and often hazardous warfare with strong corporations, and entailed incessant labor and a load of cares most men would have gone far to escape. In the current phrase, what was there in it for him?

Nothing was so far from Hearst's mind in those days as that he should ever be the owner of a continental chain of newspapers except that he should ever be a candidate for public office. It was not ambition of either kind that spurred him on. No man ever does anything from one motive, though we are constantly assuming that he ought to be of one piece. Doubtless the excitement of contest was something, the naked joy of success was something, the sheer love of the business was something, the allurement of the hazard was something, the gratification naturally belonging to a hard-won achievement was something. I give full weight to all these, but mixed with all, and with contending weakness and strength as in all men, was something else more powerful than any

of these, and to explain which it is necessary here to make a digression.

I once saw this even-poised, self-contained man thrash a Naples cabman for beating a horse, and once, with a dangerous glitter in his eyes, face down a crowd of Apulian peasants that he thought were maltreating an unfortunate man. Often I have seen him stop in the street and turn to watch out of sight a limping horse, a stray dog, or a man in trouble. These were the surface indications of a trait that will be clearly appreciable from a more conspicuous illustration.

The news of the great Galveston flood in 1900 reached us on one of the few nights when Mr. Hearst did not come to the office. I awakened him at his house with a telephone call about three o'clock and told of the appalling magnitude of the disaster. His first question was about relief measures, whereas our anxieties had been wholly centred on the problem of getting news from a town cut off from communication with the world. As he stood there talking into the telephone the idea of the relief trains to start that night seemed to come to him by inspiration. He sketched it out.

I said that the time was too short, that the public would not be aroused to the full extent of the disaster, that it would not be possible to get subscriptions started in less than forty-eight hours. He said:

"Why do you want to wait for the public? We will do it ourselves."

I objected that the cost would be enormous and the results from a newspaper point of view very small. He said:

"Never mind about the cost; never mind about the results. If we wait for organized relief those people will starve or die of their hurts. Wire the plan to the Chicago and San Francisco offices, and tell them to get to work on the same lines; wire Winifred Black at Denver to go; send men out to get the doctors and supplies and have everything rounded up at four o'clock this afternoon." He seemed to have the plan at his fingers' ends, the best men for each division of the work, what was to be done and how to do it, and, indeed, the points were so well covered in that ten minutes' conversation over the telephone that it was unnecessary to devise anything beyond. The several trains were prepared in New York, Chicago, and San Francisco, and all left on time. In its way it was flawless generalship. To paraphrase a little, I might say that it was magnificent, but it was not journalism. It helped Galveston, but was never of the slightest advantage to the Hearst newspapers—though I have reason to believe that Mr. Hearst did not at any time consider that.

A New Photograph of William Randolph Hearst

Men that had been with him in San Francisco were reminded then of the night he came into the *Examiner* office and heard of a man that had been seen on a half-submerged rock in the bay, with the tide rising and certain to overwhelm him. In the office they were wondering how he got there.

"What difference does it make how he got there?" Mr. Hearst cut in. "Get him off first and find out afterward. Charter tugs, call for volunteers, and save his life—that's the main thing." They went out with the tugs (it was a wild night), and rescued the man just before the seas rose over the rock. The waves had whipped the clothes from his back. He was a poor fisherman whose boat had been lost in the storm.

From these incidents may be inferred that strong development of the sympathetic and sentimental side of this character that has been the first impelling force in his career. Rightly or wrongly, he was convinced that he had a mission to fight for the weak, to represent the unrepresented, to better conditions, to protect the unprotected, and to do something for the class that he continually designated in his editorials as "the less fortunate." He had and has a largely idealistic notion of the mission of journalism to be of use in the world, and this generous idealism (inherited, doubtless, from his mother, whom he closely resembles) is the one and only motive for his sympathetic attitude toward labor-unions and his persistent championship of the interests of toilers.

Late in 1895 he went to New York and bought the old New York *Journal*, an ill-favored rag of a newspaper, formerly devoted, as Mr. Bennett once said, to the delectation of love-sick chambermaids. All his wise friends attempted to dissuade him, for they assured him the task of rejuvenating such a property in such a field was hopeless.

"Why, that paper will cost you a million dollars a year," one of them concluded, solemnly.

"A million dollars a year, eh?" said Mr. Hearst in that quiet way of his. "Well, then, I can publish it for twenty years, can't I?"

Dismal prophecies resounded on all sides. I cannot now recall one voice that uttered anything but predictions of absolute failure. Indeed, the problem he faced was enough to daunt the most sanguine. The field seemed filled with well-established and extremely able newspapers, each adequately supplying its own constituency in its own way, so that the mind of man could not suggest a variety of taste not provided for. To compete with any one of these journals in its own specialty was merely to divide a constituency. It was because they knew these facts so well that all experienced newspaper men foretold disaster. But the young man had been thinking; he had planned his campaign as carefully and faultlessly as von Moltke had planned the invasion of France. Moreover, he had an idea, and ideas are success. His idea was that, comparing the census returns of population with the total circulation of all the newspapers in New York, there was a hiatus. That is to say, obviously a great many people in the metropolitan district did not read any newspaper. So his plan embraced making newspaper-readers of these.

Now, it must be admitted that, simple as this seems, no one had thought of it before, and the working out of the terms of the problem was the basis of the Hearst triumph. The manner of the appeal was the superstructure. Mr. Hearst had come to the conclusion that to try to reach these possible readers with any such newspaper as was then published in New York was plainly useless. Furthermore, nothing could be more certain than that with such a paper as the highly educated class would read with delight he would be, to the people he desired to reach, a lost voice in the wilderness. Hence he gradually evolved the whole system of typographical emphasis, and unusual methods that we vaguely call "yellow journalism," by which the enormous circulations of his newspapers have been achieved.

It is too late now to consider very seriously whether some of us like or dislike "yellow journalism." It is an accomplished fact in the world's history; it has come to stay; it is in newspaper publishing (and sociology) as certain a discovery as the cathode ray was in science. What was true of the New York district has been found substantially true of every other community from Hongkong to Budapest, from Winnipeg to Buenos Ayres. The new readers were found, they became enthusiastic supporters of the Hearst style of journalism, and day after day this man addresses such an audience as no other man has ever had to listen to him. And unless we adopt the theory that only the wealthy and the college-bred are to have a voice, the kind of journalism that he instituted is exactly as respectable and desirable as any other.

Reflective persons will not need to be told that without very unusual qualities of mind no man could achieve such a success in the

face of such obstacles. The first of these mental attributes in the case of Mr. Hearst is his power of abstract concentration, in which he excels all men I have met and most men I have read of.

He can lose self, environment, and all things else in any subject he considers, and hang upon it with an attention that seems both unwavering and unwearying. It is not, I suppose, what would be called a trained mind, and yet I have never known of any proposition on any subject that it would not envelop, anacondalike, and presently squeeze out the essence of its principle. It can think in the roar and clatter of a newspaper office as readily as in absolute quiet, and I believe no man has known it to be flustered by any emergency, even (as happened once in San Francisco) when facing a homicidal maniac.

Patience and a tireless persistence that never turns aside and never admits any obstacle to be permanent, have stood him in good stead in the fights he has made. "Old Never Let Up," he has been called (not disagreeably) in some of his offices for his habit of unceasing purpose. Oddly enough in a man of such vigor and resolution, he has no personal resentments and (a fact that would redeem a multitude of faults) has never used the great power of his papers to gratify a personal spite.

He is greedy of labor and incapable of fatigue. His daily routine when he is in New York is something like this: He breakfasts at one o'clock, having previously devoured all the morning newspapers and made mental notes on their contents, for he has mastered the trick, so awe-inspiring to the uninitiated, of reading a column in three glances. At three o'clock he appears at his office and until seven he is in consultation with the officers of his ship.

These come, one after another, with reports and suggestions and to get his instructions. He listens and says little, but what he says is usually of the heart of the matter. He knows the business office as thoroughly as the editorial room; over the leased telegraph wires he directs his papers in Chicago, San Francisco, and Los Angeles as minutely as in New York. He keeps his hand on all departments, and almost the only thing that ruffles his steady temper is to have any movement initiated anywhere without his consent.

The details of these employments are, of course, many and exacting, and I think even the men that have been with him longest never quite understand how he brings to each day a fresh interest in tiresome matters of rote. He wants to see the editorial section of the Sunday paper before it goes to press; he wants to see all the magazine pages; he considers the comic supplement; he wants to know what is being done about this story of news and that.

There is, I believe a general belief that his part in the enterprise consists in hiring talent, and that the talent makes the newspapers. This suggestion always causes the men of his staff to smile grimly. As a matter of fact, he makes the papers himself—with what particularity may be guessed from the fact that he personally selects every line of display and head-letter type that appears in them, personally designs the styles of heads on the news articles, and personally plans their policy of make-up as well as opinion and procedure. When he was learning the newspaper business he included in his course presses and presswork, photo-engraving, illustrating, stereotyping, reporting, copy-editing, and some other matters. For this reason an attempt to deceive him when anything goes wrong is likely to have features of unexpected and vivid interest.

In these early days in San Francisco he used to spread the day's papers on the carpet, stretch himself over them and, lead-pencil in hand, minutely compare article with article, item with item, meanwhile making copious notes. These subsequently enlivened the days and nights of the city editor. In a short time the "beats" recorded against the *Examiner* became rare. Even nowadays any head of a department is likely to get from him at any time a copy of the paper with concise comments and directions chalked upon it in blue pencil. Some of these are of an exceedingly spirited nature.

One of his marked papers, long preserved in the office archives, had the word "Dull!" in big blue capitals and crescendo emphasis printed all over it—with other remarks. But while he has iron-shod notions as to what the paper should be, the great strength and commanding skill of his generalship lie in encouraging, inventing, and inspiring, not in criticising, for he has small faith in what are known to newspaper men as "post-mortems."

About seven he goes to dinner; about eleven he returns. Invariably, just before the first edition of the morning paper goes to press he enters the composing-room, and at the sound of his well-known step on the stairs the night editor groans in spirit.

The New York *American* (as it is now called; it used to be the *Morning Journal*) is undoubtedly the hardest paper in the world to make up, partly because of its intricate scheme of typographical and illustrational display, and partly for other reasons not necessary to go into here, and the last fifteen minutes of the night in that composing-room are hot with haste and sickening with anxieties. The night editor boils up and down, his eyes roving between his slowly filling pages and the steadily advancing clock-hand.

The linotypes clatter, mallet and planer resound on the ready forms, galley-boys run to and fro with heads and proofs, the "make-ups" yell aloud for "B 9" and "X 24," the incomparable foreman with type in each hand hurls the first page together; the assistant night editors fish out galleys and incessantly urge haste, while the traditional and fathomless abysm of "missing the mails" slowly unfolds before them. And then calmly into this seething bedlam walks the imperturbable proprietor and stands abstractedly studying the pages while he plays a tatoo on the chase with his finger-tips and the clock-hand moves on.

The pages ready to go to press are ranged before him like the squares of a great checker-board, and presently in the quietest of voices he begins to make his plays thereon:

"Take that out of the first page and put it on the third page. Drop the first page-cut. Reset your seven-column line in 48-point Howland—it's *too* big. Please have that head rewritten: it tells nothing of the story. There are too many cuts on the *third page*; put one on the fifth. What is this about? Is it worth so much *space*? Have it cut down. Don't use any more of that 28-point Ivanhoe; use Jensen or De Vinne condensed," and so on.

"We'll miss the mails," says the night editor, full of despair.

"Oh no, you won't," says Mr. Hearst, reassuringly. "You won't miss the mails. You never miss the mails. Go ahead."

He stands for a few minutes watching the changes; then goes up-stairs to his office and waits until the first edition appears. On that he marks further improvements for the second edition. Then he studies the papers, city and out-of-town, very often writes an editorial, revises the editorials of other men, and between three and four o'clock he goes home.

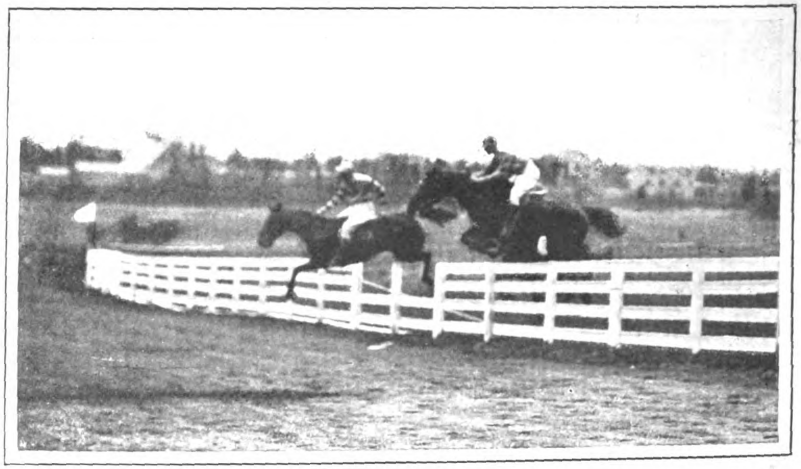
For many years he has kept this up, year in and year out. Recently he has found it advisable to take a summer vacation abroad, but even there he is in daily cable communication with his lieutenants, and bales of newspapers follow him wherever he goes.

He has one abiding interest outside of the newspaper business and his schemes of philanthropy, and that, strange to say, is a passion for art. He has filled his house with a remarkable collection of infallibly chosen paintings, more than could be hung in a dwelling ten times as big. Among these are old masters and some of the finest specimens of modern schools. He has studied every famous painting in Europe, is an animated catalogue of the great galleries, and as the crowning fact of a complex character I may observe that no one really knows William Randolph Hearst that has not heard one of his illuminating discourses on the history or principles of art.

Machine-Guns

By Sir Hiram Maxim, C.E., M.E.

A MACHINE-GUN is an instrument of warfare which generally consists of a series of gun barrels placed in close proximity to each other, and provided with an apparatus which opens the breech, thrusts a loaded cartridge into position, closes the breech, fires the cartridge, and then extracts the empty case. They are generally operated by a lever or crank.



The first machine-gun of any note was the Gatling. The original Gatling had ten barrels placed in a circle, with a breech mechanism so arranged that by turning a crank these barrels were successively fired, the cartridges being placed in a small hopper situated on the top of the gun. The Hotchkiss was a similar gun, having a similar arrangement of barrels, but a totally different form of mechanism. The Hotchkiss system, however, was used for a larger type of ammunition than the Gatling. The French mitrailleuse had thirty barrels. They all were loaded at the same time and all fired simultaneously. The recoil was so great that it had to be mounted in the same manner as a field-piece, on a heavy carriage, requiring six horses. The apparatus was clumsy, difficult to operate, and had a comparatively slow rate of fire. The Nordenfeldt gun consists of a series of barrels arranged side by side, like organ-pipes. The Nordenfeldt gun generally has five barrels, and the mechanism is worked by a lever, the cartridges falling down from a hopper on the top of the arm into position, where the mechanism thrusts them into the barrel, fires them, and extracts the empty case. This gun is of great simplicity, and for a time went into extensive use. The Gardner gun is a similar gun, except that it is worked by a crank instead of by a hand lever, the rate of fire being about the same. The Pratt & Whitney gun is practically the same as the Gardner gun.

The hand-worked machine-gun, however, has given place to a totally different form of arm having but one barrel, and is known as the automatic gun, which was one of my own inventions.

A NEW VIEW OF THE WRECK OF THE RUSSIAN

An interesting snap-shot of the wreck of the "Korietz," which was blown up by her comm "Weekly," together with a description of the events which led to her destruction. The a the present condition of the wreck. In spite of the attempts that have been made to

Women as Educators

By Florence Jackson

THE United States, which, more than any other nation in the world except Japan, owes its speedy intellectual development as much to the teaching of its women as to the statesmanship of its men, ought not to need reminders of the value of women as educators. Nor should the peril threatened any community that excludes feminine instructors (merely as such) from boys' schools require demonstration. That the question of the ability of women to teach boys and the suggestion to remove them from boys' schools should have been, of late, the subject of any discussion, implies more than a lack of appreciation of what has been accomplished by the educational work of women in this country during the past sixty years: it implies an *ignorance* of what has been done, an ignorance also of the testimony history furnishes of the economic as well as intellectual worth of the feminine mind acting for and with the mind of youth.

The presentation at Albany of the Lewis Educational Unification bill, suggested from the first a further reason for the movement to withdraw women from positions as teachers in boys' schools, a reason of which account might have been made in the promulgation of the bill: namely, an attempt to exclude from the schools those who could not serve directly as political constituents. This disability in women being one it is not expedient to name, the attack is made against their capabilities as educators, but to the initiated it is plain that this is but the offered excuse for advising their removal, for the vacancies thus made can be filled by those who have votes and may be induced to use them as directed.

It is not only in the schools that this sort of discrimination against women is constantly made. Some years ago it was made in a certain governmental department, where a woman who had, for seven years, discharged her duties without making a mistake, was displaced in favor of a man on the excuse that the work was too heavy for a woman. At the same time the salary for the man, who was assigned less than her duties, was increased by $500 a year. This is repeated in every line of work.

But it is not the purpose of this article to raise political questions. What women are doing as educators, what they have done to bring about the present condition of education, this, so far as it is possible to consider it in the space at command, is the theme.

It is an old belief, not wholly eradicated even in this age, that properly women should follow no callings that take them outside of their homes. Yet it is an older fact that, before there were homes, women worked as a matter of course as men did, outside of them, worked for the general or individual good, not for the family. A savage practice followed in a savage state before the needs of the family were recognized? True, but a practice and a state arising from necessity. The pendulum swings far before it swings back. Conditions have a way of recurring. So it is that in *this* twentieth century there are, in this country, 5,000,000 women whose homes cannot or do not give them a living and whose necessities must be met from the outside. How meet them? If this vast number of individuals is not to become a menace to the general good, is not to be pauperized or rendered immoral, *the means* for self-support must be granted to each, and each must do what she is best fitted to *do* in order to render the proper economic returns for what she must receive. Each must be allowed to choose her vocation, and no hindrance must be unjustly placed in her way while following it.

Of all callings teaching has been the most natural one for women to adopt. It is the most consistent occupation of the feminine nature. It therefore creates a warrant for its following. Not even is the care of the household so intuitively a womanly duty as is the care and instruction of the young. Teaching became, on this account, the first occupation women consciously practised. We see it exemplified to-day, in the way any young negro nurse-girl "minds" a baby as she gives it the first lessons in concentration while teaching it to beat a tattoo.

As gradually as men improved their weapons of warfare did women improve their methods of instructing the young. Instinct, heart, and mind led their way to their own and the world's development. Before systems of teaching had been dreamed of, instruction was imparted in ways that have borne results felt, but little appreciated, to-day.

It has been but a short time, comparatively, that teaching has been held to be a science. I remember well the first time I saw a book on "methods." It was abroad. It astonished me, for I had been taught in a New York college, and had been taught to teach without any "methods." No doubt this was because the peripatetic school was more favored when a classical course was preferred than any other, and what rambler wants to ramble methodically?

But though as a science teaching has rank only in these latter days, it has been a systemized profession longer than can be counted, although until these latter days it has been considered a calling any one could take up who had, in turn, been instructed, not, it is true, on how to instruct, but in what should be learned.

Max Müller says, "When a new science is to be created, the imagination of the poet is wanted even more than the accuracy of the scholar." Perhaps this is why, when teaching developed into a science, it invited, even more than it had done before, the enthusiasm of women who could throw into it an abundance of imagination, though they might have less scholarship to support it. And if, as in Japan, the imagination of the mothers and the intellect of the women in general had created the literary language of the country, there would be no denying the claim for a place in forwarding the growth of the science of teaching. And American women, if they did not create such a language have surely enriched the literature with their imaginative work.

Comprehensively to consider what has been done by women as educators history would have to be reviewed, it is plain, from the earliest times, for women, with the priests, were the guides and instructors in many primitive races. Even among those tribes where women, when not detained by young children, were warriors equally with men, certain of them shared in the governing, which, at that era, was all the instructing there was, of the people. Naturally, then, with the development of tribes, races, nations, women have continued to teach, though, for the most part, non-professionally. Such examples as classical and religious literature shows of renowned feminine teachers who supported schools of thought need no mention.

It has been reserved for our own age and our own country to increase the numbers of women who are to become educators by profession. And here the caviller will say that among all those who now swell the ranks of these teachers, no names stand out as shining lights such as were the women of old, because numbers must ever induce mediocrity. In proportion to the acquirement and development of the numbers—granted. But the whole grade of acquirement in a community being raised, all the workers therein become more nearly equal, and are consequently less marked, less renowned than are the few among lower general conditions. The general standard of education being higher than ever before, supreme excellence is harder to obtain, not often achieved, which is not to say that this mediocrity means a low grade for the middle value.

As to the charge made that women should not become teachers for the reason that they only regard the profession as a makeshift while awaiting settlement through marriage, much may be said. If teaching has been done by women as a "makeshift," it has been done as often by men for that same reason. This is proved by the life records of many prominent men, not to mention those not prominent who have done tutoring and odd jobs at teaching to "help along." The head of one of the large boys' schools in this State could be named as an example. Indeed, I think it is safe to say it is the exception when a man starts from his university with the intention of teaching continuously. As a matter of fact there are graduated as professional teachers yearly a greater proportion of women than of men. That many of these women expect to marry, and to give up teaching when they do, does not imply that they mean to marry merely to escape teaching. It means chiefly that, in looking to the natural and desirable complementing of their natures, they recognize that the duties, as well as joys of wife and mother, will confine their activities mainly within the home. Just because teaching is a calling that, unlike journalism or lecturing (with which former articles in these columns have dealt), cannot now be entered without training for it, those women who take it up are more *apt* than not to continue its pursuit, for even marriage does not always interfere with its prosecution.

Among the 5,000,000 women in the United States who, outside of domestic service, are self-supporting, are many married women. These continue their labors because their wage is needed in the support of their families; there are many widows who are left with the entire responsibility of families. This army of women is distributed in all the professions and numerous callings of lesser pretension. While untrained workers form the greater proportion of the number, of the trained workers the majority is composed of teachers. This, in spite of the fact that the trained teacher is a "modern convenience"—that places in which to pursue training have not been established two generations. It speaks well for the willingness of the sex to acquire "methods" that the training-schools have been so quickly received. This should surely remove one reproach: that of dislike to system in work—by the way, a most controvertible one if a housekeeper's proverbially scrupulous rules are considered. Another reproach to a woman attempting to teach, society removed when it acquiesced at last in the open following, by women, of callings necessary to insure their support. Nor is this so recent a concession as to be forgotten. One of my own teachers came to New York to follow the profession, because in her city—Philadelphia—she was socially declassed by becoming self-supporting, and this not two decades ago.

In spite, then, of these difficulties in pursuing the profession of educator, the numbers who enter it, the still greater numbers who prepare for it, show the esteem in which it is held by those who follow it. Also the time and expense (even with the free tuition) required to prepare for it and gain the first entrance into it go to prove that teaching is not adopted as a "makeshift" calling; which may likewise be refuted by the fact above stated, that outside of domestic service there are in this country 5,000,000 self-supporting women. In New York city alone there are, between Bleecker Street and the Battery, 10,000 self-supporting women. If there are five million this year what will there be in five, in ten, years? Is it not plain what this means?

It means that homes cannot be counted on as the shelter and support of this army of women; that there is just this number not in a position to be cared for; that each one of the five million must, in order to be of the greatest economic value to the country, seek for the calling she is best fitted to pursue; that, having found the calling and having fitted herself for it, the economic returns to the country are reduced if she is hindered in following

that calling. The economic returns to the country for its expenditure on schools cannot be more direct than in the giving out of that which has been received, in the teaching of that which has been learned, especially if the receiver, the learner, has a particular aptitude for imparting knowledge.

To those who would say that women may teach best in their own homes and should be content with doing so, let me again point to the army of five million who have no homes unless they earn them. Deducting from the number a tenth (a large proportion) who labor less because they need support than because they wish increased incomes, and we have still a formidable array of compulsory workers. Deduct from this remainder a proportion for possibly late marriages, and there is left a number equal to the entire population of New York that will not marry, has no means of support but what it earns, and by nature and ability and obligation must choose some calling not menial in kind. It is certain that the first choice, if there is any ability at all for it, will be teaching, both because, as above said, it is natural to the feminine disposition to seek to instruct, and because the work of teaching is adapted to constitutions not able to endure great physical exertion.

Will it be judged, then, that women, more than men, are looking for a "snap" in the choice of work because the teachers' vacations are long and the school hours short? Is it forgotten that the pay is proportionally curtailed; that much classwork has to be done after hours; that the nervous strain of teaching is found, even by men, to demand long vacations? If physique and opportunity permitted, possibly many women would choose other callings, yet men who have the physique and may seek opportunity to do other things choose to teach. That men have not taken advantage of the opportunities the universities offer in fitting themselves for agricultural pursuits has lately aroused the ire of the Department of Agriculture at Washington. The University of California receives from the department $75,000 a year towards its support, yet in a class of 150 not one man had taken a course in agriculture. Such a lack of interest in out-of-door callings has been equally remarked in Eastern universities.

If the occupations that are of a clerkly or scholarly sort are so inviting to men, is it strange that they should be so to women? If men avoid callings that require hard physical labor, is it strange that women should do so? If the universities have fitted men students in specialties, is it strange that women working on the same lines should have been so fitted and be, as a consequence, able to use their knowledge helpfully? The division of schoolwork into specialties has been particularly liked by women. Long before it was generally adopted it was advocated by a woman who, though for forty-seven years an educator, was accustomed to teach all subjects nearly at once. Without following any system or resorting to "methods" she would make the most unpromising students into comprehending Latin scholars, good grammarians (grammar was not, to her, merely "English"), reflecting historians, intelligent appreciators of literature—in short, what the less elegant diction of to-day would call "all-round" students.

There are teachers, like poets, who are born, not made—this woman was one of them. Every woman who teaches has not her gift, but some approach it, and many are richly dowered with ability to instruct and to inspire the desire for knowledge. How unjust it would be, then, to limit the field of this activity or to deprive young persons of either sex of influences that would be helpful. That any effort to prevent women from being instructors in boys' schools should be opposed, no friend to advancement can doubt, nor that the majority of teachers are constantly giving forth in their work the best and highest their natures can express through their sympathies and their intellects.

Aspects of London Life

By Sydney Brooks

LONDON, *May 4, 1905.*

I ALWAYS pity an American in London for the first time. He doesn't like it and one cannot blame him. There are some cities like those comfortable people who are "always the same," whose charm never seems to stale or vary, who are always apparently glad to see you, and have the happy knack of taking up the thread of an intermittent acquaintanceship without any outward consciousness that there has been a break at all—cities you can return to again and again and never without a placid foreknowledge of what welcome is in waiting. The sensible man keeps the best of them to himself, part of the essence of one's enjoyment being a jealous secrecy of guardianship. Among them, though, on nearly every one's list, stands Paris, the supreme instance of perpetual and unchanging fascination. Vienna, too, even though the jerry-builder is getting to work on it, remains intensely satisfying, in some ways the most satisfying city in Europe. But Paris and Vienna are common property that no one can claim an exclusive right in. The places one hugs to oneself with a miserly air of proprietorship and never talks about are the quiet backwater villages and hamlets and unheard-of seaside townlets scattered about England, Brittany, Holland, and northern Italy. In these the visitor detects a sort of personal appeal, and treasures them up as resting-places where he need have no fear of an aftermath of disappointment or disillusion. There is, of course, another order of places that give out a precisely opposite effect—places that smite one instantaneously and for all time, but with repulsion instead of attraction—places one feels that if one lived to be a hundred and visited them every year one would only hate the more. Of these any one but a Chicagoan would give the palm to Chicago. One goes, one sees, one gathers the impression of immutable hideousness, of having looked upon some everlasting disfigurement of the earth's surface, and one retreats. And the oftener one goes the more quickly one retreats. Impregnable in its ugliness the unhappy city strikes one and all, whenever it is visited, with the same uncontrollable emotions. But here again, as with Paris and Vienna, the first immediate impression endures. There are no second thoughts and no revisions, much less reversals, of opinion. Two classes of towns still remain—the town that "improves on acquaintance" and the town that charms at first and gradually wearies. London is typical of the first; New York of the second.

To New-Yorkers it will sound heretical even to hint that their beloved city can possibly weary. And yet honesty forces me to admit that foreigners, Englishmen, I think, especially, do after a while tire of New York. Catch a foreigner at the end of his first three or four months on Manhattan Island, and you will find him a reckless enthusiast. Catch him again at the end of a year or eighteen months and you will find him fuller of anathemas than praise. At first everything finds approval, everything in particular that London lacks. The thousand and one mechanical conveniences become themes for lyrical congratulations. If you see an obvious Englishman on Broadway—before he has bought his fedora and creased his trousers and learned to leave his umbrella at home—and also see him fumbling with a pocketbook, you may be sure he is composing an ode to the Elevated railroad, or the numbered streets, or the telephone system, or the electric cars, or the "lifts," or something of that sort. "Here," he will be exclaiming, "is a city where everything that machinery can do to make life easy and comfortable is done, and done thoroughly." And then he takes to the exhilaration of the place. Its rush and swing act upon him as a sting and a challenge. He likes the contrast to the dreary drab and studied languor of London, and finds to his delight a half-Parisian touch in the New York atmosphere and a wholly American touch in its genial, bubbling hospitality. But—there comes a big "but" when the novelty has worn off, a sense of having sacrificed to false gods, a conviction that you can have too much of machinery, an anxiety to find out whether anything lies behind. And that is just where New York begins to fail. An Englishman after a while finds himself brought up against a stony lack of suggestiveness. He comes to think of New York as an endless counter, a universal bargaining store. The numbered streets that used to please him take on a deadening Euclidian precision. Their convenience is forgotten or accepted as a matter of course and only their prosiness and their air of being ruled off like an account-book remain. And then, too, an Englishman in New York gets to feeling himself singularly cut off from the rest of the world and living among echoes, half-lights, and pale reflections. He ends as often as not by describing New York as a city of splendid provincialism. He is bored by its incapacity to be bored. Mr. Howells in an immortal phrase called American hospitality "inexorable." After eighteen months of it Englishmen, less politely and less happily, are apt to speak of the social atmosphere of New York as "rather fussy."

I do not, of course, say that Englishmen are right in coming to these conclusions, but unquestionably a great many of them do. It is rather piquant that they should, if only for the reason that an American's experience in London runs on precisely opposite lines. No foreigner can really like London to start with unless he has undergone a probationary course in Chicago or Pittsburg; and even then he will miss many of the conveniences of life that Americans are used to. London has to be lived in for at least two years to be understood and appreciated. Even a provincial Englishman will hardly catch its note and feel himself really at home in less than a year. Like most other things in England it is the product of centuries and cannot be judged offhand. The casual tourist sees only the externals, and in the way of outside appearances London is about as dismal and dingy a city as could well be imagined. That is why so many Americans return home with memories only of dark streets and darker skies, slush underfoot and ink overhead, and a vague impression of overwhelming gloom. One has to shut one's eyes to much that is obvious and unpleasant and penetrate diligently below the surface of things to discover its real charms. Even the American who settles down with the determination to see the thing out takes six months or so to shake off the first vivid impression that for downright discomfort London is hard to beat. I doubt, indeed, whether he ever quite succeeds. It is the fate of London to repel almost as much as it fascinates. The Londoner born and bred hates the city in which he lives and works only one degree less than he loves it; and will raise no protest if you call it a mere stretch of dirty drab by the side of the dazzling joyousness of New York, Paris, or Vienna—sullen, oppressive, hopelessly disenchanting. But while an American may say and feel all this to begin with, it will not be long before he reaches the point of treating it as a side issue. If he once survives the first excruciating six weeks or six months, then London may safely count on enrolling another admirer in its train. The London fever is caught with an effort and matures slowly;

Marriages in Russia

By Wolf von Schierbrand, Ph.D.

Author of "The Kaiser's Speeches," "Russia: Her Strength and Her Weakness," etc.

"WHERE is your daughter, Piotr Ivanovitch?"

"Gone to the marriage-market in Salnykoi, your honor."

"Ah, I see. Well, Olga is a pretty girl, and I suppose she'll do fairly well."

"Yes, Sasha meant to marry her, but, you see, your honor, they quarreled, and, so to make matters short, she has gone to town. I expect she will return with the bridal crown. She has taken her finest things along, even the pretty silver chain."

"My congratulations, Piotr Ivanovitch."

"Respectful thanks, your honor."

That is a conversation between the owner of a Russian estate and an elderly peasant, head of a family, and *starost* (village president) in the neighboring village. The custom here referred to is a curious relic of the mediæval past. Once it held sway in all Slavic countries. The brides were picked at the annual show held in every market town. Now it has survived in only a few Russian (and also in several German) districts, and it is singular with what tenacity the people there still cling to it.

Perhaps the best known of these Russian marriage-markets is the one which takes place annually at Klui, near Moscow, and which has just been held with the usual success. It occurs during the week of Epiphany (Russian style), and all the young women who wish to get married in the course of the year are mustered in a long row in the principal street of that large and straggling country town. In order to make themselves attractive to the young men who come to see and admire them they wear nearly all their belongings on their backs. Their finery does not consist only of their best clothes, but it includes a lot of old family trinkets, sometimes valuable scarfs, cloaks and furs, heavy silver jewelry and necklaces, jackets showing rows of prettily ciselated or filigree silver buttons, and many of the girls bring even their linen and other domestic property along with them in gaudily painted chests and trunks, sitting on them like dragons watching a treasure.

After exposing themselves for hours to the close scrutiny of would-be benedicts, the girls march off in a procession to church, there to perform at the shrine of some saint particularly potent in procuring connubial bliss, such as St. Chrysostom and St. Niazanzen, worshipful prayers. On the way to church it is not only permissible but good form for the young men to follow and accost one or the other of the girls in the way of conversation.

It must not be supposed that this conversation is of the sentimental kind. No, it is strictly "business." The questions and answers turn exclusively on such data as name and age, residence, dowry and possessions of parents, number of sisters and brothers, and practical experience in domestic or other labor. The girls, on their part, confine their inquiries to similar points.

If any two of the young people think they suit one another, a formal visit is paid by the intended groom to the parents. But before the actual marriage is arranged, a number of interviews take place between the respective parents, every item of the trousseau being exacted beforehand and noted down as part of the bride's dowry.

It is said that at Klui annually a thousand brides or more are made. And this is but one of the Russian marriage-markets. The famous one in Little Russia, located at Salnykoi, near Kieff, and the one held every year near Vladikavkas are probably next in importance. The girls in Little Russia are known for their beauty, differing in that respect from those in central Russia, where the admixture of Mongolian blood betrays itself in the broad, flat faces and burly shapes. Girls from Little Russia, on the contrary, are slender and well built, often with pretty features and fine eyes. Their national costume, too, is far more picturesque. As brides they wear a bridal crown, which is usually an heirloom in the family of well-to-do peasants, and which often represents a value quite considerable. In other respects, however, the manners of the wooers show a striking resemblance to those of the far interior of Russia.

To a stranger in Russia, however, the ancient marriage-market conducted every year on St. John's day on the plains near Vladikavkas, a town of considerable importance on the northwestern slope of the Caucasus Range, and not far from the Dniepr, is by all odds of greatest interest. Vladikavkas stands in the centre of a region inhabited by a score of different races—Kirghiz, Tartar, Georgian, Lesghian, Armenian, Russian proper, Kalmuck, Abchasian, etc. The broad steppes stretching along the Dniepr and Dniestr are fertile, and enjoy a mild climate, immense herds of cattle are grazing under the supervision of steeple-hatted Kirghiz herdsmen, astride of fiery ponies, shaggy-coated but fleet, and armed with lances having dull points and intended for goads.

In this district of comparative plenty, agriculturally one of the richest in Russia, brides and grooms are likewise plentiful. And, as I said, the marriage-market near Vladikavkas does a thriving business. The Kirghiz are, above all, horsemen, every one of them, even the women and children, riding bareback or on saddles from the day they first begin to crawl. Thus, too, a Kirghiz bride's dowry consists, above all, of nimble-footed horses, and as the breed of them there is very fine, that section of the marriage-market reserved for the Kirghiz is calculated to enchant the eye of a lover of horseflesh. But these girls bring their future husbands also fine rugs of their own weaving, as well as clothes of choice texture. On a bargain being struck between the Kirghiz wooer and his future helpmeet, the chosen one at once is compelled by custom to don her bridal cap. This is a very curious-looking object, conical in shape and about two feet high, and from its top hangs down in loose folds her bridal veil. Seated on her horse such a bride presents a most picturesque appearance. Her bosom is usually covered with huge coins, silver and gold, and each suspended from a little metal loop.

The mode of choosing a bride alone does not differ materially from that in vogue in other parts of Russia. With the Kirghiz, too, "business" precedes sentiment, and love-lorn swains have often been known to meet with final rejection on the part of intended father-in-laws just for the sake of a trifling bit or two more of demanded dowry.

The Lesghians, too, are drivers of sharp matrimonial bargains. To see them, both men and women, in their handsome and striking garb, tall, slim, sinewy, and with fine dark hair and eyes, one would not think that in the matter of choosing a wife or a husband they were governed only by crass materialism. Yet such is the fact. Lesghian girls or widows (for the latter are not excluded from these privileges) present themselves most attractively on the plain near Vladikavkas, for they are usually loaded down with a choice lot of desirable property, both of apparel and household.

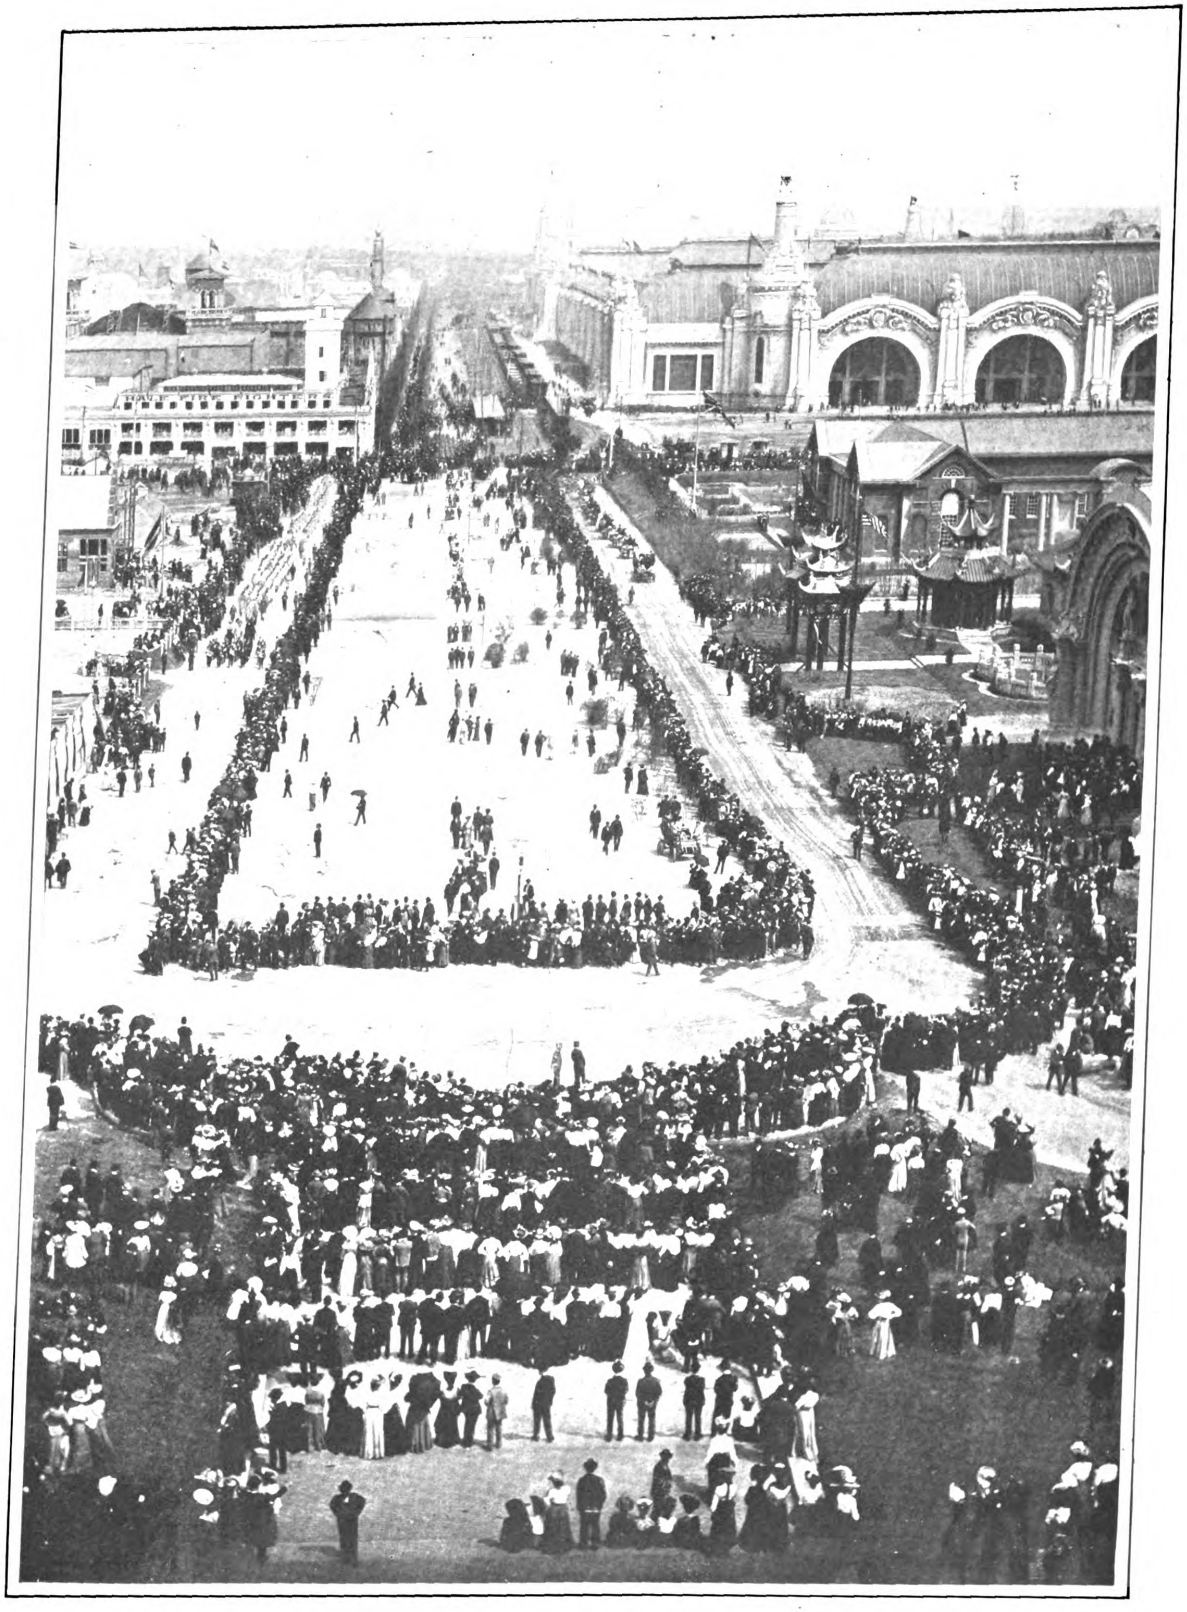
But once a bargain has been struck, the wedding is arranged on a most magnificent scale and a very lavish hospitality shown. A special feature of it is the Lesghian bridal dance, performed in the centre of the vast room where the wedding-feast is going on. Bride and groom go through this dance in the presence of all the guests and to the music of a small band performing on odd-looking instruments. The dance itself is slow and graceful, symbolically representing the wooing and winning of the bride.

The Abchasians, another Caucasus tribe, are physically not so well favored as are the Lesghians. Both men and women, as a rule, are hard-featured and wear a perennial scowl. They are just as commercially inclined in their matrimonial bargains at the marriage-market as are the others. But they do not care for music or the dance, and as they are Mohammedans, even the juice of the grape is forbidden them at their marriage-feast. Though not pretty to look at, the Abchasians are a tough, wiry lot.

It is a fact which will astonish many that marriage-markets such as those in Russia, spoken of above, exist even to this day in several districts of Germany. That is owing to these districts having been settled many centuries ago, not by Germans or people of other Teutonic stock, but by Slav races, with whom, of course, this ancient Slavic custom has survived.

The most noted of these marriage-markets in Germany is the one in Teltow, a rural town not many miles from Berlin. There every year, in midsummer, this peculiar market is held with an observance of almost the identical features as those obtaining in Russia. Though the girls and the young men that throng the market in Teltow now speak German, having abandoned the Slav idiom spoken by their ancestors, in costume, manners, and even looks they closely resemble their Russian prototypes near Moscow.

Thus it is seen that not only on the vast Sarmatian plain, more Asiatic than European, survives this ancient Slavic custom, but even in the very heart of modern Europe, scarcely a day's walk from the capital city where the Kaiser holds forth with waxed and pointed mustache.



Life

By Francis Sterne Palmer

WITH dancing step the gay rhymes went
That told a boyish sentiment;
They moved along with step as free
As had the girls bewitching me.

To-day where is that easy art
So prompt to find a rhyme to "heart"?
If it came back, could it express
This older love's deep tenderness?

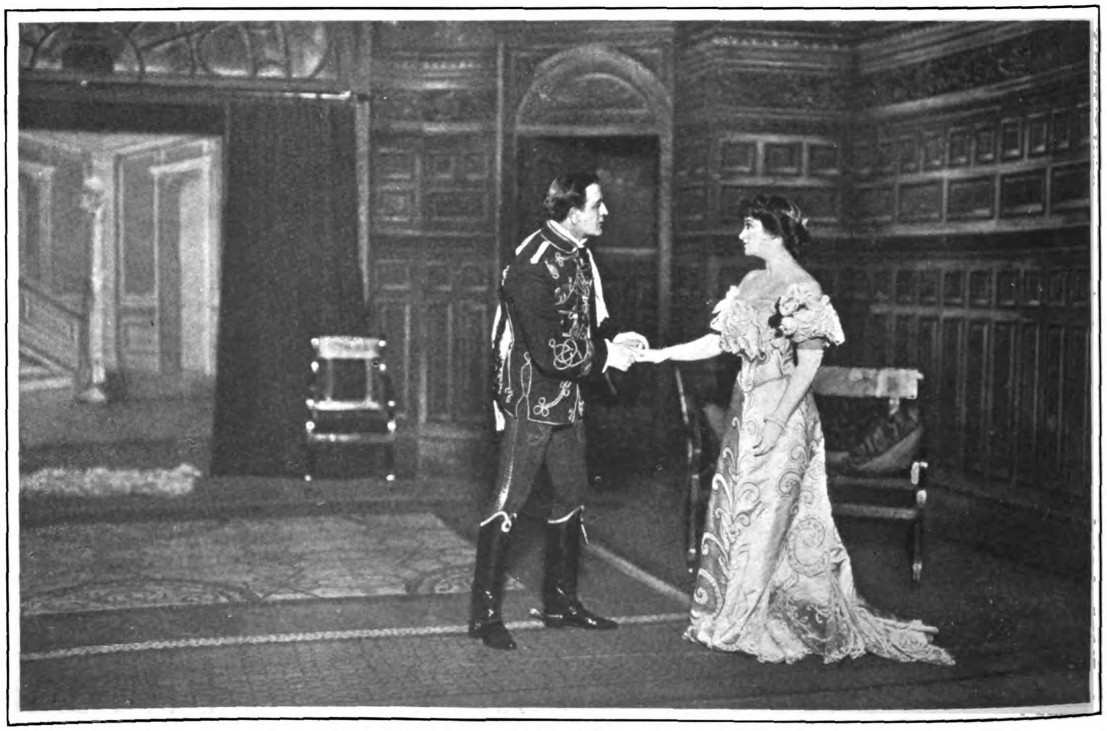
AT THE ST. LOUIS WORLD'S FAIR—A DAILY SCENE ON "THE PIKE"



At the St. Louis World's Fair, which has been open to the public since April 30, one of the most popular features is "The Pike," which corresponds to the "Midway" at the Chicago Exposition. It is officially known as "the Street of Concessions," and is a mile in length. The view shows the Administration Plaza in the centre, with the Palace of Transportation on the right

A Scene from "Piff, Paff, Pouf," at the Casino

"Piff, Paff, Pouf," a musical comedy by Stanislaus Stange, William Jerome, and Jean Schwartz, is playing at the Casino Theatre, with Eddie Foy, Thomas Q. Seabrooke, and Alice Fischer in the leading rôles. The slight plot of the piece concerns the efforts made by a rich widower to find acceptable husbands for his four daughters in order that he may be free to marry a certain attractive widow. His difficulties are caused by the fact that each of his daughters is exceedingly hard to suit in the matter of husbands—one requiring a man who has never been kissed; another the original of a portrait that has taken her fancy, etc. After complications of the usual comic opera sort, matters are satisfactorily settled, and the widower marries the lady of his choice

James K. Hackett and Charlotte Walker in "The Crown Prince"

Mr. Hackett and his company appeared at Daly's Theatre on April 30 in "The Crown Prince," a comedy by George H. Broadhurst. The play is intended as a satire on the popular romantic dramas of the day, and is humorously extravagant in action and sentiment. The Crown Prince of Morantia is engaged to marry the Queen of Rhodoland; but as they have never seen each other they are not comfortable over the prospect. "Robert," the Prince, conceives the plan of visiting Rhodoland incognito, and while there falls in love with a beautiful stranger, who is really the Queen. She, in her turn, does not know who her lover is, and from this situation come the humorous and dramatic elements of the plot. Mr. Hackett plays "Robert," and Miss Charlotte Walker the Queen

Correspondence

MR. JONES REMAINS UNCONVINCED

SAN FRANCISCO, *May 1, 1904.*

To the Editor of Harper's Weekly:

SIR,—The writer begs to make brief reply to his critics whose letters were printed in HARPER'S of recent issue. Neither of those correspondents refuted, by reasoning inductive or deductive, the specific reasons that were assigned by the writer why there is not unanimity of sentiment among Republicans in California favorable to Roosevelt as President, or as prospective nominee to succeed himself. Those correspondents, taking issue with the writer, contented themselves with simply their *ipse dixit*, that this correspondent is mistaken.

Against their averment may be quoted ex-Senator Thurston's pungent epigram, "Roosevelt is a man whom all Republicans are for, but whom nobody wants."

It is now conceded that, since death has removed Senator Marcus A. Hanna, the way to Mr. Roosevelt's nomination has been cleared, as there is no other man in the party who would contest with him for the nomination—at least, there is none in sight up to the present time. But as to Mr. Roosevelt's election—that's another story.

The Lincoln Republicanism of this correspondent has been impugned by one of his critics. Now let's see if the writer's claim that he is a Lincoln Republican is not established and vindicated, albeit he did not support the candidacy of the late William McKinley, either in 1896 or in 1900.

Lincoln declared, "This republic cannot endure, half slave and half free." He also said, "Those who deprive others of their liberty deserve not liberty for themselves." Further, he affirmed, "No man is good enough to govern another man without that other's consent." He likewise said, "The Republican party believes in the man and the dollar; but always the man before the dollar." And numerous other of his political doctrinal sayings might be quoted harmonizing with the foregoing.

Will any one maintain that the present policies of the Republican party—which are the policies of the McKinley administrations—are in harmony with these enunciated principles that we will call Lincolnisms?

The writer left the Republican party because that party abandoned the principles of Lincoln. I am, sir, JNO. AUBREY JONES.

ROOSEVELT OR CLEVELAND

DALLAS, TEXAS, *April 30, 1904.*

To the Editor of Harper's Weekly:

SIR,—Referring to the WEEKLY of April 2, 1904, and the letters from Michigan and Ohio, as to the advisability and possibility of the Democratic party nominating Grover Cleveland for the next President of this country, again brings to mind the weakest of all failings of that party—that is, it's failure to "*get together*" *at election times*. The lack of wisdom and magnanimity of factions, of different opinions and aspirations, to realize, at the proper time, the impossible and the necessity of giving up to the possible—not in the spirit of compromise of principle, but in the spirit of wisdom of general purpose—that of electing a Democratic and not a Republican President is too often the main cause of its failure.

Suppose the party grants that ex-President Cleveland is not, in the strictest sense, the man it would like to have, that he has done some things "out of line," it is none the less important for it to get back into authority, and if the nomination of Mr. Cleveland is the only way at present it can be done and if his election were only considered as an approach to a more desirable situation, would it not be better to take it than to "balk" or not approach at all.

There are, no doubt, many men just as able as the ex-President to fill the place, but they are not known, or at least sufficiently, to bring about a victory, and a victory or an approach in the right direction is what the party wants just now.

When it is almost the consensus of opinion that through him there would be *results*, why continue to help the Republican candidate by giving ear to division or placing in the field an impossibility. Mr. Cleveland is the one individual that the Republican party is trying to "side-track," being fully aware that if they accomplish it, either by division of party or by placing an unknown candidate in the field, its own victory (the Republican) is certain.

The question of this country is, Will you prefer Grover Cleveland or Theodore Roosevelt—the man with the chip on his shoulder—for one or the other will be the next President of these United States. I hope the Democratic party will have the wisdom to "get together." I am, sir, JAMES LLEURLIN.

ABOUT WOMEN

NEW YORK, *May 2, 1904.*

To the Editor of Harper's Weekly:

SIR,—Poor women! Here they are, at them again. Mrs. Flora McDonald Thompson seeks in the *North American Review* to demonstrate that women are a failure in "industrial life"; not long ago I read an attack upon them for filling so many positions as teachers and thus "femininizing" the boy scholars. In passing, pray let me characterize this last as supreme among the idiotic criticisms of women. Men must have mothers, I believe, as there has been no satisfactory substitute for them up to this time; and all the strong and great men of the world, as well as the weak, have been reared by women during avowedly the most susceptible periods of their lives, and still the distinctively masculine element remains in the world. Now comes your correspondent, H. C. Woodward, offering a curious theory to explain "why women have not written great music," the theory being that the greatest music has been inspired by men's admiration of a feminine ideal, and that women, having necessarily lacked that ideal, have therefore not written great music. This seems to me the veriest trumpery of causation. Has not the religious ideal shared with human love the inspiration of all the ages of art? And are not women the sex chiefly devoted to the religious ideal? Is it not, rather, that woman's countless generations of child-bearing and rearing—in the main the chief motive power and most absorbing joy of her life—have curtailed her development on other lines and prevented her equality with man in art? Her advancement in the past hundred years has been remarkable in many ways. Despite its opponents, this advancement is simply evolution and lies in the hands of the higher powers. But if, in its course, women never do create great music, it will not be because they lack a feminine ideal to worship such as men have, but because in the great plan it is not designed that they should do so.

I am, sir, MARGARET BUCKINGHAM.

CONTENTED

AMHERST, MASS., *May 3, 1904.*

To the Editor of Harper's Weekly:

SIR,—Were it not that the notion has currency everywhere your statement (p. 665) that "In this country no one class is more radically discontented than the soil tillers," would be an inexcusable misstatement of the actual conditions. I have been on terms of personal intimacy with large numbers of farmers, on both sides of the Mississippi River, and I speak from experience and deep conviction when I assert that there is no class of people in America more optimistic of their own calling than the soil tillers.

Many observations might be cited to prove my statement. Let two suffice. (1) Farmers everywhere praise their own calling, and urge other men to take it up. They discourage in the severest terms the departure of farmers' sons and daughters for the city. There is no other calling, save that of the ministry, the followers of which so continually strive to bring others into the same work. On the other hand, many trades-unions, for example, use drastic means to keep other men out of their lines of work. (2) The Grange, which represents more characteristically than anything else can the real spirit of the rural population, is filled everywhere with the spirit of contentment, of hope, and of optimism. Any one who knows the Grange in the least, even from the outside, knows that it does not express the spirit of discouragement or discontent.

Think of the rioting miners, of striking street-car men, of weavers on a lockout—all matters of every-day's news—and compare with these things any manifestation of discontent ever made by the soil tillers.

Your article speaks further of "the monotony of the labor" on the farm. Now farm labor is precisely the least monotonous of any in the world. Compare the man who in a day milks the cows, splits the wood, drives a young colt to harness, plants potatoes, mends a drain, sells three pigs, mixes a complicated chemical fertilizer after a recent scientific formula, doctors an ailing mare, prunes his plum-trees, and does twenty other odd jobs, with the man who sits all day on a stool and pastes red labels on packages of breakfast-food.

No, the farm life is good, and most of the men and women who practice it are, humanely speaking, satisfied with it.

I am, sir, F. A. WAUGH.

TAKING LIBERTIES WITH LANGUAGE

PHILADELPHIA, *May 3, 1904.*

To the Editor of Harper's Weekly:

SIR,—New-Englanders and New-Yorkers in their conversation misplace the final "r" of words just as the English cockney misplaces the letter "h." Your New York or Boston man will genially speak of his "popper" or "mommer," his "par" or "mar," or his "brotha" or "sista" with the same assurance that the London cockney tells you of his "'appy 'ome in hold Hengland."

Now we Pennsylvanians and Western States people have always allowed this Yankee idiosyncrasy of speech to pass without much comment, as rather a harmless liberty with our language which would in time be laughed down and pass away. But instead of passing away it is, if anything, growing stronger, in New York city especially, and, worse than that, Boston writers are now actually criticising those who do pronounce the final "r." They, with their nasal cockney habit, speak amusedly of the "uncompromising" Western pronunciation of the letter "r." Now the fact is there is no half-way or compromise "r." You either pronounce it fully or you do not pronounce it at all. It is like "n," "p," or "t," or any other consonant. It is an active letter of the alphabet, not a dead letter.

And the Yankee can pronounce it, too, if he desires, as he adds it on glibly enough to his "pa" and "ma," takes it from "oyster," and sticks it on "raw," and all the time with a superior air as if he were doing quite the only proper thing.

How can we check him in his downward linguistical career? How can we shame him into keeping our dear old "r" in its proper place, and save it from becoming the Yankee pal of the cockney "h-"? I am, sir, A. M. NELSON.

Progress of the War

FROM the beginning of the war, February 9, to May 3 fifteen Russian war-ships have been sunk or disabled — the *Petropavlovsk*, *Pobieda*, *Czarevitch*, *Retvisan*, *Poltava*, *Pallada*, *Novik*, *Askold*, *Diana*, *Variag*, *Boyarin*, *Korietz*, *Yencsei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik*, *Askold*, and *Diana* are known to have been repaired and are again in commission. Japan has lost one torpedo-boat, and several of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. Admiral Togo has made two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor. On May 1 the first great land battle of the war took place near the Yalu River, and resulted in a Japanese victory. The number of casualties on each side is not definitely known. The most trustworthy figures available are given below.

May 4.—The Russian forces under General Zassalitch are reported at Feng-Wang-Cheng. The Japanese have advanced to within eighteen miles of that place; 500 of the Russian wounded have arrived at the hospitals at Harbin and more are expected. According to St. Petersburg reports the prisoners taken by the Japanese number about 1000.

May 5.—Japanese transports have arrived at points on both sides of the Liao-Tung Peninsula north of Port Arthur. Five Japanese war-ships and a number of transports have been seen near Kin-chow Bay on the west coast of the peninsula; and Japanese transports have landed at Pitsewo, eighty miles northeast of Port Arthur. Viceroy Alexeieff has retired from Port Arthur to Liao-Yang.

May 6.—Major-General Pflug, chief of the Russian military staff, in a telegram to St. Petersburg states that on May 5 the Japanese landed troops at Pitsewo and at Cape Terminal (fifteen miles southwest of Pitsewo) under cover of an artillery fire. Japanese troops were landed simultaneously from about sixty transports. Their number is estimated at about 20,000. The Japanese also landed at Port Adams, on the west coast of the Liao-Tung Peninsula, about fifty miles from Port Arthur. It is believed that Port Arthur and Dalny are now isolated.

Russian troops are reported to have been sent to Feng-Wang-Cheng to reinforce the army at that place.

May 7.—According to reports from St. Petersburg the Russians have abandoned Feng-Wang-Cheng, and have decided to fall back to Mao-Tien Pass, sixty-five miles from Feng-Wang-Cheng and fifty miles from Liao-Yang. The Japanese troops which landed on the Liao-Tung Peninsula on May 5 have entrenched themselves, and have mounted rapid-fire guns. No news has been received at St. Petersburg from Port Arthur for more than twenty-four hours. The railroad and telegraph line are thought to have been cut near Port Adams.

Vice-Admiral Togo has informed the government at Tokyo that he has succeeded in blocking the entrance to the harbor at Port Arthur. Five Japanese blockading ships were jammed into the inner channel, and now prevent egress from the harbor to all craft excepting small boats.

May 8.—A telegram from Shan-hai-kwan states that the Japanese have landed 27,000 men on the Liao-Tung Peninsula at three different points.

Official despatches have been received at St. Petersburg giving the total number of killed, wounded, and missing among the troops under General Zassalitch, as a result of the recent fighting on the Yalu River, as 2394 officers and men. Of this total 1081 were left on the battle-field. The Japanese forces, under General Kuroki, to-day occupied Feng-Wang-Cheng.

May 9.—A report from St. Petersburg says that General Kuropatkin has ordered a general retreat. The garrison at Newchwang, consisting of 15,000 men, is retiring to Liao-Yang, and the complete evacuation of the city is in progress. The Russian gunboat *Sivouch*, which is in dock there, will, it is said, be destroyed.

The Japanese government has issued an official report of its losses in the battle of the Yalu on May 1. According to this report 5 officers and 180 men were killed and 25 officers and 690 men wounded.

The Czar has issued an order calling out 100,000 reserves to reinforce General Kuropatkin's army in Manchuria.

May 10.—To-day Viceroy Alexeieff telegraphed the Czar that communication with Port Arthur has been restored. The bridge which was blown up by the Japanese near Port Adams has been repaired, and the railroad is again in operation. The telegraph line has also been restored.

The Japanese army is said to be advancing in three divisions toward Liao-Yang. Japanese scouts have been seen within six miles of Newchwang. The United States cruiser *Raleigh* has been ordered to Chefoo to be in readiness to proceed to Newchwang to protect foreign residents there, if necessary.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

MANY BEVERAGES are so vastly improved by the added richness imparted by the use of BORDEN'S EAGLE BRAND CONDENSED MILK. The Eagle Brand is prepared from the milk of herds of well fed, housed, groomed cows of native breeds. Every can is tested and is therefore reliable.—[*Adv.*]

HEALTH means strength, Abbott's Angostura Bitters means health. At druggists and grocers.—[*Adv.*]

FOR coughs and colds, children take PISO'S CURE FOR CONSUMPTION without objection.—[*Adv.*]

ADVERTISEMENTS.

A FOOT RACE

Minister vs. Boy

"Facts are facts and stubborn things indeed," says a Michigan clergyman who had a memorable food experience.

"The fact is, when a man gets all out of sorts physically because of a derangement of the stomach, so that his heart action is bad, is very nervous owing to physical organs impaired, and nothing he can eat of an ordinary kind will properly assimilate, it is time to call a halt. Such was my case two years ago last March when I commenced using Grape-Nuts according to directions, and have continued their use up to the present time, with the result I am in better health, physically and mentally, than I have been for many years, having passed my 63rd year.

"To demonstrate this fact I proposed a foot-race with my 11-year-old boy, who was very fleet on foot; and he, being barefoot, imagined he could outrun his Pa; but I was besting him until a slip of my foot on a muddy place caused me to stumble, and I found myself rolling in the mud in the road. I soon found my footing again, undamaged, and had to join in a good, hearty laugh with my wife and daughter.

"Why should I not recommend Grape-Nuts to my friends when the food has done so much for me, for I am confident that had it not been for the help this excellent food supplied I would to-day have been past recovery. Instead of growing old now, I feel younger than I have for years, with more mental strength as well as physical, and can preach better sermons than ever before." Name given by Postum Co., Battle Creek, Mich.

Grape-Nuts makes far healthier, keener brains. A dull worn out brain can be remade on this food. There's a reason.

Look in each package for the famous little book, "The Road to Wellville."

ORDER SOME
"Club Cocktails"
SENT HOME TODAY.

You will then have on your own sideboard a better cocktail than can be served over any bar in the world. A cocktail is a blend of different liquors, and all blends improve with age.

The "Club Cocktails" are made of the best of liquors; made by actual weight and measurement. No guesswork about them.

Ask your husband at dinner which he prefers —a Manhattan, Martini, Whiskey, Holland Gin, Tom Gin, Vermouth or York.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She wires Warrisden to come by an early train, and asks him to find Tony and bring him home. Warrisden accepts the commission. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure. Warrisden learns from Mr. Chase that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. He starts out to find him, and finally reaches him far up in the North Sea. Warrisden uses every argument to prevail upon Tony to come back, but he refuses, and Warrisden is forced to return alone. He reports to Pamela the failure of his mission, but, to his surprise, she does not seem disappointed. He thinks it is because of the news which he hears from her—that Sir John Stretton has died, which will naturally bring Tony home. But that is not the whole explanation: for Pamela is overcoming her old indifference toward life, and in her life are being aroused new sympathies and emotions. Tony remains on the trawler until the term of his cruise is over, and then, after much perplexity and indecision, decides to return to London, feeling that he has seen a way out of his difficulties. On his arrival in London he calls on Mr. Chase, and tells him that he has decided not to return to Millie until he has succeeded in winning distinction in some field of work. He feels that he would deserve Millie's contempt if he returned at the moment when life had suddenly been made easy for them by his father's death. He has decided, he tells Chase, to enlist in the French Foreign Legion, as no other career seems to be open to him.

CHAPTER XIV

THE SAME EVENING IN BERKELEY SQUARE

WHILE Tony Stretton was thus stating the problem of his life to Mr. Chase in Stepney Green, Lady Millingham was entertaining her friends in Berkeley Square. She began the evening with a dinner-party at which Pamela Mardale and John Mudge were present, and she held a reception afterwards. Many people came, for Frances Millingham was popular. By half past ten the rooms were already overhot and overcrowded, and Lady Millingham was enjoying herself to her heart's content. Mr. Mudge, who stood by himself at the end of a big drawing-room close to one of the windows, saw the tall figure of Warrisden come in at the door and steadily push towards Pamela. A few moments later M. de Marnay, a youthful attaché of the French embassy, approached Mr. Mudge. M. de Marnay wiped his forehead and looked round the crowded room.

"A little is a good thing," said he, "but too much is enough," and he unlatched and pushed open the window. As he spoke Mr. Mudge saw Callon appear in the doorway.

"Yes," he answered with a laugh. "Too much is enough."

Mudge watched Callon's movements with his usual interest. He saw him pass, a supple creature of smiles and small-talk, from woman to woman. How long would he last in his ignoble career, Mudge wondered? Would he marry in the end—some rich and elderly widow? Or would the crash come and parties know Mr. Lionel Callon no more? Mudge never saw the man but he had a wish that he might get a glimpse of him alone in his own rooms, with the smile dropped from his face, and the unpaid bills piled upon his mantel-shelf, and his landlord very likely clamoring for the rent. He imagined the face grown all at once haggard and tired and afraid—afraid with a great fear of what must happen in a few years at the latest, when with middle-age heavy upon his shoulders, he should see his coevals prospering and himself bankrupt of his stock-in-trade of good looks and without one penny to rub against another. No presage of mind weighed upon Callon to-night, however, during his short stay in Frances Millingham's house. For his stay was short.

As the clock upon the mantelpiece struck eleven his eyes were at once lifted to the clock-face; and almost at once he moved from the lady to whom he was talking and made his way to the door. Mr. Mudge turned back to the window and pushed it still more open. It was a clear night of April, and April had brought with it the warmth of summer. Mr. Mudge stood at the open window facing the coolness and the quiet of the Square; and thus by the accident of an overcrowded room he became the witness of a little episode which might almost have figured in some bygone comedy of intrigue.

Callon passed through the line of carriages in the roadway beneath, and crossed the corner of the Square to the pavement on the right-hand side. When he reached the pavement he walked for twenty yards or so in the direction of Piccadilly until he came to a large and gloomy house. There a few shallow steps led from the pavement to the front door. Callon mounted the steps, rang the bell, and was admitted.

There were a few lights in the upper windows and on the ground-floor; but it was evident that there was no party at the house. Callon had run in to pay a visit. Mr. Mudge, who had watched this, as it were the first scene in the comedy, distinctly heard the door close, and the sound somehow suggested to him that the time had come for him to go home to bed. He looked at his watch. It was exactly a quarter past eleven—exactly, in a word, three-quarters of an hour since Tony Stretton, who "had something else to do," had taken his leave of his friend Chase in Stepney.

Mr. Mudge turned from the window to make his way to the door and came face to face with Pamela and Alan Warrisden. Pamela spoke to him. He had never yet met Warrisden, and he was now introduced. All three stood and talked together for a few minutes by the open window. Then Mudge, in that spirit of curiosity which Callon always provoked in him, asked, abruptly,

"By the way, Miss Mardale, do you happen to know who lives in that house?" and he pointed across the corner of the Square to the house into which Callon had disappeared.

Pamela and Warrisden looked quickly at one another. Then Pamela turned with great interest to Mr. Mudge.

"Yes, we both know," she answered. "Why do you ask?"

"Well, I don't," said Mudge. "I think that I should like to know."

The glance which his two companions had exchanged and Pamela's rather eager question had quickened his curiosity. But he got no answer for a few moments. Both Pamela and Warrisden were looking out towards the house. They were standing side by side. Mr. Mudge had an intuition that the same thought was passing through both their minds.

"That is where the truants lived last July," said Warrisden, in a low voice. He spoke to Pamela, not to Mr. Mudge at all, whose existence seemed for the moment to have been clean forgotten.

"Yes," Pamela replied, softly. "The dark house. Where the truants lived and where"—she looked at Warrisden and smiled with great friendliness—"where the new road began. For it was there really. It's from the steps of the dark house, not from the three poplars, that the new road runs out."

"Yes, that is true," said Warrisden.

And again both were silent.

Mr. Mudge broke in upon the silence. "I have no doubt that the truants lived there and that the new road begins at the foot of the steps," he said, plaintively, "but neither statement adds materially to my knowledge."

Pamela and Warrisden turned to him and laughed.

Henry M. Stanley

By G. T. Ferris

HENRY MORTON STANLEY, who died in London on May 10, was born in 1840 of obscure Welsh stock. Stanley (whose family name was Rowlands) stood among the foremost of geographical explorers in virtue of his hardy and heroic qualities, the extent and importance of his discoveries, and their political consequences in complicating the colonial activities of the nations of Europe. The young immigrant was adopted by a New Orleans merchant, whose name he took, and at the outbreak of the civil war he joined the Confederate army, though he subsequently enlisted in the Federal navy on being taken prisoner. After the war he entered journalism, and after some experience on the Western plains he became attached to the New York *Herald*. In 1867 he was appointed special correspondent to accompany the English expedition under Lord Mapin against Abyssinia, and showed such executive capacity as to have given the earliest news to the world of the fall of Magdala and the death of King Theodore. This was his first brevet, and it made him a man of professional mark. In 1869 Stanley, then corresponding from the Carlist headquarters in Spain, was suddenly called to Paris, where he received from Mr. James Gordon Bennett the unique commission of searching for and relieving, if found, Dr. David Livingstone, who had been lost three years in the wilds of Africa.

Mr. Stanley spent six months in Oriental travel, and then fitted out an expedition at Zanzibar, with which he penetrated to Lake Tanganyika, finding Dr. Livingstone at Ujiji broken in health and utterly exhausted in supplies. In company with Livingstone he circumnavigated Lake Tanganyika, and determined that it had no connection with the sources of the Nile.

The joint expedition of the New York *Herald* and London *Telegraph* to solve some of the great questions of African geography gave Stanley his culminating opportunity. He organized a little army of 350 men at Zanzibar, and started on his great African journey November 13, 1874. In little more than three months he reached the Victoria Nyanza, made an accurate survey, rectifying the mistakes of Speke, and arrived at the capital of M'tesa, King of Uganda. Thence pursuing a southwesterly course, four months more brought him again to the shores of Lake Tanganyika. The speculations as to the Lualaba River and its possible identity with the headwaters of the Congo, which had agitated Livingstone, Cameron, and others, now occupied Stanley's attention. This river, running north through the Manguemman country, 200 miles west of Lake Tanganyika, was reached at Nyangwe under the guidance of Tippu Tib, the notorious Arab slave-trader, after a four months' journey through almost insuperable equatorial forest. Thenceforward the explorer's pathway was by water. Embarking his party in canoes he followed the Lualaba, established its confluence with the Congo, and in ten months from his first embarkation arrived at Boma, near the mouth of the river, with only one-third of his followers living, having crossed the continent at its widest diameter.

Under the auspices of the African International Association, of which King Leopold of Belgium was the head, Mr. Stanley began an exploration of the basin of the Congo in 1879. His object was to investigate its commercial resources and to establish trading-stations along the banks of the river, which he did for 1400 miles. He devoted his life to this mission till 1884, when the Congo basin, including 1,056,000 square miles and 27,000,000 inhabitants, was organized as a free state under international guarantees.

The last of Mr. Stanley's African exploits was his Emin Pasha relief expedition in 1887. He gave his record of this expedition to the world under the name of *In Darkest Africa, or the Quest, Record, and Retreat of Emin, Governor of Equatoria*. Oxford University gave him the degree of D.C.L., and Cambridge that of L.L.D. Mr. Stanley married Miss Dorothy Tennant in 1890, and in the winter of 1891-2 lectured in the United States. He was a member of Parliament for North Lambeth from 1895 to 1900.

A Creole Cook-Book

"COOKING IN OLD CREOLE DAYS"
By CÉLESTINE EUSTIS

This book gives recipes for all of the famous old Creole dishes, many of them having never before appeared in print. Explicit but clear directions are given for their preparation. The book includes as well a number of quaint old Creole songs in praise of famous dishes. The recipes are also given in French. Charmingly illustrated.

(Continued from page 804.)

of the starlit night in last July when from this balcony they had watched the truants slip down the steps and furtively call a cab, was busy in their thoughts. From that night their alliance had dated, although no suspicion of it had crossed their minds.

"Well, who lives there?" asked Mudge.

But even now he received no answer. For Warrisden suddenly exclaimed, in a low, startled voice,

"Look!" and with an instinctive movement he drew back into the room.

A man was standing in the road looking up at the windows of the dark house. His face could not be seen under the shadow of his hat. Pamela peered forward.

"Do you think it's he?" she asked, in a whisper.

"I am not sure," replied Warrisden.

"Oh, I hope so! I hope so!"

"I am not sure. Wait! Wait and look!" said Warrisden.

In a few moments the man moved. He crossed the road and stepped on to the pavement. Again he stopped, again he looked up to the house. Then he walked slowly on. But he walked northwards—that is, towards the watchers at the window.

"There's a lamp-post," said Warrisden. "He will come within the light of it. We shall know."

And the next moment the light fell white and clear upon Tony Stretton's face.

"He has come back," exclaimed Pamela, joyfully.

"Who?" asked Mr. Mudge. "Who has come back?"

This time he was answered.

"Why, Mr. Stretton, of course," said Pamela, impatiently. She was hardly aware of Mr. Mudge even while she answered him. She was too intent upon Tony Stretton in the Square below. She did not, therefore, notice that Mudge was startled by her reply. She did not remark the anxiety in his voice as he went on.

"And that is Stretton's house?"

"Yes."

"And his wife, Lady Stretton, is she in London? Is she there—now?"

Mr. Mudge spoke with an excitement of manner which at any other time must have caused surprise. It passed now unremarked. For Warrisden, too, had his preoccupation. He was neither overjoyed, like Pamela, nor troubled like Mr. Mudge. But as he looked down into the Square he was perplexed.

"Yes," replied Pamela, "Millie Stretton is at home. Could anything be more fortunate?"

To Mudge's way of thinking nothing could be more unfortunate. Pamela had come late to the play; Mr. Mudge, on the other hand, had seen the curtain rise, and had a clearer knowledge of the plot's development. The husband outside the house, quite unexpected, quite unsuspicious, and about to enter; the wife and the interloper within; here were the formulas of a comedy of intrigue. Only, Mr. Mudge doubtfully wondered, after the husband had entered and when the great scene took place, would the decorous account of the comedy be maintained. Nature was, after all, a violent dramatist with little care for the rules and methods. Of one thing, at all events, he was quite sure as he looked at Pamela. She would find no amusement in the climax. There was, however, to be an element of novelty, which Mr. Mudge had not foreseen.

Drawn by William Hurd Lawrence

"You must not say that, Mr. Callon," she said, rather sharply

"What puzzles me," said Warrisden, "is that Stretton does not go in."

Stretton walked up to the corner of the Square, turned, and retraced his steps. Again he approached the steps of the house. "Now," thought Mr. Mudge, with a good deal of suspense, "now he will ascend them." Pamela had the same conviction, but in her case hope inspired it. Tony, however, merely cast a glance upwards and walked on. They heard his footsteps for a little while upon the pavement. Then that sound ceased.

"He has gone!" cried Pamela, blankly. "He has gone away again."

Mr. Mudge turned to her very seriously.

"Believe me," said he, "nothing better could have happened."

Tony, in fact, had never had a thought of entering the house. Having this one night in London, he had yielded to a natural impulse to revisit again the spot where he and Millie had lived, where she still lived. The bad days of the quarrels and the indifference and the weariness were forgotten by him tonight. His thoughts went back to the early days when they played truant, and truancy was good fun. The escapes from the house, the little suppers at the Savoy, the stealthy homecomings, the stumbling up the stairs in the dark, laughing and hushing their laughter—upon these incidents his mind dwelt, wistfully, yet with a great pleasure and a great hopefulness. The days were gone, but in others to come all that was good in them might be repeated. The good humor, the intimacy, the sufficiency of the two, each to the other, might be recovered, if only he persisted.

To return now, to go in at the door and say, "I have come home"—that would be the mistake which there would be no retrieving. He was at the crossways, and if he took the wrong road life would not give him the time to retrace his steps. He

walked away, dreaming of the good days to come.

Meanwhile, Lionel Callon was talking to Millie in that little sitting-room which had once been hers and Tony's.

Millie was surprised at the lateness of his visit, and when he was shown into the room she rose at once.

"Something has happened?" she said.

"No," Callon replied. "I was at Lady Millingham's party. I suddenly thought of you sitting here alone. I am tired, besides, and overworked. I knew it would be a rest for me if I could see you and talk to you for a few minutes. You see, I am selfish."

Millie smiled at him.

"No, kind," said she.

She asked him to sit down.

"You look tired," she added. "How does your election work go on?"

Callon related the progress of his campaign, and with an air of making particular confidences. He could speak without any reserve to her, he said. He conveyed the impression that he was making headway against almost insuperable obstacles. He flattered her, moreover, by a suggestion that she herself was a great factor in his successes. The mere knowledge that she wished him well, that perhaps, once or twice in the day, she gave him a spare thought, helped him much more than she could imagine. Millie was induced to believe that although she sat quietly in London, she was thus exercising power through Callon in his constituency.

"Of course, I am a poor man," said Callon. "Poverty hampers one."

"Oh, but you will win," cried Millie Stretton, with a delighted conviction. "Yes, you will win!"

She felt strong, confident—just, in a word, as she had felt when she had agreed with Tony that he must go away.

"With your help, yes," he answered; and the sound of his voice violated her like a caress. Millie rose from her chair.

At once Callon rose, too, and altered his tone.

"You have heard from Mr. Stretton?" he said. "Tell me of yourself."

"Yes, I have heard. He will not return yet."

There came a light into Callon's eyes. He raised his hand to his mouth to hide a smile.

"Few men," he said, with the utmost sympathy, "would have left you to bear these last weeks alone."

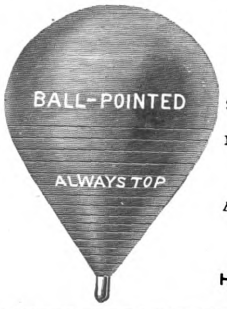
He was standing just behind her, speaking over her shoulder. He was very still, the house was very still. Millie was suddenly aware of danger.

"You must not say that, Mr. Callon," she said, rather sharply; and immediately he answered:

"I beg your pardon. I had no idea my sympathy would have seemed to you an insult."

He spoke with a sudden bitterness. Millicent turned round in surprise. She saw that his face was stern and cold.

"An insult?" she said, and her voice was troubled. "No, you and I are friends."



But Callon would have none of these excuses. He had come to the house deliberately to quarrel. He had great faith in the efficacy of quarrels, given the right type of woman. As Mudge had told Pamela, he knew the tactics of the particular kind of warfare which he waged. To cause a woman some pain, to make her think with regret that in him she had lost a friend, that would fix him in her thoughts. So Callon quarrelled. She could not say a word but he misinterpreted it.

"I will say good-by," he said.

Millie Stretton looked at him with troubled eyes.

"I am so sorry it should end like this," she said, piteously. "I don't know why it has."

Callon went out of the room and closed the door behind him. Then he let himself into the street. Millie Stretton would miss him, he felt sure. Her looks, her last words assured him of that. He would wait now without a movement towards a reconciliation. That must come from her; it would give him in her eyes a reputation for strength. He knew the value of that reputation. He had no doubt, besides, that she would suggest a reconciliation. Other women might not, but Millie! Yes. On the whole, Mr. Callon was very well content with his

GETTYSBURG AND WASHINGTON.

Personally-Conducted Tour via Pennsylvania Railroad.

The battlefield of Gettysburg, and the National Capital in all the glory of its Spring freshness, are attractions so alluring that few would feel like refusing to visit them. It is to place these two attractions within easy reach of every one that the Pennsylvania Railroad Company announces a tour over the interesting battlefield, through the picturesque valleys of Maryland, and an entertaining stay at Washington.

The tour will leave New York, West Twenty-third Street, 7.55 A.M., and Philadelphia 12.20 P.M., Saturday, May 28, in charge of one of the Company's tourist agents, and will cover a period of six days. An experienced chaperon, whose especial charge will be unescorted ladies, will accompany the party throughout. Round-trip tickets, covering transportation, carriage drives, and hotel accommodations, will be sold at the *extremely low rate* of $22 from New York, $21 from Trenton, $19 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents; Tourist Agent, 263 Fifth Avenue, New York; 4 Court Street, Brooklyn; 789 Broad Street, Newark, N. J.; or address Geo. W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia.

DR. LAVENDAR'S PEOPLE

Mrs. Margaret Deland's new book of stories concerning Dr. Lavendar and the other dwellers of Old Chester seems to have awakened the interest in these characters created by the publication of "Old Chester Tales." Speaking of the leading character, the Chicago *Interior* says that "Dr. Lavendar takes precedence over all country parsons with the possible (only possible) exceptions of the Vicar of Wakefield and Balzac's Village Priest. Let no one who loves the fine things of the soul pass this book by." $1.50

Booth Tarkington's CHERRY

Says the *Interior*, speaking of Booth Tarkington's dainty new comedy: "Anything more utterly delicious than the comedy of this narrative can scarcely be conceived. It is simply beyond price or praise. The humor of it all is so exquisite it moves one far beyond laughter, to the point of tears." The book is attractively made and is illustrated in color. $1.25

New Views of
Wedgwood's
Old Blue
Historical Plates

GEORGE WASHINGTON
1732-1799

"Soldier and statesman, rarest unison:
High-poised example of great duties done."
James Russell Lowell.

"America has furnished to the world the character of George Washington: and if our American institutions had done nothing else, that alone would have entitled them to the respect of mankind."—Daniel Webster at the completion of the Bunker Hill Monument.

The above cut represents one of 67 subjects of Wedgwood's old blue souvenir plates (6 inch). The other subjects are, in part: The Washington Elm, Cambridge; under this tree Washington first took command of the American Army July 3d, 1775—The Capitol, Washington—Mount Vernon, 1744-1902—Martha Washington—Independence Hall, Philadelphia (1743)—Longfellow's Home, 1759-1902, once Washington's Headquarters, Cambridge—The Old South Church, 1773—Faneuil Hall—The Old North Church, where Paul Revere hung out the lanterns in 1775—Old Stone Mill, Newport—The Return of the Mayflower—The White House, Washington, 1792-1902—The Landing of the Pilgrims—Priscilla and John Alden—Signing of the Declaration of Independence—Arlington House, home of Robt. E. Lee—The Old North Bridge, Concord—Bunker Hill Monument—The Battle of Lexington—State House, Boston—Emerson's Home, Concord. Among the later productions are: Monticello, the home of Thomas Jefferson—Grant's Tomb, Riverside Drive—Yale College and the Old Fence—Elmwood, home of James Russell Lowell—U. S. Frigate Constitution in Chase—Harvard College Gates, etc.

A booklet of half-tone cuts of the series will be mailed free on receipt of a two-cent stamp. These pictures have been produced from engravings after etchings and paintings (at the famous pottery of Josiah Wedgwood & Sons, Staffordshire) of important subjects connected with American history.

The decoration is under the glaze and therefore indelible. In selecting a dozen or more for table use, order by numbers from the booklet.

The price is six dollars per dozen or fifty cents each. A single plate of any subject desired will be mailed in one of our safety mailing boxes, prepaid to any post-office in the United States, on receipt of 75 cents, P. O. order or stamps.

night's work. He had taken, in his way of thinking, a long step. The Square was empty except for the carriages outside Lady Millingham's door. Lionel Callon walked briskly home.

To be Continued.

Aspects of London Life

(Continued from page 797.)

but when it has once fairly got hold of a man it will leave its mark so long as he lives. I have known Americans who, after successfully weathering the period of acclimatization, have spoken of New York as New York speaks of Denver, calling it a village, a back-water, and declining even to mention it in the same breath with London. And is it not notorious that London is the only city outside of France where a Frenchman can be happy.

Where London wins its victories is, of course, in the social field. I do not by that mean to deny that its externals have nothing in them to attract. There are some fine views in London, and to one who knows something of its history a mere walk in almost any direction yields an abundance of interest. The inexhaustible variety of the streets is a big point in London's favor. A city of retail tradesmen, with all their goods in the shop windows, hr an immense spectacular pull over the city of department stores, and nowhere can one persuade oneself so easily as in London that a day spent in rummaging among old bookstores or in print-shops or old furniture and silver-work shops, is a day profitably spent. No one ever really knows London. There is always something left for the stranger to discover on his own account, and a plunge from the main thoroughfares into the labyrinth of winding alleys and narrow, silent, seedy looking streets may always be trusted to yield something to the investigator. I do not, therefore, deny that out-of-door London has its fascination, though its chief attractiveness, to my mind, must always be looked for in its social atmosphere and attributes. What are those attributes? I heard an American trying to sum them up the other day. First of all he thought that, as compared with New York, London contains a far greater number of interesting people, especially of people who have "done things"—have fought, explored, travelled and ruled in outlying parts of the earth. "For instance," he said, "I found in my club smoking-room yesterday one man who had just returned from a forty minutes' private talk with the Czar, another who was just back from Macedonia, two officers invalided home from Somaliland, an ex-Governor of the Malay States, one or two Anglo-Indian officials, and a man who has been in Lhasa. You might have gone over the United States with a rake without finding men with such a variety of interesting experiences. And then again I always feel when I am in London that I am at the centre of things, right at the heart of all that's happening. I don't suppose I could justify this feeling in any tangible way, but it's there just the same, and every American becomes conscious of it sooner or later. New York is a little world to itself, and neither quite American nor quite European; but London is the whole world itself squeezed into a few square miles. And, above all this, what I most like about London is the richness and the mellowness of its social tone, the way it never 'enthuses' or gets excited or asks questions, the way in which it blends all elements and takes everything for granted, its repose and tolerance, its cool and equable outlook, its easy-going immovability—those are the qualities in which London excels and which drag Americans like myself captive behind her. I like her superb callousness, her disdain for little things, and her indifference to the non-essentials of social intercourse. In short, she has the art of life." The American I have quoted is a travelled man and of great sensitiveness to impressions. It will be interesting to see how far Mr. Henry James confirms or rejects this eulogy after his long-promised and now approaching visit to America.

Progress of Science

Typhoid Fever and Sanitary Legislation

A comparative statement recently published in the Journal of the Massachusetts Association of Boards of Health showing the average typhoid-fever death-rate for 1898, 1899, 1900 in Pennsylvania and Massachusetts, is of interest as indicating what intelligent legislation and scientific methods can accomplish. This table, which gives the number of deaths by typhoid per 100,000 of population, is as follows:

AVERAGE TYPHOID-FEVER DEATH-RATE, 1898, 1899, AND 1900.

PENNSYLVANIA. City.	Death-rate.	MASSACHUSETTS. City.	Death rate.
Pittsburg	108	Boston	30
Allegheny	86	New Bedford	30
Johnstown	83	Springfield	26
York	83	Lawrence	25
Chester	64	Taunton	25
Lancaster	59	Brockton	24
Philadelphia	54	Chelsea	24
McKeesport	53	Salem	23
Reading	50	Fitchburg	21
Allentown	59	Lowell	21
Harrisburg	41	Lynn	20
Altoona	33	Newton	20
Wilkesbarre	29	Cambridge	18
Erie	28	Worcester	18
Scranton	23	Fall River	15

While a certain part of this bad showing for the State of Pennsylvania may be explained by the inferior character of some elements of its population, nevertheless it is in the main due to lack of sanitary laws and adequate supervision of water-supplies. The vital statistics of Pennsylvania are said to be lacking in completeness, and there is apparently great need of intelligent legislation and public spirit to enforce necessary laws. Massachusetts, on the other hand, takes most scrupulous care of its water-supplies, and a State Board of Health is able to exercise a general supervision, and has ample authority, while the local boards of health are held to a strict performance of their duties. Furthermore, under the State board's direction most careful scientific experiments, chemical and bacteriological, are carried on, and expert investigators are constantly studying all matters relating to water-supply and contamination, and the results of the high standard maintained are seen in the absence of such epidemics as that recently occurring at Butler, Pennsylvania, and other cities.

The Spelling of Foreign Names

THE readers of war news from the Far East perplexed at the names of the various localities occupied by the Japanese and Russian military forces are doubtless unaware that these names are transliterated from their native sources according to a system adopted by most of the European nations, as well as by Canada and the United States. In this country questions of spelling are settled by the United States Board on Geographic Names, and the rules that they have adopted provide that the vowels shall have the same sounds as are given to the vowels of the languages of southern Europe. Thus *u* is used for the sound of *oo* in boot, and as a result the common form is Manchuria in preference to Manchooria, Chefu for Chefoo, Amur for Amoor, etc. The sound of *i* in ice is represented by *ai*, *oe* in how by *au*, while a modification of this latter sound such as is encountered in Mindadao and Nanao by *a o*. The *ei* of Beirut is the sound of the two Italian vowels, but is often modified by slurring, so that it closely resembles the *ey* in the English word they. As regards the consonants there is a similar set of rules. The hard *c* must be represented by *k*, and hence Korea is preferable to Corea, while *ch* is soft, as in the English word church. The *f* sound is represented by that letter and not by *ph*, *g* stands for the hard sound, *h* is always pronounced, and *j* and *k* enjoy the same sounds as in English. For the guttural sounds, which occur frequently in Oriental languages, *kh* and *gh* are used, while *ng* is used in different words for different sounds, such as in finger, where there are two sounds, and in singer, where there is but one. The sound corresponding to the English *qu* is not represented by *q*, but by *kw*, as in Kwangtung, while *y* is always a consonant as in English yard.

Two Anecdotes of Sothern

"T. P." tells an amusing anecdote of the elder Sothern (the famous father of E. H. Sothern). Sothern was travelling on tour in northern England when, just as their train was leaving York, he removed the railroad ticket which a fellow actor had stuck in the band of his hat.

"They'll want our tickets here, Johnny," he said, casually, and his companion began an exhaustive search for the missing ticket. When he had searched his hat and his pockets ten times over, and looked on seat and floor again and again, in vain, he exclaimed, in despair: "By George! I've lost my ticket! They'll make me pay over again!"

"Pay over again! I'd see them hanged first," said Sothern. "You get under the seat and it'll be all right."

His friend crawled under the seat, and lay there, gasping with nervousness, as the ticket collector came to the carriage door.

"Tickets, please," he demanded.

Sothern handed the man two tickets.

"*Two* tickets, sir! Where's the other gentleman?"

"Oh," replied Sothern, nonchalantly, "the other gentleman prefers to travel under the seat. It's only his way."

Another anecdote of Sothern recalled by "T. P." concerns a practical joke which had more serious consequences. He had made an appointment to dine at a restaurant with an actor friend named Toole, and was exasperated at having to wait long, and hungry, for his fellow guest. Seeing at a neighboring table an old gentleman who was evidently even more cross and hungry than himself, Sothern went up behind him, and, hitting him a sounding smack on the back, greeted him familiarly, "Halloa, old boy!"

"What the devil do you mean, sir?" cried the old gentleman, starting to his feet purple with fury.

"I—I really beg your pardon, sir," stammered Sothern. "I took you for an old friend of mine. Pray forgive me."

The old gentleman resumed his seat, growling. Toole appeared at last, and Sothern, after abusing him for his unpunctuality, arranged with him for the dinner. While they were waiting for it to be served, Sothern said,

"I say, Toole, I'll bet you a sovereign you won't go up to that old boy, hit him on the back, and say, 'Halloa, old boy!'"

"Done!" cried Toole, heartily; and he went behind the old gentleman, gave him a sounding smack on the back, and shouted, familiarly, "Halloa, old boy!"—and was promptly knocked down.

A Flourishing Business

A PROMINENT actor tells this story about two brother players and their experiences in a Maine temperance town. Feeling in need of alcoholic refreshment they made application at the local drug-stores, but were told that stimulants were sold only in cases of snake bite. The actors had about decided to content themselves with such refreshment as the town provided, when they heard that a certain resident owned a rattlesnake which he kept as a pet. Securing his address they called on him, and offered to hire his snake for use in some scientific experiments.

"Nothing doing," answered the owner; "he's booked solid for four months ahead."

Couldn't Afford It

A GOOD story is told of one of the most prominent of New York's financiers who has a son whose extravagance is notorious. Not long ago, at the end of the business day, the banker left his office and stood for a moment on the curb before starting for the Elevated station. Immediately a hansom drove up, the driver seeing a desirable fare in prospect. The banker shook his head and started to walk away.

"I drive your son up-town every day," insinuated the driver.

"He can afford it," retorted the millionaire; "he's got a rich father."

NEW YORK CITY

The Northwest Under Three Flags

By CHARLES MOORE

With Illustrations by Howard Pyle, Frederic Remington, and others. Maps, etc.

The early story of the Northwest—the French explorations and occupation, the Indian wars, the English conquest, and later assumption by the United States.

In the preparation of this account of the pioneers of civilization, the author has had access to the famous Parkman Collection of MSS. and government sources.

The work is of historical importance, correcting a number of errors and misapprehensions sanctioned by previous writers, and is written in an entertaining style.

Fly-Rods and Fly-Tackle

SUGGESTIONS AS TO THEIR MANUFACTURE AND USE

Revised Edition

By H. P. WELLS

Author of "The American Salmon-Fisherman"

This is a new edition of a book which is already a standard on the subject of fishing with a rod. Mr. Wells is an experienced fisherman, and he has added materially to this volume. The book goes into all necessary details, with drawings and diagrams of the manufacture and use of rods and fly-tackle and the making of flies. The book is the best authority on this subject in existence.

A HISTORY OF THE AMERICAN PEOPLE

In Five Volumes

By WOODROW WILSON, Ph.D., Litt.D., LL.D.

President of Princeton University

A new, epoch-making work—the only complete narrative history of the great Republic in existence to-day

PRESIDENT WOODROW WILSON has devoted the best years of his life to the preparation of his great work, "A History of the American People," from the earliest times to the administration of President Roosevelt. The work is monumental in character and scope, represents the genius of the greatest historical writer of the present time, and is written in that delightfully flowing style which translates historical facts into the romance of a nation. Hundreds upon hundreds of new portraits, prints, maps (in colors), plans, and pictures make the pictorial features alone tell their wonderful story—the birth and growth of what is now the United States of America. There is a photogravure frontispiece to each volume, and portraits in India tint and black. Dr. Woodrow Wilson's is the first complete narrative history of the United States in existence.

In order to meet the urgent demand for this work, the publishers have now in readiness a

NEW SUBSCRIPTION EDITION

With Photogravure Portraits of the Presidents

In addition to the illustrations noted above, the new edition contains full-page photogravure portraits of the Presidents of the United States—twenty-five in all—from Washington to Roosevelt, a feature which materially enhances the richness of the work. The five volumes are issued in bindings of new design and beauty:

Schlitz

Compare Our Methods With Yours

You cleanly housewives—compare our methods with yours. You will realize then why Schlitz beer is pure.

You wash a cooking utensil once. We wash a bottle *four* times, by machinery, before we fill it.

You use city water. We bore down 1400 feet to rock for ours.

You prepare food in the air of the room. We cool Schlitz beer in plate-glass rooms and filter all the air that touches it.

Then we filter the beer by machinery—filter it through white wood pulp.

Yet your methods are cleanly. Ours are cleanliness carried to extremes.

Then—for fear of a touch of impurity—we sterilize every bottle after it is sealed.

We double the necessary cost of our brewing to give you a healthful beverage pure.

Do you wonder that we sell over a million barrels annually? Ask for the brewery bottling.

The Beer That Made Milwaukee Famous.

COMMENT

THE important incident of the week ending May 14, so far as the Republicans are concerned, was the recommendation by the Illinois State convention of Representative Robert R. Hitt for the Republican nomination for the Vice-Presidency. Resolutions adopted by many district caucuses endorsing the candidacy of Senator Fairbanks for the Vice-Presidency had been presented to the committee on resolutions, but these were withdrawn when it was learned that a citizen of Illinois would accept the nomination for the office if it were tendered to him. It was high time that some conspicuous Republican should evince a willingness to take the second highest post in the Federal government—a post, moreover, which five times since 1840 has involved succession to the Chief-Magistracy. How strenuously a nomination for the Vice-Presidency was resisted by Governor Roosevelt and his friends in 1900 is still fresh in remembrance. It is well known that during the present canvass Senator Fairbanks would not countenance the efforts of his friends to promote his candidacy. Speaker Cannon, who is a man of his word, is understood to have declared that he would not accept the nomination, though this we can hardly bring ourselves to believe, for, as we have formerly pointed out, no man except Silas Wright, of New York, has ever declined a nomination for the Vice-Presidency when actually tendered by one of the great political parties. As Mr. Hitt's name was first put forward by Secretary Shaw, it is generally taken for granted that his candidacy will be endorsed by Iowa in her forthcoming State convention, and it is also presumable that the movement has the approval of President Roosevelt. It is easy to see why an Illinois man should be favored for the Republican nomination. The State has many more electoral votes than has Indiana, and, in the opinion of close observers, is even more doubtful than the Hoosier commonwealth, owing to the seeming impossibility of reconciling the Republican factions in Cook County, headed respectively by United States Representative William Lorimer and State's-Attorney Charles Deneen. It was the desperate struggle between these rival politicians that caused the prolonged deadlock over the nomination for Governor—a deadlock which was unbroken when the convention adjourned to May 16.

That Mr. Hitt is well qualified for the Vice-Presidency is certain; whether, beyond his appeal to State pride, he will add much strength to the Republican ticket in Illinois is, perhaps, open to question. He was for seven years Secretary of Legation at Paris; for about a year First Assistant Secretary of State; and he has been continuously a member of the House of Representatives ever since December, 1882. From the outset he became a member of the Committee on Foreign Affairs, and for many years he has been its chairman. It is doubtful whether any man in Washington is better fitted to perform the functions of Secretary of State. His abilities and his character are held in the highest respect. On the other hand, he is no orator. He has not the gift of mingling easily and engagingly with strangers. He is a quiet, studious, retiring man, disposed to shrink from public notice. Though he has represented the Ninth Congress District of Illinois for some twenty-two years, he is said to be personally unknown to a large majority of his constituents. Then, again, he may be regarded as *too* old by those who acclaim President Roosevelt's executive order declaring the attainment of the age of sixty-two to be *prima facie* proof of physical and mental disability. Mr. Hitt is in his seventy-first year. As an expert stenographer he was employed in reporting the joint debate between Stephen A. Douglas and Abraham Lincoln during the contest in which they engaged for the United States Senatorship some years before the outbreak of the civil war. He is one of many exceptions, however, to the rule that Mr. Roosevelt has laid down. His physical vigor is unimpaired; the tenacity of his memory, the breadth of his knowledge, and the excellence of his judgment are the envy of younger men. It should also be recognized that the sobriety, caution, and conservatism of his temper are calculated to commend him to some Republicans who look with uneasiness upon Mr. Roosevelt's impulsive nature. There are not a few, indeed, who think that if a bronco is to be trained to trot in harness, he should have for a mate a staid, well-broken, trustworthy animal. When all is said, however, it is scarcely open to dispute that, considered as a vote-getter, Uncle Joe Cannon should have had the nomination forced on him, if it were deemed indispensable by the Republican managers to pick a candidate from Illinois. A man may be thoroughly conservative in his political views, and yet endowed with personal magnetism to an extraordinary extent. Such a man was Abraham Lincoln. The type is exemplified also in Garret A. Hobart and in Speaker Cannon.

Democrats were most interested during the week ending May 14 in the action of the Indiana Democratic convention, which on May 12 instructed the thirty delegates from that State to the St. Louis convention to vote as a unit for Judge Parker. It was the most interesting convention held in the State since 1892, when Mr. Cleveland and Isaac P. Gray disputed the control of the Indiana delegation to the Democratic national convention of that year. The followers of Mr. Hearst were outnumbered about two to one, but they complain of unfair treatment in several districts, and purpose, it is said, to send to St. Louis contesting delegates therefrom. Indiana's endorsement of Judge Parker's candidacy, following the assumption of the same position by New York and Connecticut, is likely to exercise considerable influence on the Southern States. Georgia's twenty-six delegates and the thirty-six of Texas are now looked upon as almost assured to him. If he can also secure the twenty-two delegates of Alabama he will be fortunate, because Alabama, it will be remembered, is the first State on the roll, and is, therefore, peculiarly qualified to start a boom. The only Southern State, however, which will hold its convention in the week ending May 21 is South Carolina, and it is supposed to be doubtful whether Senator Tillman will favor the endorsement of New York's candidate. The Florida delegation will probably be half for Hearst and half uninstructed. California, Montana, and Wisconsin will hold their conventions during the week ending May 21. Mr. Hearst's friends will naturally strive to carry his native State, and will probably succeed. At the hour when we write, he seems less likely to secure the delegates from Montana, and those of Wisconsin have been instructed for a "favorite son."

It is known that the Maryland Democrats will either put forward Senator Gorman or go uninstructed to St. Louis. Whether the delegates of New Jersey and Pennsylvania, who are uninstructed, will vote for Judge Parker on the first ballot is at this hour uncertain. There is some reason to believe, however, that if Alabama is for him, Judge Parker will receive upwards of four hundred votes on the first ballot. What this means will be realized when we recall that Mr. Cleveland had but 392 votes on the first ballot in 1884, though on the second ballot he obtained upwards of two-thirds and secured the nomination. Many precedents point the other way. When the Democratic national convention of 1844 assembled, Martin Van Buren was known to have a majority of the delegates, and scarcely anybody thought of proposing James K. Polk. The Democratic national convention of 1852 balloted fruitlessly many times before the name of Franklin Pierce was

mentioned. Many things may happen between to-day and the 6th of July; and it may be that the boom for Judge Parker that Alabama is relied upon to start will fail to acquire the hoped-for headway and quickly collapse. It is not incredible that the Alabama delegates might decide at the last moment to put forward Senator Gorman, in which event a large proportion of the Southern States and Pennsylvania would be not unlikely to follow suit. Neither is it impossible that the Parker boom might strike still other snags, especially as the Democratic leaders who control the National Committee seem to have made up their minds—to our thinking, unwisely—to maintain the two-thirds rule. Should Messrs. Bryan and Hearst be able to prevent Judge Parker from getting two-thirds of the delegates, and should a prolonged deadlock ensue, it is unquestionably on the cards that the convention might be stampeded for ex-President Cleveland, should the uninstructed New Jersey delegation present his name. There is yet another possibility. Suppose Messrs. Bryan and Hearst, after demonstrating their ability to control a little more than a third of the delegates, should suddenly bring forward through the lips of an eloquent speaker the name of State's-Attorney Joseph W. Folk, of Missouri. There is no doubt that Mr. Folk, who is to be the Democratic candidate for the Governorship of the State this year, has acquired a national reputation for ability, integrity, and courage, which Mr. Bryan, whether or no he should be credited with those qualities, did not possess when he was nominated for the Presidency in 1896.

A question which is beginning to provoke a good deal of animated discussion is this: Will the radical faction at St. Louis—the faction of which the controlling dynamic head will be William J. Bryan, although most of the voting strength seems likely to be furnished by W. R. Hearst—bolt the nominee and platform put forward at St. Louis, in case both are offensive to it? The Albany correspondent of the Brooklyn *Eagle* telegraphed his paper on May 13 that information believed to be absolutely authentic was in possession of Judge Parker's friends to the effect that the radicals were determined upon such a course in the contingency supposed. According to this correspondent, whose alleged information was wired all over the country, the plans already formulated by the rule-or-ruin section of the Democracy involved a concerted secession from the St. Louis convention—should the action of that body prove unacceptable—and the organization of a third party to be dominated by Messrs. Bryan and Hearst. It was asserted that a large majority, if not a majority, of the Democratic National Committee, which, when designated, was supposed to be overwhelmingly Bryanite, are committed to the project. Chairman Jones of Arkansas was said to view the design with sympathy. It was pointed out that his son is the manager of the Hearst boom in Oklahoma. According to the *Eagle's* correspondent, the first move of the Bryan faction would be to secure control of the St. Louis convention by means of contesting delegations. There is no doubt that Messrs. Dunlop and Walsh, the treasurer and secretary of the Democratic National Committee, are "sealed," as the Mormons say, to Mr. Bryan, and one thing at least they can do, and are said to have agreed to do: they can place the seating arrangements of the convention in the hands of W. A. De Ford, a Kansas man, who has been working actively for Mr. Hearst during the last twelvemonth. Of course if De Ford succeeds in stuffing the convention hall, the radical delegates will have all the outside howlers on their side. No man who was present at the Democratic national convention held at Chicago in 1896, or who elsewhere has witnessed the extraordinary pathological effect produced upon a crowd of delegates by a supposedly authentic demonstration of violent popular sentiment, will deny that the Bryanites will gain a point of some importance if they succeed in packing the convention hall. Nevertheless, we feel absolutely certain that the "cross of gold" convulsion will not be repeated at St. Louis, unless, indeed, Mr. Bryan himself, seconded by Senator Bailey of Texas, should whirlwind the convention with the name of Joseph W. Folk.

As at present advised, we assume that some candidate, deliberately or impulsively accepted by the preponderant conservative element, such a candidate as Chief-Judge Parker, Senator Gorman, Mr. Olney, or Mayor McClellan—or the one man certain to split the Republican vote, ex-President Cleveland—will ultimately be the nominee of the Democratic national convention. We also assume that the platform framed at St. Louis will not only ignore the platforms constructed at Chicago and Kansas City in 1896 and 1900, but will be one that ex-President Cleveland or Mr. Olney, if nominated, could afford to stand on. In that event, which, as we have said, we look upon as practically certain, would the friends of Mr. Bryan and Mr. Hearst bolt and put forward a third ticket? As we have often pointed out, Mr. Bryan has studiously refrained from declaring what he would do. Mr. Hearst, on the other hand, authorized the Washington *Post* to announce on May 14 that he would support the nominee of the St. Louis Democratic convention, whoever he might be. He had been making his fight, he said, for the nomination for the Presidency, in the name, not of Populism, nor of Socialism, but of progressive Democracy. His fight had been within party lines, and would continue to be so. His appeal, he said, had been made to the Democratic masses, but if those masses should see fit to send a large majority of conservative Democrats to St. Louis, he would bow to their decision, reserving to himself the privilege of agitating within the party hereafter for the triumph of more progressive views. He added that he had supported Cleveland three times, as well as Bryan twice. This announcement seems to dispose of the danger of a bolt at St. Louis. Without the help of Mr. Hearst's newspapers, it would be suicidal for Mr. Bryan to attempt to organize a secession. We ourselves have never imputed to the Nebraskan any such intention. We have credited him with too much wisdom. We have also pointed out more than once that even should the Bryan-Hearst faction decide to bolt, it could not hope to poll so many votes—upwards of a million—as were given to General Weaver in 1892—provided the Democracy should recur to their candidate of that year, namely, Grover Cleveland. On the other hand, we have never been blind to the probability that if the St. Louis convention should put forward Judge Parker or Mr. Olney, a secession of the Bryan-Hearst element might damage seriously the regular Democratic nominee in such doubtful States as Connecticut, New Jersey, Delaware, West Virginia, and Indiana. So that we are glad to be told that there is to be no bolt.

A recent incident has been construed in some quarters as indicating that Mr. Roosevelt is just now a less stalwart champion of purity in office than he used to be. His former convictions were expressed in the book entitled *The Strenuous Life*, wherein he declared that "no man who condones corruption in others can possibly do his duty by the community"; and, again, "there must be no compromise under any circumstance with official corruption." There are those who think they detect a compromise in the escape of Cornelius Van Cott from the penalty of expulsion from his post, which seemed inevitable, in view of the outcome of the investigation of the New York Post-office, concluded some months ago by Messrs. Conrad and Bonaparte. Their report pointed out that Postmaster Van Cott had cooperated with Heath and Beavers in making illegal salary allowances. Among other charges, the report specifies that Van Cott paid Beavers four dollars a day, which was debited to New York "expenses"—a transaction which Messrs. Conrad and Bonaparte denounced as fraudulent. They declared it to be impossible to doubt that Van Cott, as well as Heath and Beavers, knew that the payment of this additional compensation was expressly forbidden by law, and that it was called "expenses" to evade the prohibition. It was also shown that the postmaster's son, Richard Van Cott, drew three hundred dollars while in Europe for seven weeks, although the law allowed him only fifteen days' vacation; and that the postmaster's brother, Whitfield Van Cott, drew eighteen hundred dollars as "Inspector of Mail-boxes," though he actually performed no services whatever. It is well known that Postmaster Van Cott was appointed at the request of the senior Senator from New York, and it turns out that Mr. Platt has stood by his favorite sturdily and successfully.

Assistant Attorney-General Robb, who was directed by the President to review the report of Messrs. Conrad and Bonaparte, has informed the Chief Magistrate that, for his part, he can see nothing in Van Cott's conduct that should be stigmatized as criminal, although the New York postmaster is declared to have been guilty of censurable slackness in several matters. The President has decided to make the son a scapegoat for his father. Richard Van Cott is summarily dis-

missed from the postal service, but Postmaster Van Cott, while he is called upon to refund the eighteen hundred dollars illegally drawn by his brother Whitfield, and the three hundred dollars improperly paid to his son Richard, will be suffered to retain his office. Thus are the errors of the parent to be visited upon his child. It will be interesting to observe whether Postmaster Van Cott's escapade will be looked upon correctly as a precedent by other employees in the postal service who have been in the habit of regarding public office as a private "snap." On May 14, Third Assistant Postmaster-General Madden, when asked whether he intended to resign, in view of the charges made against him, which are now under investigation by Assistant Attorney-General Robb, made it tolerably plain that he would not get out of the Post-office Department until he should be forced out. The fact is recalled that Madden, when he was an applicant of the office he now holds, was strongly backed by a powerful representative of organized labor, the late Chief Arthur of the Brotherhood of Locomotive Engineers; and the inference is drawn by some cynical onlookers that President Roosevelt will not find it necessary to take any drastic action against Madden before the next general election. There seems, however, to be no doubt that the supplemental investigation of the Post-office Department which the Chief Magistrate has ordered, but upon which Postmaster-General Payne, when he returned to Washington from the South, was disposed to throw cold water, is to be forthwith carried out. It will scarcely be denied by any fair-minded men that the institution of such an inquiry should, so far as it goes, be accepted as evidence of sincerity on the President's part.

There seems to be some misunderstanding current concerning the scope and nature of the species of revolution that has taken place in the American branch of the Red Cross Society. There is no doubt that Miss Clara Barton has resigned the presidency, and that, under the constitution of the society, Mrs. John A. Logan, vice-president, has succeeded, *ex officio*, to the functions of the higher post. The change does not necessarily mean that the influential members of the society who for some time have protested vehemently against Miss Barton's retention of the presidency, and have demanded a rigorous auditing of her accounts, including an exhibition of vouchers for all expenditures, will be satisfied with the acceptance of the late president's resignation, and will consent to a suspension of the investigation which has been going on before Senator Proctor's committee. Some of Miss Barton's critics assert that the resignation was not voluntary, but was rendered inevitable by the publication of the testimony given before the committee by one John Morlan, Miss Barton's confidential agent. It is alleged that when this sensational evidence was disclosed, Miss Barton's friends urged her to retire forthwith and accept any kind of arrangement that would close the investigation. By way of compromise a proposal was made that President Roosevelt should nominate a new president of the society and four of the twelve trustees, another four being nominated by the remonstrants, and the remaining four by Miss Barton's friends. To carry out the plan it was needful to secure the promise of each member of the executive committee that he would elect the trustees nominated and then resign. One of the committee, however, General Nelson A. Miles, declared that he would not resign under fire, and also asserted that the committee had no authority to elect a board of trustees, but that a meeting of the society would be requisite for the purpose. Miss Barton finally determined to resign, and her temporary successor, Mrs. John A. Logan, is said to have suggested that a meeting be called for September 6. Under the circumstances, it is by no means certain that the Proctor investigation will be allowed to drop. That such a controversy should have arisen is, of course, from some points of view, a matter for profound regret, but it could not well have been avoided, if it be true, as Morlan's evidence seems to show, that the funds contributed by philanthropists to the exemplary objects of the Red Cross Society have been improperly used.

For several reasons the conference of the Methodist Episcopal Church which has been held at Los Angeles, California, has been watched with unusual interest. In the first place, the census of 1900 attributed upwards of 2,762,000 communicants to this religious body, to say nothing of the Methodist Episcopal Church, South, and other Methodist organizations, which, if they were counted in the enumeration, would bring the total number of communicants up to almost exactly six millions. Secondly, it has been for some time understood that the Methodist Episcopal Church has been tending towards liberalism in the matter of theology. In the third place, it is known that for some time past there has been a good deal of dissatisfaction among the younger members of the organization with the ascendency exercised in the control of Church affairs by men who have long passed the age limit asserted by President Roosevelt, in Executive Order No. 78, to be *prima facie* proof of unfitness for further usefulness.

At the hour when we write the charges of heresy brought against the Garrett Biblical Institute and the Boston School of Theology seem unlikely to be sustained by the committee on education to which they were referred. On the other hand, the conference adopted, with a close approach to unanimity, a report relieving a "superannuated" general superintendent from the obligation of travelling through the Methodist connection at large, and went on to provide that he should not be assigned to the presidency of annual conferences, or be permitted to make appointments. The pill was sugared with a declaration that, if requested by a bishop presiding, a "superannuated" general superintendent might take the chair temporarily in a general or annual conference; and, at the request of the bishop presiding at such conference, might even ordain candidates previously elected to orders. At the hour when we write the conference had not acted on the report of the subcommittee of the committee on state of the Church, of which Judge H. Sibley is chairman. That report urged a radical change in the Church rule on the subject of amusements, substituting a recommendation for the existing mandatory prohibition. Under the rule which has hitherto obtained, a member of the Methodist Episcopal Church who attends a dance or a theatre is guilty of a grave infraction of the convictions consecrated in the usages of the Church, and may be punished by expulsion. If the change now proposed is adopted, the infliction of such a penalty will be entirely optional with the local Church authorities. It is well known that in this country the Society of Friends has been gradually depleted and brought almost within eye-shot of extinction by a too rigorous exclusion of its younger members from participation in recreations deemed entirely innocent by a large part of the American community.

It is a curious coincidence that the first success of the Russian fleet, in torpedoing a Japanese cruiser at Dalny, should coincide with the arrival of Admiral Skrydloff in the Far East, though Skrydloff has not taken charge of the Port Arthur squadron, nor is he likely to in the immediate future. For it was precisely by such an exploit that Skrydloff first gained a reputation in the Russo-Turkish war. Russia had then no Black Sea fleet at all, while Turkey had a number of fine ironclads, under a renegade Englishman, Hobart Pasha, and for the most part officered by Englishmen or Americans. The Russian army had to walk all the way to Turkey, and in doing so had to cross the Danube. But the Danube was intersected by Turkish war-ships, and it became the question of the hour how to get them out of the way. Skrydloff on the Danube and Makaroff on the Black Sea attacked the problem. They fitted out launches as torpedo-boats, and, armed with spar torpedoes, went against the Turkish ironclads. Makaroff scored the first attempt, while Skrydloff scored the first success. They who live by the sword, it is written, shall perish with the sword; and it is noteworthy that Makaroff, who was the first master of pioneer warfare, was destined to lose his life through a torpedo attack, delivered almost exactly as he himself had delivered so many against the Turks. Towards the close of the war Whitehead torpedoes began to be used by the Russians, who by that time had gained great skill in the use of the new weapon, which had appeared only sporadically in the American civil war. By reverting to the tactics which were so successful twenty-six years ago Russia has broken the long score of successes made by Japan, which has now to lament the loss of two cruisers, one torpedoed, and the other blown up by a Russian mine in Dalny Harbor. A Japanese torpedo-boat was lost a few days before, and it is certain that the Japanese previously lost two or three torpedo-boats and perhaps a destroyer in the attacks on Port Arthur, besides a

transport and two or three other vessels, sunk by the Vladivostok fleet.

Some of our rich men are pretty rich. Wealth has accumulated preposterously in this country in the last thirty years, and the figures which express our estimates of the fortunes of some of our contemporaries are so big that we are apt to think there never was such wealth before. We think Mr. Rockefeller has documents and other valuables that represent about a billion dollars, and we gasp at such an accumulation. Monte Cristo's fortune, which was a standard of large means thirty years ago, seems very small potatoes compared with the fortunes of half a hundred Americans that could easily be named. But, after all, civilization is pretty old, and there were strong-boxes in very old times. A writer in the Jewish magazine, the *Menorah*, has been looking into the Agadic history of the Talmud, and believes that there were richer men before the Christian era than there are now. We know that Crœsus was rich, and that there were huge Roman fortunes in the times of the Empire. The Talmud stories go back further still. The great corner in corn that Joseph managed was fabulously profitable. Tradition says that Joseph, acting for Pharaoh, got his hands on pretty much all the ready money there was in his day, and buried three enormous treasures, one of which was found by Korah, whose fortune, estimated according to the modern standards of value, is rated by the *Menorah* at three billion dollars. Solomon's stable, with its horses, chariots, and horsemen, is said to have represented a sum the modern equivalent of which would be three or four hundred millions, and he spent two hundred and fifty millions on his temple. Herod's temple cost more still. In Jerusalem in Roman times there were three Jews who between them felt able to face an expenditure of a hundred millions a year for twenty-one years. They offered to feed the million inhabitants of Jerusalem for that length of time rather than surrender the city. One of these Jews, Nikodemon, gave his daughter a dowry of $425,000,000. There were other Jews of whose enormous wealth the Agadic history makes record.

Of course, this turning of the shekels, talents, sheep, corn, slaves, merchandise, and buildings of two or three thousand years ago into modern money involves calculations which are largely guesswork. It is doubtless true, though, that immense fortunes were controlled for a time by individuals at various periods of the world's history. Where our modern rich men have an advantage of their early rivals is in the superior security and availability of property in our time. We imagine that Mr. Rockefeller can handle his money to much better advantage than Joseph or Nikodemon could. Joseph, it seems, had to bury his hoards. What good could buried money do him? Nikodemon is said to have stepped on silks from his house to the Beth-Hamidrash daily, and left the silks to be picked up by the poor. That only illustrates how hard put to it he was to find attractive objects for disbursement. An old-time rich man could build, and in some cases could maintain armies, but he had practically to live at home. Travel was so slow that he was debarred from the privilege of occupying half a dozen houses hundreds or even thousands of miles apart. Solomon maintained an enormous family—much larger than modern Western sentiment would condone—but there is no record that his extended domestic privileges were a comfort to him. Besides, Solomon was a government, and so was Joseph, and their wealth is not fairly comparable with that of an individual.

Vast accumulations of money always were, and always will be, interesting, but it is obviously difficult for the accumulating individual to make more than a moderate fortune minister to his personal happiness. A very big fortune determines what his occupations shall be, and on what he shall put his mind, but it has not much to do with determining how much satisfaction he shall get out of life. The great office of accumulated wealth is to promote civilization and give mankind a better chance to realize new possibilities of development. When wealth can buy new knowledge for mankind; when it can help a lower race to rise a little, a higher race to rise still more, it is doing about the only thing it can hope to do which is highly important. The more thoughtful of our very rich men seem to realize this. They give money most readily for the spread of knowledge and the discovery of new knowledge. For the relief of suffering they are less solicitous. As is natural, considering their training, they want to do things that will pay; that seem to be scientifically useful. The proportion of their incomes that our richest men spend for their own pleasure is a mere bagatelle. What they don't spend at all immediately becomes productive capital, and a large part of what they give away promotes the spread of knowledge. We certainly get more out of them than earlier societies seem to have got out of their Nikodemons.

Our new reciprocity treaty with Cuba has already had a highly stimulating effect on our trade with that island. According to figures gathered by the Department of Commerce and Labor, our imports from Cuba during the first three months of the present year were nearly double those for the same period of 1903, and our exports increased nearly twenty-five per cent. During the first quarter of 1903 our imports were $11,948,597, and our exports $5,211,063. During the first quarter of the present year our imports were $23,217,180, and our exports $6,495,149. This makes an increase in total trade of nearly seventy per cent. Our chief import is sugar. Our chief export is wheat flour; other important exports being lumber, furniture, cotton cloths, refined oil, locomotives, sewing-machines, and leather. A modest but grateful amelioration of the price of Cuban cigars is one of the immediate results of the new treaty. Several manufacturers have put out new brands of "Reciprocity" cigars, which are supposed to demonstrate what the new treaty has done for the consumer of tobacco.

Dr. Emil Reich's consideration of the American people, which is set forth and discussed at some length on the next page, includes two highly interesting views. He says that every nation in Europe owes its progress to the imperative necessity of resisting the aggressions of its immediate neighbors, and he fears that the Americans, having no immediate neighbors whose aggressions can be troublesome, will presently lose their snap, and cease to go ahead. That is one anxiety he entertains about us. The other concerns the American woman. Dr. Reich fears that she has utterly broken out of bounds, and demolished, so far as concerns herself, the normal attitude of woman to man. She is aggressively ambitious; she cannot stand being stationary; she wearies of family life. It even seemed to Dr. Reich that the contempt felt by the gentry in England for the middle class is in America felt by woman for man. And the man accepts it passively, loving his woman as the Briton loves his lord, and showing no spirit of revolt. Dr. Reich's prescription for us is that we abolish the Monroe Doctrine and get in some strong neighbors who will scrap with us in a good, lively fashion, and keep us from stagnating. He seems not at all to see, wise and thoughtful man though he is, that our case, as he diagnoses it, contains in itself all the elements of cure. What need have we of neighbors to fight with, when the American man has always close at hand an imperious, aggressive, and contemptuous rival, striving every moment to outdo him and keep him in subjection? If the American woman is such as Dr. Reich conceives her to be, the American man has certainly got his hands full if he proposes to continue in the ring. He needs the Monroe Doctrine to keep out foreign foes while he maintains a desperate struggle for equal rights under his own roof. If being involved in a life-and-death struggle makes men great, the American man, as Dr. Reich sees him, ought to be the most progressive creature on earth.

A new girl has landed in New York. She comes from England. Her name is Lady Kitty Bristol, and she appears for the first time in public in the June number of *Harper's Magazine*. She is introduced to the Americans by Mrs. Humphry Ward—a lady to whom some millions of us lately thought we owed a debt of entertainment because of the pleasure we found in knowing Lady Rose's Daughter. Lady Kitty's portrait by Mr. Sterner shows a delightful person, and is likely to seem a good likeness to readers of the first instalment of "The Marriage of William Ashe." For Lady Kitty is certainly charming, and will capture the interest of her new acquaintances from the start, and doubtless their affections later. We think she will not lack attentions even in a Presidential, World's-Fair year.

A German View of the United States

It is proverbially useful to see ourselves as others see us, provided, of course, the eyes of the onlooker have had adequate opportunities of observation, and provided, also, of course, he has sufficient intellect to turn the opportunities to account. Some of the conditions are satisfied in an article contributed to a British periodical by a learned and intelligent German, Dr. Emil Reich, LL.D. The impressions which he derived from five unbroken years of sojourn in the United States are worth noting, because, while discriminating, incisive, and sometimes unflattering, they are by no means always unsympathetic. He recognizes frankly that America has realized ideals, moral and social, which European nations have in vain endeavored to attain. Dr. Reich lived here long enough to see that many of the popular myths which in Europe are substituted for an accurate knowledge of American character are hopelessly incorrect. He picks out as the most characteristic and the most ill founded of the current legends attaching to the fictitious American type the legend of the almighty dollar. He willingly testifies that nothing could be further from the truth than the supposition accepted in Europe that in the American the five senses are concentrated in a sense for dollar-grabbing. Years of residence on this side of the Atlantic have convinced him, he says, that while America is no doubt the country where most money is earned by the individual, it is probably the country where the least value is really attributed to money. He did not fail to observe that in the United States wealth raises up no spiked railings of social distinction, while generosity is, perhaps, more general than in any other country upon earth. He recalls with pleasure that there is an atmosphere of urbanity and hospitality pervading the American community which is delightful to the stranger freshly landed from Europe; an atmosphere of kindliness far more genuine than anything of the kind to be found in the Old World. To what is the phenomenon ascribed? To this, that the social palisades within which most European households are doubly and triply intrenched are in America non-existent; there is no pride of caste which fences about the access to a house, and a stranger, provided he makes himself liked, may be asked anywhere. This, our German visitor thinks, is the rosy side of American democracy. He adds that the freedom of the American woman supplies another undoubted charm to American life, although, in his opinion, as we shall see presently, the charm is purchased at a heavy price.

Before proceeding to indicate some of the differences which, in the eyes of Dr. Reich, mark the American people, as a nation apart, we should note the emphasis with which he points out that these differences are by no means the peculiarities of a supposed Anglo-Saxon race, but rather the outcome of the peculiar, if not absolutely unique, circumstances under which the American nation and American civilization have been developed. He insists that the foreign student of the United States must, at the outset, abjure the theory of race with which all, or almost all, modern popular works on history are indissolubly blended. The truth is, he thinks, that, in many respects, the Americans are more antipathetic to England than they are to the rest of Europe. He contends that, in point of fact, America owes infinitely more to the constant influx of foreigners from Ireland or from the European mainland than to any supposititious strain of semi-Teutonic blood among its original settlers. The absence of individuality is pronounced to be due, not to the unoriginal character of the Anglo-Saxon race—for, certainly, England cannot be said to be deficient in strong personalities—but to the complete isolation in which America has found herself walled off geographically from all hostile foreign intercourse. In Dr. Reich's judgment, it would be easier for America to establish a filial relation with any other European nation than to maintain her cousinship with England. He holds, indeed, the heterodox opinion that, save for the chance identity of language, no two peoples are more absolutely and irreconcilably dissimilar than are the Americans and the English.

Has our geographical isolation been a good thing for the American people? To this question, which, usually, we answer offhand in the affirmative, Dr. Reich replies in the negative. He argues that if there is one conclusion which follows with indubitable and irresistible clearness from a survey of European history, it is that every nation in modern Europe was made what it is to-day infinitely less by its own spontaneous efforts than by the imperative necessity of resisting the hostility and aggression, military or other, of its own immediate neighbor. He avers it to be an incontrovertible postulate that every European nation has been built up by struggle and fight, and that the great countries of Europe have attained their greatness, not owing to some hypothetical racial excellence, but exclusively as the outcome of the desperate struggle for existence imposed upon them by their geopolitical position. Compose a scale, he says, of European grandeur, and see if you do not convince yourself that those peoples which have had the least fighting to do to maintain themselves stand lowest and have made least progress. We are reminded that each square rood of European soil has cost thousands, nay, hundreds of thousands, of European lives; the sweat and tears of generations have fertilized every square inch of European territory. The American Union, on the other hand, has been placed, since the War for Independence, in an entirely different position. The geopolitical necessity of fighting foreigners for every rood of land during centuries has never existed in the United States. Territories such as in Europe would have taken untold years to conquer and annex were acquired by the Union in a few months. In a word, the Union is neighborless; no enemy threatens it on the north, east, west, or south. From our German observer's view-point, this cardinal circumstance differentiates American history completely from European history; therefore the utmost caution must be used in attempting to draw any analogy from European to American, or from American to European, history. But, it may be rejoined, would not our age-long exemption from hostile neighbors, if it had any effect at all, have tended to relax our national energy: and is it not precisely for energy that we are especially conspicuous? To the inquiry, whence comes the undeniable energy characteristic of the people of the United States, Dr. Reich replies that it comes from the emigrants, their children, and their grandchildren, who, together, constitute a majority of the nation. If we leave out the negroes, he says, the majority of white men in America are unable to trace their family beyond the grandfather as coming from American stock. Such people in Europe would rank, collectively, as foreigners, and it is in this sense that Dr. Reich describes the majority of Americans as essentially foreigners, and as participating naturally in the energy and vitality characteristic of the immigrant.

We turn, lastly, to what this keen-sighted and candid student of things American has to say about the American woman. He first reminds us that in Europe, despite numerous attempts at "feminism"—a movement which, he thinks, would be more aptly termed defeminization—the woman has still kept, with more or less success and grace, her traditional position as a mother, ruler of the household, and wife. In her attitude towards man she recognizes that, from certain view-points of social economy and social ethics, he is her master; and the influence which, in turn, she wants to exercise over him she seeks to win, not by superior masterfulness, but by greater grace and womanliness. The fact is recalled that the greatest of European poets have typified her in the poetical forms of Penelope, Marguerite, Ophelia, and a few other types that attach man, physically and mentally, with an unslakable passion, by means of the most naïve and intense femininity. Dr. Reich suggests that had Homer made Ulysses permanently fall a victim to the charms of Calypso, or had Goethe made the beloved of Faust a haughty, hypereducated princess, both would have spoiled their masterpieces. Now, in the United States, our German visitor found that the normal attitude of woman to man had been essentially altered. The American woman, especially in the course of the last fifty years, has assumed, he thinks, an outward tone and an internal attitude diametrically opposed to what it is customary to admire and esteem as feminine in Europe. To her the Old World *naïveté* of Europe appears quite out of date; to her, the retiring dignity, the self-restraint, the self-effacement, of the European woman are repugnant. Her ambition is to win recognition for her bright intelligence; she likes to pass for a person of nerve and energy, ready at a moment's notice for action of every description. The excessive craving for movement has taken hold of her even more strongly than of the American man. She cannot stand being stationary. The assertion often heard by Dr. Reich when he was on this side of the Atlantic, that the Americans are attached to family life, he was entirely unable to reconcile with the multitudes of boarding-houses wherewith all American cities are infested. He came to the conclusion that it might be said, without much exaggeration, that the latent contempt felt by the gentry in England for the middle class, is, in America, felt by woman for man. In both cases may be observed the same passive acceptance, the same absence of all spirit of revolt. The brighter the American wife, the more overwhelming her conversation, the greater her anxiety to augment her knowledge, the more complacent, nay, joyous, is her submerged spouse. He is proud of her superiority, and submits thereto unquestioningly, not to say with satisfaction. Dr. Reich points out that one outcome of the overmentalization of the American woman, and of the hypergalvanization of her energy, is the breakdown of American maternity, which he regards as one of the most serious phenomena which cloud the future of the United States. He avoids a discussion of the painful problem, but directs attention to the statistics which reveal that the United States can in no wise depend hereafter for progress and prosperity upon the offspring of native American women, the girl children of immigrants being, of course, excluded from the application of that term. It is, indeed, well known that America relies for the increase of its population on a continuous inflow of alien immigration, without which the population would have become already stationary, and would, in the future, assuredly decline. It is pronounced hopeless to offer any solution of this immense and threatening problem. The reverse of comfort is suggested by the thought that, in the past, many a flourishing state has been brought to ruin by its women. This, unquestionably, was the case with the Roman Re-

public. Dr. Reich recalls that the Spartan married woman, a typical example of defeminization in the worst sense, contributed at least as much, or more, to the downfall of her country as the hetæræ to the collapse of Athens.

The therapeutic proposed by this German inspector of American symptoms is as heterodox as is his diagnosis. The only remedy that he can discern for the arrests or deflections of development incidental to our geographical position is the abjuration of the Monroe Doctrine. Reminding us once more that Europe has been made what it is by incessant conflicts, military, intellectual, religious, and economic, between neighboring states, he warns us that of such bracing and illuminating conflicts Americans, so long as they observe the Monroe Doctrine, can know next to nothing. He would persuade us, in fine, that for the United States the Monroe Doctrine plays the part that has been played for China by the Great Wall: it condemns us to isolation and stagnation. Should that wall be removed, and should we, in consequence, enter upon age-long conflicts with Europe, then and then alone, Dr. Reich assures us, would we be able, in case of success, to become a power of the first rank, or, perhaps, eventually, of unique greatness. Could paradox be carried any further?

Will Our King Cotton ever be Dethroned?

A QUESTION of tremendous economical importance to the American people is this: Will they continue to be throughout the twentieth century, what they were in the nineteenth, the principal purveyors of the world's cotton-supply? Much needed light is thrown on this question in the current number of the *North American Review* by Mr. J. Arthur Hutton, vice-chairman of the executive council of the British Cotton-Growing Association. He begins with pointing out that during recent years the production of the staple has not kept pace with the increase of consumption. It has been computed that the normal addition to the world's consumption of cotton is 400,000 bales a year. The annual output from the United States is by no means augmented in a corresponding proportion. Five years ago, from 23,000,000 acres, we produced 11,250,000 bales, yet, although the acreage last season was 25 per cent. larger, the latest government report has shown that the crop was smaller by about a million bales. Mr. Hutton, like Mr. Sully, whose article on the same subject appeared in an earlier number of the review named, believes that, for want of labor and other reasons, there is little likelihood that we shall witness in the immediate future any large increase in the bulk of our yearly product. From these data the deduction seems unavoidable that if the world's demand for cotton cloths is to go on expanding, new cotton-fields will have to be opened, outside of the United States. It is because almost all European manufacturers have accepted this deduction that, of late, earnest efforts have been made by England, Germany, France, and other countries to extend the growth of cotton in their tropical possessions. Is it probable that the experiments will be commercially successful?

Of all the movements in this direction, Mr. Hutton seems to regard with most confidence that undertaken by Great Britain. Of the fields within the British Empire which are available for the culture of the staple, the British Cotton-Growing Association, organized in 1902, seems to look with especial hope on India. There appears to be no doubt that the existing production—about three million bales of five hundred pounds each—could be largely increased. From a manufacturer's view-point, however, the quality of Indian cotton leaves at present much to be desired; for it is shorter in staple than is its American competitor, and, therefore, is of relatively little use to the Lancashire workers, who are engaged principally in spinning the finer yarns. Nevertheless, an increase in the output of even the shortest staple is desirable, provided it can be used at all; for, obviously, if it be salable to the Continental manufacturers it will relieve to just that extent the demand for higher grades. It is equally manifest that if the supply of the best Sea Island staple could be augmented the spinners who desire the same would not be forced on to the market for the next lower grade. Now experiments have led to the belief that, not only may the quantity of cotton grown in India be expanded, but the quality also might be improved by careful selection of seed and by paying more attention to the methods of cultivation. To that end the British Cotton-Growing Association has memorialized the Calcutta government—we are told that the petition has been favorably received—to establish model farms in the midst of the districts adapted to the culture of the staple, as object-lessons for the education of the Indian ryot in the most modern processes of cotton culture. Of late, also, the attention of British manufacturers has been turned once more to the West Indies, whence, more than a century ago, some 40,000 bales, or about half the total of England's requirements at that time, were annually obtained. In 1902, on the other hand, the aggregate imports into England from this source of supply had shrunk to less than a thousand bales. Now, however, large quantities of the best Sea Island seed has been distributed among the planters, and cash advances have been made to some of them, so that it is looked upon as probable that two or three years hence the West Indies and British Guiana will produce annually at least fifty thousand bales of the Sea Island staple. In Egypt proper, where Britain's protectorate seems likely to be permanent, the cotton crop is already most remunerative, while both the Khedival government and the Egyptian people are alive to the advisability of expanding the area of cotton culture. Even now the Egyptian output of the staple is about one million bales of five hundred pounds each, and it is calculated that the Nile dam at Assouan, just completed, will make it possible to put under cultivation an additional acreage of fifteen per cent. Moreover, the investigations instituted by the British Cotton-Growing Association have shown that there are very great possibilities in the Sudan; in the valley of the Middle Nile new land is being put under cotton every day; and when the projected railway from Berber to Suakim has been opened it will be practicable to cultivate cotton at a profit even so far up the river as Khartoum. We are told that quite recently a new field has been discovered at Tokar, on the Red Sea, where the land available is credited with the capacity of raising a crop as large as the present yield of all Egypt proper.

Mr. Hutton sees, therefore, every reason to hope that, within the next five years, the output from Egypt, including the Sudan, may be distended by from one million to one million five hundred thousand bales. In East Africa, south of the Sudan, the work done by cotton cultivators has passed the experimental stage, and from Nyassaland alone three thousand bales will be shipped this season. Mr. Hutton deems it not impossible that in Nyassaland no fewer than fifty thousand bales may be produced next year, and he holds it to be extremely probable that after a few years East Africa may deliver at least a million bales of first-class cotton annually. On the west coast of the Dark Continent, the spokesman of the British Cotton-Growers' Association believes that he discerns an immense field for the cultivation of the staple. He can see no reason why, before the close of the twentieth century, the whole of West Africa should not produce twenty million bales of cotton a year. In that event, it might well happen that American spinners would have to look to West Africa for a part of their raw material. It seems, at all events, to be well-nigh certain that ultimately the British Empire will be able to produce an amount of cotton of high quality, answerable to the needs of Lancashire. Does it follow that the outlook for American producers of the staple is dark, because the day may not be very distant when they will cease to be relied upon by British manufacturers? Not at all. Before that epoch shall have arrived our domestic consumption will, in all likelihood, have outrun the domestic sources of supply.

The Meaning of the Acré Dispute

A REGION in South America about ten times the size of the State of New York is being added, piece by piece, to the enormous bulk of Brazil. The process (Brazil's method of acquisition) is not without interest, and the results, so far as they can be foreseen, promise to be of greater importance to the world at large than most things that happen below the Isthmus of Panama.

Roughly defined, the region in question extends from a point very little south of the geographical centre of Colombia to a point somewhat north of the centre of Bolivia; includes the eastern portions of Ecuador and Peru; stretches from the Andes eastward along the courses of the numerous rivers that flow southeast and northeast toward the Amazon. The mountainous strip along the great Andean wall is rich in minerals, and the lowlands, with their hot-house climate, are passing rich in vegetable products. Brazil's recent movement of expansion began in the southwestern corner of this region, in the district which takes its name—Acré—from the Acré River, a tributary of the Purus. On some maps the Acré, or Aquiry, may be seen; indeed, it could not be more boldly drawn if it were as well known as the Ohio. The truth is, its sources have not yet been precisely located, but are probably on the eastern Andean slopes, near the eleventh degree of south latitude. From the point at which it becomes navigable for small steamers its course is generally northeast to its confluence with the Purus, and the latter empties into the Amazon west of the city of Manáos. Together, the Amazon, Purus, and Acré give access to a rubber-forest district the value of which depends entirely upon the use of those waterways, since its products cannot be carried profitably over the mountain barriers of the Bolivian or Peruvian sierras to the Pacific. Bolivia and Peru, as well as Brazil, laid claim to the Acré district; and in 1902 Bolivia sought to draw some profit from it by granting a concession for its exploitation to an Anglo-American syndicate. Then the real character of Brazil's designs—her policy touching all parts of the disputed hinterland—began to appear. Bolivia was not allowed to live up to her agreement with the syndicate, though she had troops and a military governor on the ground. Before a year had passed the Bolivians were expelled.

The Brazilian government, first taking possession, proceeded to negotiate, in effect dictating the terms that Bolivia could not reject without ruining one-half of her departments.

The boundary treaty between Bolivia and Brazil, signed November 17, 1903, provides for the relinquishment by the former country of all that part of the vast Acré district lying north of the Abunan, in latitude 10° 20′ S., and a line following watercourses in a southwesterly direction from that point to latitude 11° S., where, as we have said, the sources of the Acré River will probably be found. Brazil agrees to pay "an indemnity of £2,000,000 sterling, which the Republic of Bolivia accepts with the intention of using the same mainly in the construction of railways or other works tending to improve the communications and develop commerce between the two countries." Moreover, Brazil "binds herself to build on Brazilian territory . . . . a railway to extend from Santo Antonio on the Madeira River to Guajará-Mirim, on the Mamoré, with a branch road running through Villa-Murtinho . . . to Villa Bella, at the confluence of the Beni and Mamoré"—the object being to furnish an outlet to the Madeira and Amazon for Bolivian products. The surrender and the price of it could not be more explicitly stated.

Peru's turn came next—and quickly. In the treaty just mentioned Brazil "declares that she will negotiate directly with the Republic of Peru the boundary dispute about the territory comprised between the source of the Javary [about 7° south latitude] and parallel 11°, and will endeavor to reach a friendly solution of the litigation." Now, Peru and Bolivia agreed in the treaty of November 21, 1901, to submit to arbitration all controversies pending between them, and their long-standing boundary disputes are actually at the present time referred to the President of the Argentine Republic as arbitrator. But until the beginning of May, 1904, there still remained as a menace to the peace of South America the conflicting claims of Peru and Brazil to that portion of the great Amazon basin extending (between latitude 7° S. and latitude 11° S) from the eastern cordillera of the Andes to the heart of the continent; watered by the Juruá River, as well as by the Acré; a country imperial in size and of incalculable undeveloped resources, yet all of it so situated as to be absolutely dependent upon Brazil. All the lands claimed by Peru beyond the Andes are valueless unless Brazil keeps open the only outlets for their produce—the waterways through Brazilian territory to the Atlantic Ocean. Peru could not, therefore, reasonably hope to gain anything in this contention by force of arms if Brazil should prove to be unwilling to yield. Furthermore, a speedy resort to arbitration was indicated clearly enough as the proper course to be adopted by a sister republic, instructed by Bolivia's experience last year. Nevertheless, when Brazil demanded the evacuation of posts in the disputed territory held by Peru, as a condition precedent to arbitration, Peru refused compliance, saying, through her legation at Washington, that she, for her part, proposed arbitration without demanding previous conditions which should be regarded as unnecessary by governments really wishing to reach a just and pacific settlement of their differences. While diplomatic notes were being exchanged, Brazilian troops from Manãos defeated the small army of occupation maintained by Peru. Thus the Acré-Purus-Juruá district passed under Brazilian control. As for the remaining portion of the district in question, the lands between latitude 7° S. and latitude 3° N., it is evident that Ecuador and Colombia can be forced in turn to surrender their claims to the equatorial rim of the Amazonian basin. To those weaker states also the Brazilian government appears to be ready to say: "Of what use to you, or to foreigners who secure concessions from you, are the forests of rubber and cacao trees, the fine woods and medicinal plants, if we do not make it convenient for you to take them to market? To our enemy, even the gold, silver, and copper would be worth no more than sand."

These events, then, mark an important epoch in South-American history. Brazil virtually admits that it is her intention to be supreme in all the lands drained by the Amazon and its tributaries, though conceding rights of way to the inland provinces of the Pacific coast states.

The Claims of the Individual

In a forthcoming book by M. Victor Basch, entitled *Anarchistic Individualism*, the author makes a wide distinction between the ethical value of liberal individualism and anarchical individualism. The anarchical doctrine, he says, is fairly stated thus:

"Normal life does not consist in subordinating our real nature to some superior nature—some chimera invented by dreamers,—but in realizing our entire desire of life and desire of joy and exploiting our ego, with all its powers and all its possibilities, without regard for others, without preoccupation with any religious dogma, moral, civil, or penal laws. For any individual, worthy the name, there is no other law than that of revealing himself such as he is, such as he feels himself, such as he desires to be at every turn in the road of life."

M. Basch takes Nietzsche as representative of this phase of anarchical individualism; but surely Nietzsche's place in the history of modern thought can only be rightly judged when it is viewed as a definite reaction against the modern doctrine of gregariousness, the modern tendency to organization, and the death of the individual by the despotism of convention. Though superficially Nietzsche's doctrine might seem to contradict the fundamental law of all religions, that a man must lose his life to find it, in the depths, the demands he makes upon the Uebermensch are as exigent as those of the sternest religious code. The main difference is that he lays stress upon the state of achievement, rather than upon the process. No one has exacted more uncompromisingly than Nietzsche that a man should be in complete control of himself, should always deny what Plato calls the choices of the *partial* self, the momentary desires and personal gratifications. No one has exacted more uncompromisingly that every act and every thought should be a slow building up of the *whole* self, the ultimate, perfected man, strongly and joyfully one with creation.

Kropotkine, whom M. Basch places at the head of the liberal individualists, practically arrives at like conclusions, though his process is simpler and more direct. Man acts, he argues, from a principle of solidarity. In as far as he is endowed with conscience and intelligence he submits voluntarily to law. A race has a chance to live, to emerge triumphant from the struggle with inimical conditions, in as far as it obeys this instinct of solidarity. This instinct one might still formulate in the counsel: *do unto others as you would they should do unto you*. There will doubtless come a time, Kropotkine thinks, when action in reference to others, in reference to the best good of the race, will be natural to each man, and the golden rule the inevitable practice of all. When the babe creeps on all-fours we do not despair of his walking. We simply wait, and when his muscles strengthen and his imitative faculties awaken, he stands upright and walks. Even so, Kropotkine predicts a time when such feelings as envy, malice, vengeance, vanity, will be the marks of infancy and stunted growth. Once granted that all reformers aim at the same end, namely, a society made up of disinterested individuals, we come back to the differences in the means recommended to such end. That greatest of all modern historic institutions, the Roman Catholic Church, has aimed at gaining the end by reducing men to a state of unreasoning obedience to, and belief in, an institution—a hierarchical government. Protestantism placed Hebrew literature at the head in the place of Pope and Church authority. When the question of the right of personal interpretation arose, Protestantism split into innumerable schisms and sects.

Individualism, anarchical or liberal, is at heart but a much-needed protest against the doctrines of fear inculcated by certain religious teachings. As the beginning of intellectual greatness is the casting off of all fear and the bold trust in the sacredness of the individual inspiration, so the basis of all moral greatness is a casting off of fear, the untrammelled choice of virtue for virtue's sake. That action gains compelling force which is prompted by loyalty to an ideal, and the best action is weakened if it is prompted by an avoidance of danger. Only in so far as a man develops to the utmost his own ego, can he serve society. Otherwise he does what M. Macterlinck calls "giving away the oil of your lamp instead of its light." In the striving for solidarity the important fact to realize is, that no society can be nobler than the individuals that compose it. Concerted and harmonious action of many ignoble people is the worst of evils; concerted action of *all* noble people would be the millennium.

To realize one's self is the ethical doctrine of the individualists. How to accomplish such realization has been variously answered. "By the destruction of all forms and institutions," cry the anarchists. "By the supremacy of the Church and the thraldom of men's consciences," says the Catholic Church. "By modelling human life upon the life in the New Testament," says Protestantism. "By culture," reply the humanists. "By philanthropic effort," add the humanitarians. In the hue and cry of the struggle about means, half the world loses sight of the end—the foundation of a noble society of noble individuals.

Religions and philosophies fall into desuetude when their followers put their trust in easy accomplishment, when a few negative rules obeyed, and a few rites conformed to, leave a man free to relax for the rest of his time. It is the essence of the joy of living that in this war there is no discharge. The great menaces to modern society are not the candid criminals who come under the penalties of the law, but rather those who put their faith in small things, in petty conformities, hidden sloth, and wasted vigils.

It is one of the confusing elements of modern society that anarchism, socialism, science, and free thought are producing heroes and martyrs to set beside those of the definitely religious sects. There is apparently no school of thought or ethics with a monopoly of holiness. Somewhere in the mean of all these conflicting theories lies the germ of truth fitted for mortal understanding, but meantime individualism is unquestionably safe in its assertion that no society, no organization, no consolidation whatsoever is nobler than the individuals that compose it, and that the development of the individual, not by the stunting processes of fear, but by the strengthening processes of freedom, is the first duty of man.

RUSSIAN WOUNDED IN A JAPANESE RED CROSS HOSPITAL AT CHEMULPO, KOREA

The photograph shows the interior of the Japanese Red Cross Hospital at Chemulpo. The patients are some of the Russian sailors who were wounded in the first naval engagements of the war in Chemulpo Harbor. The Russians who come under the care of the Japanese Red Cross are treated with as much care as the wounded men of their own nationality

JAPANESE ARTILLERY LEAVING THE SHINAGAWA STATION, JAPAN, FOR THE FRONT

The photograph illustrates the departure of Japanese artillery from the Shinagawa Railway station, about four miles from Tokyo. The arch shown in the centre was erected by the people of Shinagawa. A recent estimate of the Japanese force now advancing on Liao-Yang places the number of men at 100,000, with 50,000 horses, and 270 guns

A Russian View of American Sympathy

By Prince Esper Oukhtomsky

Editor of the "St. Peterburgskya Wiedomosti"

OUR people in Russia cannot understand the reported pro-Japanese sympathy of Americans. In the first place, it seems incredible why the Japanese attack upon the Russian Empire should be considered as something heroic. The comparison has been made, and is still being made, of the collision of a brutal giant with a comparatively weak adversary. In fact we see the contrary. We see a powerful realm on the Pacific Ocean, with forty-five millions of energetic men, attack an opponent who cannot immediately meet them with the same arms and the same power. Thousands of miles separate the seat of war from European Russia. Obviously this fact alone makes the situation decidedly more dangerous, more fatal to Russia than to Japan, who is sending her troops over a narrow sea. They fight at home, and are able to concentrate their forces. Russia, for the present, can employ only the very smallest part of her slumbering, gigantic power. In fact, her position, as compared with that of her bold and strong adversary, is uncommonly weak and unfavorable. The question arises, Is Japan, with her glowing patriotism, at the moment fighting for her highest aims and interests, defending her proper right in Eastern Asia? The fact is that neither Manchuria nor Korea ever derived any benefit from Japanese civilization. Korea has always been laid under contribution by Japan, who waged wars against her, brought her into misfortune, to such an extent that, from high culture and abundant wealth, she has been degraded to a completely miserable country. The Chinese coast from the mediæval ages has always been attacked and terrorized by Japanese pirates. Never have they brought anything positive, or useful, to the Asiatic nations, their neighbors and tribe-related elements. Whether they will do so in the future—even if in this war Japan should be crowned by great victories—whether they will bring welfare and a real awakening to continental Eastern Asia is, at any rate, a question.

The unfortunate Ainos, in northern Japan, where a great industrious population could perform a great deal of labor, are witnesses to the fact that Japan's hunger for territory is *not* conditioned, or motived, by the unfortunate, inconsistent economical situation of that realm. The island Formosa, snatched away from China by the Japanese, is also a rich country, and only thinly populated. In spite of these facts, Japan's talent for colonization—fully unknown as yet—could not have been displayed there. What can be expected of Japan's influence on Korea and northern China *in the near future*? *Judging of* Russia's *politics in Eastern* Asia, from the American standpoint, one must frankly confess that only one reproach can be made to the Russians: We were, up to a few years ago, a lethargic, flabbily working element, hardly aware of our own great goal. Every other civilized nation, in Russia's stead, and in our position, would long ago have ripped up China, with her gigantic natural wealth, Manchuria abounding in gold, and Korea, and would have conquered Japan regardless of politics: *Manu Militari*. Had that happened, our policy in Eastern Asia would have received the applause of America—the country of developed energy. Then one could only have considered things as they were, and pro-Japanese sympathy could not have appeared—at least not more than the sympathy of a sentimental European for the natives of the Philippines. We have always been too slow, taking in hand too late the opening up of Eastern Asia, with comparatively small means, in the same patriarchal manner as at the time of the first Cossack expeditions in Western Siberia, and then turning rather unconsciously towards the Pacific Ocean. Now, the past is taking revenge upon us. Americans, the energetic elements of the Occident, the personification of the full power of the Westerner, should thoroughly appreciate the fact that a realm like Russia's of 150,000,000 population, with a rather undeveloped civilization, but rudimentarily very strong, must certainly have an exit to the open sea, irrespective of whether Japan likes or dislikes the aspect of a strategical position on our part in southern Manchuria.

To be frank, China and Korea may now attract the sympathy of the Westerner, who is carefully observing the opening up of civilization in Eastern Asia. But Japan, the rapacious and violent Japan, is not in the same position. The enthusiastic sympathy for this nation, at the present moment, appears to me to be based on a misapprehension. The West will never derive anything from an eventual victory of Japan. The so-called "open door" under Japanese management would very quickly change into a strongly fenced wall, such as the Russians never intended. America, more than many others, has profited by the building of the Manchurian railway. How is it that in this country the events are looked on so mischievously, and that the one essential thing is forgotten?—that this war, in every respect, will be a curse not only for the Japanese themselves, but also for all those entertaining relations or coming into contact with the land of the Mikado. A vanquished Japan would readily turn into a state of perfect anarchy, and fall to the lowest economical corruption, which, in the first place, would create deep hatred of the national elements there against the resident Westerner, against the missionaries, and against all business men.

Vice versa, the momentarily triumphant Japan would at once elevate herself to a still bolder and perfectly inconsistent chauvinism, as she did after her victories over China.

What good can these results bring to the West?

The powers would have been compelled, at any rate, to teach the Japanese a lesson, in due course of time. If the war could have been avoided, by the powers telling and demonstrating to the Japanese beforehand, that such a war shall not and should not be tolerated, the bloody pages of latest history might not have been turned so rapidly before our eyes.

Russia is a land of the future, full of entirely unexplored powers. That nobody denies her. She is, so to speak, the pendant of America in the Old World.

We can understand the inimical feelings of England, the feelings of Germany (whose situation in central Europe is entirely too confined) towards Russia. In this instance, in a certain antipathic sentiment against us, we find causes and motives based on historical traditions.

But why a sound population like that of the States of North America should seriously view the present events in Eastern Asia not from the practical, but only from a highly theoretical standpoint, is not clear. When the Americans are discussing the dark sides of the social life in Russia and criticise sharply, we Russians, who do not close our eyes to many of the cancerous affections of our own country, know better than a Westerner may be able to judge how correctly such a criticism very often sounds; on the other hand, we Europeans might at times point out very strongly negative sides in the public life of America. Such a criticism of respective conditions is harmless, and does not carry any political weight. But if all of a sudden, without any consideration of the real value of conditions in Eastern Asia, pro-Japanese sympathy inimical to Russia is brought to light, that can only serve to loosen the bond of good relations between the two countries. Instead of learning how to know and appreciate one another, and instead of marching hand in hand toward the attainment of certain goals of both gigantic powers, in due course of time we shall arrive at the end, of speaking a language equally unintelligible to both.

Cui prodest?

The Fate of a Spy in Korea

By Robert Dunn

CHEMULPO, KOREA, *April 12, 1904.*

THE first spy caught by Japan in this war met his death on March 23 at Pyeng-Yang, on the plain just outside the north gate of the city, below the verandas of the missionaries' houses. Pyeng-Yang is the ancient Korean capital. Now it is Japan's "secondary base" in the advance to the Yalu—a vast warren of mud hovels, thatched roofs, sickening ditches, and tall beardless men wearing white robes and long impotent faces. Kim Sachong, the spy, was a young Korean. Before the war he built skids in the snows of the Yalu forests, in a lumber camp ceded to Russia by the Korean Emperor just after his mother was soaked in kerosene and burned by the Japs at Seoul in 1895, and H. I. M. was bundled out of the palace at night and hidden in the Czar's legation. That lumber camp, with its Cossack guard, was one of the straws that broke the back of Japanese patience. Maybe the death of Kim helped to even the score.

Kim's home was in Wonsan, on the east coast of the peninsula. I should like to say that he had a wife and child there, and that he thought of their poverty when the captain of the Cossack guard, hearing of the humiliation at Chemulpo, quartered his men in the sawmill, shipped the Chinese foreman to Liao-Yang, on the Manchurian Railway, the Koreans to their homes, and pressed two paper rubles into Kim's left hand. But I know he thought of nothing but the idleness the rubles would buy, added to the larger bribe promised when he should return from Anju in the Jap's country to the south with news of how many troops were there and where these troops were going.

Kim was fitted for this spy's work, thought the Cossacks. They could understand him. Two summers' fishing in Possiet Bay, south of Vladivostok, had taught him Russian. But, as it turned out, Kim was misjudged, though the paper rubles, which were enough pay to Kim for eternity, immediately caused his undoing.

Rank after rank of the little yellow fighters of the second division trudging north on the Anju road for five days faced the spy hurrying south. They didn't suspect him. His horse-hair cylinder hat ribboned under his chin, the oval Korean features, which are stolid in the face of shame or destruction, the small chin covered with black fuzz, made him seem to the Japs only one of the many farmers plundered and enslaved by their com-

rades ahead, hurrying blindly for mercy to the prefect, who had often robbed him too. Bent under back packs of heavy boots and scarlet blankets, beating their lean ponies, they crowded him from the road. He had to slosh through the snow melting on the rice-fields.

Thus he crossed the Chung Chun River, and entered Anju city, awed and tumultuous with soldiers of "the accursed nation," as the Koreans say. He found a native inn. Boiling on a brazier in the courtyard was a flayed dog's head, and two gaunt bullocks carrying pine-brush. Under the four-sided toy porch squatted a fellow countryman, eating. Kim spoke with him, complaining of the Jap's marauding, and a girl child in soiled green silk hooked the dog's head from the pot to pour him soup. The stranger's accent seemed queer to Kim. At Wonsan people spoke more softly, and at Wiju they did not clip their final vowels so. Surely the stranger was from the south, thought Kim.

At last he asked how many troops had landed at Chinampo. He asked the names of their leaders. The stranger answered willingly in figures and tongue-twisting Japanese names.

"Is your home in Fusan?" said Kim.

"No; but coming here I pass through Fusan," he smiled, reaching for the oil-cloth purse under his tunic. "I go to Wiju tonight, and must pay." The wizened old innkeeper was standing by them.

"Let me pay all," bowed Kim, who had risen; and he drew one of the Cossack's rubles from his pocket.

The old man made a sound in his throat. The stranger for a time eyed the bullocks, who had sunk to their knees.

"My home is in Fusan, I should say—" at length said the stranger, quickly, and paused.

"So deska!" said Kim (meaning, in Japan, "Indeed!"), in earnest of his Japanese knowledge and sympathies. "And how near is the new railroad from Fusan now to Seoul?" he asked, wisely.

"Not very far," said the stranger, vaguely. Before, he had been communicative.

"Are the troops advancing fast or slowly toward Anju?" Kim persisted.

"By what roads? How many are there in a body?"

"As many troops as you please to think," said the stranger, amiably, untying the hatband under his chin. "Perhaps more than you could imagine camped under here," and raising a hand to his head, he removed his topknot, as you take the cover from a teabowl—such a large, neat knot, Kim had thought before, looking through the transparent hat-crown!

Underneath was the clipped, bulletlike Jap head.

"I, too, am a spy," said the stranger, his shoulders trembling in the manner of a Jap under excitement, "but I am no traitor to my race!"

He seized Kim by both arms. He picked an ox-bone from the courtyard filth, and he beat Kim. Kim seemed rather to have expected it. But he did not even whimper. He only cowered, bent into an oval white heap. The old man had fled in the darkness, leaving the ruble.

What Kim said that night when haled before General Sasaki I do not know. The general would not tell—probably he thinks that if printed in America it might gratify the Cossack captain. That is the Oriental way in this war. But the old innkeeper tells his story well.

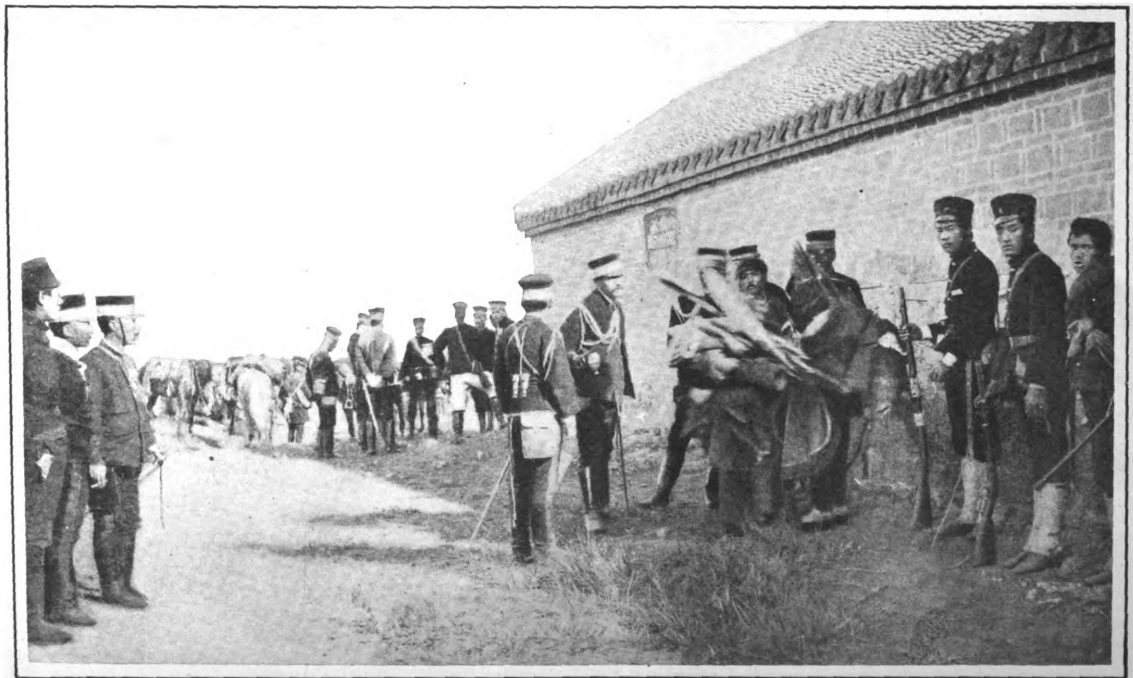
At any rate, two days later Kim reached Ping-Yang between two Jap soldiers. He slept that night at headquarters, which are in the former Korean prefect's office near the ruined palace—there in the compound with the stone fish-posts before it. Toward ten o'clock the next day you could have heard the bullock drivers around the north gate saying quietly as they met, "The Korean spy will be shot at noon."

Hardly forty loiterers followed the half-company of soldiers, led by a thin little Jap in a major's regimentals, with Kim Sachong, his hands chained behind him, but still in white and his cylinder hat, in their midst.

They passed through the wooden portals of the tiled gate, which have rotted through their studded covering of sheet-iron, and halted by the old pine in the open, half way to the house of Mr. Moffat, the missionary. The two soldiers who led Kim kept straight on when the company cleared a circle about the tree, and deftly bound him to it, face outwards, with a long grass rope wound twice across the chest, three times about the legs above the knees.

A man in mourning—that is, in yellow grass cloth, and holding before him a little white banner to hide his face—stepped out into the open space before the tree. Close to, a blue-robed Chinaman pushed his way smiling through the soldiery. A tall man in foreign clothes jumped off the veranda of Mr. Moffat's house, and approached the execution.

The Korean in mourning stepped on a little mound to the right, perhaps a forgotten grave, and carefully removing his huge basket hat, which he laid on the ground before him, began what seemed to be a passionless oration for mercy. The Chinaman kept on smiling. Soon he said the orator was pointing out how wicked Kim had been in trying to betray the secrets of Japan, since it was the duty of all Koreans to support their conquerors. The Chinaman added that the Japanese major had asked the mourning gentleman to make the speech, promising pay for it.



Then the little major stepped out on the mound, the orator having retired. He spoke very low and briefly, but facing Kim. The Chinaman said, quite seriously, that the officer was making a statement of the spy's offence. The major ended, paused, waited a moment, gave a staccato order, and followed the grass-cloth mourner into the crowd.

Four soldiers stepped out from it, and two more from another part of the circle advanced and blindfolded Kim with a coarse cotton cloth. As far as any one of the three were concerned in that, Kim's face might have been made of putty.

The major, without showing himself, gave another order. Without looking at the others, the tallest of the group of four soldiers stepped forward from his companions and raised his rifle, aiming at the bandage.

At the third order he shot from about fifteen yards.

Nothing would have been unpleasant had it not been for the white, watching Koreans. They had pushed forward to form a circle within the soldiers. When Kim was blindfolded, all squatted at once, expectantly, and lit their long pipes. At the shot they half-raised themselves on their haunches, opening their mouths wide. When Kim's head fell to one side, all of them smiled broadly and a few laughed outright.

A Spy Captured by Japanese Troops in Korea

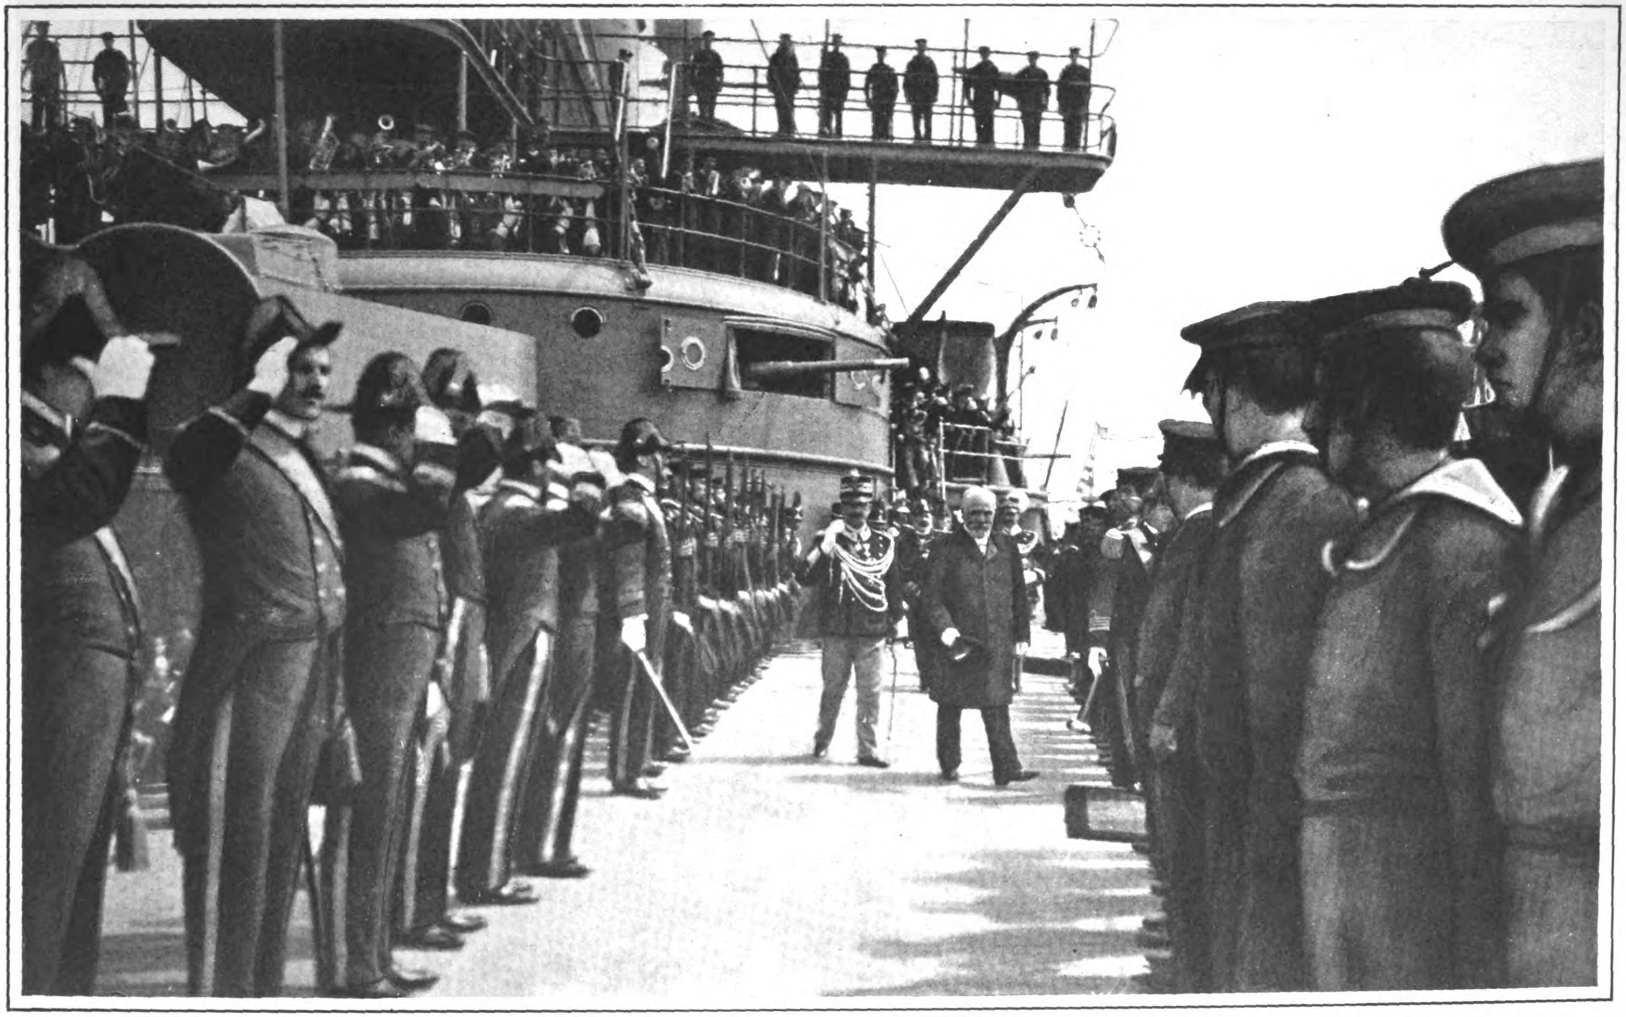
"Punch"

By Sydney Brooks

LONDON, *May 11, 1904.*



TO say a good word for *Punch*, and in an American journal, almost passes the permission of boldness. Ever since there was a *Punch* Americans have certainly laughed—but at it, not with it. *Punch* is quite one of the oldest and cruellest jests that America has against England. I can as easily imagine a movement for bringing the United States once more under the British Crown as I can conceive a company of Americans regularly subscribing to, reading, and enjoying *Punch*. Nothing makes an Englishman in America more indignant than to hear the way in which his great comic journal is spoken of. Talk about the King in a free and easy republican fashion and he will merely smile. Let him know what every right-minded American thinks about cricket, and the British accent, and Mr. Brodrick, and General Buller, and the House of Lords, and he may marvel, but he will not grow angry. But attack *Punch* and he at once springs full-armed to its defence, with the air of a priest protecting his altar from the hands of sacrilege. The fact that it rouses such pugnacious enthusiasm shows, at any rate, that it suits England. The extent of its entire harmony with the national taste and temperament can, indeed, hardly be realized unless you know England well. From the middle classes up to the summit of the social mountain every one reads *Punch*. Go into an average household and you will be surprised if it does not contain at least half a dozen bound volumes of *Punch*. The reading of *Punch* on Wednesday is as much a part of the discipline of English life as church-going. Boys and girls, asking on rainy days what they shall do-o-o, find the back numbers of *Punch* thrust into their hands. To come across an urchin of twelve who knows every picture in *Punch* from the beginning and can repeat, without in the least understanding, the letter-press beneath it, is nothing out of common. *Punch* has a place in every well-organized system of domestic education in England. From its pages juvenile patriots glean the history of latter-day England, much as Marlborough confessed that he owed what little knowledge of the past he had to Shakespeare. And the habit lasts. An Englishman going on a railroad journey instinctively buys *Punch* at the bookstall for his travelling companion. The greatest club nuisance in the United Kingdom is the man who goes to sleep clutching the latest issue of *Punch*. If you are waiting for a shave, ten to one it is *Punch* that the barber offers you to fill up the interval. A septuagenarian wishing to refresh some early memories turns at once to *Punch*. You will hear *Punch* quoted as an authority on manners and fashions. For the provinces it serves in some sort the purpose of an illustrated guide to London social life. To be on the staff of *Punch* is to be invested with an almost embarrassing attractiveness and interest. When a *Punch* man asks for the mustard the table roars. There is no other journal in England for which people feel so intimate and peculiar an affection. It is a national institution in far more senses than is the *Times*. When Du Maurier in *Trilby* spoke of *Punch* as lying on the table in a lady's drawing-room, Americans possibly thought he was going out of his way to advertise the journal he served so brilliantly. Not at all. That is precisely where *Punch* would be; and to mention it was but to throw in a perfectly natural touch of "local color." It was not a tribute to *Punch*, but for English readers, at any rate, it helped to mark the character of the house that Du Maurier was describing. It was just as symptomatic in its way as if he had said that a Blue-book was on the drawing-room table.

What sort of a hold *Punch* has on England was shown a year or two ago when, on the retirement of Sir John Tenniel, the Prime Minister of England, the American ambassador, the president of the Royal Academy, the leading lawyers, politicians, artists, journalists, actors, and authors of the country, to the number of over two hundred, came together to give him a farewell dinner. I question whether such a company ever before assembled to do honor to a political cartoonist or ever will again. It was, of course, much more for his work on *Punch* than even for his masterly illustrations to *Alice in Wonderland* and *Alice Through the Looking-Glass* that Tenniel was acclaimed. For thirty-six years hardly an issue of *Punch* had appeared in which Tenniel's familiar signature was not to be found at the left-hand corner of the cartoon of the week. That was an immense record of hard work if of nothing else. In Sir John Tenniel's case it was also a record of good work. There are in New York alone several cartoonists who constantly reach a higher point in humor, power, and draughtsmanship than Tenniel ever attained. But looking over the seventy-two half-yearly volumes which contain Tenniel's work one finds that his standard, if he rarely rose above it and sometimes fell calamitously below it, was of a high character and wonderfully maintained. He had his obvious, his unmistakable, faults. His composition was not infrequently poor; his style, somewhat statuesque at the best, was on occasion nothing less than wooden; and there were men, like Mr. Balfour and Mr. Chamberlain, whose features he never could catch. His humor, like his pathos and his meaning, was large and unshaded. His whole case was got up in good plain black and white. So much was evident on the surface, and on the casual reader of *Punch* might have acted merely as a deterrent. But to the student—and every one who wants to understand England should be a student of *Punch*—Tenniel's work took on a charm that even its manifest defects could not destroy. It was, for one thing, always pointed and apt. Sir John always contrived to produce something that hit the nail precisely on the head and gave expression to what the average Englishman was thinking at the moment. Also it was work of unfailing dignity. Tenniel, as Mr. Balfour said, was "a great artist and a great gentleman." He hit hard, but never malignantly, and he never overstepped the line that separates caricature from travesty. Rancor was just as absent from his cartoons as indecisiveness. What he had to say he said boldly and clearly, but with a scrupulous regard for the decencies of combat. I think one may find in the quality of his work a clue to the secret of *Punch's* political success. *Punch* has never gone in for extremes. It has always preserved and enforced the common-sense view of public events that partisanship distorts. It has opinions and a policy, and while it never hides them, it never antagonizes by pressing them too heatedly. Ruskin long ago declared that of all the papers in England *Punch* best represented the average opinion of the country. It still does so, and it is precisely because it does so that it possesses a real historical value. Turn over the back numbers of *Punch* and look at the weekly cartoon, and you will have a picture of the sane, second thoughts of the nation on the leading event of the moment. It is a calm, good-humored, pointed pictorial summary of the world's history.

The mental agility that goes to the making of a cartoonist is not an English quality, nor have cartoons ever had anything like their proper political influence in England. It is really only since the fiscal question came up that the London daily papers—or some of them, at any rate—have taken to publishing cartoons as a regular feature. The experiment has not so far proved a happy one, and has really only served to make clear the dearth of talent. Outside of *Punch* there is only one political draughtsman of the very first rank, and he is "F. C. G.," the unsurpassable caricaturist for the *Westminster Gazette*, and perhaps the greatest asset that the Liberal party and the free-trade cause possess. The proprietor of the most widely read protectionist journal in the kingdom was assuring me the other day that he had searched the entire country to discover, if possible, a cartoonist who might in some measure counteract "F. C. G."—and without success. The day of the brush and pencil in English journalism is still to come. *Punch* is practically the only paper that provides them with an opening, and every black-and-white man who has the knack of caricature aspires in consequence to a post on *Punch*. One ought, therefore, to remember, in trying to account for *Punch's* unchallenged supremacy in England, that it has practically a monopoly of what little gift for political cartoons exists in the kingdom, and that its age and fame and the impossibility—proved a score of times over—of competing with it make its monopoly an assured thing. If Mr. W. A. Rogers ever tires of America, comes over here, joins the staff of *Punch*, and turns out a weekly cartoon for the next thirty years or so, he may be sure of an ample reward—a knighthood, at the very least, and a dinner, presided over by the Prime Minister, when he retires. I don't know whether the prospect will tempt him, but it is certain that it tempts a good many Englishmen.

And then, again, outside the realm of political and Parliamentary cartoons and caricatures, *Punch* makes a very successful appeal by its entire wholesomeness and its sense of balance. I said just now that Sir John Tenniel always showed a scrupulous regard for the decencies of combat. That has been the *Punch* attitude toward everything right along, and its inflexible maintenance of it more than offsets (for Englishmen) its deficiencies in wit and liveliness. Pick up a single issue of *Life* and a single issue of *Punch*, and you will probably prefer the former—it will at least make you laugh. But compare half a dozen issues of the two journals and you will find your inclination veering towards *Punch*. And when it comes to whole volumes, inclination, in nine cases out of ten, will be definitely fixed on the side of the English production. After all, *Punch* is the one professedly humorous paper in the world, the bound volumes of which can be looked into not only without weariness, but with positive pleasure. To say that is to say a good deal. The great fault of the American comic papers is that they are not serious enough. They are always making jokes. You laugh yourself into a fit of profound depression while reading them. They are too much in the air, too trivial, too grotesque, too local, and they rarely know when to leave off. *Punch* evades these mistakes because it is really not a humorous, but a critical journal, and its criticism is the easy, armchair, equable criticism of a man of the world on human nature and the politics, fashions, fads, and events of the day, mixed up with a not too irritating strain of benevolent optimism. The American comic paper is like the professional funny man at a party. You listen and laugh for a while and then you want to murder him. The man you are content to sit at the feet of for hours at a stretch is that quiet, shrewd-looking old gentleman with the gray hair, who has common sense and experience, and never cuts capers or tries to force the pace, but keeps you placidly chuckling as he holds forth—in other words, our old friend *Punch*. When you come to think of it, no journal anywhere has ever been able to boast of such names on its staff—Thackeray, Hood, Jerrold, à Beckett, Owen Seaman, Leech, Keane, Burnand, Phil May, Du Maurier, Tenniel, Furniss, Anstey; it is an incomparable list, and I, for one, am ready to back it against the world.

PRESIDENT LOUBET'S VISIT TO ITALY—ON BOARD THE "REGINA MARGHERITA" WITH KING VICTOR EMANUEL DURING THE REVIEW AT NAPLES

President Loubet's recent visit to the King of Italy aroused wide attention in diplomatic circles. The municipality of Rome gave him a reception, which was attended by the King and Queen, and there was a gala performance at the Argentino Theatre. The photograph shows President Loubet and the King of Italy on board the "Regina Margherita" during a review at Naples

Books and Bookmen

By James MacArthur

THERE is a picture you will often meet with on the nursery walls that is deeply significant and symbolic of the eternal child. A little round-faced cherub, with eyes that know no fear, is gently leading an incongruous company of animals up out of the wilderness, his fair hair brushing the mane of a lion and a lamb gambolling at his feet. The picture is an allegory of universal childhood, but it serves our present purpose in pointing the moral—if, indeed, the author had any moral in view—of *Bruvver Jim's Baby*. The story goes deeper than any moral, and is instinct with a truth that is fundamental and rooted in human nature. "A little child shall lead them." When Bruvver Jim's Baby was carried into the rough mining-camp of Borealis, "with her threescore men and one decent woman," a huddled village lying pitifully insignificant in one of the beautiful valleys of the vast State of Nevada, it was an advent that worked like a miracle and touched the lives of men who had forgotten God and civilization with a sense of the smile, the care, the yearning of the ever All-Pitiful. Long lanky Jim—"old If-only Jim"—went out from Borealis to fetch home a pup, and, as Saul went forth to find his father's asses and returned with a kingdom, so Jim not only came back with the dog, but freighted also with a little foundling that began a new and eventful reign in the future history of meagre, unknown, unimportant Borealis. "I'll have to take you straight down to the boys!" said Jim next morning. The little fellow looked up appealingly, and the words uttered in baby accents were the first he had spoken. "No—body—wants—me. No—body—wants—*me*—anywhere." It was the first stroke. "What's that?" said the miner, staring at the quaint little pilgrim in awe. "Nobody wants you, little boy? What's the matter with me and the pup?" And taking the tiny chap up in his arms he held him snugly to his rough, old heart and rocked back and forth in a tumult of feeling. "Little pard, you bet me and Tintoretto want you, right here." That was how Bruvver Jim's Baby came to camp in Borealis.

Philip Verrill Mighels
Author of "Bruvver Jim's Baby"

The story of *Bruvver Jim's Baby* as it unfolds itself with the utmost simplicity, with evident sincerity and freshness of feeling, told for the most part in the quaint, racy, biting speech of the miners, riotously picturesque in its rude native imagery, uproariously funny, yet with an undercurrent of deep feeling, all the more searching for its reserve, that touches the tears of things, makes no bid for novelty; there is nothing bizarre, nothing forced about it; it is an old story appealing to the "funderments of motherhood" that are old as the Mother Earth that has borne us. But as a well-known critic said to me the other day, there are no such things as hackneyed plots; the last story will be as fresh and fraught with human interest as the first as long as there are men and women and children to play anew with the elements of life and to discover the world for themselves. Every generation becomes a pioneer in turn and makes a fresh trial of life. It is this truth that illumines the genius of the poet and artist; what Carlyle called the sense of wonder with which a child opens its eyes on the world. This it is which distinguishes *Bruvver Jim's Baby*, and makes an old story appear as if told for the first time. Mr. Mighels has raised *Bruvver Jim's Baby* on its native soil; he has spoken of what he has seen and heard with the true vision of the realist, with sympathy and imagination, and the proof that he is an artist and a poet lies in the fact that we forget the author in the story, and become wholly absorbed in the drama of its incidents. He has written straight from the heart; little wonder, therefore, that his story goes straight to the heart.

So far I have spoken of the simple and certain appeal of *Bruvver Jim's Baby* to human sympathy. But strong and sure as is the author's power of pathos, I believe that it is through his fresh and spontaneous humor that his book is going to win its way with the greatest number. A book that will make you laugh and cry in the same sentence is rich in humanity, and, in the long run, it is the laughter that counts, for without its sunlight no rainbow would shine through the tears. A writer's individuality is most strikingly expressed through his humorous point of view, and the quality of humor is about the rarest thing to be met with in literature. Mr. Mighels is a genuine humorist. It is not only the humorous things his people say, the fresh, quaint utterance of their language, the rude gift of an original wit and byplay of words; his humor colors his view of life and pervades the atmosphere in which his characters breathe. There is a large patience and charity in his handling of human nature wherever it shows the kindling spark of loving kindness or innate goodness. And akin to this humor is the deep insight and intimate sympathy which accompany it. Old Jim is an apt illustration of this when after routing Miss Doc Dennihan from his cabin he drawled, "It does take some people an awful long time to learn not to meddle with the divine order of things." The humor and insight of this remark are significant of Mr. Mighels's general attitude toward life. Since Bret Harte we have had no humorist who has captured for us the humor of the rough Western miner with such native force and vigor. But there is something more than the crude saliency of Bret Harte's humor and the spaciousness of the great out of doors about Mr. Mighels; one is reminded oftentimes of the good Jean Paul Richter—a chastened and Americanized Jean Paul, to be sure. Other readers will, no doubt, fasten on the quaint, uncouth, epigrammatic sayings that are scattered through the pages of *Bruvver Jim's Baby*, and which crystallize in a pithy sentence the piercing humor and insight that flash a new picture full of fresh meaning on the white screen of life. These sayings are as pungent and original as any to be found in *David Harum* or *Mrs. Wiggs of the Cabbage Patch*, and as racy of the soil. I can imagine that such sayings as these will soon be passing from mouth to mouth, and in time becoming general property: "All dogs look alike to a flea"; "It's an awful dirty cloth that you can't put a little more blackness on"; "Watches that don't keep perfect time are scarcer than wimmin who tell their age on the square"; "It's a poor shirt that won't work both ways"; "Angel's visits are comin' fewer and fewer in a box every day"; and there is old "If-only" Jim's motto, "Hurry is an awful waste of time that a feller could go easy in." But, to my mind, Mr. Mighels's humor is at its best when it is simply the medium through which his imagination plays with character, and out of the grotesque and awry circumstances of life weaves a plan that is in tune with the Infinite and moves toward some divine event.

I have indicated that *Bruvver Jim's Baby* is in its way a parable of the picture in which a little child is seen leading a motley procession of animals, and making the wilderness about him blossom as the rose. The way in which Bruvver Jim's Baby tames the wild beasts in Borealis and transforms the haunts of gamblers and outlaws into a law-abiding, peace-loving community is simply and naturally developed, and shows that Providence does not always perform its most effectual work in supernatural ways. One gets at the secret of it when Keno declares, "I 'ain't heard a baby cry fer six or seven years." The funniest chapters in the book are perhaps those in which the camp meets in the blacksmith's shop on Sunday to celebrate Little Skeezucks's arrival, as the most pathetic are those in which the poor little mite's illness balks the well-laid plans of the miners to give him a Santa Claus surprise. The same exuberant fancy that led Jim to call his dog "Tintoretto," had inspired him to name the baby "Aborigineezer," but the endearing epithet "Little Skeezucks" stuck to him, when he wasn't referred to as "Bruvver Jim's Baby." Dear, rough old "If-only" Jim, with the tenderness of a mother in his care of the quaint little "shaver!" The blacksmith had suggested a Sunday-school programme in their quandary as to how they should go about having "church," which is "just mostly catechism," Jim imparted sagely—"that is, where you ask a lot of questions that only the children can answer." "I know," responded the blacksmith. "Little Skeezucks, who made you? Who is it makes everything? Who makes all the lovely things in the world?" Shyly the tiny man leaned back on the arm he felt he knew, and gravely, to the utter astonishment of the big, rough men, in his sweet baby utterance, he said,

"Bruv-ver—Jim."

THE CLUB OF QUEER TRADES

The Awful Reason of the Vicar's Visit

by

G·K·CHESTERTON

Part I.

THE revolt of Matter against Man (which I believe to exist) has now been reduced to a singular condition. It is the small things rather than the large things which make war against us, and, I may add, beat us. The bones of the last mammoth have long ago decayed, a mighty wreck; the tempests no longer devour our navies, nor the mountains with hearts of fire heap ruin over our cities. But we are engaged in a bitter and eternal war with small things; chiefly with microbes and with studs. The stud with which I was engaged (on fierce and equal terms) as I made the above reflections was one which I was trying to introduce into my shirt collar when a loud knock came at the door.

My first thought was as to whether Basil Grycc had called to fetch me. He and I were to turn up at the same dinner-party (for which I was in the act of dressing), and it might be that he had taken it into his head to come my way, though we had arranged to go separately. It was a small and confidential affair at the table of a good but unconventional political lady, an old friend of his. She had asked us both to meet a third guest, a Captain Grant, who had made something of a name and was an authority on chimpanzees. As Basil was an old friend of the hostess and I had never seen her, I felt that it was quite possible that he (with his unusual social sagacity) might have decided to take me along in order to break the ice. The theory, like all my theories, was complete; but as a fact it was not Basil.

I was handed a visiting-card inscribed, "Rev. Ellis Shorter," and underneath was written in pencil, but in a hand in which even hurry could not conceal a depressing and gentlemanly excellence, "Asking the favor of a few moments' conversation on a most urgent matter."

I had already subdued the stud, and throwing on my dress-coat and waistcoat, hurried into the drawing-room. He rose at my entrance, flapping like a seal; I can use no other description. He flapped a plaid shawl over his left arm; he flapped a pair of pathetic black gloves; he flapped his clothes; I may say, without exaggeration, that he flapped his eyelids as he rose. He was a bald-browed, white-haired, white-whiskered old clergyman, of a flappy and floppy type. He said:

"I am so sorry. I am so very sorry. I am so extremely sorry. I come—I can only say—I can only say in my defence, that I come—upon an important matter. Pray forgive me."

I told him I forgave perfectly and waited.

"What I have to say," he said, brokenly, "is so dreadful . . . it is so dreadful—I have lived a quiet life."

I was burning to get away, for it was already doubtful if I should be in time for dinner. But there was something about the old man's honest air of bitterness that seemed to open to me the possibilities of life larger and more tragic than my own.

I said gently, "Pray go on."

Nevertheless, the old gentleman, being a gentleman as well as old, noticed my secret impatience, and seemed still more unmanned.

"I'm so sorry," he said, weakly. "I wouldn't have come—but for—your friend Major Brown recommended me to come here."

"Major Brown!" I said, with some interest.

"Yes," said the Rev. Mr. Shorter, feverishly flapping his plaid shawl about. "He told me you helped him in a great difficulty—and my difficulty! Oh, my dear sir, it's a matter of life and death."

I rose abruptly, in an acute perplexity. "Will it take long, Mr. Shorter?" I asked. "I have to go out to dinner almost at once."

He rose also, trembling from head to foot, and yet somehow, with all his moral palsy, he rose to the dignity of his age and his office.

"I have no right, Mr. Swinburne—I have no right at all," he said. "If you have to go out to dinner, you have, of course—a perfect right—of course, a perfect right. But when you come back—a man will be dead."

And he sat down, quaking like a jelly.

The triviality of the dinner had been in those two minutes dwarfed and drowned in my mind. I did not want to go and see a political widow and a captain who collected apes; I wanted to hear what had brought this dear doddering old vicar into relation with immediate perils.

"Will you have a cigar?" I said.

"No, thank you," he said, with indescribable embarrassment, as if not smoking cigars was a social disgrace.

"A glass of wine?" I said.

"No, thank you; no, thank you; not just now," he repeated with that hysterical eagerness with which people who do not drink at all often try to convey that on any other night of the week they would sit up all night drinking rum-punch. "Not just now, thank you."

"Nothing else I can get for you?" I said, feeling genuinely sorry for the well-mannered old donkey. "A cup of tea—"

"I saw a struggle in his eye and I conquered. When the cup of tea came he drank it like a dipsomaniac gulping brandy. Then he fell back and said:

"I have had such a time, Mr. Swinburne. I am not used to these excitements. As vicar of Chuntsey, in Essex," he threw this in with an indescribable airiness of vanity, "I have never known such things happen."

"What things happen?" I asked.

He straightened himself with sudden dignity.

"As vicar of Chuntsey, in Essex," he said, "I have never been forcibly dressed up as an old woman and made to take part in a crime in the character of an old woman. Never once. My experience may be small. It may be insufficient. But it has never occurred to me before."

"I have never heard of it," I said, "as among the duties of a clergyman. But I am not well up in church matters. Excuse me if perhaps I failed to follow you correctly. Dressed up—as what?"

"As an old woman," said the vicar, solemnly, "as an old woman."

I thought in my heart that it required no great transformation to make an old woman of him, but the thing was evidently more tragic than comic, and I said, respectfully,

"May I ask how it occurred?"

"I will begin at the beginning," said Mr. Shorter, "and I will tell my story with the utmost possible precision. At seventeen minutes past eleven this morning I left the vicarage to keep certain appointments and pay certain visits in the village. My first visit was to Mr. Jervis, the treasurer of our League of Christian Amusements, with whom I concluded some business touching the claim made by Parkes the gardener in the matter of the rolling of our tennis lawn. I then visited Mrs. Arnett, a very earnest church woman, but permanently bedridden. She is the author of several small works of devotion, and of a book of verse entitled (unless my memory misleads me) 'Eglantine!'"

He uttered all this not only with deliberation, but with something that can only be called, by a contradictory phrase, eager deliberation. He had, I think, a vague memory in his head of the detectives in the detective stories who always sternly require that nothing should be kept back.

"I then proceeded," he went on with the same maddening conscientiousness of manner, "to Mr. Carr (not Mr. James Carr, of course. Mr. Robert Carr), who is temporarily assisting our organist, and having consulted with him (on the subject of a choir-boy who is accused, I cannot as yet say whether justly or not, of cutting holes in the organ-pipes) I finally dropped in upon a Dorcas meeting at the house of Miss Brett. The Dorcas meetings are usually held at the vicarage, but my wife being unwell, Miss Brett, a new-comer in our village, but very active in church work, had very kindly consented to hold them. The Dorcas society is entirely under my wife's managament, as a rule, and except for Miss Brett, who, as I say, is very active, I scarcely know any

members of it. I had, however, promised to drop in on them, and I did so.

"When I arrived there were only four other maiden ladies with Miss Brett, but they were sewing very busily. It is very difficult, of course, for any person, however strongly impressed with the necessity in these matters of full and exact exposition of the facts, to remember and repeat the actual details of a conversation, particularly a conversation which (though inspired with a most worthy and admirable zeal for good work) was one which did not greatly impress the hearer's mind at the time, and was, in fact—er—mostly about socks. I can, however, remember distinctly that one of the spinster ladies (she was a thin person with a woollen shawl, who appeared to feel the cold, and I am almost sure she was introduced to me as Miss James) remarked that the weather was very changeable. Miss Brett then offered me a cup of tea, which I accepted, I cannot recall in what words. Miss Brett is a short and stout lady with white hair, and really bears a remarkable resemblance (I trust I say it with all reverence) to the late great and good Victoria, our queen. The only other figure in the group that caught my attention was a Miss Mowbray, a small and neat lady of aristocratic manners, silver hair, and a high voice and color. She was the most emphatic member of the party; and her views on the subject of pinafores, though expressed with a natural deference to myself, were in themselves strong and advanced. Besides her (although all five ladies were dressed simply in black) it could not be denied that the others looked in some way what you men of the world would call dowdy.

"After about ten minutes' conversation I rose to go, and as I did so I heard something which—I cannot describe it—something which seemed to—but I really cannot describe it."

"What did you hear?" I asked, with some impatience.

"I heard," said the vicar, solemnly, "I heard Miss Mowbray (the lady with the silver hair) say to Miss James (the lady with the woollen shawl) the following extraordinary words. I committed them to memory on the spot, and as soon as circumstances set me free to do so, I noted them down on a piece of paper. I believe I have it here." He fumbled in his breast pocket, bringing out mild things—note-books, circulars, and programmes of village concerts. "I heard Miss Mowbray say to Miss James, the following words, 'Now's your time, Bill.'"

He gazed at me for a few moments after making this announcement, gravely and unflinchingly, as if conscious that here he was unshaken about his facts. Then he resumed, turning his bald head more towards the fire.

"This appeared to me remarkable. I could not by any means understand it. It seemed to me first of all peculiar that one maiden lady should address another maiden lady as 'Bill.' My experience, as I have said, may be incomplete; maiden ladies may have among themselves and in exclusively spinster circles wilder customs than I am aware of. But it seemed to me odd; and I could almost have sworn (if you will not misunderstand the phrase) I should have been strongly impelled to maintain at the time that the words, 'Now's your time, Bill,' were by no means pronounced with that upper-class intonation which, as I have already said, had up to now characterized Miss Mowbray's conversation. In fact, the words, 'Now's your time, Bill,' would have been, I fancy, unsuitable if pronounced with that upper-class intonation.

"I was surprised, I repeat, then, at the remark. But I was still more surprised, when looking round me in bewilderment, my hat and umbrella in my hand, I saw the lean lady with the woollen shawl leaning upright against the door out of which I was just about to make my exit. She was still knitting, and I supposed that this erect posture against the door was only an eccentricity of spinsterhood and an oblivion of my intended departure.

"I said genially: 'I am so sorry to disturb you, Miss James, but I must really be going. I have—er.' I stopped here, for the words she had uttered in reply, though singularly brief and in tone extremely businesslike, were such as to render that arrest of my remarks, I think, natural and excusable. I have these words also noted down. I have not the least idea of their meaning, so I have only been able to render them phonetically. But she said," and Mr. Shorter peered short-sightedly at his papers, "she said, 'Chuck it, Fat Ed,' and she added something that sounded like 'It's a Kop,' or (possibly) 'a Kopt.' And then the last cord, either of my sanity or the sanity of the universe, snapped suddenly. My esteemed friend and helper, Miss Brett, standing by the mantelpiece, with her resemblance to our late great and good Victoria positively accentuated by her upright and dignified posture, said: 'Put 'is old 'ed in a bag, Sam, and tie 'im up before you start jawin'. You'll be kopt yourselves some o' these days with this way of doin' things har lar theatre.'

"My head went round and round. Was it really true, as I had suddenly fancied a moment before, that unmarried ladies had some dreadful riotous society of their own from which all others were excluded? I remember dimly in my classical days (I was a scholar in a small way once, but now, alas! rusty) I remembered the mysteries of the Bona Dea and their strange female freemasonry. I remembered the witches' Sabbaths. I was just, in my absurd light-headedness, trying to remember a line of verse about Diana's nymphs, when Miss Mowbray threw her arm round me from behind. The moment it held me I knew it was not a woman's arm.

"Miss Brett—or what I had called Miss Brett—was standing in front of me with a big revolver in her hand and a broad grin on her face—a broad grin very different from the customary expression of our late great and good queen (as I have seen it in her pictures), but which still did not quite suffice to efface the remarkable resemblance. Miss James was still leaning against the door, but had fallen into an attitude so totally new, and so totally unfeminine, that it gave one a shock. She was kicking her heels, with hands in her pockets and her cap on one side. She was a man. I mean he was a wo—no—that is, I saw that instead of being a woman she—he, I mean—that is, it was a man."

Mr. Shorter became indescribably flurried and flapping in endeavoring to arrange these genders and his plaid shawl at the same time. He resumed with a higher fever of nervousness:

"As for Miss Mowbray, she—he, held me in a ring of iron. He had her arm—that is, she had his arm—round her neck—my neck, I mean—and I could not cry out. Miss Brett—that is, Mr. Brett, at least Mr. Something who was not Miss Brett—had the revolver pointed at me. The other two ladies—or, er—gentlemen, were rummaging in some bag in the background. It was all clear at last: they were criminals dressed up as women, to kidnap me? To kidnap the vicar of Chuntsey, in Essex. But why? Was it to be non-conformists?

"The brute leaning against the door called out carelessly: 'Urry up, 'Arry. Show the old bloke what the game is and let's get off.'

"'Blast 'is eyes,' said Queen Victoria—I mean the man with the revolver—' why should we show 'im the game?'

"'If you take my advice you bloomin' well will,' said the man at the door, whom they called Bill. 'A man wot knows wot 'e's doin' is worth ten wot don't, even if 'e's a potty old parson.'

"'Bill's right enough,' said the coarse voice of the man who held me (it had been Miss Mowbray's). 'Bring out the picture, 'Arry.'

"The man with the revolver walked across the room to where the other two women—I mean men—were turning over baggage and asked them for something which they gave him. He came back with it across the room and held it out in front of me. And, compared to the surprise of that display, all the previous surprises of this awful day shrank suddenly.

"It was a portrait of myself. That such a picture should be in the hands of these scoundrels might in any case have caused a mild surprise; but no more. It was no mild surprise that I felt. The likeness was an extremely good one, worked up with all the accessories of the conventional photographic studio. I was leaning my head on my hand and was relieved against a painted landscape of woodland. It was obvious that it was no snap-shot; it was clear that I had sat for this photograph. And the truth was that I had never sat for such a photograph. It was a photograph that I had never had taken.

"I stared at it again and again. It seemed to me to be touched up a great deal; it was glazed as well as framed, and the glass blurred some of the details. But there unmistakably was my face, my eyes, my nose and mouth, my head and hand, posed for a professional photographer. And I had never posed so for a photographer.

"'Be'old the bloomin' miracle,' said the man like Queen Victoria, with ill-timed facetiousness. 'Parson, prepare to meet your God.' And with this he slid the glass out of the frame. As the glass moved, I saw that part of the picture was painted on it in Chinese white, notably a pair of white whiskers and a clerical collar. And underneath was a portrait of an old lady in a quite black dress, leaning her head on her hand against the woodland landscape. The old lady was as like me as one pin is like another. It had required only the whiskers and the collar to make it me in every hair.

"'Entertainin', ain't it?' said the man described as 'Arry, as he shot the glass back again. 'Remarkable resemblance, parson. Gratifyin' to the lady. Gratifyin' to you. And hi may hadd, particlery gratifyin' to us, as bein' the probable source of a very tolerable haul. You know Colonel Hawker, the man who's come to live in these parts, don't you?'

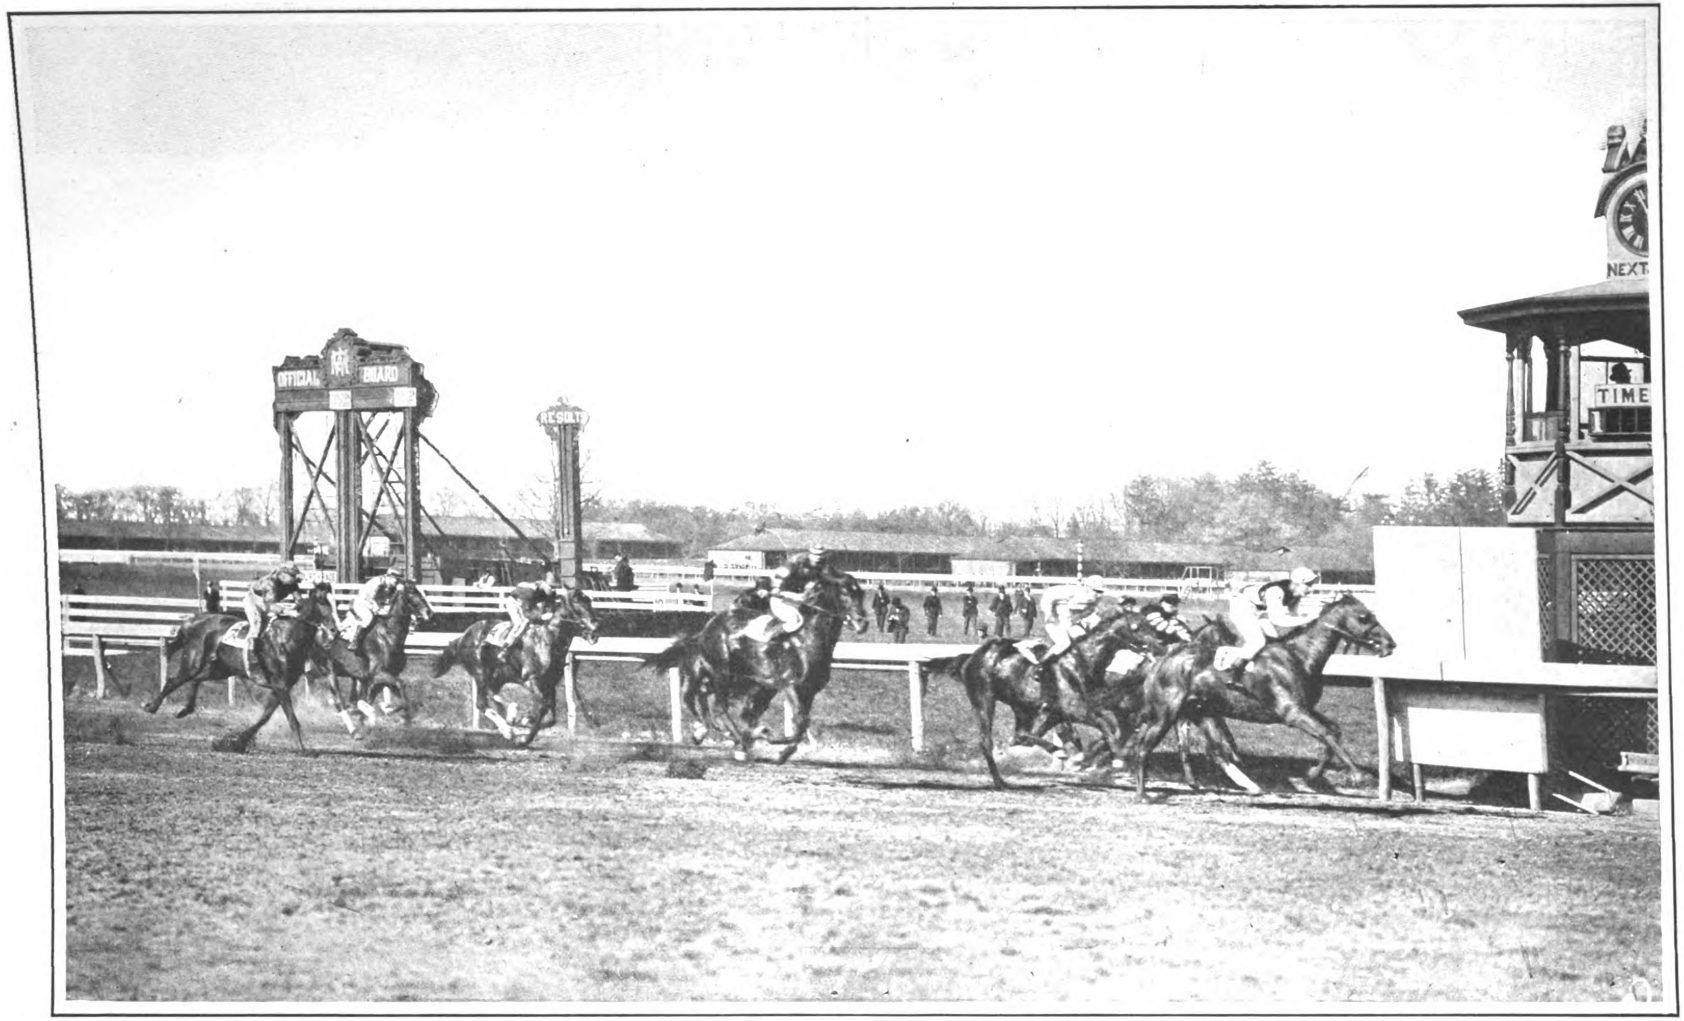
"I nodded.

"'Well,' said the man 'Arry, pointing to the picture, 'that's 'is mother. 'O ran to catch 'im when 'e fell? She did,' and he flung his fingers in a general gesture towards the photograph of the old lady who was exactly like me.

"'Tell the old gent wot 'e's got to do and be done with it,' broke out Bill from the door. 'Look 'ere, Reverend Shorter—we ain't goin' to do you no 'arm. We'll give you a sov for your trouble if you like. And as for the old woman's clothes—why, you'll look lovely in 'em.'

"'You ain't much of a 'and at a description, Bill,' said the man behind me. 'Mr. Shorter, it's like this. We've got to see this man Hawker to-night. Maybe he'll kiss us all and 'ave up the champagne when 'e sees us. Maybe, on the other 'and—'e won't. Maybe 'e'll be dead when we goes away. Maybe not. But we've got to see 'im. Now, as you know, 'e shuts 'isself up and never opens the door to a soul; only you don't know why and we does. The only one as can ever git at 'im is 'is mother. Well, it's a damned funny coincidence,' he said, accenting the penultimate, 'it's a very unusual piece of good luck, but you're 'is mother.'

"'When first I saw 'er picter,' said the man Bill, shaking his head in a ruminant manner, 'when I first saw it I said—old Shorter. Those were my exact words. Old Shorter.'



"What do you mean, you wild creatures?" I gasped. "What am I to do?"

"'That's easy said, your 'oliness,' said the man with the revolver, good-humoredly, 'you've got to put on those clothes,' and he pointed to a poke-bonnet and a heap of female clothes in the corner of the room.

"I will not dwell, Mr. Swinburne, upon the details of what followed. I had no choice. I could not fight five men, to say nothing of a loaded pistol. In five minutes, sir, the vicar of Chuntsey was dressed as an old woman—as somebody else's mother, if you please, and was dragged out of the house to take part in a crime."

To be Concluded

CLOSE OF THE FIRST MEETING AT MORRIS PARK—FINISH OF THE "TOBOGGAN HANDICAP"

The racing season at Morris Park, which was the first of the New York tracks to open, comes to an end this week. One of the most notable races of the meet was the "Toboggan Handicap," run on May 7. It was won by Mr. James R. Keene's "Hurst Park," with "Kohinoor" and "Gayboy" second and third. The time, over the Eclipse course, was 1.14

A Scene from "The Other Girl"

Augustus Thomas's comedy of New York life, "The Other Girl," has been one of the most successful productions of the season just closing, and is to be played on tour during the coming year. The plot, described in the February 29 issue of "Harper's Weekly," deals with the adventures of "Kid Garvey," a champion pugilist in the employ of an athletic minister as physical instructor, who almost succeeds in eloping with an aristocratic girl

Miss Julia Marlowe as "Parthenia" in "Ingomar"

Miss Marlowe revived the play of "Ingomar," in which she made her first success as a star, on May 16 at the Empire Theatre, with Tyrone Power in the title rôle of "Ingomar." The play tells the story of "Parthenia" (Miss Marlowe), a beautiful Greek maiden, who offers herself as a ransom to "Ingomar," the chief of a warrior tribe, for her father, who has been captured by the band. In the end she subjugates him, and he becomes a Grecian for her sake

The Revival of "When Knighthood Was in Flower"

Miss Julia Marlowe appeared at the Empire Theatre on May 9 in a revival of "When Knighthood was in Flower." This engagement marks the close of Miss Marlowe's career as an independent star. Next season it is announced that she will appear jointly with Mr. E. H. Sothern in various productions, among which some elaborate Shakespearean revivals are promised

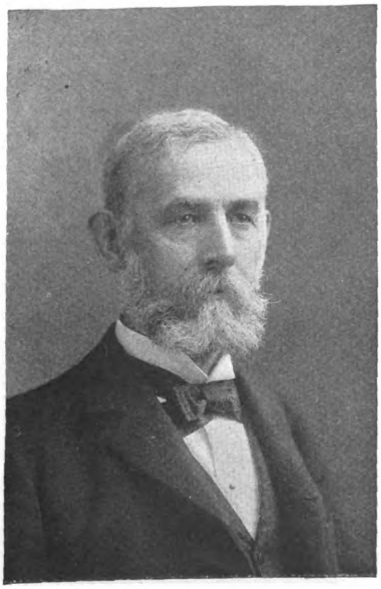
The Story of America's Gibraltar

By Herbert S. Houston



(Photographically Illustrated by Arthur Hewitt)

ANTONIO and the other merchants of Venice would surely wonder if they could see Gibraltar turned into a business force as tangible as one of their ships. They knew the great rock as Calpe, one of the Pillars of Hercules, but it had no definite commercial value on the Rialto. So far is medieval Italy from modern America. But out from the former went a young Genoese to Spain and, later, on into the unknown west to find a new continent, and there, in time, grew up a republic full of an abounding life. In it was freedom of opportunity, a real democracy of worth. It became a country of big things, of enterprises that amazed the world. One of these, desiring an impressive symbol of strength, reached across the Atlantic and grasped Gibraltar, one of the Pillars of Hercules.

Before millions of people that great symbol has been presented in the leading magazines and newspapers until Gibraltar has come to be almost a synonym for the Prudential. And the Prudential has grown steadily in strength and greatness up to its symbol. The Venetian merchants, or those from the Genoa of Columbus, would not wonder, if they could read this record of growth, why Gibraltar and Prudential have come to be interchangeable terms. In fact, that record is one of such achievement that even twentieth-century Americans, wonder-proof as they are, get a genuine thrill of surprise in hearing it. Let it be told in as dry a chronicle as that of the venerable Bede, and still it will command attention.

Ten years after the close of the civil war—a period so recent that its history has scarcely been written—the Prudential was established in Newark. As if foreknowing the great rock to which it would grow, it began its foundation in a basement office. It was like the beginning of the New York *Herald* by Bennett the elder, in a basement on Ann Street. But it would be an idle play with words to make a basement office the real foundation of the Prudential. It was something much deeper down than that—nothing else than the bedrock American principle of democracy. The Prudential applied the democratic principle to life insurance. As Senator Dryden of New Jersey, the founder of the company, has said, "Life insurance is of the most value when most widely distributed. The Prudential and the companies like it are cultivating broadly and soundly among the masses the idea of life-insurance protection. To them is being carried the gospel of self-help, protection, and a higher life."

U. S. Senator John F. Dryden
President Prudential Insurance Co.

And what has been the result of the democratic American principle worked out in life insurance? In 1875 the first policy was written in the Prudential. At the end of 1903 there were 5,447,307 policies in force on the books of the company, representing nearly a billion dollars. The assets in 1876 were $2232, while twenty-seven years later, in 1903, they were more than 30,000 times greater, or $72,712,435 44, the liabilities at the same time being $62,578,410 81.

This is a record of growth that is without precedent in insurance and that is hard to match in the whole range of industry. The rise of the Prudential to greatness reads like a romance in big figures, but, in fact, it is a record of business expansion that has been as natural as the growth of an oak. The corn crop of the country seems too big for comprehension until one sees the vast fields of the Middle West, and then it appears as simple as the growth of a single stalk. So with the Prudential. To say that, in ten years, the company's income grew from something more than $9,000,000 a year to more than $39,000,000 last year is amazing as a general statement, but when made in relation to the broad principles on which that growth has been based, it becomes as much a matter of course as the corn crop. There is no mystery about it; but there is in it, from the day when the principles were planted in Newark until these great harvest days, the genuine American spirit of achievement, strong, hopeful, and expansive.

Stairway to Main Offices

The Prudential Insurance Company of America is a national institution. It was founded to provide insurance for the American people on the broadest possible basis, consistent with strength and safety. It does not write insurance abroad. In the fullest sense it has worked out the democratic idea of safe insurance for the great masses of the American people. It has adjusted its policies to American conditions; it has based its dividends on the earning power of American investments; it has placed its premium rates on the American tables of vital statistics; in a word, it was intended to be and it has become an insurance company for the American people. And they have met the Prudential's broad American principles with a broad American support, and, as a result, the company's marvellous growth has come as naturally as the full ear on the stalk. But, as the full ear is always on a stalk that has been cultivated, so, too, the growth from the Prudential's principles has come through their spread

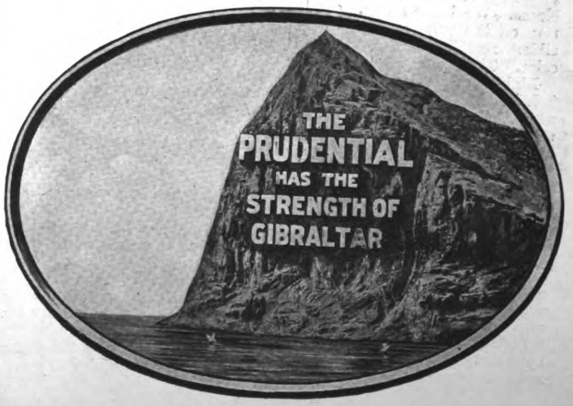
by an organization that is a marvel of efficiency.

And right here is the most stirring chapter of the Prudential's rise to greatness. Just as Grant and Lee organized their armies, or as Kouropatkin and Yamagata plan their campaigns in Asia, so does the Prudential work out its national insurance propaganda. The company's organization is essentially military. It is a wonderful combination of big grasp and outlook with the most painstaking thoroughness and system in details. And, as is always the case in every organization that throbs throughout with intelligent energy, there is a man at the centre of it. This man has a constructive imagination lighting up a New England brain. To business prudence there is added the large vision which sweeps the horizon for opportunity. Naturally, to such a vision the application of the democratic idea to insurance was an opportunity of the first magnitude. When seen, it was grasped and developed. The Prudential was founded. In the most careful way its idea was tested, just as the Secretary of Agriculture tests seeds at the government's experiment farms. Here was where prudence kept the large vision in proper focus. Gradually the idea took root and grew. Year after year the Prudential added to its number of policy-holders. And all the time the company was working out a more liberal basis for its democratic idea. But each time a more liberal policy was offered, it was fully tested. "Progress with strength" is the way President Dryden describes the company's principle of growth—the results, clearly, of vision and prudence. At the end of ten years of this method of growth, the company reached the point where, it was believed, insurance could be safely offered for any amount with premiums payable on any plan, either in weekly instalments or at longer periods. Within the five years 1886 to 1890 inclusive the company's assets increased nearly fivefold, from $1,040,816 to $5,084,895, and the amount of insurance in force from $40,266,445 to $139,163,654.

Group of Main Office Buildings, the Prudential Insurance Co., Newark, N. J.

The Prudential had found itself. The idea of democratic insurance had been fully tested and adjusted to the needs and conditions of the American people. Then, with a boldness which only large vision could have quickened, the plan was formed to make the Prudential's idea known in every section of the country. Gibraltar was chosen as the symbol of the company's strength, and advertising—the telling of the Prudential idea to the people—was begun. At that time insurance advertising was a sea as unknown as the Atlantic when Columbus set sail from Palos. But, with a map of the United States for chart and a live idea for compass, the Prudential took passage in nearly every important magazine in the country, and thus safely made port in millions of homes. As the insurance idea was carried broadcast, in this wide publicity, it was followed up by the well-drilled army of Prudential agents.



Section of Composing-Room

Again it was vision and prudence, and again the result was "Progress with strength." The Prudential grew into a place of foremost importance, known in every part of the world. The printed announcement—always attractive and suggestive—had never gone ahead of men bearing the insurance message until sent by the Prudential, and this conjunction marked the epoch in business in which advertising and personal endeavor should be used as complementary forces.

The Prudential publicity is accompanied by wise promotion from a field force of over 12,000, some of whom have been with the company for over a quarter-century, working in almost every State of the Union. They have the zeal of Crusaders, and it is kept at ardent pitch through an organization that could not fail to produce a wonderful *esprit de corps*. Wise direction and constant encouragement come from the home office; and then the company's agents are grouped in districts, under superintendents and assistant superintendents, managers, general agents and special agents, and in each district a strong spirit of emulation is developed by human contact and cooperation. Weekly meetings are held, and the problems of wisely presenting insurance are discussed. Comparative records of the men are kept in many districts, and prizes are offered for those writing the largest volume of business, for those making the greatest individual increase, and for many other contests. This wholesome rivalry produces an alertness and industry which are to the company an invaluable asset in human efficiency. A few weeks after this publication appears, probably 2000 agents of the Prudential — those who have made the best records for the year — will be brought to Newark from all parts of the country. They will, of course, visit the home offices and come in contact with the directing centre of their wonderful organization.

And, after all, there is no place where one feels the greatness of the Prudential quite so much as in the vast granite piles which have been raised for the company's home buildings. They rise above the Jersey meadows as Gibraltar does above the sea, a convincing witness, surely, to the growth and to the strength of the Prudential. But they are not a cold, gray rock, but a living organism throbbing from vital contact with millions of policy-holders. There are now four of these great buildings, all occupied by the company. In one of them is the Prudential's publishing plant, which, in equipment, surprising as this may seem, is equal to that of almost any publishing house in the country. Millions of booklets, two publications for the company — one, "The Prudential," with a circulation of more than two millions — and the policies are all printed here, besides no end of commercial printing for the home office and for the district agencies. The big composing-room, the press-room with its eighteen presses, the bindery with its folding, cutting, sewing, and numbering machines, are models of cleanliness and light. But, for that matter, all the buildings are as spick-and-span as a man-o'-war. There are subways, well lighted, under the streets, connecting the different buildings. In every way there has been, in the arrangements, a conservation of energy and time to produce economy and efficiency in carrying on the company's vast business. As indicating how vast that is, the mail coming to and going from the Prudential is nearly as large as for all the rest of Newark, a city with more than 250,000 population and of great industrial importance. The mailing department is really a big city post-office. And in all the departments one gets the feeling of size that comes in the enormous government buildings at Washington. And it is as a national institution that the Prudential always fixes itself on the mind—its fundamental idea of democracy in insurance, its nation-wide organization for spreading the idea, its essentially American spirit throughout, all make the company worthy of its name—the Prudential Insurance Company of America.

Correspondence

TRADE WITH EAST COAST OF SOUTH AMERICA

April 6, 1904.

To the Editor of Harper's Weekly:

SIR,—Numerous articles have been written, and will probably continue to be written, on the commercial advantages which the nations will derive through the opening of a Panama canal. I have seen many charts illustrating the shortening of the distances between given points in Europe and the United States and cities on the west coast of South America, but I have been greatly interested—I was going to say entertained—in the reading of certain articles which have sought to show how the use of the canal will enable the United States to capture an enormous trade in Chile, Peru, etc.

One might be tempted to believe that the United States had already received its proper share of trade in the available markets, and only required easy access into new countries to accomplish what it had in others. I have read that ten years will be required to finish the Panama Canal. Of course it is wise to make plans and provisions for the future, but in the mean time—What? I only desire in this letter to comment on the situation, and will not burden you with an array of figures, which, at any time, are easily available to the interested investigator; so I merely say to the manufacturers and exporting merchants of the United States, to capitalistic promoters—Why are you shutting your eyes to the east coast of South America? There is no barrier of nature shutting you out from this coast. There are no hundreds of millions of dollars to be expended in opening the way. Look in any geography, and see how many more millions of consuming population there are on the east coast as compared with the west. Read your daily papers, and you will quickly learn that the proportion of people who want and can buy the good things to eat and wear, and who are accustomed to having them, is infinitely greater on the east coast than on the west. There are millions *more* on this coast of the kind of people you want for customers. What have you done and what are you doing to capture this trade? You are talking about the lines of steamers you will establish to capture the trade of the west coast when the canal is opened. Give the names of American lines operating between United States ports and those of Brazil, Uruguay, and the Argentine Republic. How many miles of railroad are there in Chile, Peru, Bolivia, Ecuador, and Colombia, and how many in the Argentine Republic, Uruguay, and Brazil? Railroads tell a story to the commercial world. Look on your map and try to figure out how many more miles of rich and undeveloped country lie in the republics of the east coast as compared with those of the west. What share of the trade of the Atlantic republics of South America have you and what share do you propose to take in the future? Will you allow another ten years to pass by, neglecting your opportunities?

I have as briefly as possible, Mr. Editor, expressed somewhat the feeling which is experienced by many Americans visiting or living in these countries, who perceive that the "bird in the hand" is but loosely held.

I am, sir, FRANCIS B. PURDIE.

THE NEGRO'S QUALITIES

CHUCKY CITY, TENN., *April 4, 1904.*

To the Editor of Harper's Weekly:

SIR,—It is amusing to read what Mr. Hooper Alexander, of Atlanta, Georgia, has to say in HARPER'S WEEKLY of March 19, 1904, on "The Negro and the Fourteenth Amendment." He reminds one of the teacher who, upon being asked by one of his students if it was any harm to kiss a girl, replied, "Not if you are doing the kissing yourself, but if the other fellow is doing it the sin is great." The application is easily made.

The truth is not departed from in this article from the able pen of Mr. Alexander, but it is concealed. While making the statement that the Republican machine relies upon the negro vote to give it representation in national conventions, he forgets the fact that the Southern States rely upon the same vote to give it representation in the national Congress. Let us "tote" fair, brethren. Invariably the negro votes with the white man, else in some of the Southern States negro domination would prevail, and of course that will never be. If he votes and uses his citizenship in a corrupt manner his white "boss"—machine boss—is to blame. We believe there ought to be some educational qualification on the privilege of franchise—a sort of civil service, if possible. But it ought to apply to all alike, regardless of race or color. There ought to be no intimidation.

Right here let the writer state that his father's people were slaveholders, but he himself came into existence more than a decade after the close of the civil war, therefore he has no recollection of things prior to and immediately following that necessary unpleasantness. He tries to form unbiased and meritorious opinions on this question—a question which perhaps will settle itself best by being discussed least.

It is true that the negro and the white man can be governed alike, as is proven in many, many localities in the South and elsewhere.

Had Mr. Alexander inspected closely the Negro Building at the Atlanta Exposition, and with unbiased mind, or even studied carefully the speech of Mr. Booker T. Washington at that same exposition, he would have seen that it is not true that "the negro is a low type of mankind, proven by his entire history to be incapable of growing in industry, intelligence, or virtue by any inherent capacity of his own." The statement that some were helped by slavery is, in a limited sense, true. I do not see why the statement is repeatedly made as to the slaves being treated so kindly, when the best authorities tell us that that was the exception rather than the rule. Of course no one ever said that they had their own slaves treated unkindly. Often have I heard my father tell of his neighbors who sometimes beat their slaves until the flesh was lacerated, then sprinkle salt on the places worn bare. They were also subjected to other mistreatments which are not printable. However, my father always held to the idea of slavery and that the negro is a brute, in the same sense as does Mr. Alexander.

If the negro is capable of fidelity to his master in a marvellous sense, as Mr. Alexander says, is he not capable of something good and high and noble? We think so.

It is the writer's personal observation, as one interested in the subject, that the more mixed the negro is in his lineage the meaner and lower he becomes as a human being. It will not do to mix the blood.

It is not true that "if he is hungry he steals; if he is angry he fights; and if he is lustful, he falls upon the first unprotected woman he meets." He shows himself as capable of control, in a sense, as his white brother. This most heinous of all crimes has not, in a single instance known to the writer, and he has made some investigation, been committed by an educated negro or by any save of the lowest class. The same awful and hellish crime is committed by white men. In this county, less than ten years ago, a white man of average education and intellect was convicted of that crime, and confessed his guilt. Another case is recalled also in which a white man was the offender.

"The Fourteenth Amendment" is all right. It is our own personal feelings that want fixing. We have the negro with us, and will always have him. Why teach our children that he is mean—the meanest and lowest of all created beings, and then trust our children with him day after day in the house and field? Is it not better to recognize the good, and cultivate it, thus helping him? Can we afford to fight that which we can turn to good advantage for ourselves and for our servants, if we insist that the negro be such, and he is quite willing to be.

Again we insist that the negro is no more prone to low crimes than his low white brother—or high white brother, either, for that matter—under the same conditions of training and servitude. Give him the opportunity, and you will see him take his place in the doing of good in the world. But he is helpless in many places in the South, and needs all the assistance he can get. As the writer stated in the columns of this paper some weeks ago he does not always get the educational money due him in proportion to the white people, who are, comparatively speaking, as poor as he is in this world's goods. Give him an equal chance, and this much-discussed question will settle itself. Justice and equality to all serve as the best of civilizers.

I am, sir, S. H. THOMPSON,
Principal Wesleyan Academy.

THE COMING RACE

MISSISSIPPI, *May 7, 1904.*

To the Editor of Harper's Weekly:

SIR,—"Who will inherit the United States?" Why, the negro, of course. He indulges in no "race suicide," and follows very literally the Scriptural injunction to multiply and replenish the earth. There are no celibates in the race, at least in a broad sense, for while some do not take the trouble to conform to the law of marriage, and are not even exclusive in their relations, all are parents—and usually very much so.

The "Americans" of several generations' inheritance are retrograding, we are told, and have one or less children to the couple—a matter of less than one-half child to the parent; the Germans who have settled amongst us have followed in our footsteps, and have lost their chance for the inheritance; the Irish have lost their supreme indifference to the material world, have begun to wear corsets, keep pug-dogs, and relegate the old-time family of fifteen or twenty to the background or oblivion.

It may be, as one writer suggested, that the first generation or two of Italians, French Canadians, and Russian Jews will withstand us, that they will not be influenced by our example, but the desire to be "stylish" will affect them, as it has the Italians of some years' residence, as I am able to certify, and as it has the more intelligent class of Jews, who now are contracting their families as fast as time and education will permit.

But the negro is not affected by any of the considerations that influence the whites of whatever nationality; he knows that he is debarred from the "smart set," that he can only appear at the Waldorf-Astoria in a white apron in the cuisine or in full dress behind our chairs, or with a whisk-broom in his hands; his women can never hope to enter the "Four Hundred," except in cap and apron, and so they give themselves up to the joy of rearing voters and votresses and swelling the census reports.

"Multiply and replenish the earth," is the text oftenest preached in their pulpits, the precept oftenest taught in the heart-to-heart talks of pastor and flock, and the one admonition in the Bible that is strictly adhered to, and so when we Old World, wornout races are mouldering in the dust the negroes will have settled the inheritance and the negro question together, and will reign in uninterrupted bliss, undisturbed by any question of white supremacy, and will look down with utmost contempt upon that shadow of ours left, the fast fading mulatto, who will doubtless paint his skin and kink his hair, to hide his shame; the blood of the vanished, the hated, and, finally, fabled Caucasian race.

I am sir, A MISSISSIPPIAN.

Progress of the War

FROM the beginning of the war, February 9, to May 10 fifteen Russian war-ships have been sunk or disabled — the *Petropavlovsk*, *Pobieda*, *Czarevitch*, *Retvisan*, *Poltava*, *Pallada*, *Novik*, *Askold*, *Diana*, *Variag*, *Boyarin*, *Korietz*, *Yencsei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik*, *Askold*, and *Diana* are known to have been repaired and are again in commission. Japan has lost one torpedo-boat, and several of her ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. After two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor, Admiral Togo on May 7 notified his government that his third attempt was successful. On May 1 the first great land battle of the war took place near the Yalu River, and resulted in a Japanese victory. The number of casualties on both sides was very heavy. The Japanese have landed troops on both sides of the Liao-Tung Peninsula back of Port Arthur. On May 9 the Russians began the evacuation of Newchwang.

May 11.—General Kuropatkin to-day telegraphed the Czar that a train loaded with war material from Liao-Yang arrived at Port Arthur.

A telegram from Tokyo says that on May 10 two hundred Cossacks attacked the Japanese garrison at Antung, on the west bank of the Yalu. The Japanese resisted the attack and the Russians retreated.

The Japanese forces, under General Kuroki, have been moving from Feng-Wang-Cheng toward Hai-Cheng. Another division of General Kuroki's army is advancing towards Liao-Yang.

May 12.—It is reported in St. Petersburg that Admiral Alexeieff has informed the Czar that the Russians have blown up the docks and piers at Dalny, the Russian port twenty-five miles northeast of Port Arthur on Talienwan Bay. According to Russian official despatches, there have been a number of skirmishes between Russian and Japanese forces on the Liao-Tung Peninsula back of Port Arthur.

May 13.—The advance-guard of the first Japanese army to-day appeared six miles below Lien-Chen-Kuan, forty miles northwest of Feng-Wang-Cheng and forty-five miles from Liao-Yang. At this point the Japanese encamped and began erecting fortifications.

A despatch from Mukden states that the Japanese have again occupied Polandien, near Port Adams, on the Liao-Tung Peninsula, and communication with Port Arthur is cut off.

May 14.—It was reported to-day that the Japanese have attacked Dalny. A fleet of Japanese war-ships cleared the channel of mines and entered the harbor this morning. Later in the day troops were landed.

The landing of the Japanese second army at Pitsewo is said to have been completed, and it is estimated that there are now 50,000 troops on the Liao-Tung Peninsula. General Kuroki's army continues to advance divisions toward Liao-Yang. The St. Petersburg *Novoe Vremya* estimates the Japanese forces approaching Liao-Yang at 100,000 men, with 50,000 horses, and 270 guns.

According to a Russian despatch received to-day, a small naphtha-launch, carrying three torpedoes and a machine-gun, left the harbor at Port Arthur on the night of May 10, and approaching the Japanese squadron lying outside Dalny successfully torpedoed a Japanese cruiser.

It is reported from Seoul that a force of 2000 Russians has been seen in the northern part of Korea marching southward. 700 Cossacks have also been seen several times in villages northeast of Anju, where they have seized horses and supplies.

May 15.—Admiral Alexeieff has telegraphed the Czar that he has received a report of the state of affairs at Port Arthur from May 6 to 12. He says that the Japanese squadron continues to blockade the port, undertaking no active operations. The Russians are making preparations to protect the rear of Port Arthur from a Japanese attack.

May 16.—An unconfirmed report was received to-day from Chefoo of a combined land and sea attack on Port Arthur. The Japanese have destroyed fifty miles of the railroad between Liao-Yang and Port Arthur.

A telegram from Tokyo says that the Japanese despatch-boat *Miyako*, while clearing the Russian mines from Kerr Bay, northeast of Dalny, struck one of the mines and was destroyed. There were twenty-four casualties.

May 17.—It was reported to-day from Newchwang that a fleet of Japanese war-ships appeared at Kai-Chow yesterday and began a bombardment of the shore defences, which were effectually silenced. The Japanese troops then landed and are endeavoring to outflank the Russians at Newchwang. The last of the Russian troops are said to have left Newchwang on May 16, and preparations are being hurried for the destruction of the Russian gunboat *Sivoutch* in the harbor at that place.

The Japanese army under General Kuroki is reported to be still advancing in two divisions—one toward Hai-Cheng (a few miles southeast of Newchwang) and the other toward Liao-Yang Numerous small engagements have been fought but no decisive action has taken place The Japanese are said to be almost within striking distance of the Russians.

It was announced to-night in St. Petersburg that Lieutenant-General Zassalitch, who was in command of the Russian forces which were defeated in the battle of the Yalu, has been relieved of his command. Lieutenant-General Count Keller has been appointed to succeed him.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

IF YOU ARE LOOKING for a perfect condensed milk preserved without sugar, buy BORDEN'S PEERLESS BRAND EVAPORATED CREAM. It is not only a perfect food for infants, but its delicious flavor and richness make it superior to raw cream for cereals, coffee, tea, chocolate, and general household cooking. Prepared by Borden's Condensed Milk Co.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

THOUSANDS suffer from a short, hacking cough who might be cured by PISO'S CURE.—[*Adv.*]

ADVERTISEMENTS.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She wires Warrisden to come by an early train, and asks him to find Tony and bring him home. Warrisden accepts the commission. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure. Warrisden learns from Mr. Chase that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. He starts out to find him, and finally reaches him far up in the North Sea. Warrisden uses every argument to prevail upon Tony to come back, but he refuses, and Warrisden is forced to return alone. He reports to Pamela the failure of his mission, but, to his surprise, she does not seem disappointed. He thinks it is because of the news which he hears from her—that Sir John Stretton has died, which will naturally bring Tony home. But that is not the whole explanation: for Pamela is overcoming her old indifference toward life, and in her life are being aroused new sympathies and emotions. Tony remains on the trawler until the term of his cruise is over, and then, after much perplexity and indecision, decides to return to London, feeling that he has seen a way out of his difficulties. On his arrival in London he calls on Mr. Chase, and tells him that he has decided not to return to Millie until he has succeeded in winning distinction in some field of work. He feels that he would deserve Millie's contempt if he returned at the moment when life had suddenly been made easy for them by his father's death. He has decided, he tells Chase, to enlist in the French Foreign Legion, as no other career seems open to him. The same evening John Mudge, a friend of Pamela's, while at a reception given by Lady Millingham sees Lionel Callon enter the Stretton's house, where Millie is living. Soon after, as Mudge, Pamela, and Warrisden are standing at the window, they see Tony Stretton approach his house, but to their surprise he merely walks up and down in front of it and does not go in. Meanwhile, Lionel Callon has contrived, for purposes of his own, to quarrel with Millie.

CHAPTER XV

MR. MUDGE COMES TO THE RESCUE

LIONEL CALLON'S visit to Millie Stretton bore, however, consequences which had not at all entered into his calculations. He was unaware of the watchers at Lady Millingham's window; he had no knowledge of Pamela's promise to Tony Stretton; no suspicion, therefore, that she was now passionately resolved to keep it in the spirit and the letter. He was even without a thought that his advances towards Millie had at all been remarked upon or their motive discovered. Ignorance lulled him into security. But within ten days a counterplot was set in train.

The occasion was the first spring meeting on Newmarket Heath. Pamela Mardale seldom missed a race-meeting at Newmarket during the spring and summer. There were the horses in the first place; she met her friends besides; the Heath itself, with its broad expanse and its downs, had for her eyes a beauty of its own; and, in addition, the private enclosure was separated by the width of the course from the crowd and the clamor of the ring. She attended this particular meeting, and after the second race was over she happened to be standing amidst a group of friends within the grove of trees at the back of the paddock. Outside upon the heath the air was clear and bright; a light wind blew pleasantly. Here the trees were in bud, and the sunlight, split by the boughs, dappled with light and shadow the glossy coats of the horses as they were led in and out amongst the boles. A mare was led past Pamela, and one of her friends said:

"Semiramis. I think she will win this race."

Pamela looked towards the mare, and saw just beyond her Mr. Mudge. He was alone, as he usually was, and though he stopped in his walk now here, now there, to exchange a word with some acquaintance, he moved on again invariably alone. Gradually he drew nearer to the group in which Pamela was standing and his face brightened. He quickened his step. Pamela, on her side, advanced rather quickly towards him.

"You are here?" she said, with a smile. "I am glad, though I did not think to meet you."

Mr. Mudge, to tell the truth, though he carried a race-card in his hand, and glasses slung across his shoulder, had the disconsolate air of a man conscious that he was out of place. He answered Pamela, indeed, almost apologetically.

"It is better, after all, to be here than in London on a day of spring," he said, and he added, with a shrewd glance at her: "You have something to say to me. A question to ask."

Pamela looked up at him in surprise.

"Yes, I have. Let us go out."

They walked into the paddock and thence through the gate into the enclosure. The enclosure was at this moment rather empty. Pamela led the way to the rails alongside the course, and chose a place where they were out of the hearing of any bystander.

"You remember the evening at Frances Millingham's?" she asked.

Mr. Mudge replied immediately.

"Yes. Sir Anthony Stretton," and the name struck so oddly upon Pamela's ears that, serious as at this moment she was, she laughed, "Sir Anthony Stretton turned away from the steps of his house. You were distressed, Miss Mardale. I, on the contrary, said that nothing better could have happened. You wish to ask me why I said that?"

"Yes," said Pamela. "I am very anxious to know. Millie is my friend. I am in a sort of way, too, responsible for her," and as Mr. Mudge looked surprised, she repeated the word. "Yes, responsible. And I am rather troubled." She spoke with a little hesitation. There was a frown upon her forehead, a look of perplexity in her dark eyes. She was reluctant to admit that her friend was in any danger or needed any protection from her own weakness. The freemasonry of her sex impelled her to silence. On the other hand, she was at her wit's end what to do. And she had confidence in her companion's discretion. She determined to speak frankly.

"It is not only your remark which troubles me," she said. "But I called on Millie the next afternoon."

"Oh, you did!" exclaimed Mr. Mudge.

"Yes. I asked after Tony. Millie had not seen him, and did not expect him. She showed me letters from his solicitors empowering her to do what she liked with the house and income, and a short letter from Tony himself written on the *Perseverance* to the same effect."

She did not explain to Mr. Mudge what the *Perseverance* was and he asked no questions.

"I told Millie," she continued, "that Tony had returned, but she refused to believe it. I told her when and where I had seen him."

"You did that?" said Mr. Mudge. "Wait a moment!" He saw and understood Pamela's reluctance to speak. He determined to help her out. "Let me describe to you what followed. She stared blankly at you and asked you to repeat what you had said?"

"Yes," replied Pamela, in surprise. "That is just what she did."

"And when you had repeated it, she turned a little pale perhaps, was disconcerted, perhaps a little—afraid."

"Yes, it is that which troubles me," Pamela cried, in a low voice. "She was afraid! I would have given much to have

doubted it. I could not. Her eyes betrayed it, her face, her whole attitude. She was afraid!"

Mr. Mudge nodded his head and went quietly on.

"And when she had recovered a little from her fear she questioned you closely, as to the time when you first saw Stretton outside the house and the time when he went away."

He spoke with so much certitude that he might have been present at the interview.

"I told her that it was some little time after eleven when he came, and that he only stayed a few minutes," answered Pamela.

"And at that," rejoined Mr. Mudge, "Lady Stretton's anxiety diminished."

"Yes, that is true, too," Pamela admitted, and she turned her face to him with its troubled appeal. "Why was she afraid? For since you have guessed that she was, you must know the reason which she had for fear. Why was it so fortunate that Tony Stretton did not mount the steps of the house and ring the bell?"

Mr. Mudge answered her immediately: "Because Lionel Callon was in the house."

A great sympathy made his voice gentle—sympathy for Pamela. None the less the words hurt her cruelly. She turned away from him so that he might not see her face, and stood gazing down the course through a mist. Bitter disappointment was hers at that moment. She was by nature a partisan. The thing which she did crept closer to her heart by the mere act of doing it. She knew it, and it was just her knowledge which had so long kept her to inaction. Now her thoughts were passionately set on saving Millie, and here came news to her which brought her to the brink of despair. She blamed Tony. "Why did he ever go away?" she cried. "Why, when he had come back, did he not stay?" And at once she saw the futility of her outcry. Tony, Millie, Lionel Callon—what was the use of blaming them? They acted as their characters impelled them. She had to do her best to remedy the evil which the clash of these three characters had produced. "What can be done?" she asked of herself. There was one course open certainly. She could summon Warrisden again, send him out a second time in search of Tony Stretton, and make him the bearer not of an excuse, but of the whole truth. Only she dreaded the outcome; she shrank from telling Tony the truth, afraid that he would exaggerate it. "Can nothing be done?" she asked again in despair, and this time she asked the question aloud, and turned to Mr. Mudge.

Mudge had been quietly waiting for it.

"Yes," he answered. "Something can be done. I should not have told you, Miss Mardale, what I knew unless I had already hit upon a means to avert the peril. For I am aware how much my news must grieve you."

Pamela looked at Mr. Mudge in surprise. It had not occurred to her at all that he could have solved the problem.

"What can I do?" she asked.

"You can leave the whole trouble in my hands for a few days."

Pamela was silent for a little while. Then she answered, doubtfully:

"It is kind of you to offer me your help."

Mr. Mudge shook his head at Pamela with a certain sadness.

"There's no kindness in it at all," he said. "But I quite understand your hesitation, Miss Mardale. You were surprised that I should offer you help just as you were surprised to see me here. Although I move in your world I am not of it. Its traditions, its instincts, even its methods of thought—to all of these I am a stranger. I am just a passing visitor who for the time of his stay is made an honorary member of your club. He meets with every civility, every kindness, but he is not inside, so that when he suddenly comes forward and offers you help in a matter where other members of your club are concerned, you naturally pause." Pamela made a gesture of dissent, but Mr. Mudge gently insisted:

"Let me finish. I want you to understand equally well why I offer you help which may likely seem to you an impertinence."

"No indeed," said Pamela. "On the contrary, I am very grateful."

they stood. They turned and walked slowly over the grass away from the paddock.

"There is no need that you should be," Mudge continued. "You will see that if you listen." And in a few words he told her at last something of his own career. "I sprang from a Deptford gutter with one thought—to get on and get on and get on. I moved from Deptford to Peckham. There I married. I moved from Peckham to a residential suburb in the southwest. There my wife died. Looking back now, I am afraid that in my haste to get on I rather neglected my wife's happiness. You see, I am frank with you. From the residential suburb I moved into the Cromwell Road, from the Cromwell Road to Grosvenor Square. I do not think that I was just a snob. But I wanted to have the very best of what was going. There is a difference. A few years ago I found myself at the point which I had aimed to reach, and as I have told you, it is a position of many acquaintances and much loneliness. You might say that I could give it up and retire into the country. But I have too many undertakings on my hands. Besides, I am too tired to start again. So I remain. But I think you will understand that it will be a real pleasure to me to help you. I have not so many friends that I can afford to lose the opportunity of doing one of them a service."

Pamela heard him to the end without any interruption. But when he had finished she said, with a smile:

"You are quite wrong about the reason for my hesitation. I asked a friend of mine a few weeks ago to help me, and he gave me the best of help at once. Even the best of help fails at times, and my friend did. I was wondering merely whether it would not be a little disloyal to him if I now accepted yours. For I know he would be grieved if I went to any one but him."

"I see," said Mr. Mudge. "But I think I can give you help which no one else can."

It was clear from his quiet persistence that he had a definite plan. Pamela stopped and faced him.

"Very well," she said. "I leave the whole matter for a little while in your hands."

"Thank you," said Mr. Mudge, and he looked up towards the course. "There are the horses going down."

A sudden thought occurred to Pamela. She opened the purse she carried on her wrist and took out a couple of pounds.

"Put this on Semiramis for me, please," she said, with a laugh. "Be quick if you will and come back."

Though she laughed she was still most urgent he should go. Mr. Mudge hurried across the course, made the bet, and returned. Pamela watched the race with an eagerness which astonished Mr. Mudge. So completely did she seem to have forgotten all that had troubled her a minute ago. But he did not understand Pamela. She was, after her custom, seeking for a sign, and when Semiramis galloped in a winner by a neck she turned with a hopeful smile to her companion.

"We shall win too."

"I think so," Mudge replied, and he laughed. "Do you know what I think of Lionel Callon, Miss Mardale? The words are not mine, but the sentiment is unexceptionable. A little may be a good thing, but too much is enough."

To be Continued.

A Dangerous Trade

THE dangers of work in a white-lead factory are interestingly described by a medical authority in a discussion of the causes and effects of lead-poisoning. Most of the cases occur among the workers in the department where the preparation of the carbonate of lead is carried on by what is called the "Dutch process"—in which the lead, in sheets, is placed on the top of pots filled with acetic acid, and converted, first, into the subacetate, and finally decomposed by carbon dioxide emitted by tar. In moving the carbonate, clouds of white-lead dust are easily caused by careless handling on the part of the workmen; and in spite of the respirators worn by them much of the poison is taken into the system.

How Gladstone met Verlaine

SOME interesting reminiscences of Gladstone and William Morris are told by Mr. Chris Healy in his *Confessions of a Journalist*. It was Gladstone's habit when in Paris to visit the Latin Quarter, where he haunted the second-hand bookshops. One day as he entered a shop near the Odéon he found the bookseller talking with an odd-looking person who held in his hands an old edition of Villon's poems. His dress was ragged and dirty, his face matted with hair, and he had "the eyes of an archangel and the mouth and jaw of a baboon." The respectful attitude of the bookseller showed, though, that the man was a personality. Gladstone entered into conversation with him about Villon, and for an hour they discussed early French poetry; then the stranger shuffled out of the shop.

"Who is that gentleman?" inquired the G. O. M. with interest. "He has an extraordinary knowledge of French poetry." "Monsieur, he himself is our greatest poet. C'est Paul Verlaine!"

His View of the Suburbs

Mr. Healy recalls also some entertaining glimpses of William Morris's personality. Sometimes when walking through the slums of London he would get on a stool at a street corner and, in his rough, eloquent way, forecast the life of the people in that glad day when the slums and the villas would be swept away, and the employer and workmen merged into the free citizens of the commonwealth. For Morris hated the suburbs and villadom. Mr. Healy tells of having often heard him remark that "God made the country, man made the town, and the devil made the suburbs."

An Important Difference

NOT long after a series of losses at sea on a certain steamship-line, two travellers were discussing transatlantic liners. One of the men preferred the C—— line, the other the T—— line,—the one on which the repeated wrecks had occurred.

"There's one important difference," said the first, "that you don't seem to have considered, but which weighs strongly with me."

"What is that?"

"Why, the C—— line guarantees to take you across, but the T—— line guarantees to take you only as far as they go."

They Knew Him

A WELL-KNOWN literary man who has been spending several weeks at his old home in Vermont tells of a conversation which he overheard between two visitors on the porch of the village store. An acquaintance of theirs had just passed in the street, and the following comment was heard by the visitor:

"Thar goes Si Perkins." Then a meditative pause. . . . "Si ain't the man he used to be."

"Naw—an' he never was."

What Royalty Costs

IT is not generally realized what an expensive thing it is for an important nation to support its royal family. England, for example, pays out almost $3,000,000 a year for the maintenance of its King, Queen, princes, princesses, and other royal dignitaries. The King and Queen alone receive $2,350,000 annually; the Prince of Wales receives $100,000, and the Princess of Wales $50,000 (what the United States pays its President). The Princesses Christian, Louise, and Beatrice, and the Duchess of Albany, receive $30,000; the Duchess of Mecklenburg-Strelitz receives $15,000; the Duke of Connaught, $125,000, and the Duke of Cambridge $60,000. Out of the income allotted to the King and Queen must be paid the cost of the royal household; this includes the salaries and incidental expenses of almost 1000 officers and functionaries. The King and the Prince of Wales receive, in addition to their incomes, large revenues from several sources.

Hawthorne and His Circle
By JULIAN HAWTHORNE

The son of the greatest writer of romance yet produced in America, Nathaniel Hawthorne, has written in this entertaining volume his remembrances of his father and his father's friends. The author's standpoint is personal throughout, which adds greatly to the charm of the narrative. Little details of Hawthorne's life are recounted which have not been available to any other biographer.

CHANGES IN THE MAP.

"Especially the
BUFFALO LITHIA WATER of Virginia."

For Bright's Disease, Albuminuria, Renal Calculi, Gout, Rheumatism and All Diseases Dependent Upon a Uric Acid Diathesis.

Samuel O. L. Potter, A. M., M. D., M. R. C. P., *London, Professor of the Principles and Practice of Medicine and Clinical Medicine in the College Physicians and Surgeons of San Francisco, Cal.*, in his "Hand-Book of Materia Medica, Pharmacy and Therapeutics," in the citation of remedies under the head of **"Chronic Bright's Disease,"** says: "Mineral waters, especially the **BUFFALO LITHIA WATER** of Virginia, has many advocates." Also, under **"Albuminuria,"** he says: **"BUFFALO LITHIA WATER** is highly recommended."

George Halsted Boyland, A. M., M. D., *of Paris, Doctor of Medicine, of the Faculty of Paris, in the New York Medical Journal*, August 22, 1896, says: "There **is no remedy as absolutely specific** in all forms of **Albuminuria** and **Bright's Disease,** whether acute or chronic, as **BUFFALO LITHIA WATER,** Spring No. 2. accompanied by a milk diet. In all cases of pregnancy, where **albumin** is found in the urine as late as the last week before confinement, if this water and a milk diet are prescribed, **the albumin** disappears rapidly from the urine and the patient has a positive guarantee against puerperal convulsions."

T. Griswold Comstock, A. M., M. D., *of St. Louis, Mo.*, says: "I have often prescribed **BUFFALO LITHIA WATER** in Gouty and Rheumatic conditions and in **Renal Calculi, accompanied by Renal Colic,** and always with the most satisfactory results. In **Renal Calculi,** where there is an excess of **Uric Acid,** it is especially efficacious."

Medical testimony which defies all imputation or question mailed to any address.

BUFFALO LITHIA WATER is for sale by druggists and grocers generally.

Hotel opens June 15th.

PROPRIETOR BUFFALO LITHIA SPRINGS, VIRGINIA.

A Chance Courtship

is a story of an unconventional love match, well told and beautifully illustrated. The small picture above only *suggests* the real charm of these illustrations. As a bit of readable fiction the story is well worth writing for. It is contained in a handsomely bound book of 128 pages, a portion of which is devoted to the attractive mountain and lake resorts along the Lackawanna Railroad. It is a book you will like to see. It may be had by sending 10 cents in postage stamps to T. W. LEE, General Passenger Agent, Lackawanna Railroad, New York.

A LITERARY EVENT

MRS. HUMPHRY WARD'S

NEW NOVEL

"THE MARRIAGE OF WILLIAM ASHE"

BEGINS IN THE JUNE NUMBER OF

HARPER'S MAGAZINE

THE scene of this story is laid in the midst of the society world of London. The heroine, Lady Kitty Bristol, is one of the most fascinating and original characters in all fiction. The story moves with the same breathless rapidity which made "Lady Rose's Daughter" so notable a success, and in the very first instalment the reader is brought face to face with a situation which promises an even more dramatic outcome.

for June

JAPAN'S NEW GOSPEL.

¶ HAROLD BOLCE writes from Japan his fourth article on **The Two Pacifies.** The current legend of Japan as a land of pretty daintiness, of color, incense, politeness, and geisha girls, gets a rude jolt in this article. The world-wide nature of Japan's ambitions, her scornful pride of superiority to all things Western, and the extent of her actual preparedness for the coming struggle with the West will be a revelation to most readers. "Asia for the Japanese in commerce and religion" is the new gospel of Japan. The special illustrations add value to a remarkable article.

JUNE COLOR PICTURES.

¶ The work of Mr. Edmund C. Tarbell, one of the half-dozen leaders in American art to-day, is discussed in an article by Albert Winslow Barker. There are four pictures in color, the most attractive in subject and best executed in printing that have appeared in the magazine for some time.

A GROUP OF AMERICAN COLLEGE PRESIDENTS.

¶ This series of full-page portraits of college presidents of outstanding individuality includes President James of Northwestern; President Wheeler of California; President Hyde of Bowdoin; President Faunce of Brown; President Pritchett of Massachusetts Institute of Technology; President Thwing of Western Reserve; and President Dabney of Tennessee.

PRESIDENT DIAZ OF MEXICO.

¶ For twenty-five years Porfirio Diaz has ruled Mexico with an iron hand, but also with wisdom and energy. He is now about to lay down the reins of power. Frank H. Taylor writes a fully illustrated account of the romantic career of this ambitious ruler. Mr. Taylor also discusses the probable effect of Diaz's retirement on the future of Mexico.

¶ There are half a dozen other articles of present-day interest, each fully illustrated. Also the usual good novelette and the World of Print.

WHAT FIFTY CENTS WILL DO.

¶ Send us 50 cents for the May and June numbers, and we'll mail you free the January, February, March, and April numbers of 1904, thus completing the first volume of this year. We include also the index to this volume. This is an exceptional offer and it is good only during the month of June. There are over fifty color pictures in the first six numbers. We make this offer now because we know that those who find how good THE BOOKLOVERS MAGAZINE really is, become regular readers. Mention *Harper's Weekly* when you write.

The Booklovers Magazine

25 Cents the Copy **Three Dollars a Year**

Breaking Into Society

By GEORGE ADE

Author of "The Girl Proposition," etc.

A collection of crisp, new "fables" in Mr. Ade's inimitable style, which has made his former work so popular. This time our latter-day Æsop levels his satire at aspirants for social prestige, and describes "What Happens to Butters-In." Mr. Ade's humor is inexhaustible, and every page sparkles with his picturesque dialect and up-to-date metaphors. These fables are the best Mr. Ade has yet done. *Illustrated.* 16*mo*, *Ornamented Cloth*, $1.00.

Later Adventures of Wee Macgreegor

By J. J. BELL

Author of "Wee Macgreegor," "Ethel," etc.

No more delightfully humorous studies of childhood have been written than these adventures of this little Scotch laddie, whose advent into literature last season caused something of a sensation. "Wee Macgreegor" now makes his second appearance, together with the other characters of the first volume, and his "Later Adventures" will be found as humorous, original, and ingenuous as their predecessors. 16*mo*, *Ornamented Cloth*, $1.25.

For nearly a century this trade-mark has been famous in Havana and has always represented the finest quality of cigars ever made in Cuba

Registered Trade Mark

A DE VILLAR Y VILLAR

GENERALS—50 CENTS
COLONELS—3 FOR $1.00
MAJORS—25 CENTS
ADJUTANTS—20 CENTS
CAPTAINS—3 FOR 50 CENTS
LIEUTENANTS—15 CENTS

These cigars are the best cigars that are now made in Cuba. They have been sold almost exclusively in Spain and England on account of their extremely fine quality and straight shape.

They are now offered to American smokers and have been given these new grading names to identify them in size and price.

No better cigars can be made, as only the choicest tobacco, the ripest, most mature and sweetest leaf is used in making them.

The straight shape is the original and best shape, as it burns better, draws more evenly and gives you more tobacco to smoke than the pointed shape. *"Smoke them slowly, as you would sip old wine."*

The darker colors are the most to be desired, as they smoke sweeter and mellower. *"A light wrapper does not make a mild cigar!"*

These statements are responsibly made and can be verified—and all discriminating smokers of Havana cigars will be gratified to know that cigars of this highest quality, finest workmanship and choicest leaf can now be obtained from the leading dealers in the United States.

A HISTORY OF THE AMERICAN PEOPLE

In Five Volumes

By WOODROW WILSON, Ph.D., Litt.D., LL.D.

President of Princeton University

A new, epoch-making work—the only complete narrative history of the great Republic in existence to-day

PRESIDENT WOODROW WILSON has devoted the best years of his life to the preparation of his great work, "A History of the American People," from the earliest times to the administration of President Roosevelt. The work is monumental in character and scope, represents the genius of the greatest historical writer of the present time, and is written in that delightfully flowing style which translates historical facts into the romance of a nation. Hundreds upon hundreds of new portraits, prints, maps (in colors), plans, and pictures make the pictorial features alone tell their wonderful story—the birth and growth of what is now the United States of America. There is a photogravure frontispiece to each volume, and portraits in India tint and black. Dr. Woodrow Wilson's is the first complete narrative history of the United States in existence.

In order to meet the urgent demand for this work, the publishers have now in readiness a

NEW SUBSCRIPTION EDITION
With Photogravure Portraits of the Presidents

In addition to the illustrations noted above, the new edition contains full-page photogravure portraits of the Presidents of the United States—twenty-five in all—from Washington to Roosevelt, a feature which materially enhances the richness of the work. The five volumes are issued in bindings of new design and beauty:

Green crepe buckram, with leather label, per set - $25.00

had been effected, and contesting delegations opposed to Governor La Follette had been admitted, was able to muster 567 delegates. These stalwarts are headed by United States Senator John C. Spooner and United States Senator J. V. Quarles, who were nominated as two of the delegates-at-large to the national convention. Both of the conventions put forward the same list of Presidential electors, and it is, consequently, argued that the split in the Republican party of Wisconsin will not affect Mr. Roosevelt's prospects of success.

This may prove true if the Democracy puts forward a weak candidate for the Presidency, and if, on the other hand, the Republican national convention shall admit the La Follette delegation. Senator Spooner's friends, or, in other words, the "stand-patters," are unlikely, under any circumstances, to bolt a Republican nomination for the Presidency, although, if rebuffed at Chicago, they may not support it with fanatical ardor. If, on the other hand, the La Follette delegation, which unquestionably had, on the face of the returns, a majority of the regular Republican convention before that body was rent apart, should be repelled at Chicago, or even admitted with only half a vote, most of them may return home in a soured and rebellious temper, with which the managers of the Roosevelt canvass might find it hard to deal. Under such conditions, it might not prove difficult—especially if the Democracy should put forward a strong candidate—to secure the votes of a good many Republican revisionists for Democratic Presidential electors, in return for a promise to support the La Follette State ticket. What would be the effect on Iowa and Illinois of the foreknowledge that Mr. Roosevelt was destined to lose Wisconsin, which has more electoral votes than New Jersey, and which McKinley carried four years ago by upwards of 106,000 votes?

The Republican canvass for delegates is naturally more advanced than is the Democratic, because the Chicago convention is to assemble on June 21, or fifteen days earlier than the St. Louis convention will come together. Nevertheless, the Democracy made considerable progress in the way of choosing delegations during the week ending May 21. Delegates to St. Louis were named in Ohio, Minnesota, South Carolina, Wisconsin, Montana, and California. In Ohio and Minnesota, however, State conventions have not yet been held, and only some district delegates have been elected. The two delegates from the Fourteenth District of Ohio, who were designated on May 17, were uninstructed, but are known to be friendly to Judge Parker. On May 21 the Johnson and anti-Johnson Democratic factions in Cleveland nominated separate candidates for Congress, and separate delegates to the St. Louis convention. The anti-Johnson delegates are for Parker. Mayor Johnson declines to say whom he, if admitted, would vote for, but he took occasion in an interview to boom Joseph W. Folk, of Missouri. Minnesota's convention for the selection of delegates-at-large will not convene until June 22, but the Fourth Congress District held its convention on May 19 and named two delegates, who, although uninstructed, were directed to do everything in their power to block Mr. Hearst's candidacy. In South Carolina the delegates were ordered to vote as a unit, but the attempt to commit them to Judge Parker was defeated by a large majority. Subsequently, however, when Senator Tillman and other delegates were interviewed, they expressed no personal opposition to Judge Parker, and few, if any, avowed themselves favorable to Mr. Hearst.

Wisconsin instructed its twenty-six delegates to vote for a favorite son, Mr. E. C. Wall, who, at the hour when we write, seems to have but little chance of securing any support outside of his own State. Although Montana is a silver State, the Hearst-Bryan element failed to control it, the Democratic convention being controlled by Senator Clark and Senator Gibson, who prevented instructions. It has been for some time understood that if Mr. W. R. Hearst failed to carry his native State, his boom would forthwith be fractured, and it would be futile to present his name in the St. Louis convention. For that reason the contest for ascendency in the California State convention was desperate and bitter. Mr. Hearst ultimately won by a very narrow majority, and there is, of course, much talk on the part of his defeated opponents about "corrupt bargains."

A ticket which lately has been suggested by some friends of Tammany Hall bears the name of Mayor McClellan of New York city for President, and that of ex-Governor Pattison of Pennsylvania for Vice-President. There is no doubt that McClellan's name was cheered in the Indiana Democratic convention, and it has been truthfully said that Democratic voters in the small towns and rural districts of Illinois, Michigan, Wisconsin, and Iowa do not have to be stood up against the fence and told who the son of General McClellan is. Perhaps it is just as well for a great political party to put forward a nominee for the Presidency whom the voters have at least heard of. That, with the sole exception of Grover Cleveland, McClellan would run better in New Jersey than any other Democrat that has been mentioned can hardly be disputed. As to the nomination of ex-Governor Pattison of Pennsylvania for the Vice-Presidency, that, plainly, would be a waste of ammunition, and the Democracy have none to waste. Should the Republicans nominate Mr. Robert R. Hitt for Vice-President, the Democrats should follow suit and select their own nominee for the same office from the same State; or else from Indiana or Wisconsin, both of which must now be regarded as doubtful. To sum up, we may say that, when we write, the prospects of the Democracy have been improved in the Middle West, but, unhappily for them, the improvement has been counterbalanced to a certain extent by an envenoming of the factional dissension within the New York Democracy between Tammany Hall and the Hill-McCarren combination, which has lately gained a useful recruit in Comptroller Grout. If ex-Governor Hill, who, through his control of the Democratic State Committee, is expected to dominate the next Democratic State convention, should, in pursuance of an agreement which is said to exist, nominate Mr. Grout for the Governorship, the latter could hardly hope to poll the full vote of Tammany Hall, and would, therefore, be threatened with defeat. Under such conditions, the Democratic Presidential electors might also be beaten, unless the nominee for the Presidency chosen at St. Louis should be a man whom Mr. C. F. Murphy, the Tammany leader, earnestly desires to see elected.

Mr. Ion Perdicaris, the American citizen who, with his stepson, a British subject, was kidnapped the other day by Moorish bandits from his country-place near Tangier, was not born, as has been asserted, at Trenton, New Jersey, but at Athens, where at the time (1840) his father, Gregory Perdicaris, who had been naturalized in this country, and who had once been an instructor in Greek at Harvard College, was the United States consul-general. In the application for a passport, made in 1903, to the consulate-general of the United States at Tangier, Mr. Ion Perdicaris averred that, although he was living temporarily at Tangier, the place of his permanent residence was Trenton, New Jersey, and that he intended to return to the United States within two years. It seems that Ion Perdicaris entered Harvard College in the class of 1860, but at the end of his Sophomore year went to Europe, where he studied for some time. Subsequently he lived for a number of years in Trenton with his father, who had married a member of a well-known South Carolina family. In 1868, Ion Perdicaris contributed a number of articles to the *Galaxy* magazine, and two years afterward went to England, where he became interested in the study of electricity. In 1879 he returned to this country, and produced at the Fifth Avenue Theatre a play in verse, which was unsuccessful. A little earlier, at the Centennial Exposition (1876), he had come before the public as a painter, exhibiting at Philadelphia a picture called "Tent Life," which attracted a great deal of attention. It was twenty-seven years ago that Ion Perdicaris built a house on the side of a mountain three miles from Tangier, in which he has permanently resided since 1884, and from which he has just been abducted. Here he entertained lavishly American and English friends. He thoroughly earned the popularity which he enjoys in Tangier by organizing, and in large part maintaining, the sanitary commission which has transformed the city from a pest-hole into a healthy town. Our State Department has done well to take prompt and impressive measures for his relief. Not merely a single war-ship, but the whole South Atlantic squadron under Rear-Admiral Chadwick, has been ordered to Tangier, and should even a greater show of force be needed, the European squadron under Rear-Admiral Jewell will be directed to report at the same place. There is

no doubt that such a demonstration will cause the Shereefian government to make most strenuous efforts for the rescue of Mr. Perdicaris, and it is earnestly to be hoped that the efforts will not result, as has sometimes been the case, in provoking the bandits to put their prisoner to death.

According to a report which has been widely circulated, and which, if it has not been positively confirmed, at least has not been contradicted at the White House, the next chairman of the Republican National Committee is to be Mr. George B. Cortelyou, formerly secretary to the President, and now head of the new Department of Commerce and Labor. It is said that at the time of Mr. McKinley's second election to the Presidency, Mr. Cortelyou was desirous of renouncing his post at the White House, and of going into private business, but, at Mr. McKinley's request, continued to discharge the functions of confidential secretary, on the understanding that he should be made a member of the cabinet should a Department of Commerce and Labor be organized. There is a supplemental rumor, which we deem incredible, that but for Mr. McKinley's promise, which his successor deemed it a duty to fulfil, Lucius N. Littauer, of gauntlet-contract notoriety, would have been appointed the first Secretary of Commerce and Labor, and that, although he has narrowly escaped conviction for the violation of an act of Congress, he has even now the best chance of succeeding to the place at present occupied by Mr. Cortelyou. Such an act would be such a brazen defiance of public sentiment that we not for a moment believe that Mr. Roosevelt is capable of committing it.

It was an interesting coincidence that soon after the placing of the Cuban loan for $35,000,000 on favorable terms in the American market, the second anniversary of the birth of the Republic of Cuba should have been celebrated in New York city. In a letter which was read at the banquet, President Roosevelt said that it should ever be a source of joy and gratitude to American citizens to recall the self-denying part which they played towards the Pearl of the Antilles. He acclaimed, he said, what had been done by us in Cuba not merely for its own sake, but because it exemplified the attitude and purpose of the United States towards all nations south of it. The Latin-American peoples will mark with pleasure Mr. Roosevelt's emphatic denial that the United States have any land-hunger, or entertain any but disinterested and sympathetic projects with regard to all other republics on this continent. All that we desire, Mr. Roosevelt said, is to see the neighboring commonwealths stable, orderly, and prosperous. Any country whose inhabitants conduct themselves well can count upon our hearty friendliness. Ex-Secretary Root, whose speech was the principal feature of the banquet, rebuked indirectly the carping spirit in which some Americans are wont to speak of the Cubans and declared that he should be false to his duty if he did not bear personal testimony to the admirable conduct of the Cuban people, to their respect for their law, to their love of country, and to their subordination of their personal interests to the larger welfare of their native land. Subsequently, Senator Platt of Connecticut, the author of the "Platt Amendment" to the Cuban Constitution, justly said that reconstructed Cuba owes more to Elihu Root than to any other man. If, to the sorrow of his fellow citizens, Mr. Root's career were to end to-morrow, of him it would be written: He was Secretary of War, and incidentally Secretary of the Colonies, when liberated Cuba was transformed into an independent republic, forever to be shielded against foreign aggression by the ægis of the United States, and when the Philippines were pacified and conscientiously endowed with a large measure of self-government.

General Kuropatkin seems to be gradually getting his loosely organized army in hand, and its movements become more intelligible and connected. He has evidently been able to check the advance of the main Japanese army under General Kuroki, who is now, it seems, waiting for reinforcements. It should be borne in mind that with every added man the Japanese commissariat problem becomes more serious. It is reported that the Japanese troops are already suffering severely from the poor diet with which they are supplied, and Japan will be taxed to the utmost to procure and pay for the vast quantities of food needed by her army of invasion. Her commissariat problem is even more difficult than that of Russia, which has been somewhat exaggerated in the popular view. It should be kept in mind that there were tens of thousands of Russian colonists in Manchuria for two or three years before the war broke out; that they had planted and garnered immense quantities of wheat, and had gathered vast herds of cattle. These supplies are available for the army, and they are of the quality to keep the troops in health. They can also be supplemented by supplies drawn from Siberia, also a great wheat country, and European Russia, which is one of the granaries of the world. The reiterated reports of the Russian evacuation of Newchwang are probably due to the fact that General Kuropatkin found it possible to draw on the garrison of that town for troops to resist the more imminent danger from General Kuroki's advance. When the advance is checked, and when the disposition of the troops is accurately known, the garrison can be sent back to Port Arthur to prepare for a possible landing there. The weakening of the Japanese fleet makes that landing less probable, and in any case it is only a few hours by rail from Mukden to Newchwang; so that a rapid reinforcement of the garrison there is possible at any time. General Stoessel's reported victory at Port Arthur is probably true. That gallant officer showed his prowess at Tientsin, when he and his Russian troops rescued the European settlement from the Boxer army in June, 1900. The English officers were moved to admiration by Stoessel's bravery, and sent home special reports declaring that but for the Russians not a European would have come out alive from Tientsin.

We commented in a recent number of this paper on a remarkable article entitled "The Truth About Women in Industry," contributed by Mrs. Flora McDonald Thompson, a well-known journalist, to the May number of the *North American Review*. It may be remembered that Mrs. Thompson, speaking from a politico-economical view-point, and also from her personal experience, deprecated the intrusion of her sex into the fields of labor formerly monopolized by men. Mrs. Thompson proceeded on the assumption that, while, of course, there would always be a few exceptions, voluntary or involuntary, yet, as a rule, all women could and would marry, but for the so-called emancipation movement, which has impelled many of them to compete with men for work outside of the home. Such outside work, Mrs. Thompson contended, is practically incompatible with the duties of child-bearing and child-rearing. A very different position was taken by Miss M. Carey Thomas, president of Bryn Mawr College, who at St. Louis, on May 20, delivered an address before the General Federation of Women's Clubs on "Educated Women in the Twentieth Century." She disputed Mrs. Thompson's fundamental premise. The fact is, Miss Thomas averred, there are only two classes in American society, wherein, as a rule, all women marry, to wit, first, the working class, in which the woman, far from being a source of expense, contributes her full share to the support of the family, either by household labor at home, or by paid work outside of it; and, secondly, the opulent class, wherein either the women bring inherited wealth to their husbands, or else the men are themselves so rich that they do not need to look for money with their wives. Miss Thomas relied upon statistics to show that, of the vast intermediate class—not only in the United States, but in other highly civilized countries—the class wherein the wife is usually an ill-to-be-afforded luxury, and unable, from the circumstances of her husband's social position, to conduct her household without the aid of servants, or herself to earn part of the family income, only fifty per cent. marry. The other fifty per cent. must needs be self-supporting, or else eke out existence on what their male relatives can spare.

Miss Thomas next examined the notion, undoubtedly current, that if young women receive the liberal or technical education which qualifies them to do men's work, they are apt to be unfitted, or, at all events, disinclined, to enter into the marriage relation. She adduces statistics, collected in both England and the United States, to show that a girl's going to college, or to a scientific or technical school, no more affects her prospects of marriage than does a young man's going to similar institutions affect the likelihood of his assuming matrimonial responsibilities. It is true that only about fifty per cent. of feminine graduates marry. That, however, is not because they have received a college education, but because

they come from the intermediate social class, only fifty per cent. of the women in which ever do marry, whether they go to college or not. Two other interesting facts are deducible from the statistics produced at St. Louis, namely, first, that feminine graduates have a great power of selection, inasmuch as they marry two-thirds more men that themselves were college graduates than do their non-collegiate sisters; and, secondly, that the average yearly income of their husbands is much higher than is the income of the husbands whom their non-collegiate sisters have captured. Lastly, Miss Thomas, after pointing out that at present women graduates are drawn almost exclusively from the great intermediate class, went on to warn women of the richer class that unless they go to college more generally, the leadership in all things affecting their sex—a leadership which they hitherto have exercised—will pass during the twentieth century into the hands of the middle-class women who have a college education.

Where now does Miss Thomas bring us? If our girls *can* go to college—if they come from the class from which the college girls are recruited—they have only half a chance of being married, anyway. If they *do* go to college, this half-chance is no whit impaired, and they are better equipped for self-support in case they don't marry. "The ordinary college course," Miss Thomas says, "prepares women for the one profession, teaching, which is peculiarly their own." So she demonstrates to her own satisfaction that the college girl is an absolute gainer from going to college, and her demonstration must be satisfactory to us also unless we dispute her statistics. The WEEKLY is not prepared to dispute them, and yet they are surprising. She says that, as a rule, all the women of the "working-class" marry. All the shop-girls? All the cooks and housemaids? We are glad to be relieved from the supposition that domestic service keeps from marriage a good many valuable women who ought to be raising children. And is it really true that in this country *half* the girls born in families that are not rich but fairly prosperous don't marry? Miss Thomas says so, and doubtless she speaks advisedly, but the thought is somewhat appalling. She says that nowadays when it is a question in an American family—except the wealthiest families—whether a boy or a girl shall go to college, the girl goes. Has it really come to that? "Only thus can we explain the steady increase of women over men in colleges." We don't believe this is a permanent condition. There cannot be a general rivalry of sex even in America. If at present the girls go to college rather than the boys, it is the doing of the American fathers. The college-bred mothers of sons and daughters will not favor their daughters to the prejudice of their sons. That is not characteristic of mothers. The more that is done in the way of education for the girls of one generation, the more education the boys of the next generation will get. That is human nature, and that is what will save us, if necessary, from woman-domination.

Various German doctors—Dr. Emil Reich, Professor Munsterberg, and others—and also some members of the Moseley Commission, think that our women are learning too much, and getting too ambitious, and that therein lies a source of grave peril to the American race. Miss Thomas holds—and, we think, rightly—that one important reason for our industrial success is that we educate our girls at least as well as our boys. American intelligence and energy are at the bottom of American success, and of course the intelligence of any people must be raised by educating its girls. The idea, to which the minds of learned Germans are at present so hospitable, that we are tending, hag-ridden, to extinction because we educate our girls too well is one of the most amusing bugaboos that learning ever disclosed. Yet everything may be overdone, and college education for American girls may be now somewhat overdone. By no means all thoughtful people are as sure as Miss Thomas is that a college education is the best possible thing for all girls who can have it. The impression that it impairs femininity does exist, whether it is reasonable or not.

Dr. Charles Cuthbert Hall thinks that the moral standard of the American people is degenerating. Dr. Hall is president of the Union Theological Seminary in New York. In the course of an address on May 18 before the Religious Educational Association in Chicago he spoke of the "relatively good state of the common morality of the American people," but a deeper examination of the social side of our American life reveals, he thinks, a situation that causes anything but satisfaction. Our activity has astonished the world, "but morally we are rapidly going astern—so rapidly that one is dumbfounded at the contrast after a visit to some of the countries of Europe." Religion, he finds, has very little part in our civilization to-day; our home life might be better, and our people are generally apathetic about their spiritual interests. To much the same intent but more specific are the conclusions of Dr. Coyle of Denver as disclosed by him on May 19 at the opening of the Presbyterian General Assembly at Buffalo. He noted the drift of the people away from lofty ideals and from organized Christianity. It meant something, he thought, when conservative observers called our time "the age of graft." He quoted a distinguished Roman Catholic prelate as declaring that the most pronounced of our sins was dishonesty. He spoke of our vanishing sense of sin, which had brought it to pass that there are no sinners any longer, especially in the high places of respectability. Our ideals of the home have been lowered; we suffer from the social scourge of easy divorce; childless firesides are taking the place of family circles. "It is the ring of the telephone we hear nowadays," says Dr. Coyle, "and not the cry of the baby." He thinks a restoration of ethical ideals is imperatively needed.

It is evident that these two reverend and distinguished gentlemen have received practically the same impression of contemporary conditions. Neither of them is a croaker. "I am an optimist through and through," says Dr. Hall, "but I am not a stone-blind optimist." Dr. Coyle says democracy is compelling attention everywhere, and finds the unrest of the masses a thing to be thankful for, serious as it is. But the apparent unsettlement of morals impresses them both, and many other observers besides. Dr. Coyle expresses a common feeling when he says we are losing our sense of sin. Things that used to be wrong are not wrong any longer. Things that are still wrong do not greatly matter unless the district attorney is able to secure a conviction. There is a confusion of ideals, an uncertainty as to what is wrong enough to be inexpedient, and what is merely wrong enough to be "sporty." In older times the example of exemplary persons was respected even when it was not followed. In these days its profitableness is questioned, and the situation is further confused for our generation because it has seen in some exceedingly potent and conspicuous instances sundry beliefs, professions, and details of conduct which used to be part of the outfit of persons who used to be thought exemplary, mixed up with actions and details of behavior which even our accommodating consciences condemn as utterly wrong. We have come to know so much about contemporary success and the price of it, have seen so many gnats strained out and camels gulped down, have seen in politics so many first principles nullified, and early convictions upset, that the best of us wobbles in his moral gait, and wishes some competent hand would chalk again the middle line of the straight and narrow path. But every truly wise man wants to be good. There is hope in that. The American people are intelligent, and they undoubtedly want to be good. If it is true that just now they are less successful than usual in realizing their best aspirations, we must believe that that is only a passing condition born of vast changes, and that presently they will get their bearings again and steer a better course. The warnings of the Presbyterian lookouts constitute one of the natural preliminaries to improvement, even though the improvement when it comes may not take precisely the form that the Presbyterian brethren might now desire.

A correspondent of the *Evening Post* suggests filling in the East River between Manhattan and Brooklyn. He would build two dams, one extending from East Seventeenth Street in Manhattan to the opposite shore, the other from the Battery to Governors Island, and thence to a convenient point in Brooklyn. Between these dams he would fill in, and thus create a substantial tie between the two most valuable islands in America. There is a fine audacity about the proposition, but it is not timely. American engineering energy and capital will be busy for some years to come in making an island of North America.

Porto Rico

It is well known that, for the Greater and the Lesser Antilles —with the exception of Cuba, which, as the principal purveyor of cane-sugar to the United States, and as the favored beneficiary of Spain's protectionist policy, occupied an exceptional position —the nineteenth century was a period of decadence, ending with a close approach to collapse. These fertile sub-tropical islands, which in the seventeenth and eighteenth centuries had played so conspicuous a part, economically and politically, in the history of Europe's maritime nations, had lost by 1898 almost all of their industrial and commercial, if not also their strategic importance. It is well known that the preference given to Cuba by a reciprocity treaty—though by no means all that the Cubans desired—has already imparted a marked stimulus to the production of cane-sugar, the island's chief export staple. It is also patent that the certainty of the early completion of the Panama Canal has enhanced materially the value of almost all of the Antilles, from a strategic view-point, considered as possible stations for coaling and repair. Does it follow that the inhabitants of these islands may look forward to the enjoyment of comparative prosperity during the twentieth century? Scarcely would such a forecast be justified by the experience of Porto Rico in the last few years, during which she has been relieved from the oppression of the Spanish *régime*—if such oppression ever existed—and during which her products have been able to enter, duty free, the ports of the United States. To enter our ports free of duty is a boon that Cuban sugar-planters would purchase at almost any price, short of the surrender of their political independence. Yet it cannot be said truthfully that Porto Rico is better off economically than she was under Spanish rule. Her exports of cane-sugar to the United States are admitted duty free, whereas the same commodity, shipped from Cuba, still has to pay a considerable duty. Very limited, however, is the quantity of cane-sugar producible in Porto Rico. The island's principal product—the export staple which it is best qualified to deliver in great volume and of admirable quality—is not cane-sugar, but coffee. Nearly the whole of Porto Rico's coffee crop used to be consumed in Spain, but from the peninsula's market it is now cut off by a duty virtually prohibitive. Why, then, is not the commodity sent to the United States? Because here the delicate berry of Porto Rico finds the market monopolized by the coarse, rank Brazilian product, to which the American palate has become accustomed, and which is procurable at a price with which the Porto-Rican cultivators of a coffee almost comparable for flavor with Mocha or with Java find it impossible to compete. Brazilian coffees, it should be remembered, unlike Cuban and all other *sugars*, except those of Hawaii, enter our ports free of duty. In other words, Porto Rico is unfortunate in that, although an integral part of the United States, her chief export staple is subjected, in our home market, to a ferocious competition, from which she would be instantly relieved if only a small quantity of coffee were grown on the soil of any of our States or Territories. It is Porto Rico's misfortune that, to this extent, she is treated as a stepdaughter. Congress will not protect her coffee, as it protects her sugar, because, in the United States, there are no domestic coffee-growers, whereas there is a multitude of producers of beet-root sugar.

Such being the economical disabilities of the island, what is the present condition of Porto Rico from a political, social, and industrial point of view? An attempt to answer the question is made by Dr. L. S. Rowe, in a book called *The United States and Porto Rico*, which lately was published by the Longmans. Dr. Rowe, who is professor of political science in the University of Pennsylvania, may be deemed peculiarly qualified to discuss the subject of his volume, because he was a member of the commission to compile and revise the laws of Porto Rico, and was subsequently made chairman of the Porto-Rican Code Commission. His book is brought down to July, 1903. He repels the notion, which, indeed, was never entertained by well-informed persons, that a majority of the island's inhabitants are colored. As a matter of fact, colored persons form only about 38 per cent. of Porto Rico's population, whereas they contribute more than 58 per cent. to that of Mississippi or South Carolina. Noteworthy, also, is the fact that, in the colored element of the Porto-Rican people, the percentage of pure negroes is small. More than 83 per cent. of the colored element are mixed, whereas in the United States less than 15 per cent. of the same element have any white blood. Interesting, also, is Dr. Rowe's *explanation* of the relatively small number of colored inhabitants. He attributes their comparative paucity to the narrowness of the sugar-producing area. We are told that in heaven there is no marrying or giving in marriage. There seems to be an approximation to the beatific state of things in Porto Rico. Of the total population, fewer than 17 per cent. are legally married. Of the colored women, precisely as many are living in irregular connections as in wedlock. Steps have been taken by the new insular government to redress this lapse from rectitude. In the first place, legal responsibility for the support of his illegitimate children was imposed upon the father, and, in the next place, consensual unions were legalized whenever there was issue. We learn that in 1898-9 the enforcement of an educational qualification for the franchise would have excluded 76 per cent. of the men of voting age. Now, on the other hand, there is no doubt that the facilities for public education have been signally improved. Twenty-eight per cent. of the total income from taxation is devoted to the purpose.

For obvious reasons the revision of the laws in Porto Rico presented a difficult problem. The Spanish and the American systems may be looked upon as the two extremes of administrative organization. Of especially doubtful expediency was the introduction of trial by jury. The Spanish government had persistently refused to extend trial by jury to its colonies, on the ground that the experiments made with this method of procedure in the mother country had proved extremely unsatisfactory. It seems that trial by jury took root very slowly in Porto Rico. Jurors were reluctant to pronounce for the conviction of the accused, not only on account of their clannish feeling, but because there was known to be a danger of reprisals upon any members of a jury who should concur in a conviction. The timidity of the insular population made a free expression of opinion among jurors almost unattainable. As a matter of fact, the Act of Congress did not make trial by jury compulsory in Porto Rico, and during the first seven months after the statute became operative not a single jury trial was held. Gradually, however, the institution is gaining the confidence of the islanders, and in a single month near the end of 1902, there were thirty jury trials in one district court. Dr. Rowe expresses the optimistic conviction that Porto Rico will undergo a remarkable industrial development during the next ten years, but he fails to explain to our satisfaction how the coffee problem will be solved. Porto Rico will scarcely again be as prosperous as once she was until she finds a market for her coffee; but that market she cannot hope for in the United States so long as we admit the competitive Brazilian commodity duty free.

The Vatican in Politics

The ecclesiastical drama which is now taking place between Rome and Paris is of the most profound interest and importance. Its historic foundations go back four centuries, and its present influence more or less affects every country in Europe. The immediate pretext of the struggle between the Vatican and the French Republic is, of course, the visit of President Loubet to Italy. That the head of a Catholic state, and one for centuries affectionately called the eldest daughter of the Church, should go so far as to pay homage and give friendly recognition to the secular head of Italy, who represents the confiscation of the papal states in 1870, is something intolerable to the Vatican, and by no means to be borne. The formal protest of the Vatican against this visit might have been foreseen, and was, in fact, foreseen. The withdrawal of France's ambassador to the court of the Vatican was equally inevitable.

We are thus already taken back to the great struggle for Italian liberty and Italian unity; to the days of Garibaldi and "United Italy"; and it is just this ideal of united Italy which consolidates and confirms the resistance of the Quirinal to the Vatican. To restore the temporal power of the papal states would be once more to disunite Italy, a thing not to be thought of from the standpoint of Italian national politics and ideals. Therefore the Quirinal persists in its national policy, which means the political disfranchisement of the Vatican; and the Vatican persists in laying a ban on the Quirinal, and consistently refuses the pension provided by the Italian government in 1871, the arrears of this pension now amounting to $20,000,000. The conduct of the French government in thus endorsing the secular Italian state, and consequently the disfranchisement of the Vatican, is therefore not to be pardoned by the latter, and President Loubet and his government have come under the ban pronounced against the Quirinal.

The results in France itself are likely to be momentous. It will be remembered that one of the most startling and dramatic acts of the French Revolution was to legally abolish the Deity, setting up instead the Goddess of Reason, who had found, for the moment, somewhat questionable vehicles of incarnation. This was in line with Voltaire's exhortation to "Crush the Infamous One," and with the philosophic and destructive rationalism of Rousseau. When Napoleon came to power he found it politic to reestablish the Deity, and once more to erect French Catholicism into a state Church. This was done in 1801, and the Church has had an official existence in France ever since. The instrument by which this reestablishment of the Church in France was brought about was called the concordat, and, as a practical result of this policy, the French government annually pays the Catholic Church some forty million francs—that is, about $8,000,000.

This sum is used to preserve and repair the splendid French cathedrals and churches, and also to pay the salaries of the regular parish priests, with their ecclesiastical hierarchy, who are thus, in a sense, French officials.

The campaign of M. Waldeck-Rousseau against the religious orders in France was in no sense directed against the concordat or the established Church in France. It was levelled against the monastic orders, who form, to some degree, an *imperium in imperio* within the Catholic Church itself, and who have on many occasions been found in an attitude of resistance, or at least marked independence, towards the Supreme Pontiff. The civil attacks on the religious orders take us back to the Middle Ages. They had undoubtedly their origin in a policy sanctioned in England by the great Archbishop Lanfranc, who, in the reign of William the Conqueror, succeeded in making the clergy independent of the common law, an immunity which was extended to the religious houses. The results were most harmful to the religious houses themselves, for outlaws and criminals began to find in them an asylum from civil justice, which, in those days, generally meant hanging. Doubtless in many cases the adoption of a religious life indicated a genuine repentance and desire to make reparation; in many cases, however, it became a mere means of escape from temporal punishment. The old instincts once more came to the surface, and the thousand abuses grew up which are satirized by Chaucer and Boccaccio.

The accumulation of similar abuses, springing from like causes, was the real motive of Martin Luther's first protest, which lit the fire of the Reformation. Devout Catholics are the first to say that there was great need of a reformation in discipline, and that had Luther not tried to supplement this by a revolution in doctrine he would have been recognized in time as one of the greatest sons of the Catholic Church. There can be no doubt that Catholicism was quickened and purified by the struggle of the Reformation, while the extreme type of Calvinism is gradually becoming a thing of the past. Those to whom the opening words of "Holy Willie's Prayer" represent a genuine belief, genuinely held, must now be few in number, and avowedly out of sympathy with the great mass of religious people of whatever form of faith.

Another side of the monastic communities had to do with bequests of the dying who expected to gain benefits for their souls by leaving their property to the religious orders. Sir Henry Maine well shows that the principle of testamentary bequest, as against the old tribal inheritance, has been largely developed by ecclesiastical influence; by religious orders gradually moulding the law, so that they could become beneficiaries under the wills of their adherents. The modern view of personal property, against undivided family wealth, is largely the result of the same pressure, since freedom to bequeath implies separate personal property as a condition precedent.

In Spain, at the suppression of the religious orders in the middle of the nineteenth century, it was asserted that the revenue from property in possession of the religious orders was greater than the revenue of the state. This represents the extreme result of the system of testamentary bequests to these orders; as their possessions were for the most part free from taxation all over Europe, this also represented so much restriction of the field from which the civil revenues could be drawn.

Finally, certain purely secular and political questions enter into the relation of the Church to various countries. In Italy, it happens that the Church is violently opposed to the reigning house, as representing the confiscation of the Papal States. In France, on the contrary, the Church is strongly monarchical and aristocratic in tendency, and this is at the bottom of the struggle waged against the religious orders by successive republican governments. It is believed by the majority of republicans that, while receiving salaries from the state, many representatives of the Church in France use their position and influence in favor of royalist ideas and claimants, and this is what sharpens the animosity of M. Waldeck-Rousseau and M. Combès. The Socialists are Anticlerical, because they are for the most part atheists and materialists, to whom religion is an absurd superstition; and the intolerance and bigotry of unbelief shown by some of these Frenchmen are well exemplified in the order to remove all crucifixes from the courts of justice.

It will be remembered that the representatives of Austria and Germany intervened to veto the election of Cardinal Rampolla to succeed Pope Leo XIII. He was *persona ingrata* to these two courts. We may infer that Pius X. is *persona grata* to the same courts, which will make more intelligible the fact that he finds himself in a position of antagonism to France. The choice of a Spaniard as papal secretary of state is another symptom of Austrian influence, and, as such, is not likely to promote better relations with France.

One can hardly fail to come to the conclusion that the implication of the Church in politics, in virtue of its position, whether in Italy, France, or Germany, can hardly fail to prove detrimental to the best and highest interests of religion; nor can one fail to see that the brightest record in the Catholic Church was held, during the eighteenth and nineteenth centuries, by the Catholics of Ireland, who were proscribed and persecuted for a great part of that period, gaining full rights and immunities only in 1869. Persecution was a great preservative of genuine piety, and the moral purity and especially the sex purity of the Irish race are the finest element in Catholicism to-day. The Catholic Church in America is another example of the success which follows the total separation of Church and state, and one is persuaded that the same thing would be true in France and Italy. This is a matter which will shortly be open to demonstration, since it seems certain that the French concordat will soon be denounced.

The German Element in the United States

THE current number of an interesting quarterly publication of the German-American Historical Society of Illinois, entitled *Deutsch-Amerikanische Geschichtsblätter*, contains an article by Mr. Ernst Bruncken in which the assertion is made that "the German element [of our population] at the present time produces only about one-third as many prominent men as it ought to, in view of its numbers"; and the author of the article, writing in German and addressing chiefly people who read that language more easily than any other, refers to his conclusion as though it were a thing not to be doubted—"a somewhat shameful or humiliating *fact*," and again "a lamentable result."

We shall consider this "fact" briefly in connection with a new book, also written in German by an American citizen, *The German Spirit in the United States of America*, by Dr. Julius Goebel, professor of German philology and literature at Stanford University. With an enthusiasm that makes his book exceedingly readable, Professor Goebel calls upon all German-Americans to be united *as Germans*. In the preface he says that the greater part of the real work of colonization in North America was done by Germans, explaining this statement and supporting it by an extensive historical survey which shows "that the opening of the vast western part of America was begun by the Germans of Pennsylvania and continued and completed by the masses of German immigrants eagerly following in their footsteps. True, the people of other nations—English, French, and especially Irish and Scotch—also participated in this pioneer work, but the lion's share in the quiet colonizing which laid the foundations of America's wealth is probably to be ascribed to Germans." His contention is substantially that a race which rendered such great service in the childhood of America should make its influence felt greatly in the nation now arrived at man's estate. He thinks that the Germans should act as a mighty unit in the endeavor to preserve in the new nation the German conception of life—"the best of our German nationality"—and, above all, should "keep the sacred source from which these possessions have flowed to us, the mother tongue."

A reply to Mr. Bruncken and Professor Goebel, if it is to be quietly convincing, and not merely rhetorical, must be sought in a study of the records of the settlements, and subsequent growth of population in the various parts of our country. The records will aid us to form a clear idea in regard to the ancestry of those Americans from whom Mr. Bruncken and Professor Goebel seek to distinguish the German-Americans. Fortunately a scholarly presentation of the results of such studies lies before us, in the form of a series of articles contributed to the *Deutsch-Amerikanische Geschichtsblätter* during 1903 by Mr. Emil Mannhardt; and for our present purpose we adopt Mr. Mannhardt's conclusions, not only because they command respect, but also because that homœopathic course seems uncommonly appropriate.

Mr. Mannhardt says that in the year 1790 German blood ran in the veins of about one-fifth of the population of the United States. In 1830 the Anglo-Saxon-Puritan element numbered 2,964,717; the German element, 2,695,167; and the American population, in which the several European strains had already become so thoroughly blended as to be no longer easily distinguishable, 4,852,717. At the century's end he finds in the United States 25,477,583 Germans, as compared with 12,713,036 descendants of the "American" inhabitants in 1830, and 12,118,640 Anglo-Saxons. The Teutonic element (Germans, Scandinavians, Dutch, and Belgians) is given as 43 per cent. of the total white population; but very little reflection upon the foregoing figures will be required to convince our readers that in the course of a century a large part of the German element—which was important even at first, and has been increasing so rapidly that it now holds the first position numerically, and is indeed twice as strong as the Anglo-Saxon in that sense—must have become by intermarriage thoroughly amalgamated with the descendants of British colonists and the nineteenth-century immigrants from Great Britain. It is a fair presumption that the influence of German blood—the inheritance of "the best of the German nationality"—may be traced in the more or less useful careers of very many of the prominent Americans whose names give no certain indication of their German origin, or of German blood derived through some ancestress. Therefore Mr. Bruncken's method, which consists in searching American biographical dictionaries for German names, will presumably yield results of very

questionable scientific value; and an analysis of Mr. Mannhardt's figures shows that Professor Goebel's appeal to German-Americans to unite *as Germans* is addressed to 12,046,949 descendants of persons who were citizens of the United States before 1830. Even if one could discover just who are still *German*-Americans, the time has long passed in which it would have been possible to induce them to unite except as they are doing—except as *Americans*.

Population of the World

In a scholarly German work, the first copies of which have just reached this country, we find tables showing the total area, number of inhabitants, and density of the population of each of the principal divisions of the world's land surface. It is issued as Supplement No. 146 to "Petermann's Mittheilungen" (Gotha: March 31, 1904), and the author, Alexander Supan, has placed in order upon his pages such battalions of figures that even the most securely intrenched doubt could scarcely withstand their assault. The present volume brings to an end the series of careful and remarkably exhaustive studies devoted to this subject, and entitled "Die Bevölkerung der Erde," the initial volume of which was published in 1899. As shown in this most recent computation, the grand total of the earth's population is 1,503,300,000; the total area of the seven groups or divisions in which Dr. Supan includes all of its continents and islands is 144,110,600 square kilometers; and the average density of population is, accordingly, about ten persons to one square kilometer. The distribution is as follows: In Europe, 9,723,600 square kilometers and 392,264,000 people, or forty inhabitants for each square kilometer; in Asia, 44,179,400 square kilometers and 819,556,000 inhabitants—eighteen to a square kilometer; in Africa, 29,820,200 square kilometers and 140,700,000 inhabitants—five to a square kilometer; in Australia and Polynesia, 8,951,800 square kilometers and 6,483,000 persons, or much less than one inhabitant to the square kilometer; in North America (to which division Dr. Supan somewhat arbitrarily assigns the West Indies, Mexico, Central America, and Panama, as well as the United States and Canada, but not Greenland), 20,817,700 square kilometers and 105,714,000 inhabitants—five to one square kilometer; in South America, 17,744,900 square kilometers and 38,482,000 inhabitants—two for each square kilometer; in the polar regions (both Arctic and Antarctic), about 12,873,000 square kilometers and 91,000 inhabitants. Of the division last mentioned, 9,013,000 square kilometers are attributed, not very confidently, of course, to the Antartic islands and mainland. The wide extension which the author gives to "North America," exemplifies a tendency of German thought which appears also in Professor Münsterberg's *Die Amerikaner*—a tendency to emphasize geography in America and to slur over ethnology and history. The number of the inhabitants of South America has been stated above; but the total population of Latin America, if we include in that designation all countries and islands directly south and southeast of the United States, excepting parts of the British and Dutch possessions, should be given as approximately 63,000,000.

Ghosts

At a recent symposium following a Shakespeare lecture some one in the audience raised the question as to whether Shakespeare believed in his own ghosts. The lecturer, with all the weight of the man in the seat of authority, squelched the question by saying, "No intelligent person need ever question whether Shakespeare believed in ghosts." It is customary to attribute to Shakespeare all knowledge, even an easy familiarity with the eighteenth-century French rationalism and the physical science of the mid-Victorian age. Such is the human reverence for genius, that when we bow to our greatest we admit that he looked before and after with all the perspicacity of a Hebrew prophet.

Now doubtless as man grows in consciousness his ghosts grow too, and Shakespeare unquestionably gave to his supernatural world that touch of psychological truth which a universal genius invariably does give. If his men are more truly human than those of Webster and Dekkar, his ghosts and his witches are more truly inhuman than those of Middleton and Tourneur. If Shakespeare uses the intervention of supernatural agencies to project the drama, his supernatural agencies always stand in an entirely real and conceivable relation to his people. They serve to accentuate and complete what is already present in the mind of the creature! The witches appear to *Macbeth* alone, to *Macbeth* and *Banquo* together, and their objective reality is still further emphasized by a scene in which they appear alone and in which they are shown having various activities and interests of their own, unrelated in any way to *Macbeth* and his concerns. Their power over *Macbeth* is merely to hasten and complete what he has already conceived and planned. If *Hamlet* had not been of a questioning, pitiful, analytic frame of mind, even "unhousel'd, disappointed, unanel'd," would not have set him on the track of investigation. So that Shakespeare, even if his whole ghostcraft is not purely psychological, does reverence to the truth that like turns to like, and that no supernatural agency can lead us to action or to thought unrelated to our own destiny—or character. Our angels choose us for our likeness to them.

There is a charming little Catholic tale of an orphan girl who lived alone on a hill, uncompanioned and unprotected. Despite sobriety and industry, she finally caused a scandal in the village because her cottage was seen to shine by night and figures moved up and down before the door. The village priest was sent to question the girl, and having received satisfactory replies as to the whole course of her day, he asked her if she prayed. She hung her head and said she repeated the only prayer she had ever been taught:

> God bless my hut from thatch to floor,
> The twelve Apostles guard my door.
> Matthew, Mark, Luke, and John,
> Guard the bed I lie upon.

Finally the priest himself, going up at night to investigate, found, indeed, habitants marching back and forth in front of the door, but they were not in the garb of this world, and the light through the shutters was blinding with heavenly radiance, and the rustle was the surge of angels' wings.

Witches astride of cats and sheet-and-broomstick ghosts seem, indeed, to have evaporated sometime in the eighteenth century, and there was that in the scientific spirit of the middle nineteenth century, a kind of loyal attachment to the concrete, which made their resuscitation difficult.

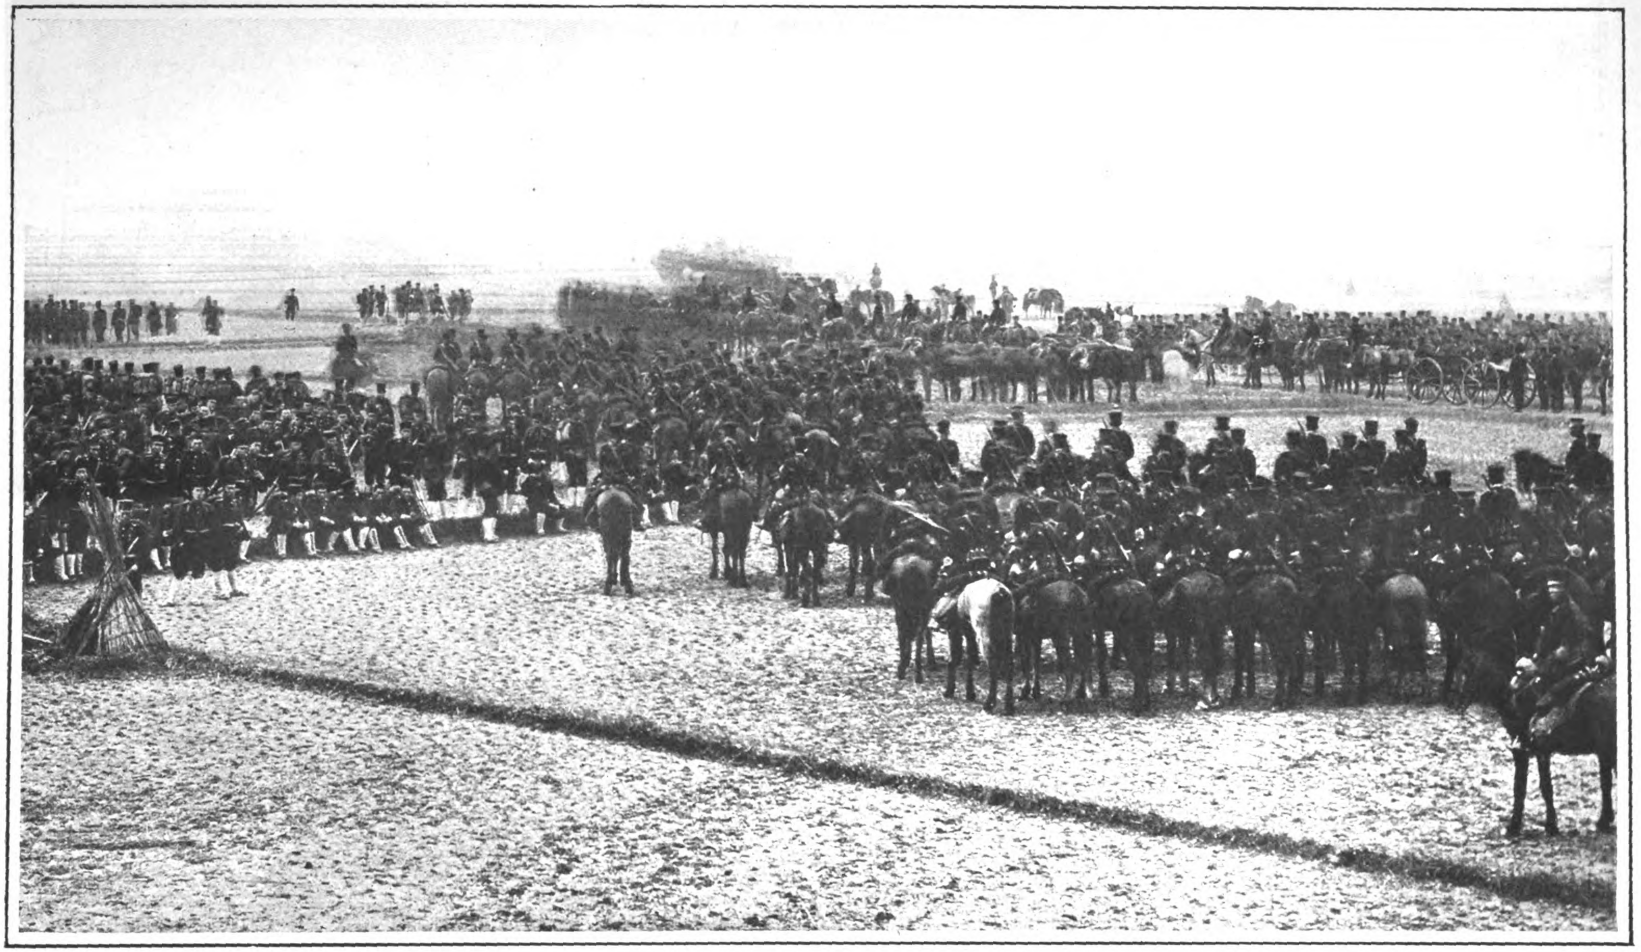
But will men ever be content to live without ghosts? We have only to look about the world to realize that so long as there are men, so long will there be ghosts. Never can life be reduced to the poverty of the five senses. From the very ranks of the scientists comes Clifford assuring us that the whole universe is mind stuff, and have we not Mr. James with his enlarging hypothesis that consciousness may as likely as not exist independently outside of us, and that possibly only a very thin stream of it filters through that meagre and faulty organism, the brain, and therefore only the very smallest part of life would be known of man? It is a most enlarging and joyous sensation to think, as we look at the stars, that not only are we in a vague and indistinct way conscious of them, but that very likely, in a much larger and more profound way, they are conscious of us.

Let no man grieve, then, that we are sweeping the earth clear of the supernatural and making life uninterestingly tidy and comprehensible, for even as the realm of the knowable expands, alongside of it the realm of the *un*knowable stretches. For every new discovery there will still be a desert of the unexplored, and when men have reached the north pole there will still be the great question of the relation of the north pole to the polar star.

If the old-fashioned ghost,

> My father, in his habit as he lived,

is not so apt to appear nowadays, we fill the void with subconscious selves, double and manifold personality, mediums, and theosophists who lead most adventurous lives in astral bodies.



Literature is still full of ghost-seers, though perhaps the most eminent one, Blake, died before the reformation of ghosts. When asked if he had ever seen a ghost, Blake replied, "Only once, and then I took to my heels"; but as a child he reported seeing angels walking among the haymakers, seeing a tree full of shining angels, and when his brother Robert died he saw his soul mount upward clapping its hands for joy, and his spiritual converse with this brother was never interrupted. While poor, obscure, and unappreciated, Blake took solid comfort in the assurance that his works were "the delight of archangels." He enjoyed his cottage in the country because "voices of celestial inhabitants are more distinctly heard and their forms more distinctly seen, and the cottage is also a shadow of their houses."

It is possible, of course, to dismiss Blake as a visionary, and stay one's questioning with a name. But we have the wholesome, concretely inclined Mr. Kipling writing *The Greatest Story in the World*, in which a commonplace young counter-jumper under given physical conditions remembers all the experiences of a Viking and a galley slave. And *At the End of the Passage*, a ghost story in which

> The gates of hell are open and riven,
> And the winds of hell are loosened and driven,
> And the dust flies up in the face of Heaven.

There is Stevenson, a man much at home upon earth, and always cheerfully and comfortably allied to the body, giving us Dr. Jekyll's ghost, a hideous, haunting, bloodthirsty capacity for evil, dogging the steps of a respectable, upright, benevolent gentleman. There is Balzac's Seraphita, a strange creature, part seraph and part human, and Peter Ibbetson, who lived his life and loved his love, all in a dream. In the face of all this modern testimony, shall we cease to believe in ghosts? Rather let us perceive that our ghosts become more rational and more helpful as our own sense-perceptions strengthen and refine themselves.

THE JAPANESE ADVANCE IN KOREA—TROOPS LEAVING CAMP

The photograph was taken by one of our special correspondents in Korea, Edwin Emerson, Jr., and shows a body of Japanese cavalry preparing to leave camp in marching order. The Japanese advance, it is reported, is northwestward from the region of the Yalu to Feng-Wang-Cheng, where the northern and westward movement of the troops is temporarily checked

A DETACHMENT OF JAPANESE ENGINEERS LAYING A MILITARY ROAD IN KOREA

The photograph shows a detachment of the engineer corps of the Japanese army constructing a military railroad in Korea for the transportation of supplies and ammunition, as an auxiliary to the system of wagon transportation. The rapid breaking up of the winter season in Korea has facilitated the advance of the Japanese into northern Korea and Manchuria

JAPANESE READING WAR BULLETINS IN YOKOHAMA

The intense interest felt among all classes of Japanese in the progress of the war is illustrated by the scene shown in the photograph, which is a snap-shot taken in front of an announcement-board giving the news of the war in Japanese. Another means used to keep the public informed of the progress of events at the front is the "Gogai-ya," or carrier of war bulletins. These men, each with a bell fastened to his belt to announce his approach, run through the streets distributing free war bulletins

Experiences of a War Correspondent

By William Dinwiddie

Special Correspondent of "Harper's Weekly"

PING-YANG, KOREA, *April 15, 1904.*

PASSES from Chinampo to Ping-Yang—stamped with the ever-essential vermilion seal of the Japanese commanding officer at the first-named place—had been handed out to the dozen or more hungry war correspondents.

Orders were to proceed to Ping-Yang, where it would be determined whether or not we might go on to the front. This doling out of small, piecemeal concessions had created a belief, in the minds of the foreign correspondents, that it was not the intention of the Japanese government to permit them to see the war at all—a mental condition just relieved, on our arrival in Ping-Yang, by the prompt issuance of passes to the fighting front.

The Japanese mess contractor and transport agent (employed by the newsmen upon representations that food was scarce at the front and horses and coolies practically impossible to secure) was promptly besieged, upon his tardy arrival in the harbor of Chinampo with his 400-ton coasting boat, with a view to finding out how soon he could move us forward. Though he was still landing provisions, he agreed to start the next morning, April 12, at eleven o'clock.

A few impatient spirits could not wait. One noted English correspondent, part of whose religion is a bath and a shave every morning, astonished everybody by digging out up the road on his horse the same day, with only a few cans of meat and vegetables, while five others, with the secrecy of the proverbial sand-hidden ostrich, booked passage separately on a tiny boat bound up the Ping-Yang River at midnight.

The sky had been slightly overcast, yet hardly warranted the sudden closing down to the storm footing it assumed at four in the afternoon. Slowly the rain poured down, harder and harder, and the moderate temperature chilled and became raw in a cutting breeze.

Storm and darkness drew down into what one correspondent mildly called "the devil's own night." The filthy, clayey, unlighted streets of Chinampo became a sticky mass of mud and water.

The men attempting to elope by boat found it extremely difficult, in a Japanese inn, with paper partitions and diaphanous sliding-doors, to keep their movements secret, and soon the place buzzed with the question whether to go or stay. Five men started, to their regret, and the rest stayed behind, to their greater regret.

Not knowing the peculiarities of the Korean coolie, who has a horror of cleansing rain and a dread of darkness, night was allowed to come on before putting the baggage aboard the vessel. The Japanese interpreters implored and cajoled and even captured Korean pack-carriers, who speedily ran away again. A two-wheeled cart was finally loaned by the Japanese commissary, and a famine price paid for laborers to push and pull it, and away it went with the effects of at least two of the men, splashing into mud-holes and ruts not illumined by the swinging oiled-paper lanterns the men carried.

It is a good three-quarters of a mile from the inn to the military wharf, and two-thirds of this distance must be traversed on a dirt causeway raised fifteen feet above the reeking tidal flats. Among the buildings of the town there was some protection from the slanting, wind-driven rain, and the flickering light from the boxlike stores shot across the muddy roadway, lighting it dimly, but over the high bank road to the water-front, with its sheer drop into the tide-covered ooze and slime, pitch darkness and wind and pelting rain held full sway.

The belated writer, with shortness of time demanding sprinting, made the trip alone, and, after a few plunges, acutely realized the difficulty of walking in a straight line with no guiding points ahead. There were a thousand-odd depressions filled with six inches of water and as many intervening humps of doughy mud a foot deep. The sprint turned into a sliding sprawl, right left, left right. Fortunately the route was bordered on one side by long sections of covered artillery and on the other by a small-truck railway track—on the one hand, if you did not go through the perilous open spaces you could only run into the guns broadside, while on the other it was just possible to fall full-length without being precipitated over the embankment. As you slid and fell, and splashed along, unseen sentries guarding the artillery grunted unintelligible words in your startled ears, until, in desperation, you tried to whistle unconcernedly, with dry lips and wind-blown lungs.

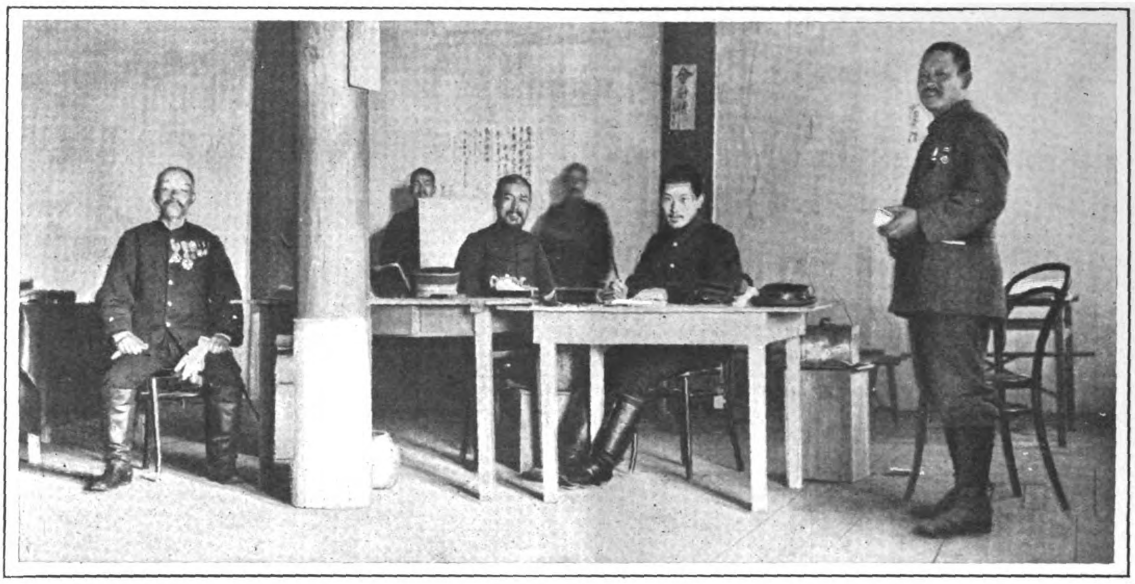
Apparently, not a sampan man was to be had for love or money; in fact, there were none at the wharf, and none answered the strident calls of the Japanese or the roaring bellow of a big-chested Scotch correspondent, who kept shouting: "Sampan! Sampan! Sampan! Ten yen for a sampan!" into the distressing darkness of the wild water, just dotted here and there with the misty sparks which indicated the berths of anchored ships.

After an hour of ineffectual howling, a sampan man glided out of the Stygian blackness, and, whirling down on an out-racing tide, came alongside the little pontoon wharf, already quivering in the rushing waters and threatening to break loose from its kedge anchors, without the added force of a blow from the clumsy scow.

The boatman was promptly offered ten yen, but not understanding numerical English higher than the figure four, he insisted upon receiving "Four yen, four yen," and his offer was instantly taken up. The small river steamboat lay only a hundred yards up-stream, but it took two husky Korean scullers a full half-hour to stem the swift current and reach the ship's ladder. The Koreans flatly refused to try it again, though half the party, with their baggage, were still on the wharf. The display of the original tender of ten yen in one-yen bills finally tempted them, and again the somewhat perilous journey was accomplished, the up-trip being made more difficult by the increased run of the ebb tide.

It was after midnight when all were on board. The two cabins were six feet long, four feet wide, and seven feet high, and the doors opened directly out into the wind and rain, so that they had to be kept closed to prevent the flood from entering. It was somewhat of a trick, with an indescribable resultant confusion of belongings, for white men in raincoats, heavy overcoats, and muddy boots, to disrobe in the eighteen-inch space left between the door and the edge of the bunk, and, once in the berth, the suffocating odor which arose from dirty blankets left it questionable whether the rain and wind outside would not have been preferable.

At the last moment, one of the five correspondents, whose despatch boat had been seized and its crew arrested by the Russians at Newchwang a week before, received advices that she had been released and had reached Chemulpo. It was important that he remain behind, but at first it looked as if he would be separated from his baggage; however, by desperate financial inducements, the sampan men were persuaded to put him and his belongings ashore. Noticing among his rescued baggage the two days' rations allowed by the contractor (two loaves of bread and two tins of meat, price thirty yen!), with his up-turned face streaming with rain, he attempted to throw them into the outstretched hands of his partner in crime. The two tins and one loaf went overboard, and the man at the rail stood clutching one small loaf of bread, feeling that he had been given, not a stone, but a gold brick costing just $15!



Korean Coolies carrying Japanese Military Supplies on a Road near Ping-Yang

Correspondents making a Landing on the Ta-Long River, four Miles below Ping-Yang

Japanese Commissary Officers transacting Business in a Korean Temple at Ping-Yang

On account of the darkness and a strong down current, which had been greatly increased by the wind, the captain did not weigh anchor until five o'clock in the morning, or just as the dawn disclosed sullen, wind-reft clouds scurrying low overhead.

Ban-kei-dan, a Korean village now submerged in military supplies, was reached at ten o'clock, and here we transferred ourselves and our luggage to a tub of a sampan, with rounded, bulging sides and flattened bow and stern which, owing to its shape, rode the water as unsteadily as a huge tin washbasin. One lone Korean, with a bent sculling-oar fifteen feet long, undertook the task of propelling up the river four correspondents, six Japanese interpreters, and at least two tons of baggage. The issue seemed doubtful, but he struggled valiantly, with the great oar grasped by the short crosspiece above his head, and swung rhythmically to and fro, standing on his feet and crooning a weird song of half a dozen notes.

Two miles an hour with the tide at flood was the initial speed, decreasing progressively as the tide turned and began to ebb, until he could just stem it. At the end of the first mile we were informed that we should have to wait for the next tide! Cheerful prospect this, in a drizzling rain, with a cold rain coming in ever-strengthening gusts!

Our boatman, however, after special inducements were offered, proved himself equal to the emergency by shoving in shore and casting a tow-line about his shoulder, when he trudged manfully forward along the bank, dragging the boat behind him at a very fair rate of speed. The trip to Ping-Yang would have been accomplished in style had it not been for the idiocy of two of the interpreters, who landed and struck out, at a rapid gait, along the shore path. They disappeared in a short time up the beach, and when, half an hour later, it became necessary to cross the river, as Ping-Yang lay on the other bank, the pedestrians were out of reach. It so happened that the land on which they elected to stretch their legs was an island five miles in circumference, and the rest of the party must, perforce, sit themselves down and wait till they returned, or perhaps made the circuit of the island. They went round in exactly two hours, and arriving at a log which they recognized three hundred yards below us, they stood and gazed in stupid astonishment into the river for a moment, and hurriedly took the back track.

Want of time and general ill humor caused by the delay prevented us from permitting them again to circumscribe the land, and a courier was sent hotfoot to bring them in.

A near-by junk was utilized for two more Koreans to assist our boatman in the strenuous task of crossing the river. They were loath to come, but a little Jap, linguistically athletic in Korean, prevailed upon them to join our forces by lifting them bodily from their boat, with a firm grip on their padded pantaloons.

The boat shot diagonally over the waters, flowing seaward at a rate of six knots an hour, losing half a mile in the sweep down stream, and landed on a pebbly, shallow bar. It now became perfectly evident that the boat must await the turning of the tide. Two correspondents and their interpreters went on a relief expedition to Ping-Yang, leaving to the others the task of guarding the baggage and moving the boat when tide and water permitted.

Some one made the foolish statement that it was two miles to the city. It is four on a dry day and eight in wet weather, owing to the back lash of one's feet in the slippery mud.

Through the massive stone arched gateway we pass, splashing in the water and mud pouring out of it like an open drain, and see, for the first time, some indication of Japanese military activity in the stores of rice piled high in the open, partially protected from the weather by straw mats. There are also several temporary cavalry stables and warehouses with matting walls, but no such permanent structures as we saw at Chinampo.

After passing the second, or inner, gate the fearful condition of the streets beggars description. The main avenue of traffic is ten feet wide, with a continuous line of tiny shops of a single story, dwarfed, if possible, by the big black tiles of their roofs. The street actually runs filth and sewage, through which a congested population crushes, spattering and splashing one another with the muck as they pass and repass. At intervals the river of stench becomes so deep that the pedestrians take to broken rocky ledges twelve inches wide, on either side, and squirm and twist and balance past open swinging doors. It is actually necessary to assist each other in passing, to keep from falling off into the slough, by clinging to each other and balancing together.

The street winds in curves, so that it can be seen only a few yards ahead, and it seems to be an endless succession of stores, where foodstuffs, clothes, trinkets, and tobacco are displayed, awaiting a purchaser, in the doorways, and contaminated by the mire which is flung upon them.

It seems absolutely inconceivable that human beings can go on living for centuries in an atmosphere far worse than the filthiest pig-sty imaginable. One season should kill off every man, woman, and child with some pestilential disease, yet—while the mortality is, no doubt, very large—children, almost literally born in the wallows and certainly bred in them, actually reach the full stature of manhood. The entire city within the walls is such a continuous mass of loathsome nastiness that one must apologize for having even attempted to picture it and drop the subject.

The jolting, muddy people of the streets are all dressed alike, so far as clothing goes, in white, baggy trousers and long coats corded about the waist, but the footwear and headgear offer a wide variety of styles and fashions. Among the shoes are found a straw sandal with strings, a plaited straw slipper with corded uppers, varnished paper and leather slippers with decorated tops, and generally, on rainy days, a "wooden shoon" curved upward at the toe like a junk under full sail, and furnished with two broad heavy cleats beneath, two inches high. This shoe is carved from a solid block of wood, cleats and all, and is often elaborately decorated in colored lacquer patterns.

The woven horsehair and split bamboo fly-screen headpieces worn by Koreans seemingly take on an endless variety of forms, from the shape of an inverted paper bag to those with brims two feet in diameter and straight-sided chimney cones nine inches high rising above them. The real protection to the head is a tight skull-cap with strings under the chin, and anything else is worn purely for adornment.

On a rainy day one may see a tall Korean of position arrayed in a skull-cap, a fillet or black band of horsehair fitting tightly down to the middle of his forehead, which holds his hair in position, a straight-brimmed, high-crowned hat of bamboo splints suggestive of Dutch or Quaker colonial days, and, topping and covering all, a little yellow oiled-paper, half-closed parachute or umbrella, tied from the ends of four ribs with strings under his chin. In fact, all strings of these cranium-protecting devices pass beneath the chin of the victim, and add a questionable dignity by keeping the face tilted upward and straight to the front.

Headquarters of the commissary department, where correspondents report their arrival and have their passes visèd and telegrams and letters censored, is in a Chinese temple, whose huge roof-beams and rafters, supporting the double-decked and fluted tile roof, are gaudily painted in red, green, and yellow designs. The Japanese officials receive us with great courtesy, and, to our real surprise and pleasure, say that we may start next morning for Wiju, on the Yalu, and join the fighting front.

Large quantities of army rations and ammunition are constantly

moving northward over the main road to Wiju. Thousands of Korean coolies are engaged in this heavy task, and all day long they stream through the northern gates of the city wall, bent double with a back-pack of over a hundred pounds. Their chief diet is the small red bean of the country, so they are no drain upon the Japanese army commissariat, and it is said they can plod steadily forward twenty miles a day under this crushing weight, though for quick marches eighty pounds is the usual load.

The army has bought up vast numbers of small Korean ponies, which can carry a man and a heavy pack at the same time, at the rate of thirty miles a day. They are only a few sizes larger than the Shetland pony, but tough as a whipcord, and they keep healthy and fat on the same bean soup used by their masters and by browsing on the scant dry grass left through the winter.

The selling price of these animals has doubled under the great demand, and a Korean will, with a placid face, assure a prospective purchaser that this is the only beast he has with which to win his daily bread, and that the entire family loves him so dearly they do not care to part with him at all, but, as a personal favor and at a sacrifice to himself, he will sell it for two thousand yong, or over a hundred dollars gold. If one has time to dicker the price will be found to be fictitious, but much time and haggling is required to effect a sale at a fair price.

One Korean confidentially assured the American missionary, who talks the language and had kindly offered to act as a go-between for the writer, that he had discovered that I was no Christian, and that, of course, the price he asked was very high and not the real one. His acumen regarding the species known as war correspondent did him great credit, and my estimation of the perspicacity of the whole Korean race rose accordingly.

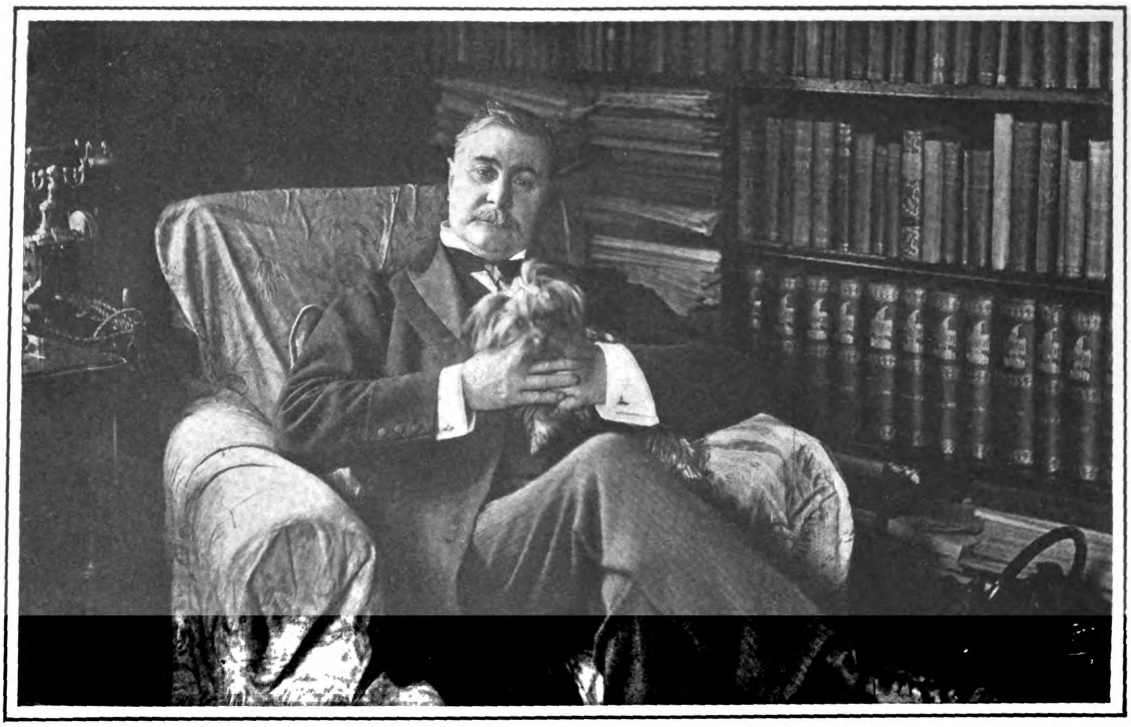
The bargain for one horse was made for a very fair price by the writer, by paying part down awaiting delivery, but was followed by a very amusing episode. The next day the old father of the boy who made the sale came lamenting that his son, in his absence, had sold his horse that he would part with under no circumstances whatever. He tragically exclaimed, "How could this ill-doing boy of mine possibly sell my horse for a less price than I paid for it?" It turned out that another correspondent bidding for horses had offered more money for it, and the disappointed father took this means of reselling his horse at the higher figure, by returning the money paid down by the original purchaser. A threat to report him to the Japanese authorities promptly produced the horse. Though the old man had a very wicked son, according to his own say so, they went off arm in arm, laughing at their failure to work the foreign devil.

The American missionary colony here is more or less exercised over the fact that a general massacre of all Christians has been prophesied for the end of this month. With success to Japanese arms, they say that no uprising of Koreans will take place, but in the event of a big defeat, it is possible that the natives of the north, who are organized under the society name of Hong-noc and pledged to overthrow the present dynasty and rid the country of foreigners, may rise *en masse* and try to carry out their suggested purpose.

As I was finishing this letter, at 11 P.M., a knock came at the door, and a Jap in civilian clothes, followed by three soldiers, pushed into my room. The civilian began explaining—while my startled mind ran the gamut of my possible misdeeds—that the headquarters staff of Ping-Yang, in consideration of the very high regard in which they held the foreign correspondents, desired, as a slight expression of this appreciation, to present me with a small gift; and the foremost soldier thereupon drew out from the folds of his overcoat two large bottles of beer and three cans of Japanese dried fish. It was a kindly, courteous act, and calculated to strengthen sympathies already aroused for this plucky little nation which dares give battle to so formidable a foe.

T. P. O'Connor, M.P.

By Joseph Keating



ANY man who by mere force of character takes hold of the world's interest and keeps it in his grip for a quarter of a century must be in some respects an extraordinary being. There must be something in the heart and soul of the man which differentiates him from ordinary people. And it would be well worth while to try and get at the wonderful secret.

T. P. interests the eye as well as the mind. His hair has that touch of iron gray which is said to appeal so strongly to the sympathies of good women. He is tall and well built. His physique, indeed, has the peculiar effect of making a man of equal size look and feel small beside him. He dresses well. He succeeds in putting a touch of elegance even into the colorless tie and unromantic black frock coat with lapels of silk. His features have rather a ruddy tint—not of health, for overwork and insomnia have spoiled that; it is more like the red of the fight between physical weariness and a sanguine temperament. In repose, when he leans back in his armchair, his face looks grave; when he smiles, leaning forward, he looks the essence of geniality. But the dominant expression is one of weariness. He impressed me as a man with some mysterious ideal unrealized. And there is about his personality a vague dreaminess, an atmosphere of reminiscence which had, for me, something of the charm and mystery of wistfulness. I was astonished to find myself face to face with the attributes of a dreamer when I knew very well what an enormous output of journalism lay to his credit. How could he be both a dreamer and a worker? Above all, how could a man be born a poet and a journalist? For he certainly has the alertness of the one and the imagination of the other. Then I remembered the nationality of T. P. The apparent inconsistency vanished: he was Irish, and he came from the land of contrasts, extremes, and logical inconsistencies, the outward signs of inner ideals. As a boy he was but a dreamer pure and simple. The first thing he did in London, after six hours' walking about under a scorching sun, was to sit down by the fountain in Trafalgar Square listening to the splash of the water, dreaming of marvellous but impossible achievements. But, since then, his long fight with the world may have brought out the sterner elements in his nature. In the conflict of interests we see only the harsher side of men. T. P. plunged into that conflict when he left Queen's College, Galway, at the age of nineteen, and as a first blow at conquering the world joined forces with the hopelessly obscure journal called *Saunders's News Letter*. If he had not decided to fight alone he would surely have been buried in the awful oblivion which darkens the fate of Saunders's journalistic fossil.

There are two unavoidable accidents by which some men fall under public notice: princely birth, or wealth with the same qualification. According to all available information, neither of these accidents ever happened to T. P. O'Connor—though I am perhaps trespassing when I disallow an Irishman the dimmed glory of a royal but un-Debretted ancestry dating back somewhere in the dark of the world's morning—an ancestry which performed marvels some considerable time before history began to think it worth while to start a record. In any case, when T. P. came to London, a youth of twenty-two, instead of being welcomed by the highest in the land, as at present, his only friend was a humble employé at the Lyceum Theatre—an old police sergeant from Athlone. The old man directed him to a cheap lodging at the top of the house in Catherine Street, Covent Garden. He began work at once—invading editorial offices. The editors were not glad to see him. Repulse after repulse sickened him. He had no money. The only capital he had was invested in the bank of hope. Even the interest on that began to fail when he found himself reduced to existing on meals whose cost did not exceed twopence per rare indulgence. But his sheer necessity goaded him on; and the beautiful education his affectionate mother had sacrificed so much to give him was turned to the unclassic purpose of concocting "penny dreadfuls." Now, here we raise our eyebrows in wonder at the extraordinary fact, that same mind which produced such lamentable literature, produced also the *Life of Lord Beaconsfield*, one of the most intellectually brilliant of biographical essays. They touch the top and bottom notes in the intellectual scale. One would feel inclined to accept them as the limits of a man's capacity; for when a man reaches the highest point in any special art the natural thing is for him to fail at everything else. But here the versatility of the Irishman destroys the natural law. Sheridan wrote the finest comedy and made the finest speech. T. P. has done the finest things in journalism, made himself one of the most effective and charming speakers in the House of Commons, and the finest president of the greatest political organization the world has ever known. Whatever view we take of the United Irish League, there is no denying its power. Its millions of members are scattered all over the British Empire and the United States. They are not easily led. And no man of lesser capacity could remain all these years at the head of such a vast organization. Any one who has seen him at its great conventions will admit his power. A few mischief-makers sent there as delegates from obscure branches rise in their places, bent on airing some grievance or other. They begin in a purely impartial way. T. P. smiles benignly and looks down at the speaker from his presidential chair on the platform. He knows exactly what to expect, and while he smiles he is simply arranging a counter-stroke. The speaker goes on, becomes excited. He makes a personal attack on the president. Instantly the hundreds of other delegates call him to order. But T. P., still smiling, puts out his hand, and calls them to order. "Sit down," he says to those guardian angels of his. "Let the man finish what he has to say." So with a movement of his hand he brings a lull over the angry sea, and most politely permits the speaker to go on. There he shows to great effect the real amiability of his nature, the knowledge of character, and his conception of what a man with ideals should put first. For underneath the mere plausible surface of his admirable manner, the ideal of nationality lies deep in his heart; and when a man is so fortified he need not fear the noises and antics of formless ghouls.

"Let them say their say," he pleads. And when the few malcontents have said all the bad things they can about the president, T. P. will calmly look over and say, "And what is the next business on the agenda?" Under his chairmanship these great conventions last only one day. T. P.'s capacity for organization clears away as much business in a day as another chairman, with such an individualistic gathering to handle, would take a month to get through. His speeches are effective. When he first entered the House of Commons in 1888, as the member for Galway, the Irish party were in the thick of the struggle with English opinion. "It was the day of all-night sittings," as an Irish member expressed it. Parnell spoke to the new and youthful representative of Galway, and his instructions were to speak "as early as pos-

Mr. T. P. O'Connor, M.P., in his Library

sible, as often as possible, and as long as possible." T. P. was shy. He heard the command of his leader with a shrinking feeling. But he had to obey. His maiden speech delayed the business of the House for an hour and a quarter, and he blushed under the congratulations of his colleagues and the maledictions of the merely Saxon members.

Since that time T. P. has become one of the few members of Parliament to whom the House loves to listen. When he stands up to speak he is listened to with pleasure and with respect. He has the Parliamentary manner, a pleasantly conversational tone, with an occasional graceful gesture to emphasize a point in his argument. The difficulty of a public speaker is to get rid of his hands. As a rule, they get in a man's way. He hides them in his trousers pockets; but the next minute they spring out again, unawares to him, and hopelessly get in the way. T. P. gives his hands something to do. He uses them with effect. When he is leading up to a point, the subtle movement of his hands helps to guide his hearers. When he has scored, and has no need for the time being to bring them into play, his hands cling to the lapels of his coat, out of harm's way. Besides the ability to speak, T. P. has the ability to listen—when the other man says something worth saying. Unseen by the speaker, T. P. sits listening, carefully fixing the point with unconscious little nods, occasionally making the fragment of a "note" on a fragment of paper. His notes for a speech are scattered over the whole area of the sheet, decorated with mystical signs, and in form and writing like a Chinese proclamation—hopelessly illegible to any but the heaven-born. For his journalistic work he has to use a typewriter. He has a conscientious objection to dictating his articles. He says the result is unsatisfactory; and as he is always turning out some kind of work, he takes a typewriter with him even on his travels.

All the world knows how exactly he gauges the public taste, how firmly he grips attention with the journalistic aptness of his articles, the enormous interest he puts into a subject, the vitality of his phrases, the broad imaginative quality of his ideas. The question is: Where does the secret lie—the source of this extraordinary combination of vision and activity? It lies, I believe, in the meaning of the impression quoted somewhere above: a dreamer with great ideals forced into action. Mere existence called for it. The form of action may not tend to the realization of all the dreamer once beheld. But the moral backbone of the man keeps him to the front.

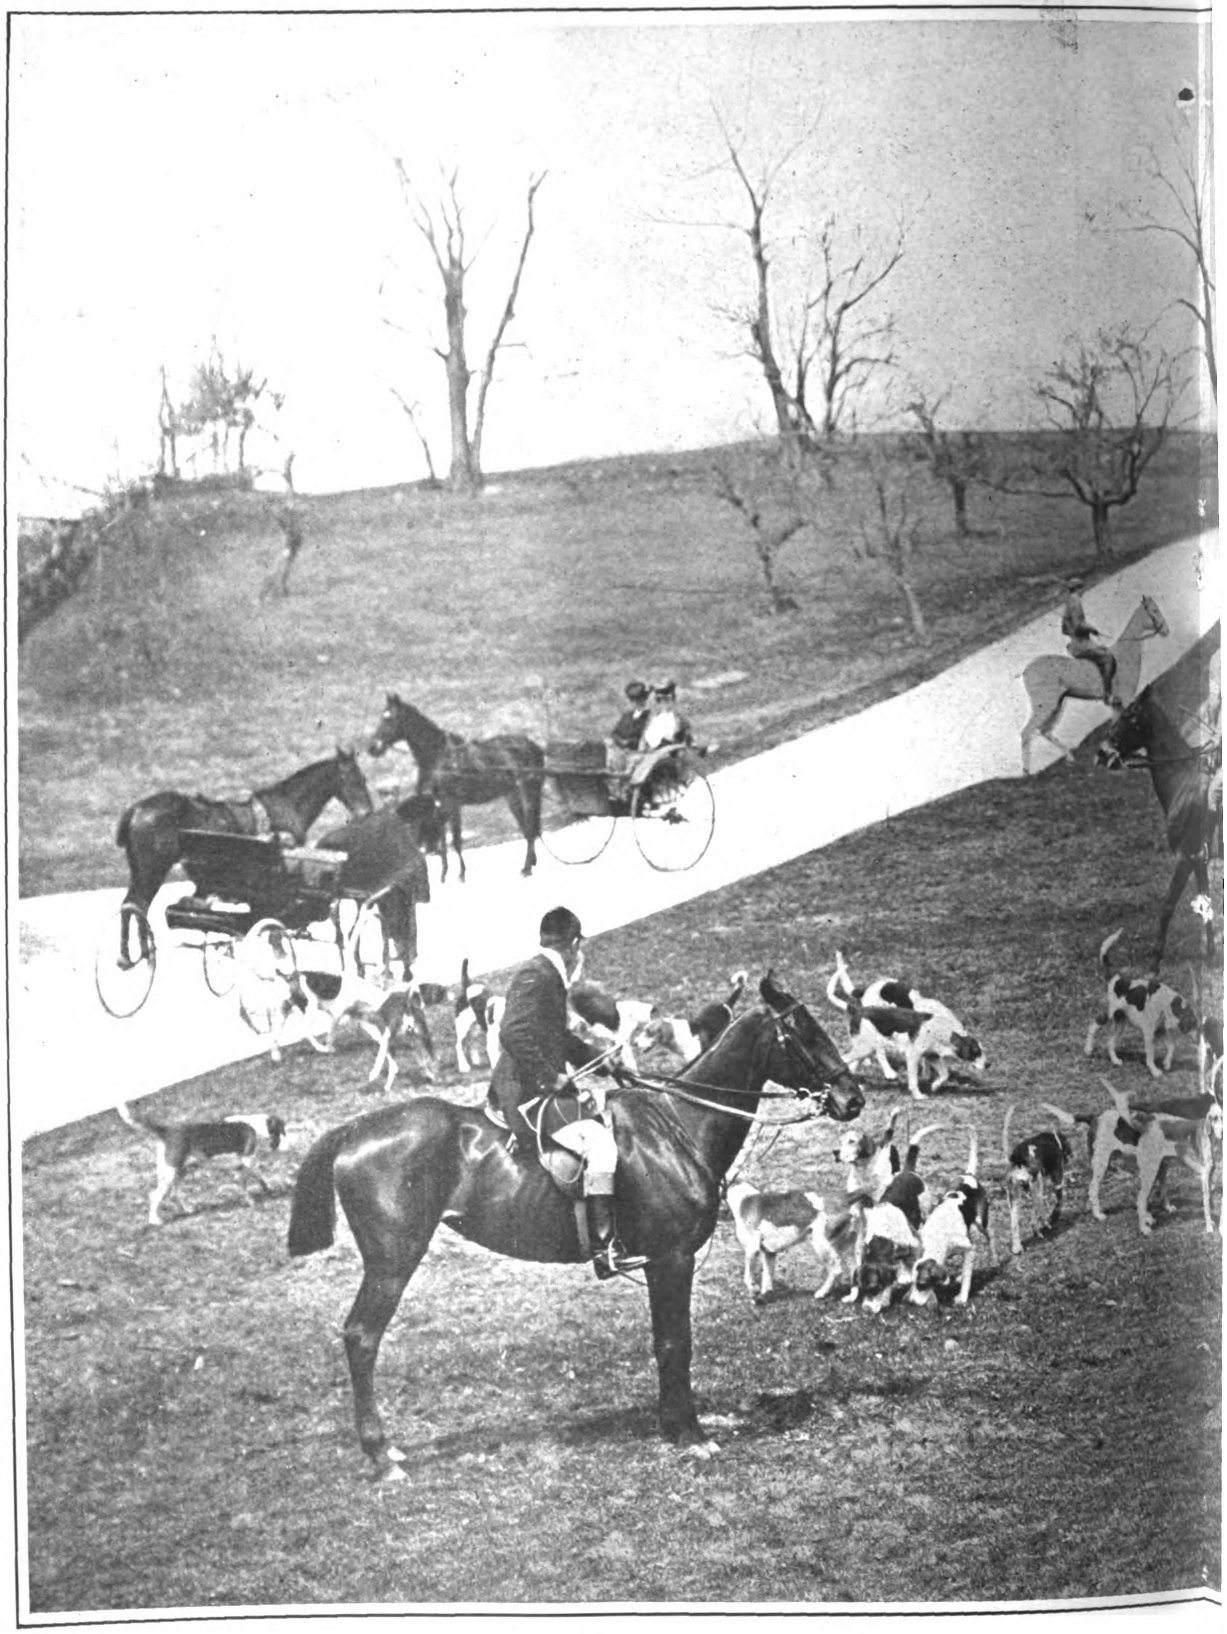
What is the Sun Made Of?

By Charles Augustus Young, Ph.D., LL.D.

Professor of Astronomy at Princeton

IT is generally agreed that the main body of the sun—the nucleus within the photosphere — must be purely gaseous. This seems to be an unavoidable conclusion from the sun's low mean density and its tremendous internal temperature, which must almost certainly be far higher than that of its outer surface; so high that even the enormous force of solar gravity is able to compress the vapors to a density only one and four-tenths that of water, although among the constituent elements are many of the metals (iron being the most conspicuous) which in the solid or liquid state are from three to eight times as dense. The reader must not imagine, however, that this gaseous nucleus is like air or other gases as we encounter them upon the earth. Denser than water, and strongly viscous from the heat, it more resembles a globe of tar except near the outside. There the vapors relieved from pressure are free to expand, and to cool both by the expansion and by radiating heat to outer space, in a region of powerful currents, ascending, descending, and cyclonic.

The photosphere or luminous surface is generally believed to be what it looks like—a sheet of *clouds* enveloping the nucleus, and consisting of minute drops and crystals formed from those vapors which condense at the highest temperatures. These clouds float in an atmosphere composed of the permanent gases like hydrogen and helium mixed with the more numerous vapors which condense only at far lower temperatures than those that form the clouds. As to the substances which compose the cloud-particles opinions are unsettled. Sir Robert Ball maintains that carbon predominates. Whatever their constitution, the clouds possess all the mobility of gas, while in their radiating power they behave like liquids or solids, acting much like the mantle of a Welsbach burner in giving a continuous spectrum and emitting a light far more intense than that of the still hotter vapors in which they float.



The upper surface of the photosphere is, of course, irregular; some of the cloud-summits rise high above the general level (*faculæ*), and elsewhere there are hollows; everywhere there are small clear openings (*pores*) through which the vapors below force their way to the upper atmosphere.

For sun-spots there are almost as many theories as investigators. Until recently they were almost unanimously believed to be depressions in the photosphere filled with cooler vapors which produce the darkening by the absorption of light; and this still seems to be the prevailing opinion, subject certainly to serious objections, but, on the whole, less serious than those which embarrass rival theories.

In any case, it is clear that the spots belong to the domain of solar meteorology; they are phenomena of the photosphere and atmosphere. They are carried by the sun's rotation, and confined to certain zones on its surface, though why is still uncertain. Their cause has not yet been ascertained, nor do we know whether they are due to internal disturbance or to invasions from without. The shortened rotation-period near the sun's equator still obtains

THE CLUB OF QUEER TRADES

The Awful Reason of the Vicar's Visit

by

G·K· CHESTERTON

Part II.

"IT was already late in the afternoon and the nights of winter were closing in fast. On a dark road in a blowing wind we set out towards the lonely house of Colonel Hawker, perhaps the queerest cortège that ever straggled up that or any other road. To every human eye, in every external, we were six very respectable old ladies of small means, in black dresses and refined but antiquated bonnets; and we were really five criminals and a clergyman.

"I will cut a long story short. My brain was whirling like a windmill as I walked, trying to think of some manner of escape. To cry out, so long as we were far from houses, would be suicidal, for it would be easy for the ruffians to knife me or to gag me and fling me in a ditch. On the other hand, to attempt to stop strangers and explain the situation was impossible, because of the frantic folly of the situation itself. Long before I had persuaded the chance postman or carrier of so absurd a story my companions would certainly have got off themselves and in all probability would have carried me off, as a friend of theirs who had the misfortune to be mad or drunk. The last thought, however, was an inspiration, though a very terrible one. Had it come to this: that the vicar of Chuntsey must pretend to be mad or drunk? It had come to this.

"I walked along with the rest up the deserted road, imitating and keeping pace, as far as I could, with their rapid and yet ladylike step, until at length I saw a lamp-post and a policeman standing under it. I had made up my mind. Until we reached them we were all equally demure and silent and swift. When we reached them I suddenly flung myself against the railing and roared out: 'Hooray! Hooray! Hooray! Rule Britannia! Get your 'air cut. Houp-la! Boo!' It was a condition of no little novelty for a man of my position.

"The constable instantly flashed his lantern on me or the draggled, drunken old woman that was my travesty. 'Now, then, mum,' he began, gruffly.

"'Come along quiet, or I'll eat your heart,' cried Sam in my ear, hoarsely. 'Stop, or I'll flay you.' It was frightful to hear the words and see the neatly shawled old spinster who whispered them.

"I yelled and yelled—I was in for it now. I screamed comic refrains that vulgar young men had sung, to my regret, at our village concerts; I rolled to and fro like a ninepin about to fall.

"'If you can't get your friend on quiet, ladies,' said the policeman, 'I shall have to take 'er up. Drunk and disorderly she is right enough.'

"I redoubled my efforts. I had not been brought up to this sort of thing, but I believe I eclipsed myself. Words that I did not know I had ever heard of seemed to come pouring out of my open mouth.

"'When we get you past,' whispered Bill, 'you'll howl louder; you'll howl louder when we're burning your feet off.'

"I screamed in my terror those awful songs of joy. In all the nightmares that men have ever dreamed there has never been anything so blighting and horrible as the faces of those five men looking out of their poke bonnets: the figures of district visitors, with the faces of devils. I cannot think there is anything so heartbreaking in hell.

"For a sickening instant I thought that the bustle of my companions and the perfect respectability of all our dresses would overcome the policeman and induce him to let us pass. He wavered; so far as one can describe anything so solid as a policeman as wavering. I lurched suddenly forward and ran my head into his chest, calling out (if I remember correctly), 'Oh, Cricky, blimy Bill.' It was at that moment that I remembered most clearly that I was the vicar of Chuntsey, in Essex.

"My desperate coup saved me. The policeman had me hard by the back of the neck.

"'You come along with me,' he began, but Bill cut in with his perfect imitation of a lady's finicking voice:

"'Oh, pray constable, don't make a disturbance with our poor friend. We will get her quietly home. She does drink too much, but she is quite a lady—only eccentric.'

"'She butted me in the stomach,' said the policeman, briefly.

"'Eccentricities of genius,' said Sam, earnestly.

"'Pray let me take her home,' reiterated Bill, in the resumed character of Miss James; 'she wants looking after.'

"'She does,' said the policeman, 'but I'll look after her.'

"'That's no good,' cried Bill, feverishly. 'She wants her friends. She wants a particular medicine we've got.'

"'Yes,' assented Miss Mowbray, with excitement, 'no other medicine any good, constable. Complaint quite unique.'

"'I'm all righ'. Cutchy, cutchy, coo!' remarked, to his eternal shame, the vicar of Chuntsey.

"'Look here, ladies,' said the constable, sternly. 'I don't like the eccentricity of your friend, and I don't like 'er songs, or 'er 'ead in my stomach. And, now I come to think of it, I don't like the looks of you. I've seen many as quiet-dressed as you as was wrong 'uns. Who are you?'

"'We've not our cards with us,' said Miss Mowbray, with indescribable dignity. 'Nor do we see why we should be insulted by any jack in office who chooses to be rude to ladies, when he is paid to protect them. If you choose to take advantage of the weakness of our unfortunate friend, no doubt you are legally entitled to take her. But if you fancy you have any legal right to bully us you will find yourself in the wrong box.'

"The truth and dignity of this staggered the policeman for a moment. Under cover of their advantage my five persecutors turned for an instant on me faces like faces of the damned, and then swished off into the darkness. When the constable first turned his lantern and his suspicions on to them, I had seen the telegraphic look flash from face to face saying that only retreat was possible now.

"By this time I was sinking slowly to the pavement, in a state of acute reflection. So long as the ruffians were with me I dared not quit the rôle of drunkard. For if I had begun to talk reasonably and explain the real case, the officer would merely have thought that I was slightly recovered and would have put me in charge of my friends. Now, however, if I liked I might safely undeceive him.

"But I confess I did not like. The chances of life are many, and it may doubtless sometimes lie in the narrow path of duty for a clergyman of the Church of England to pretend to be a drunken old woman; but such necessities are, I imagine, sufficiently rare to appear to many improbable. Suppose the story got about that I had pretended to be drunk! Suppose people did not all think it was pretence!

"I lurched up, the policeman half-lifting me. I went along weakly and quietly for about a hundred yards. The officer evidently thought that I was too sleepy and feeble to effect an escape, and so held me lightly and easily enough. Past one turning, two turnings, three turnings, four turnings, he trailed me with him, a limp and slow and reluctant figure. At the fourth turning I suddenly broke from his hand and tore down the street like a maddened dog. He was unprepared; he was heavy, and it was dark. I ran and ran and ran, and in five minutes' running found I was gaining. In half an hour I was out in the fields under the holy and blessed stars, where I tore off my accursed shawls and bonnets and buried them in clean earth."

The old gentleman had finished his story and leaned back in his chair. Both the matter and the manner of his narration had, as time went on, impressed me favorably. He was an old duffer and pedant, but behind these things he was a country-bred man and gentleman, and had showed courage and a sporting instinct in the hour of desperation. He had told his story with many quaint formalities of diction, but also with a very convincing realism.

"And now," I began.

"And now," said Shorter, leaning forward again with something like servile energy, "and now, Mr. Swinburne, what about that unhappy man Hawker? I cannot tell what those men meant or how

far what they said was real. But surely there is danger. I cannot go to the police, for reasons that you perceive. Among other things, they wouldn't believe me. What is to be done?"

I took out my watch. It was already half past twelve.

"My friend Basil Gryce," I said, "is the best man we can go to. He and I were to have gone to the same dinner to-night, but he will just have come back by now. Have you any objection to taking a cab?"

"Not at all," he replied, rising politely and gathering up his absurd plaid shawl.

A rattle in a hansom brought us underneath the sombre pile of workman's flats in Lambeth which Gryce inhabited; a climb up a wearisome wooden staircase brought us to his garret. When I entered that wooden and scrappy interior the white gleam of Basil's shirt-front and the lustre of his fur coat flung on the wooden settle struck me as a contrast. He was drinking a glass of wine before retiring. I was right; he had come back from the dinner-party.

He listened to the repetition of the story of the Rev. Ellis Shorter with the genuine simplicity and respect which he never failed to exhibit in dealing with any human being. When it was over he said simply,

"Do you know a man named Captain Grant?"

I was so startled at this totally irrelevant reference to the worthy collector of chimpanzees with whom I ought to have dined that evening that I glanced sharply at Gryce. The result was that I did not look at Mr. Shorter. I only heard him answer, in his most nervous tone, "No."

Basil, however, seemed to find something very curious about his answer or his demeanor generally, for he kept his big blue eyes fixed on the old clergyman, and though the eyes were quite quiet they stood out more and more from his head.

"You are quite sure, Mr. Shorter," he repeated, "that you don't know Captain Grant."

"Quite," answered the vicar, and I was certainly puzzled to find him returning so much to the timidity, not to say the demoralization, of his tone when he first entered my presence.

Basil sprang smartly to his feet.

"Then our coast is clear," he said. "You have not even begun your investigation, my dear Mr. Shorter; the first thing for us to do is to go together to see Captain Grant."

"When?" asked the clergyman, stammering.

"Now," said Basil, putting one arm in his fur coat.

The old clergyman rose to his feet, quaking all over.

"I really do not think that it is necessary," he said.

Basil took his arm out of the fur coat, threw it over the chair again, and put his hands in his pockets.

"Oh," he said, with emphasis. "Oh—you don't think it necessary. Then," and he added the words with great clearness and deliberation, "then, Mr. Ellis Shorter, I can only say that I would like to see you without your whiskers."

And at these words I also rose to my feet, for the great tragedy of my life had come. Splendid and exciting as life was in continual contact with an intellect like Basil's I had always the feeling that that splendor and excitement were on the borderland of sanity. He lived perpetually near the vision of the reason of things which makes men lose their reason. And I felt of his insanity as men feel of the death of friends with heart-disease. It might come anywhere, in a field, in a hansom-cab, smoking a cigarette. It had come now. At the very moment of delivering a judgment for the salvation of a fellow creature, Basil Gryce had gone mad.

"Your whiskers," he cried, advancing with blazing eyes. "Give me your whiskers. And your bald head."

The old vicar naturally retreated a step or two. I stepped between.

"Sit down, Basil," I implored, "you're a little excited. Finish your wine."

"Whiskers!" he answered sternly, "whiskers!"

And with that he made a dash at the old gentleman, who made a dash for the door, but was intercepted. And then, before I knew where I was, the quiet room was turned into something between a pantomime and a pandemonium by those two. Chairs were flung over with a crash, tables were vaulted with boots like thunder, screens were smashed, crockery scattered in smithereens, and still Basil Gryce bounded and bellowed after the Rev. Ellis Shorter.

And now I began to perceive something else, which added the last half-witted touch to my mystification. The Rev. Ellis Shorter, of Chuntsey, in Essex, was by no means behaving as I had previously noticed him to behave, or as, considering his age and station, I should have expected him to behave. His power of dodging, leaping, and fighting would have been amazing in a lad of seventeen, and in this doddering old vicar looked like a sort of farcial fairy-tale. Moreover, he did not seem to be so much astonished as I had thought. There was even a look of something like enjoyment in his eyes; so there was in the eye of Basil. In fact, the unintelligible truth must be told. They were both laughing.

Drawn by Will Grefe

"Sit down, Basil," I implored, "you're excited"

At length Shorter was cornered.

"Come, come, Mr. Gryce," he panted, "you can't do anything to me. It's quite legal. And it doesn't do any one the least harm. It's only a social fiction. A result of our complex society, Mr. Gryce."

"I don't blame you, my man," said Basil, coolly. "But I want your whiskers. And your bald head. Do they belong to Captain Grant?"

"No, no," said Mr. Shorter, laughing, "we provide them ourselves. They don't belong to Captain Grant."

"What the devil does all this mean?" I almost screamed. "Are you in an infernal nightmare? Why should Mr. Shorter's bald head belong to Captain Grant? How could it? What the deuce has Captain Grant to do with the affair? What is the matter with him? You dined with him, Basil."

"No," said Gryce, "I didn't."

"Didn't you go to Mrs. Thornton's dinner-party?" I asked, staring. "Why not?"

"Well," said Basil, with a slow and singular smile, "the fact is I was detained. By a visitor. I have him, as a point of fact, in my bedroom."

"In your bedroom?" I repeated: but my imagination had reached that point when he might have said in his coal-scuttle or his waistcoat pocket.

Gryce stepped to the door of an inner room, flung it open, and walked in. Then he came out again with the last of the bodily wonders of that wild night. He introduced into the sitting-room, by the nape of the neck, a limp clergyman with a bald head, white whiskers, and a plaid shawl.

"Sit down, gentlemen," cried Gryce, striking his hands heartily. "Sit down all of you and have a glass of wine. As you say, there is no harm in it, and if Captain Grant had simply dropped me a hint I could have saved him from dropping a good sum of money. Not that you would have liked that, eh?"

The two duplicate clergymen who were sipping their Burgundy

with duplicate grins laughed heartily at this, and one of them carelessly pulled off his whiskers and laid them on the table.

"Basil," I said, "if you are my friend, save me. What is all this?"

He laughed again.

"Only another addition, Cherub, to your collection of Queer Trades. These two gentlemen (whose health I have now the pleasure of drinking) are professional detainers."

"And what on earth's that?" I asked.

"It's really very simple, Mr. Swinburne," began he who had once been the Rev. Ellis Shorter, of Chuntsey, in Essex; and it gave me a shock indescribable to hear out of that pompous and familiar form come no longer its own pompous and familiar voice, but the brisk sharp tones of a young city man. "It is really nothing very important. We are paid by our clients to detain in conversation, on some harmless pretext, people whom they want out of the way for a few hours. And Captain Grant—" and with that he hesitated and smiled.

Basil smiled also. He intervened.

"The fact is that Captain Grant, who is one of my best friends, wanted us both out of the way very much. He is sailing tonight for East Africa, and the lady with whom we were all to have dined is—er—what is, I believe, described as 'the romance of his life.' He wanted that two hours with her, and employed these two reverend gentlemen to detain us at our houses so as to let him have the field to himself."

The New Ireland and its Maker

By Sydney Brooks

LONDON, *May 18, 1904.*

OF Horace Plunkett I can only say *Vidi tantum*. I met him at the lunch table of a popular M.P. during the crisis of the Irish Land bill. He must have been about the busiest man in London at that time. He was the court of appeal to whom all members of all parties referred their doubts and difficulties, and he seemed to have spent all the morning and was going to spend all the afternoon and evening consulting and being consulted, drafting amendments, suggesting new points, advising the government, and advising the Opposition. The Land bill filled his thoughts and engrossed his energies. More than any living man he had paved the way for it by accustoming Irishmen to sink political differences on non-political matters, and so making possible that spirit of moderation and compromise from which alone so gigantic a revolution could spring and bear fruit. He came late to lunch, a tall, slightly built, wiry-looking man of fifty odd, neatly bearded, hair just tinged with gray, his face browned by a life of ranching, and marked with the strong lines of toil, his eyes blue, deep, and of the true Celtic expressiveness. I do not remember that he particularly shone in the conversation that followed. He talked well, with a light and graceful touch and a quiet play of humor and imagination, but not strikingly well. And yet somehow he pleased more than many cleverer and more brilliant talkers I have listened to. What he said or else his manner of saying it had the supreme quality of charm, the aroma of a kindly, winning, modest, most sympathetic nature. I began to understand why a lady who has played hostess to many of the most distinguished men in England described Horace Plunkett to me as the most delightful man she had ever met, and why an Irish Nationalist, to whom the Plunkett policy was at one time an abomination, declared that he dreaded to see its author approach him—"He's sure to get something out of me that I don't want to give." But to have done the work that Horace Plunkett has done in Ireland something more than persuasiveness must have been needed, and I found myself watching for a sign of his preeminent practicality. It came readily enough when the ladies had left the table. Our host was to speak that afternoon in the House on the Land bill, and, like a sensible man, had invited Horace Plunkett to talk over the main heads of his speech beforehand. Mr. Plunkett as he then was—he is a knight now—particularly pressed on him the necessity of proposing and carrying a certain amendment to the government scheme. In less than five minutes he had made clear, even to one who like myself had never tortured my mind with the intricacies of Irish land-tenure, precisely where the official plan failed, how it should be amended, and what effect the amendment would have. I do not doubt that he had in his head all the other details of that stupendous measure, and could have expounded each one of them in turn with the same precision and clarity. It was the other side of the man I had been waiting to see—the *intent*, business-like, *managerial*, constructive side; and the revelation, slight in itself, was sufficient.

When such a man, with the accomplishment of what is easily the most practically beneficial work that has yet been essayed for Ireland standing to his credit, begins to talk of Ireland and Irish affairs and the Irish people, it is well to listen. In his book, *Ireland in the New Century*, Sir Horace Plunkett tells the story of the movement which is revolutionizing Ireland. But his book is something infinitely more than a mere record of achievement. It is a singularly penetrating essay on Irish conditions and the Irish character.

What is this "new Ireland" of which for the past few years we have heard so much? What has brought it into being and wherein does it differ from the old Ireland? Sir Horace leads off with the statement that within the last decade there has been a decisive change in the English attitude towards Ireland and a profound revolution in the thoughts of Ireland about herself. The defeat of the home-rule bills, and especially the fall of Parnell, turned the country upon itself, removed from its mind the obsession of politics, and diverted its thoughts towards the immediately practicable. Irishmen, or some of them, at any rate, came to realize that great as was the responsibility of England for the state of Ireland, the responsibility of Irishmen was greater still. This was Sir Horace's own attitude. He made not the slightest effort to gloss over the ravages of English tyranny and English stupidity; he admitted fully the results of centuries of misunderstanding, of the penal laws, commercial restrictions, the land system, and so on; he saw it was natural that Irishmen should think that what legislation had done legislation, and legislation alone, could undo, and that an injury inflicted from without could only be healed from without. But he asked himself whether all this, while natural and to some extent inevitable, was also wise; whether Irish reliance on legislation for the cure of economic ills had not sapped the national virility; whether it was not possible, instead of always complaining about their state, to do something to mend it; whether the habit of living in the past did not result in a present without achievement and a future without hope. In his opinion Anglo-Irish history was for Englishmen to remember, for Irishmen to forget. As he saw it, the Irish problem at bottom was not a racial, political, economic, or religious problem, but a human problem, a problem of the Irish mind and character. The Irish mind and character showed the defects that are the offspring of persecution and misgovernment—lack of moral courage, initiative, independence, and self-reliance; and the real duty of Ireland, in Sir Horace's eyes, was to overcome these defects, to strengthen the moral fibre, to brace the national character, to cultivate a salutary individualism. To do this what was needed was a positive Irish policy, springing from the people and dependent for its success upon their own powers of thought and energy.

In some masterly chapters Sir Horace analyzes the influences brought to bear on the Irish mind and character by politics, religion and education. Though a Unionist, he sees and lays bare the defects of Irish Unionism—the negativeness of its policy, its preaching of the *status quo* as though that were the beginning and end of all things, its capitulation to the landlords which has made it rather the creed of a social caste than a policy in and for Ireland, its aloofness from the people, and its failure to reconcile them to the Union. His criticism of the Nationalists is, if possible, even more outspoken. Their one-man system and the dictatorship of the central organization have thwarted, if not crushed, individual initiative. Sir Horace even argues that the distraction that followed the fall of Parnell, the canvassing in every hut and at every market-place of new men and policies, was about the only real education in politics that the Irish of this generation have had. The Nationalists, he declares, ought to have known that the weakness of character which renders the task of political leadership in Ireland comparatively easy is in reality the quicksand of Irish life, and that neither self-government nor any other institution can be enduringly built upon it. Their agitation, besides being non-constructive and throwing little helpful light on any Irish problem, has increased the indifference of the nation to its immediate needs, and encouraged it to rivet its mind on the past. They have wholly failed to win over the landlords or the great industrial interests of Ulster, and their policy in the main has been more anti-English than pro-Irish.

As for the influence of religion, Sir Horace firmly denounces the intolerance and bigotry of his coreligionists in the north. Catholicism, he thinks, is showing itself non-economic, if not actually anteconomic, in its tendencies, and by its reliance on authority, its repression of the individual, its shifting of the moral centre of gravity to a future existence, has undoubtedly fostered some of the weaknesses in the Irish character, and encouraged a kind of fatalism with resignation as its chief virtue. He warmly commends its comparative freedom from bigotry, but criticises sharply the excessive building of churches and monastic and conventual institutions as too great a drain on the people. "The priest in politics" does not alarm him, but he doubts whether the Irish priest quite realizes his direct and personal responsibility for the character and morale of his flock, considers the clergy to have failed significantly in promoting temperance, and also believes that the disciplinary measures they insist upon to insure chastity repress the natural gayety of the people, and encourage emigration by banishing innocent pleasures from the countryside. As for education, it has always been the English imported brand, taking no account of Irish genius, history, or sentiment, divorced from economic realities, and chiefly fitted for the production of second-rate clerks. Maynooth is too restricted and Trinity too aloof, and until a university is created that will reach down, like the Scotch and American universities, to the rural population, the salvation of Ireland will not be wrought in its schools.

Sir Horace Plunkett's central idea was to utilize the instinctive clannishness of the Irish in a way that would at once harmonize with their native genius, and broaden and strengthen their characters. The Irish have the associative qualities; then let them associate. The Irish problem is predominantly agricultural; then let them associate in agriculture. So in 1889 Sir Horace launched

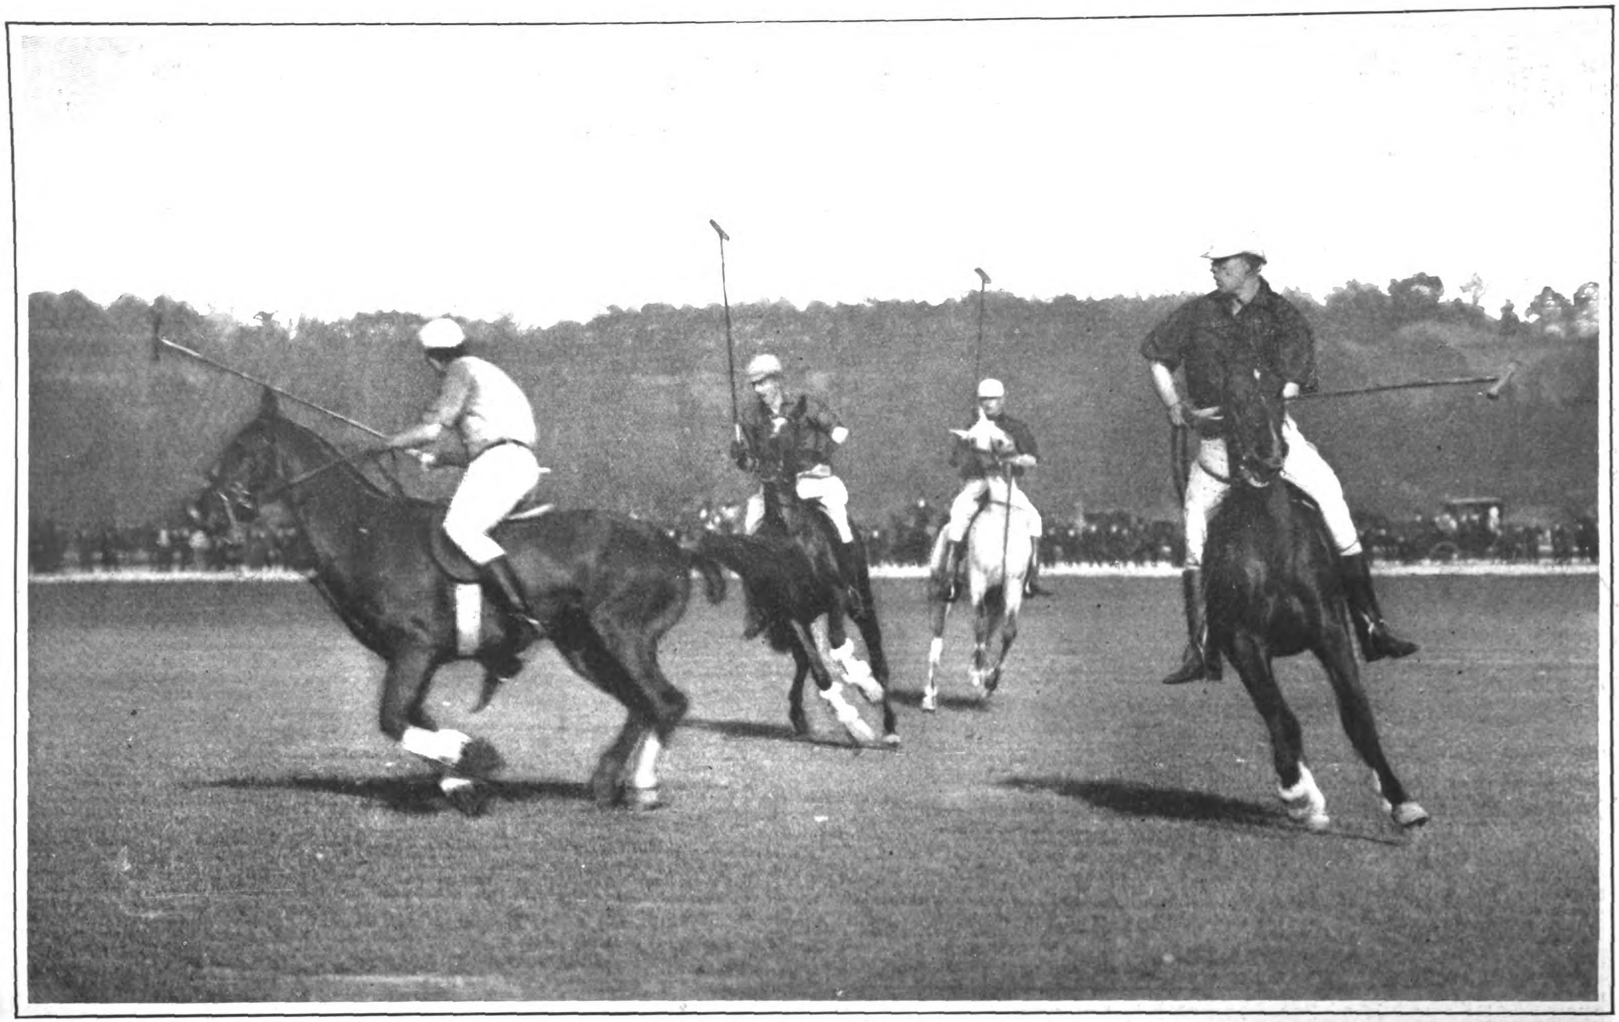
Books and Bookmen

By James MacArthur

BIRD CENTER CARTOONS by Mr. John T. McCutcheon is more than a collection of comic drawings and comments from the newspapers in which they originally appeared. For some time the pictures and accompanying chronicle of social happenings at Bird Center, Illinois, which reappear in this volume, have been a source of hilarious amusement to the readers of the Chicago *Tribune*, and are now presented in a form which will introduce them to a wider circle of readers and add to the gayety of the nation. The author-artist confesses to no definite purpose in his work, but he is too modest, else he has drawn upon his observation and imagination better than he knew. The thread of story connecting the social doings and adventures of the Centerites may be slight, but one finds one's self as deeply interested in the chronicles of this small community as in a novel. It is in reality a kind of fiction in which you are introduced to the little comedies and the little tragedies in one little corner of our country which is only isolated geographically, and may be duplicated all over the States. For, as Mr. McCutcheon says, "You will find Bird Centerites in large cities as well as in small ones, and it is to be regretted that there are not more of them. For they are all good, generous, and genuine people, and their social circle is one to which any one gifted with good instincts and decency may enter. The poor are as welcome as the rich, and the one who would share their pleasures is not required to show a luxuriant genealogical tree." It is a healthy picture of a home-loving people of domestic virtues and of generous impulses, with a little good-natured fun thrown in that satirizes the idiosyncrasies of a small neighborhood, but does not mar that "joy in widest commonalty spread," which the poet has eulogized as the best heritage of the common lot. You will recognize many of them as neighbors — Mrs. Riley Withersby, the "Grand Dame" of Bird Center ("If everybody were as good as she there would be no need of churches"); Captain Roscoe Fry, who fought at Gettysburg, and will tell you many an interesting anecdote of that memorable fight; Mr. Smiley Greene, the popular undertaker, a man of infinite good humor and the soul of exuberant joy, who will cheer you up, no matter how far you are down; Mr. Gus Figgey, of Chicago, the busiest man in the world; Mr. Wilbur Fry, who, with Mr. Orville Peters, is always in attendance with his mandolin or some musical instrument at every social function; Miss Mae Niebling, now an old maid (she was May when she was a little girl); Mrs. J. Milton Brown, *née* Miss Lucile Ramona Fry, who stands for the elevation of her sex, and a number of others, including the Rev. Walpole, Judge Warden, "Doc" Niebling, Attorney Black, and "Mine Host" Mort Peters, of the Bird Center House.

A Literary Evening in Bird Center
From "Bird Center Cartoons," by John T. McCutcheon

Nor must one forget to mention Mr. J. Oscar Fisher, "ye editor," who will put your name in the paper if you are ever among those present, and from whose columns these chronicles purport to be culled. Who does not recognize the touch of the village editor in the flowing style of these sentences describing "A Literary Evening," as pictured in the cartoon which accompanies the text: "Seldom, if indeed ever, has an evening been more consecrated to the Feast of Reason than was last Thursday evening in Bird Center. For on that date the members of the Pierian Culture Club met at the hospitable home of Judge Warden, there to indulge in intellectual essays, orations, discussions, and what not. Many and scholarly were the literary titbits, and if any one went home none the wiser for the evening's entertainment it was his own fault. Without the slightest exaggeration, the evening may be pronounced one of the most complete in the history of Bird Center, up to the time we go to press—" Then Mr. J. Oscar Fisher condescends to notice a few of the more gratifying incidents of the evening, ending up with "all departed, loud in their praise of the evening's entertainment." A hint of romance trickles through the chronicles in the person of the Mysterious Stranger who keeps Bird Center "on the *qui vive*," to quote Mr. J. Oscar Fisher, until the mystery is solved. Mr. McCutcheon's humor is kindly and contagious in its cheerful optimism; as Mr. Winthrop K. Biddle, of Philadelphia, who "came out of the East to woo one of Bird Center's fairest daughters," is reported to have said, "There is not a cross word in the history of Bird Center." Granted that they think a whole lot of themselves, that their self-esteem is a very bulwark of defence from the buffets of an outrageous world, and that their self-conceit is a magnifying lens that glorifies their own importance; somehow Mr. McCutcheon takes the meanness and the pettiness out of it; there is nothing offensive in their conduct and behavior, and this is one of the most marked and distinguishing traits of his humorous point of view. Oliver Wendell Holmes, with whose sane and wholesome, if somewhat too complacent, view of human nature Mr. McCutcheon has much in common, came near the truth when he said: "Talk about conceit as you like, it is to human character what salt is to the ocean; it keeps it sweet, and renders it endurable. Say rather it is like the natural unguent of the sea-fowl's plumage, which enables him to shed the rain that falls on him and the wave in which he dips. When one has had *all* his conceit taken out of him, when he has lost *all* his illusions, his feathers will soon soak through, and he will fly no more."



Shade of John Bunyan! It was only a few months ago that I ventured, in reading the signs of the times, to predict that in the near future some enterprising theatrical manager would put Bunyan's *Pilgrim's Progress* on the stage. The statement was received with derision and treated as a rank heresy; yet only a few days ago the news was cabled from London that Mr. Charles Frohman had arranged for a dramatization of *The Pilgrim's Progress* in nineteen scenes, and that over two hundred people would be employed in the production. This, of course, means that Vanity Fair will be a strong picturesque feature in the presentation of Bunyan's allegory — in all probability the *pièce de résistance* of the play, which will undoubtedly win a great spectacular success. There seems a cruel irony in the fact that the very people lampooned and denounced by Bunyan in Vanity Fair should seize upon his work at this distant day, and use it for mercenary and profitable ends. It would be interesting to know whether *The Pilgrim's Progress* is read as widely nowadays as it used to be. I remember a story that came from Boston, of all places, a few years ago, which argued a strange ignorance and confusion concerning Bunyan's immortal work. The officials in charge of the Juvenile Department of the Boston Public Library had noticed an extraordinary demand for copies of *The Pilgrim's Progress*. Upon investigating the cause of this unprecedented interest in the Pilgrim, it was discovered that the teacher of history in a well-known school had reached the colonial events of the seventeenth century, and had recommended Bunyan's classic to her pupils as a part of the bibliography of the story of the Pilgrim Fathers!

Bruvver Jim's Baby is fast making friends, and there seems to be little doubt that the book will have a sweeping success. The tenor of all the reviews is that which was taken, in the first to appear, from the pen of one of our soundest critics, Dr. Frederic Taber Cooper. "Unless we are very much mistaken," wrote Dr. Cooper, "Mr. Philip Verrill Mighels has written a book destined to touch the hearts of a very wide circle of readers." In conclusion he says: "Many people will read this book just for the sake of the whimsical sayings of 'If-Only Jim'; but by far the larger number will read it for the sake of the story, tender, pathetic, and humorous by turns—a book that cannot be justly dealt with in a brief epitome, but one which may be cordially recommended, with the comfortable certainty that each reader who takes it upon your endorsement will add his own in passing it on to some friend."

THE POLO MATCH BETWEEN PRINCETON AND SQUADRON "A" AT VAN CORTLAND PARK

The polo match between the Princeton and Squadron A teams at Van Cortland Park on May 14 was noteworthy in being the first occasion on which a college polo team has played a match outside of university grounds. The university men lost the game by a score of 13 to 1 3-4 goals. The line-up was, for Squadron A: 1, J. H. Hunt; 2, R. D. Douglas; 3, L. J. Hunt; back, Herbert Barry; and for Princeton: 1, W. B. Devereaux, Jr.; 2, H. C. Yarrow; 3, W. G. Devereaux; and back, G. Forbes. On May 21 the Princeton and Yale teams played the first American intercollegiate polo match. In this game, which Princeton won by 7 to 2, H. D. Babcock, Jr., of the Yale team, was fatally injured.

The Tower at "Dreamland," lit with 100,000 Electric Lights

A Night View of Luna Park, showing the Towers Illuminated

THE NEW CONEY ISLAND—NIGHT VIEWS OF "DREAMLAND" AND "LUNA PARK"

"Dreamland," the new amusement feature at Coney Island, was opened to the public for the first time on May 14. It is laid out in Venetian style, with lagoons, towers, bridges, and statuary. Its most striking feature is a tower 375 feet high, illuminated at night with 100,000 electric lights. Some of its other features are the Santos-Dumont air-ship, the "Fall of Pompeii," the "Canals of Venice," the submarine boat, and the spectacle, "Fighting Flames," in which people are rescued from a burning building and the fire extinguished. Luna Park, which opened on the same date, has been made over since last year. It has been enlarged, and the number of attractions increased. New features are the Delhi Durbar and the Hanging Gardens

Correspondence

CAPACITIES AND INCAPACITIES OF WOMEN

SALEM, N. C., *May 15, 1904.*

To the Editor of Harper's Weekly:

SIR,—Few thought avenues are more alluring than those leading to the contemplation and speculation of men and women concerning one another's capacities and characteristics, and Mr. Woodward's letter in the current WEEKLY is sure to start a number of thinking-machines speeding along these avenues.

It seems unlikely that we may expect strong musical compositions from women, outside an occasional *rara avis*. "In the beginning" it was indisputably the Creator's design that man should originate and construct, and woman should take the result and make the best of it. Back of that we cannot go.

It is not through lack of sentiment that she fails; she is full of every variety of that; it is a lack of power to grasp and hold abstruse problems until they are arrayed along mathematical rules and measurements. Drawing is the arithmetic of lines, music of sounds, fundamentally, and the average feminine mind is at enmity with mathematics; it is not subject to the laws of mathematics; neither, indeed, can it be. Woman's mature attitude toward the advanced science is much the same as that of the schoolgirl to the rudiments:

> Multiplication is vexation,
> Division is as bad;
> The rule of three perplexes me,
> And fractions drive me mad.

The study of harmony, leading up to musical composition, delightful as it is, presents the same species of bunkers that her childhood knew in connection with "ciphering." There is the necessity of following certain fixed rules (which she will not do), of concentrating her thoughts (which she cannot do), and the willingness to delve to secure a foundation on which her airy superstructure may later rest, in safety from the adverse winds of criticism.

The same thing is observable in studios; the men excel in strong correct drawing, while the women count on their natural aptitude for coloring to cover lapses in correctness of line.

Then as to the inspiration necessary, isn't it true that it comes only when there is strength to grapple it and persistence to harness and bring it into subjection? Isn't it one of the gifts bestowed on those who already have much?

Perhaps (but I doubt it), after generations of business training, woman may develop strength and concentration of mind sufficient for high artistic achievement, if combined with the divine afflatus.

Meanwhile, she will doubtless continue to add to the gayety of her men-folk by her amusing methods of home-made bookkeeping, at the end of one month mourning an unaccountable shortage, and at the end of the next month finding that by some innocent juggling she has spent more than she received, and has a cash balance.

No, man must be expected to produce the great harmonies along all lines, and woman will continue to play variations thereon, for so it has been since the time of Adam and Eve, is now, and ever shall be. I am, sir,

G. E. S.

RACE LESSONS IN TEXAS

GALVESTON, TEXAS, *May 14, 1904.*

To the Editor of Harper's Weekly:

SIR,—I have been much interested in the discussion of the subject of the relations of the races, or what is termed the "negro problem," now going on in the public press. I have noticed that the most confident in the correctness of their views are those who by their locality and opportunities know the least about the subject. With an intimate acquaintance with the negro for over threescore years, during the last third of which I have given the most careful study of which I am capable, I am forced to declare that I see no satisfactory solution of the question which concerns the future peace and security of our country.

The restraints of law which are, in the main, deemed sufficient for the white race have no influence whatever over the negro. He is the first to appeal for protection to the law, and yet cannot be made to render any assistance whatever in enforcing it. There are many well-to-do negroes possessing their homes, with all of the comforts of life, honest, respectable, and respected. And yet the negro ravisher and murderer, with the blood of his victim red on him, is certain of shelter and concealment in the best negro home in the land. This has been proven in so many instances that the officers rarely expect or ask assistance of negroes when one of their race is hunted.

I have recently had occasion to visit thirty or forty counties of this State. I find conditions the best for order and security of person in those counties where the negro population is so large as to have compelled the whites, for self-preservation, to organize and practically eliminate the negro from all participation in public affairs, and by prompt punishment, severe if unlawful, have made of the negro a fairly well-behaved member of the community. On the other hand, by far the worst conditions are found in Travis, the county of the State capital, where the machinery of the law is invoked and a negro executed every few years.

But recently a most shocking murder, with every evidence of another crime, was committed in open daylight within fifteen miles of the State House, and half a mile from a prosperous village. It was committed on Friday. The whole community turned out, and ran him down by the following Tuesday. He was tried the next Friday, pleaded guilty, waived the statutory thirty days, only asking that he be hanged on Monday, that he might be *baptized on Sunday*. Two negro preachers attended him and sent him off to glory, and no doubt the negroes, who sympathized with him, as they always do, thought that as "the *Laud* done forgive him, the white folks mout have done it." There is no useful lesson learned by the negroes from such proceedings.

I am, SIR, SELIG.

TWENTIETH-CENTURY YANKEES ABROAD

DURANGO, MEXICO, *May 11, 1904.*

To the Editor of Harper's Weekly:

SIR,—Your correspondent, "G. S. C.," who recently supplied such interesting data concerning the population of the city of Naples, brings strongly to my mind a selection in a school reader of my boyhood days, entitled "Eyes and No Eyes, Or the Art of Seeing." This "piece" impressed upon infantile intelligence the moral that it was possible to take a walk abroad and see very little, if the traveller were careful to keep his optics sedulously closed.

There is much of absorbing interest to foreigners in Naples and its environs besides the magnificent bay and the world-famous volcano. It is astonishing that "G. S. C." should have preferred the somewhat monotonous occupation of tabulating fleas to that of increasing his obviously limited stock of useful knowledge. People whose intellectual and poetical aspirations are satisfied by peregrinations in Avenue A, the Bowery, and Wallabout Market, should not venture beyond those classic boundaries; they are surely out of their element at Capri.

"Twentieth-century" Yankees occasionally come to Mexico. They make their presence known by shouting orders to inoffensive hotel employees, when, to their surprise, they discover that the latter cannot understand the English language when it is enunciated in a low tone of voice with a Sixth Avenue accent.

They also amuse themselves by taking "snap-shots" at kneeling worshippers, *inside the churches*. "G. S. C." might make a note of this exalted form of amusement. It may serve as a cure for ennui, and would undoubtedly prove an agreeable change from strenuous natural history studies.

I am, sir, DOLORES FUERTES DE BARRIGO.

INCOMPATIBILITY OF RACE

COLUMBIA, S. C., *May 13, 1904.*

To the Editor of Harper's Weekly:

SIR,—The race question sometimes referred to in your columns is certainly now prominently under discussion. It is no longer confined to the former slave-holding States, nor even to the United States. By reason of the contact of whites with blacks in South Africa and Australia, of whites with yellows in California, and recently by some events in this country and by the Russian-Japanese war, it is becoming a world-considered issue. It seems to me that this issue does not primarily involve any discussion as to the mental and moral capabilities of these races, nor as to their comparative superiority, but that the fundamental question, which underlies the whole subject, though seldom mentioned, is affirmatively or negatively assumed in almost every argument that we hear or read. H. A. Mumper, however, does suggest this question in your issue of May 14. It is practically this: *Whether two races radically diverse in color can ever peaceably act together in the government of any country, where both races are numerically strong?* Does history furnish any such instance? I think not, and I believe it never will, because of the existence of an instinct of race-cohesion and race-repulsion, which exists everywhere, but is manifested and intensified whenever two peoples of distinct color are thrown together in large numbers.

If this suggested question should be decided affirmatively, then it must be determined whether it is better for all, negroes included, that we should have a peaceful determination of all political questions at the ballot-box, or that we should have constant strife between two races struggling for political mastery on the paramount and only issue of the color of the office-seeker's skin. If I am correct in my opinion, then the negroes, however respectable and well educated, should not be permitted to vote in any State of the Union, except where they constitute an insignificant percentage of the population. If I am wrong and they should be so permitted, I am sure that the inevitable result will be that negroes exclusively will hold office in those States where they are in the majority, and the offices will all be filled by white men in those States where the Caucasian outnumbers the African, the Indian, and the Mongolian.

If this matter is freely discussed, the race issue can be better appreciated by those who will be immediately affected by negro suffrage, and also by those who now philanthropically wish to have the trial made by far-away States in which they neither reside nor own property. And when a proper solution shall have been reached as to the political duty of the white race to the black and brown races resident in this country, the duty of the United States and of the several States to guarantee to all non-voting citizens, male and female, the rights of life, liberty, property, and the pursuit of happiness, and to furnish to them the opportunities of education, will probably be disputed by very few, if any. I am, sir, R. W. SHAND.

Progress of the War

FROM the beginning of the war, February 9, to May 17 fifteen Russian war-ships have been sunk or disabled — the *Petropavlovsk*, *Pobieda*, *Czarevitch*, *Retvisan*, *Poltava*, *Pallada*, *Novik*, *Askold*, *Diana*, *Variag*, *Boyarin*, *Korietz*, *Yenesei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik*, *Askold*, and *Diana* are known to have been repaired and are again in commission. Japan has lost at least two torpedo-boats, and a Japanese cruiser was successfully torpedoed by the Russians on May 10. Other Japanese ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. After two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor, Admiral Togo on May 7 notified his government that his third attempt was successful. On May 1 the first great land battle of the war took place near the Yalu River, and resulted in a Japanese victory. The number of casualties on both sides was very heavy. The Japanese have landed troops on both sides of the Liao-Tung Peninsula back of Port Arthur.

May 18.—According to Russian despatches, Japanese forces are reported to be in possession of the region around Feng-Wang-Cheng. The northern wing of General Kuroki's army is said to be at Hai-Yang-Tien, forty-five miles northeast of Feng-Wang-Cheng.

May 19.—Admiral Togo to-day reported that on May 15 the battle-ship *Hatsuse* while cruising off Port Arthur struck a mine. She signalled for help, and a moment later struck another mine, and sank in half an hour. Three hundred of the officers and crew were saved. The crew numbered about 740 men.

On the same day the Japanese cruisers *Kasuga* and *Yoshino* collided during a fog off Port Arthur. The *Yoshino* sank, and only ninety of her crew, which is estimated at three hundred, were saved.

General Kuroki to-day telegraphed his government the exact number of casualties in the battle of the Yalu. The Japanese lost 218 killed and 783 wounded. One thousand three hundred and sixty-three Russian dead were buried by the Japanese, and 613 Russians were made prisoners. The Japanese captured twenty-one 3-inch quick-firing field-guns, eight quick-firing machine-guns, 1021 rifles, a number of horses, and large quantities of ammunition, clothing, tents, etc.

A report from St. Petersburg says that the Russian cruiser *Bogatyr* during a fog went aground on the rocks near the entrance to Vladivostok harbor.

May 20.—Admiral Wittsoeft, in command of the Russian naval forces at Port Arthur, to-day reported to Admiral Alexeieff that another Japanese battle-ship, believed to be the *Fuji*, was badly injured by a mine off Port Arthur at the time the *Hatsuse* was sunk. Admiral Togo makes no mention of this in his official report, and it is denied by the Japanese.

General Kuropatkin has telegraphed the government at St. Petersburg that on May 18 a party of Cossacks engaged a detachment of the Japanese advance-guard north of Feng-Wang-Cheng and forced them to retreat.

The Japanese to-day began landing an army at Taku-Shan, south of the Yalu River.

May 21.—A despatch from St. Petersburg says that the government has received news of a successful sortie made by General Stoessel from Port Arthur, in which the Japanese losses were over 1000 killed and wounded. The Russian loss is given at 116 killed and wounded. No official confirmation of the report has been made. The Japanese account of this engagement does not give the number of their own casualties, but says that the Russians lost over 300.

Admiral Skrydloff arrived this morning at Harbin, and at once proceeded to Vladivostok.

May 22.—A telegram from Tokyo says that the Japanese torpedo-boat destroyer *Akatsuki* was struck by a shell during a reconnoissance off Port Arthur on May 20 and badly damaged. One officer and twenty-four men were killed.

The first Japanese army under General Kuroki is now said to be concentrated at Feng-Wang-Cheng, and, according to Russian reports, is not advancing. It is stated that Feng-Wang-Cheng is being fortified. The second Japanese army, under General Oku, is now in the rear of Port Arthur. A conservative estimate of the Japanese forces in Manchuria and on the Liao-Tung Peninsula places the number at 150,000.

Admiral Skrydloff reached Vladivostok this afternoon, and was enthusiastically received.

May 23.—Rumors of a great land attack made by the Japanese on Port Arthur have been received in St. Petersburg. The Japanese are said to have been repulsed with great loss. This is not officially confirmed.

The report that the cruiser *Bogatyr*, went aground on the rocks off Vladivostok and was blown up by order of Rear-Admiral Jessen, was to-day confirmed.

Newchwang has been reoccupied by a small Russian garrison.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE INFANT

takes first to human milk; that failing, the mother turns at once to cow's milk as the best substitute. BORDEN'S EAGLE BRAND CONDENSED MILK is a cow's milk scientifically adapted to the human infant. Stood first for forty-five years.—[*Adv.*]

A STOMACH SPECIALIST

solved the problem. "The New Philosophy" shows a permanent cure for Stomach and Intestinal Troubles and Neurasthenia. The book is free to sufferers. Address, with stamps, A. H. SWINBURNE, M.D., Sta. Q., Marietta, Ohio. During July and August at Hotel Elwood, Atlantic City, N.J.—[*Adv.*]

PISO'S CURE FOR CONSUMPTION has cured Coughs for forty years. It is still on the market.—[*Adv.*]

ADVERTISEMENTS.

BOTH JAWS SHOT AWAY

Still a Successful Business Man.

A man who had both jaws shot away had trouble eating ordinary food, but found a food-drink that supplies the nutriment needed. He says:

"I have been an invalid since the siege of Vicksburg, in 1866, where I was wounded by a Minié ball passing through my head and causing the entire loss of my jaws. I was a drummer-boy, and at the time was leading a skirmish line, carrying a gun. Since that time I have been awarded the medal of honor from the Congress of the United States for gallantry on the field.

"The consequences of my wound were dyspepsia in its most aggravated form, and I finally proved ordinary coffee was very hard on my stomach, so I tried Postum, and got better. Then I tried common coffee again, and got worse. I did this several times, and, finally, as Postum helped me every time, I continued to use it; and how often I think that if the Government had issued Postum to us in the Army how much better it would have been for the soldier boys than coffee.

"Coffee constipates me, and Postum does not; coffee makes me spit up my food, Postum does not; coffee keeps me awake nights, Postum does not. There is no doubt coffee is too much of a stimulant for most people, and is the cause of nearly all the constipation.

"This is my experience, and you are at liberty to use my name." Name given by Postum Co., Battle Creek, Mich.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Tony has some misgivings about leaving Millie, for he has been warned by Pamela Mardale that she should never be left alone; but at last he departs, after Pamela has promised to be a stanch friend to his wife. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She wires Warrisden to come by an early train, and asks him to find Tony and bring him home. Warrisden accepts the commission. Pamela has advised him to call on a Mr. Chase, head of a London mission, at whose suggestion Tony had chosen New York as a field of adventure. Warrisden learns from Mr. Chase that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. He starts out to find him, and finally reaches him far up in the North Sea. Warrisden uses every argument to prevail upon Tony to come back, but he refuses, and Warrisden is forced to return alone. He reports to Pamela the failure of his mission, but, to his surprise, she does not seem disappointed. He thinks it is because of the news which he hears from her—that Sir John Stretton has died, which will naturally bring Tony home. But that is not the whole explanation: for Pamela is overcoming her old indifference toward life, and in her life are being aroused new sympathies and emotions. Tony remains on the trawler until the term of his cruise is over, and then, after much perplexity and indecision, decides to return to London, feeling that he has seen a way out of his difficulties. On his arrival in London he calls on Mr. Chase, and tells him that he has decided not to return to Millie until he has succeeded in winning distinction in some field of work. He feels that he would deserve Millie's contempt if he returned at the moment when life had suddenly been made easy for them by his father's death. He has decided, he tells Chase, to enlist in the French Foreign Legion, as no other career seems open to him. The same evening John Mudge, a friend of Pamela's, while at a reception given by Lady Millingham sees Lionel Callon enter the Stretton's house, where Millie is living. Soon after, as Mudge, Pamela, and Warrisden are standing at the window, they see Tony Stretton approach his house, but to their surprise he merely walks up and down in front of it and does not go in. Meanwhile, Lionel Callon has contrived, for purposes of his own, to quarrel with Millie. John Mudge learns from Pamela of the peril Millie is in from Callon, and promises to help her.

CHAPTER XVI

THE FOREIGN LEGION

IT was midday at Sidi-Bel-Abbés in Algeria. Two French officers were sitting in front of a café at the wide cross-roads in the centre of the town. One of them was Captain Tavernay, a man of forty-seven, tall, thin, with a brown face worn and tired with the campaigns of thirty years, the other a young lieutenant, M. Laurent, fresh and pink, who seemed to have been passed out but yesterday from the school of St.-Cyr. Captain Tavernay picked up his cap from the iron table in front of him and settled it upon his grizzled head. Outside the town trees clustered thickly, farms were half-hidden amongst groves of fig-trees and hedges of aloes. Here there was no foliage. The streets were very quiet, the sunlight lay in dazzling pools of gold upon the sand of the roads, the white houses glittered under a blue, cloudless sky. In front of the two officers, some miles away, the bare cone of Jebel-Tessalah sprang upwards from a range of hills dominating the town, and a speck of white upon its shoulder showed where a village perched. Captain Tavernay sat looking out towards the mountain with the lids half-closed upon his eyes. Then he rose deliberately from his chair.

"If we walk to the station," he said, "we shall just meet the train from Oran. A batch of thirty recruits is coming in by it. Let us walk to the station, Laurent."

Lieutenant Laurent dropped the end of his cigarette on to the ground and stood up reluctantly.

"As you will, captain," he answered. "But we should see the animals soon enough at the barracks."

The words were spoken in a voice which was almost, and with a shrug of the shoulders was, quite contemptuous. The day was hot and Lieutenant Laurent unwilling to move from his coffee and the shade into that burning sunlight. Captain Tavernay gazed mildly at his youthful junior. Long experience had taught him to leave much to time and little to argument. For himself he loved his legionaries. He had a smile of indulgence for their faults even while he punished them; and though his face seldom showed the smile and his punishments were not unjustly light, the culprits none the less knew it was there hidden somewhere close to his heart. But then he had seen his men in action, and Lieutenant Laurent had not. That made all the difference. The Foreign Legion certainly did not show at its best in a cantonment. Amongst that motley assemblage—twelve thousand men distinct in nationality as in character, flung together pell-mell, negroes and whites, criminals, adventurers, silent unknown men haunted by memories of other days or tortured by remorse—a garrison town with its monotony and its absinthe played havoc. An Abyssinian rubbed shoulders in the ranks with a scholar who spoke nine languages, a tenor from the Theatre de la Monnaie at Brussels with an unfrocked priest. Often enough Captain Tavernay had seen one of his legionaries sitting alone hour after hour at his little table outside the café, steadily drinking glass after glass of absinthe, rising mechanically to salute his officer, and sinking back among his impenetrable secrets. Was he dreaming of the other days, the laughter and the flowers, the white shoulders of women? Was he again placing that last stake upon the red which had sent him straight from the table to the nearest French depot? Was he living again some tragic crisis of love in which all at once he had learned that he had been befooled and derided? Captain Tavernay never passed such a man but he longed to sit down by his side and say: "My friend, share your secret with me. So it will be easier to bear." But the etiquette of the Foreign Legion forbade. Captain Tavernay merely returned the salute and passed on, knowing that very likely his legionary would pass the night in the guard-room and the next week in the cells. No, the town of Sidi-Bel-Abbés was not the place wherein to learn the mettle of the legionary. Away to the south there, beyond the forest of trees on the horizon's line, things were different. Let Lieutenant Laurent see them in their bivouacs at night under the stars, and witness their prowess under arms, "ces animaux" would soon become "mes enfants."

Therefore he answered Lieutenant Laurent in the mildest voice. "We shall see them at the barracks, it is true. But you are wrong when you say that it will be soon enough. At the barracks they will be prepared for us; they will have their little stories ready for us; they will be armed with discretion. But let us see them descend from the train; let us watch their first look round at their new home, their new fatherland. We may learn a little, and if it is ever so little it will help us to know them the better afterwards. And, at the worst, it will be an amusing little exercise in psychology."

They walked away from the café and strolled down the Rue de Mascara under the shady avenue of trees, Tavernay moving with a long, indolent stride which covered a deal of ground with a surprising rapidity, Laurent fidgetting discontentedly at his side. M. Laurent was beginning, in fact, to regret the hurry with which he had sought a commission in the Foreign Legion. M. Laurent had, a few months ago in Paris, imagined himself to be irrevocably in love with the wife of one of his friends, a lady at once beautiful and mature; M. Laurent had declared his passion

upon a suitable occasion; M. Laurent had been snubbed for his pains; M. Laurent in a fit of pique had sought the consolation of another climate and foreign service; and M. Laurent was now quickly realizing that he was not nearly so heart-broken as he had fancied himself to be. Even now while he walked to the station he was thinking that, after all, Paris was endurable, even though one particular woman could not refrain from a little smile of amusement when he crossed her path.

Captain Tavernay had timed their walk accurately. For as they reached the station the train was signalled.

"Let us stand here, behind these cases," said Tavernay. "We shall see and not be seen."

In a few moments the train moved slowly in and stopped. From the furthermost carriage the detachment descended, and following a "sous-officier" in the uniform of the Legion walked towards the cases behind which Tavernay and his companion were concealed. In front came two youths, fair of complexion and of hair, dressed neatly, well shod, who walked with a timidity of manner as though they expected to be questioned and sent packing.

"Who can they be?" asked Laurent.

"They are boys."

"Yet they will give their age as eighteen," replied Tavernay, and his voice trembled ever so slightly. "And we shall ask no questions."

"But they bear no marks of misery. They are not poor. Where can they come from?" Laurent repeated.

"I can tell you that," said Tavernay. He was much moved. He spoke with a deep note of reverence. "They come from Alsace or Lorraine. We get many such. They will not serve Germany. At all costs they *will* serve France."

Lieutenant Laurent was humbled. Here was a higher motive than pique, here was a devotion which would not so quickly tire of discipline and service. He gazed with a momentary feeling of envy at these two youths who insisted at so high a price on being his compatriots.

"You see," said Tavernay, with a smile, "it was worth while to come to the station and see the recruits arrive even on so hot a day as this."

"Yes," replied Laurent; and then "Look!"

Following the two youths walked a man, tall and powerful, with the long, loose stride of one well versed in sports. He held his head erect and walked defiantly, daring you to question him. His hands were long and slender, well kept, unused to labor, his face aquiline and refined. He looked about thirty-five years old. He wore a light overcoat of fine material which hung open, and underneath the overcoat he was attired in evening dress. It was his dress which had riveted Laurent's attention; and certainly nothing could have seemed more bizarre, more strangely out of place. The hot African sun poured down out of a cloudless sky; and a new recruit for the Foreign Legion stepped out of a railway-carriage as though he had come straight from a ballroom. What sudden disaster could have overtaken him? In what tragedy had he borne a part? Even Laurent's imagination was stimulated into speculation. As the man passed him, Laurent saw that his tie was creased and dusty, his shirt-front rumpled and soiled. That must needs have been. At some early hour on a spring morning some four or five days ago this man must have rushed into the guard-room of a barrack-square in some town of France. Laurent turned to Tavernay eagerly.

"What do you make of him?"

Tavernay shrugged his shoulders.

"A man of fashion who has made a fool of himself. They make good soldiers as a rule."

"But he will repent."

"He has already had the time and he has not. There is no escort for recruits until they reach Marseilles. Suppose that he enlisted in Paris. He is given the fare. At any station between Paris and Marseilles he could have got out and returned."

The man in evening dress walked on. There were dark shadows under his eyes, the eyes themselves were sombre and alert.

"We shall know something of him soon,"

TAKE-DOWN REPEATING SHOTGUNS

The notion that one must pay from fifty dollars upwards in order to get a good shotgun has been pretty effectively dispelled since the advent of the Winchester Repeating Shotgun. These guns are sold within reach of almost everybody's purse. They are safe, strong, reliable and handy. When it comes to shooting qualities no gun made beats them. They are made in 12 and 16 gauge. Step into a gun store and examine one.

Drawn by William Hurd Lawrence

"Suddenly there was a sound of cries and three soldiers came running across the square"

said Tavernay. He watched his recruit with so composed an air that Laurent cried out:

"Can nothing astonish you?"

"Very little," answered Tavernay, phlegmatically. "Listen, my friend. One day some years ago a captain of Hussars landed at Oran. He came to Bel-Abbés with a letter of introduction to me. He stayed with me. He expressed a wish to see my men upon parade. I turned them out. He came to the parade-ground and inspected them. As he passed along the ranks he suddenly stopped in front of an old soldier with fifteen years' service in the Legion, much of which fifteen years had been passed in the cells. The old soldier was a drunkard—oh, but a confirmed drunkard. Well, in front of this man my young captain with the curled mustaches stopped—stopped, and turned very pale. But he did not speak. My soldier looked at him respectfully, and the captain continued his inspection. Well, they were father and son—that is all. Why should anything astonish me?" and Captain Tavernay struck a match and lighted a cigarette.

The match, however, attracted attention to the presence of the officers. Four men who marched, keeping time with their feet and holding their hands stiffly at their sides, saw the flame and remarked the uniforms. Their hands rose at once to the salute.

"Ah! German deserters," said Tavernay. "They fight well."

Others followed—men in rags and out of shoe leather; outcasts and fugitives; and behind them came one who was different. He was tall and well knit, with a frank open face, not particularly intellectual; on the other hand, not irretrievably stupid. He was dressed in a double-breasted blue serge suit, and as he walked he now and then gave a twist to his fair mustache, as though he were uneasy and embarrassed. Captain Tavernay ran his eyes over him with the look of a connoisseur.

"Aha!" said he, with a chuckle of satisfaction. "The true legionary! Hard, finely trained; he has done work, too. Yes! You see, Laurent, he is a little ashamed, a little self-conscious. He feels that he is looking a fool. I wonder what nationality he will claim."

"He comes from the North," said Laurent. "Possibly from Normandy."

"Oh, I know what he is," returned Tavernay. "I am wondering only what he will claim to be. Let us go outside and see."

Tavernay led the way to the platform. Outside, in front of the station, the sous-officier marshalled his men in a line. They looked a strange body of men as they stood there, blinking in the strong sunlight. The man in the ruffled silk hat and the dress suit toed the line beside a bundle of rags, the German deserters rubbed elbows with the "true legionary" in the blue serge. Those thirty men represented types of almost all the social grades, and to a man they were seeking the shelter of anonymity in that monastery of action—the Foreign Legion.

"Answer to your names," said the sous-officier, and from a paper in his hand he began to read. The answers came back, ludicrous in their untruth. A French name would be called.

"Montaubon."

And a German voice replied,

"Present."

"Ohlsen," cried the sous-officier, and no answer was given. "Ohlsen," he repeated, sharply. "Is not Ohlsen here?"

And suddenly the face of the man in the serge suit flushed, and he answered, hurriedly,

"Present."

Even the sous-officier burst into a laugh. The reason for the pause was too obvious; "Ohlsen" had forgotten that Ohlsen was now his name.

"My lad, you must keep your ears open," said the sous-officier. "Now, attention. Fours right. March!"

And the detachment marched off towards the barracks.

"Ohlsen," said Tavernay, and he shrugged his shoulders. "Well, what does it matter? Come!"

"Ohlsen" was Tony Stretton, and all the way along the Rue Daya to the barracks he was longing for the moment when he would put on the uniform and cease to figure ridiculously in this grotesque procession. None the less he had to wait with the others drawn up in the barrack square until Captain Tavernay returned. The captain went to his office, and thither the recruits were marched. One by one they entered in at the door, answered his questions, and were sent off to the regimental tailor. Tony Stretton was the last.

"Name?" asked Tavernay.

"Hans Ohlsen."

"Town of enlistment?"

"Marseilles."

Tavernay compared the answers with some writing on a sheet of paper.

"Yes, Marseilles. Passed by the Doctor Paul as sound of body. Yes," and he resumed his questions.

"Nationality?"

"Swede."

Captain Tavernay had a smattering of most languages, and he was greatly inclined to try his new recruit with a few questions in the Swedish tongue. But the etiquette of the Legion forbade. He went on without a smile.

"Age?"

"Thirty."

"Vocation?"

"Fisherman."

Captain Tavernay looked up. This time he could not help smiling.

"Well, it is as good as any other," said he, and suddenly there was a sound of cries and three soldiers burst out of a narrow entrance on the further side of the parade-ground and came running across the square to the captain's quarters. Both Tavernay and Stretton looked through the door. There was not a tree in that great square; the sunlight poured down upon the bare ground with a blinding fierceness; all the recruits but Stretton had marched off; a second ago it had been quite empty and very silent. Now these three men were hurrying across it shouting, gesticulating with their hands. Stretton looked at them with surprise. Then he noticed that one of them, the man running in the middle and a little ahead of the others, carried a revolver in his hand and brandished it. Moreover, from the look of his inflamed face, he was shouting threats; the others were undoubtedly shouting warnings. Scraps of their warnings came to Stretton's ears. "Mon Capitaine!" "Il veut vous tuer!" "Rentrez!" They were straining every muscle to catch the threatening soldier up.

Stretton strode to the door, and a voice behind him cried,

"Halt!"

It was Tavernay who was speaking.

"But he is already half-way across the square."

"Halt!"

And there was no disobeying the command. Captain Tavernay walked to the door.

"A Spanish corporal whom yesterday I degraded to the ranks," said he. "Half a pint of aguardiente and here's the result."

Captain Tavernay stepped out of the door and leisurely advanced towards the running men. He gave an order, he raised his hand, and the two soldiers who warned him fell back and halted. Certainly Captain Tavernay was accustomed to obedience. The Spanish ex-corporal ran on alone, straight towards Tavernay, but as he ran, as he saw the officer standing there alone, quietly waiting his onslaught, his threats weakened, his pace slackened. He came to a stop in front of Tavernay.

"I must kill you," he cried, waving his revolver.

"You shall kill me from behind, then," said Tavernay, calmly. "Follow me!" And he turned round and with the same leisurely deliberation walked back to his room. The ex-corporal hesitated and—obeyed. He followed Captain Tavernay into the room where Stretton stood.

"Place your revolver on the table."

The Spaniard again obeyed. Tavernay pushed open the door of an inner room.

"You are drunk," he said. "You must not be seen in this condition by your fellow soldiers. Go in and lie down!"

The Spaniard stared at his officer stupidly, tottering upon his limbs. Then he staggered into the captain's room. Tavernay turned back to Stretton, and a ghost of a smile crept into his face.

"It is theatrical," he said, with a little shrug of the shoulders. "But what would you have, monsieur?" and he spoke to Stretton as to an equal. "You are astonished. It is very likely not your way in your—fishing-boats," he continued, with a chuckle. Stretton knew very well that he meant "army." "But there is no Foreign Legion amongst your—fishermen." He laughed again, and gathering up his papers dismissed Stretton to the tailor's. But after Stretton had taken a few steps across the parade, Tavernay called him back again. He looked at him with a very friendly smile.

"I, too, enlisted at Marseilles," he said. "One can rise in the Foreign Legion by means of these," and he touched lightly the medals upon his breast. This was Tony Stretton's introduction to the Foreign Legion.

To be Continued.

The New Ireland and its Maker

(Continued from page 870.)

his agricultural cooperative movement. How in the face of every initial discouragement that movement has grown till there are now over 800 societies affiliated with it, how its joint creameries and dairies and poultry societies and banks have spread to every corner of the island, how, with the admirable assistance and stimulus of the Gaelic League, it has at once brightened the life and developed the backbone of the peasant, taught him thrift, responsibility, self-confidence, and businesslike habits, educated him and increased his income, how it has multiplied rural industries and arts and brought back something of the old Irish joyousness, how its success and Sir Horace's energetic determination led to the creation of a new government department of agriculture and technical instruction, and how this department is sending a thrill of scientific activity from one end of Ireland to the other—all this and much else may be found in this engrossing book. There was nothing original in Sir Horace's scheme. Denmark, Germany, Italy, and France have worked it for years, and America is beginning to. What was original was the perception of its extraordinary fitness to Irish conditions, and the courage, will-power, statesmanship, and high skill in diplomacy that made possible its application.

THE PROUD PRINCE

A novel daring in its plot and daring in its situations. A dramatization of this book, now being produced by Mr. E. H. Sothern, has aroused the talk of the entire country. Every one is sure to discuss it—every one must read it.

Illustrated with Pictures of Mr. Sothern and His Company

ABBOTT'S ANGOSTURA BITTERS

Make the best cocktail. A delightful aromatic for all wine, spirit and soda beverages. A tablespoonful in an ounce of sherry or sweetened water *after* meals, affords relief and aids digestion.

Important to see that it is Abbott's.

What is the Sun Made Of?

(Continued from page 865.)

but doubtful explanations, and even more perplexing is the problem of the periodicity of the spots and their clear connection with the disturbances of terrestrial magnetism. Possibly, and not improbably, the new discoveries, made and making, with respect to "radioactivity" and its allied phenomena may ultimately bring out an intelligible interpretation of the facts.

The region just above the photosphere is necessarily rich in all the solar gases and vapors. Here the dark lines of the solar spectrum mainly originate by the absorption of certain rays from the continuous spectrum of the photosphere as they pass through the densest portion of the overlying atmosphere. These dark lines, however, are dark only relatively to the luminous background, and when for a moment, during a total eclipse, we are able to observe the spectrum of this stratum "unbacked," it appears as a magnificent array of brilliant lines of vivid colors—the "flash spectrum" of eclipse reports.

Within a thousand miles above the photosphere most of the solar vapors thin out and practically disappear, but the lighter gases, hydrogen and helium and a vapor of calcium, persist to a much greater elevation. These form the scarlet chromosphere rising like a sheet of flame some six or eight thousand miles above the reversing layer, though separated from it by no definite boundary. From the chromosphere project the prominences, sometimes to enormous heights. Many of them are quiet, cloudlike forms, often immense, but not very brilliant, and gradual in their changes. These are found on every portion of the solar surface. Others exhibit the most violent activity, especially when near to an energetic sun-spot, and are practically limited to the sun-spot zones. They are due to tremendous eruptions from beneath, which often carry the metallic vapors of the lower atmosphere high up in the flaming column. The spectrum of all the prominences is bright-lined, and this makes it possible for us to observe them, and even to photograph them with the spectroscope whenever the sun is shining.

Enveloping all is the corona, visible only during eclipses as a beautiful stellate "glory" around the darkened sun. Its spectrum is mainly continuous, but is characterized by a brilliant green line with several faint violet and ultraviolet companions. These indicate the presence of some gas of extreme tenuity, unidentified as yet, but provisionally called "coronium." The continuous spectrum is probably due partly to the reflection of sunlight from minute particles and partly to their incandescence from heat, or perhaps "luminescence" like that of phosphorescent or radioactive substances. The coronal streamers sometimes reach a length of several million miles, and in appearance closely resemble those thrown off by electrical discharges from a metallic globe in an air-pump vacuum; and their curvature, and their arrangement with reference to the poles of the sun, strongly suggest their analogy to the streamers of the terrestrial aurora in cause and nature. Immense as the corona is considered spatially, the quantity of matter in it is extremely small, and its density far less than that of the best vacuum yet reached by art.

Seventeen Millions More

EXPORTS of manufactures from the United States promise to exceed in the fiscal year 1904 those of any preceding year. The nine months' figures of the fiscal year, just announced by the Department of Commerce and Labor, show a total of 17 million dollars greater than the corresponding months of the fiscal year 1900, in which the exports of manufactures reached their highest figures. In 1900 the exports of domestic manufactures amounted to 433 million dollars for the whole fiscal year, which was the highest figure ever recorded for the exports of domestic manufactures from this country. In 1900 the figures showed 411 million dollars; in 1902, 403 million dollars; and in 1903, 407 million dollars.

A Christian Science Story

A WELL-KNOWN physician who is somewhat skeptical as to the soundness of Christian Science doctrines tells this story of an ardent Eddyite and her little boy: The mother was crossing the field with her small son when a goat appeared and came toward them threateningly, to the dismay of the youngster, who shrank in terror behind his mother's skirt. Remembering her beliefs she tried to reassure him.

"Why, Georgie," she said, soothingly, as the goat continued to advance, "don't you know that you're a Christian Science little boy, that there's no such thing as pain, and that it would be useless for the goat to try to hurt you? Don't you know that?"

"Yes," wailed the doubting believer between his sobs, "I know it, and you know it, but the goat don't know it!"

A Useful System

THE wife of a distinguished Congressman is enduring some good-natured chaff over the recent failure of a theory which she has held as to the uses of memory systems. Not long ago, at a large dinner, she was telling of a remarkably gifted man whom she had lately met, but whose name had escaped her.

"I am sure," she said, while the company waited eagerly for the system to work, "I am sure his name began with B, and had three syllables"—a long pause. . . . "Oh yes, I remember," she announced, finally: "It was Moore."

The Only Obligation

A STORY that comes from a country region not far from New York concerns a native who was seen stolidly ploughing a field with a team of weary and dejected horses. As they approached, the observer of rural life remarked, sympathetically, that the horses "didn't seem to like the work."

"Um," commented the farmer, briefly; "they don't have to like it; they only have to do it."

At the Top of the Ladder

A WOMAN whose acquaintance with the methods and opportunities of work in a modern newspaper office is of the slightest was talking to a friend about her son's start in life. The young man had just left college, and had secured a position as reporter on one of the important New York dailies in the humble capacity which is the usual lot of the "cub" journalist—that of a police court reporter. His mother was enthusiastic over his good fortune.

"Do you know," she exclaimed, "they've given him such a splendid position. He's the crime editor at Jefferson Market Police Court!"

Poets' Opinions of Each Other

A GOOD story about Browning and Tennyson is to be found in the interesting diary of the Right Hon. Sir Mountstuart Grant Duff. Browning referred readily to the charge of obscurity in his poetry. "He once told me," says Sir Mountstuart Grant Duff, "after repeating a story Wordsworth had told him illustrating his own strange want of humor and wit, that Wordsworth, after all, was unjust to himself, for that on hearing of Browning's engagement to Miss Barrett he had said: 'Well, I suppose they understand each other, although nobody understands them!'"

Tennyson's opinion of Browning (and, incidentally, of himself) is shown in his remark that "Browning is devoted to music, and knows a great deal about it; but there is no music in his verse. I know nothing about music, and don't care for it in the least, but my verse is full of music."

In reading Milton's *Lycidas* aloud, says Sir Mountstuart Grant Duff, Tennyson would stop at the line,

And oh! ye dolphins, waft the hapless youth,

with the comment that this was "the only bad line Milton ever wrote."

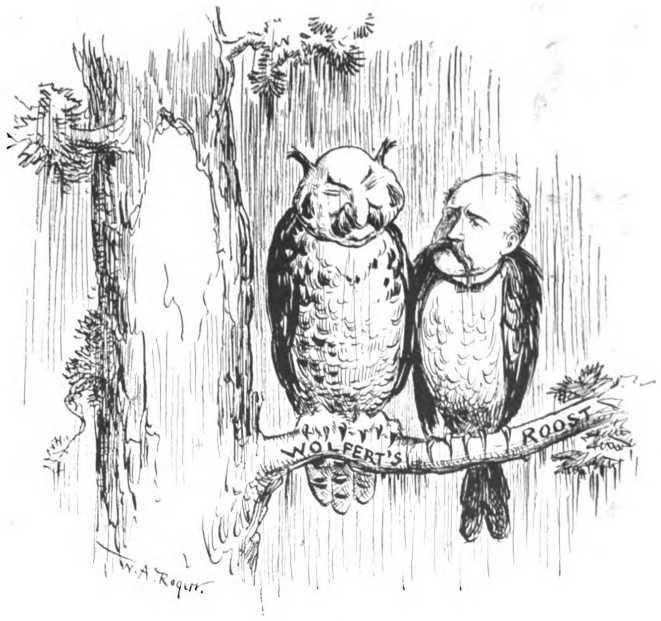
HESPER
By HAMLIN GARLAND
Author of "The Captain of the Gray-Horse Troop"



A novelist, speaking of Hamlin Garland's new story, recently said: "When I read *Hesper* I can feel the wind come down the cañon and can see the mountains rise before me." One of the charms of this love story is that the reader is irresistibly made to feel the exhilaration and the beauty of the outdoor life depicted. Another charm is Ann Rupert, the New York society girl "out West."

New Conceptions in Science

By CARL SNYDER

THIS is not a dry and arid treatise, unintelligible to the general reader, but a clear, comprehensive exposition of the results of latter-day scientific research and discovery. The underlying romance of science and scientific method has never been more convincingly set forth than by Mr. Snyder. The book will be nothing short of a revelation to the average layman, while of abiding value to the scientific student.

THE FUNNIEST OF BIOGRAPHIES

The Memoirs of a Baby

By JOSEPHINE DASKAM

NEVER before has the dignified title of "Memoirs" graced so funny a book as this latest tale of Josephine Daskam's — a writer widely known for her clever child studies. The sorry side of life—the tribulations of the little tots—have no place in this irresistibly amusing record of the home-life of a typical American couple. The baby refuses to develop psychologically or scientifically according to the theories set down in his Aunt Emma's books, but he grows to robust boyhood after a fashion of his own. All the various incidents of a lively youngster's boyhood here find laughable portrayal. The unceasing arguments between the common-sense young father and the theoretical "Aunt Emma" not only afford such amusement as Josephine Daskam alone can give us, but go to make a clever satire on "modern" methods of rearing children.

F. Y. Cory, whose pictures of baby-life have never been equalled for cleverness and humor, has illustrated the book copiously with pen-and-ink drawings. The pictures are every bit as funny as the narrative, and the book will provoke the laughter of any one who turns the pages.

HARPER & BROTHERS, PUBLISHERS, NEW YORK

Sir Mortimer

By

MARY JOHNSTON

Author of "To Have and To Hold"

THE love of Sir Mortimer for the fair Damaris Sedley, a lady-in-waiting, holds unswerving course through a narrative alive with stirring incidents of the days of Sir Walter Raleigh, when all England loved, sang, adventured, and fought, in the flush of youthful power. Herein is a love story of uncommon charm cast among stirring scenes —love in the lap of adventure, set forth with rare imaginative power.

Readers of "To Have and To Hold" will welcome in this tale of love and gallantry the distinct advance Miss Johnston has made upon her former success. The romance is instinct with new life and color, like the golden days with which it deals.

"The witchery of romance pervades its scenes, and once in the grasp of the story the reader will be swept along the current to the end."—*Chicago Chronicle.*

"Her thousands of admiring readers will thank her for the book—a strong, vigorous, original story, with honor as the theme."—*Syracuse Herald.*

"May be classed among the gems of modern novels."—*Birmingham News.*

"She has reproduced in a wonderful manner the time of Elizabeth, with all its greatness and its littleness."—*N. Y. World.*

HARPER & BROTHERS, NEW YORK

Rulers of Kings

by

GERTRUDE ATHERTON

Author of "The Conqueror," "The Aristocrats"

IN this novel is pictured the conflict between the two greatest forces in the world—American wealth and European royalty—in which the former triumphs. Gertrude Atherton, from whom the reading public has learned to expect surprises, has evolved a story both daring and original. Fessenden Abbott, the son of America's most colossal millionaire, in the midst of great financial undertakings that are watched by all the world, falls in love with the daughter of the Austrian Emperor. In her heart duty to the weakening monarchy of her fathers battles with an overmastering love for the young American. How Fessenden Abbott bends the will of emperors and alters the diplomatic relations of kingdoms to win the girl he loves is an original and most romantic piece of fiction writing.

COMMENT

As the hour for the meeting of the Republican national convention draws nigh, the party managers, dismayed by the bitterness of the factional dissension revealed in the Illinois Republican convention, seem determined to select their nominee for the Vice-Presidency from that State. The boom for Senator Fairbanks appears to have disappeared, partly because of his undisguised unwillingness to be a candidate for the Vice-Presidency, and partly because the Republicans look forward with a good deal of confidence to carrying Indiana—a confidence that disinterested observers predict will be justified, unless Mr. Cleveland should chance to be the Democratic nominee; in which event the Republican organization in the State might be seriously weakened by desertion from its ranks. As we pointed out last week, the choice of Representative Robert R. Hitt—although he has been endorsed as a candidate for the Vice-Presidency by the Illinois State convention—is not the wisest that could be made, if Republicans really believe that their opponents have anything like an even chance of securing the State's electoral votes.

We repeat, what we formerly said, that "Uncle" Joseph G. Cannon is the most popular Republican in Illinois, and would unquestionably lend great strength to the party ticket. It is true that he has declared, in an unequivocal and peremptory way, that he would not accept the nomination, but nobody believes that he would prove stubbornly recalcitrant, should he be "drafted" for the party's service by the national convention. It is also true that he, like Mr. Hitt, has long passed the age of sixty-two, which President Roosevelt regards as the limit of usefulness. Mr. Hitt will be seventy-one in January, and Mr. Cannon is in his seventieth year; but the former looks his age, while Uncle Joe, to use the phrase coined by Dr. Holmes, is seventy years *young*. It should be borne in mind, however, that many Vice-Presidents have died in office. This was the case with George Clinton, who died at Washington, on April 20, 1812, in the last year of his second term. That was the case also with Elbridge Gerry, a little more than a year and eight months after he became Vice-President. William R. King, who was nominated for the Vice-Presidency on the ticket headed by Franklin Pierce, died soon after his election. Henry Wilson, who was chosen Vice-President in 1872, did not live out his term. Neither did Thomas A. Hendricks, who became Vice-President on March 4, 1885. Garret A. Hobart died during his term of office. The obvious deduction from these data is the expediency of selecting for the Vice-Presidency men that are not far advanced in years. "Uncle Joe" Cannon, however, is still as robust and active as he was half a generation ago.

Another selection for an important office will have been made practically before the Chicago convention is called together. Nominally, indeed, the new national committee to be appointed by that body will choose its chairman, but the expressed wish of the nominee for the Presidency is always heeded. It is understood that President Roosevelt has chosen for the post Mr. George B. Cortelyou, Secretary of the new Department of Commerce and Labor. It remains to be seen whether he will prove as efficient as was his predecessor, the late Senator Hanna, and there appears to be a good deal of scepticism touching his qualifications in some influential quarters. It is reported, for instance, on what seems trustworthy evidence, that he is unacceptable not only to Senator Penrose of Pennsylvania, who is said to have wanted the place himself, but also to Senator Kean of New Jersey and Senator Aldrich of Rhode Island. The fact doubtless is that Mr. Roosevelt, a somewhat impatient candidate at best, thinks the campaign would better be "personally conducted." Hence Mr. Cortelyou.

At the hour when we write the number of delegates instructed more or less definitely for Chief-Judge Alton B. Parker, of New York, is put by his friends at nearly two hundred. If to these be added the uninstructed delegates who are alleged to be friendly to him, the New York candidate should be credited at this stage of the canvass with some three hundred votes, or less than a third of the convention. He will start off pretty well, however, for it is tolerably certain that the first State on the roll, to wit, Alabama, will give him her twenty-two votes on the first ballot. Nor is it unlikely that the next State to be called, Arkansas, will follow the example. Then the Parker boom will strike a snag, for the third State, California, has instructed her delegates to support Mr. Hearst. What Colorado will do is as yet uncertain. Connecticut, on the other hand, has instructed her delegates to give their fourteen votes to Parker. Delaware is relied upon to propose the name of Judge George Gray. The District of Columbia, it is settled, will cast its six votes for Senator Gorman. Florida's delegates will be divided, though unevenly, it is expected, between Parker and Hearst; but Georgia will declare, it is believed, for the New York candidate. In an interview which Mr. Cleveland gave a correspondent of the Philadelphia *Record*—an organ of the regular Pennsylvania Democracy—during the week ending May 28, he said that he still looked forward with confidence to the selection of Chief-Judge Parker at St. Louis. As we have formerly pointed out, there is no reason to doubt the perfect sincerity of Mr. Cleveland's declination to be himself a candidate for the Democratic nomination, or to question the earnestness of the support which he and such stanch friends of his as Mr. Hornblower, Mr. Stetson, Mr. Everett Wheeler, and Mr. Wheeler H. Peckham are giving the candidate endorsed by the Albany convention. At the same time there are indications that a great many Republicans are hoping that the St. Louis convention will give them an opportunity of voting for the ex-President. Such a wish was disclosed on May 27, when he was on the point of sailing for Europe, by Rev. Dr. Charles H. Parkhurst, who seldom is described as a conservative. Although he had been, he said, a Republican all his life, he had come to the conclusion that a Democratic victory in the nation would not be bad for the country, or even for the Republican party itself. What, in his judgment, we need at the head of the republic is a safe man—a man of calm, deliberate judgment; a man who is always sure of himself, and one who is not prone to reach conclusions affecting the welfare of the country except after careful consideration. It is evident that the statesman whom Dr. Parkhurst has in mind resides in Princeton, New Jersey.

We are told that about the middle of June, when the interest in the nomination for the Presidency to be made at St. Louis will be approaching fever-heat, ex-President Cleveland will "go a-fishing." At the very time when avowed aspirants and "dark horses" are angling for delegates the Sage of Princeton will be angling for trout on the farm of Colonel H. C. Trexler, of Allentown, said to be the finest preserve of the speckled beauties in Pennsylvania. Before leaving home, however, to engage in this suggestive diversion, Mr. Cleveland has not forgotten to leave behind him a parting counsel. On Memorial day an authorized and interesting interview with the ex-President was published in the New York *Herald*. Mr. Cleveland reminded his hearers that in any political campaign there are only two possible objects of attack, to wit, the candidate and the platform. He says,

Digitized by Google

truly, that if the candidate of a great party be vulnerable, not so much attention will be paid on the stump or in the press to the party's platform. This was the case, it will be remembered—though the fact is not mentioned by the successful nominee of the Democracy in that year—with Mr. Blaine in 1884. When, on the other hand, as in the case of Chief-Judge Alton Brooks Parker, the candidate is personally unassailable, the platform is sure to be scrutinized minutely and critically by his opponents, and ought, therefore, to be so framed as to reveal no points of weakness. Proceeding to specify the planks which, in his judgment, the St. Louis platform should contain, as being faithfully representative of fundamental and unquestioned Democratic doctrines, the ex-President named, first, tariff reform; secondly, a distinct declaration of the party's intention in the matter of bestowing independence on the Filipinos; thirdly, economy in the public expenditure; and, lastly, honesty in the public service.

With regard to tariff reform, Mr. Cleveland evidently has in mind, and doubtless will announce it at the proper time, a formula which, while providing for an adequate readjustment of certain schedules of the Dingley tariff to actual industrial and commercial conditions, shall yet reassure and safeguard the community against an abrupt and disastrous dislocation of American industries and a catastrophic paralysis of business. Apparently, the ex-President takes much the same view of the tariff question that was expressed in general terms the other day by Senator Gorman of Maryland, who would have the tariff revised, he said, in a spirit of conservatism, which, while inflicting no injuries upon established industries, should lessen the load of taxation now imposed upon the people, by taking away the power which monopoly, as it is asserted, now has to levy excessive tribute. Turning to an anti-imperialist plank, Mr. Cleveland argues that the occupation of the Philippines was not intended, but was incidental to our interference on behalf of Cuba; and he holds, therefore, that the principles which governed us in the main event should govern us also in the incidental consequences. After expressing his own conviction with reference to the fate of the archipelago, he reminds us that the Filipinos are human beings, and suggests that if, as the Republicans say, the ultimate independence of the islands is contemplated, there should be held out to their inhabitants the stimulating hope of freedom through unequivocal declarations. As for the continually increasing extravagance in public expenditure, this is regarded with dismay by Mr. Cleveland, as a cankerous growth undermining the strength of the nation, and already so dangerous as to demand drastic treatment. We observe, lastly, that the reference to the imperative necessity of enforcing honesty in the public service is invested with no ordinary weight from the vigilance and earnestness with which, during his two terms, Mr. Cleveland is known to have lived up to his professions.

Democrats all over the United States are certain to mark attentively what the ex-President had to say concerning the silence thus far maintained by Chief-Judge Parker, and with regard to the course which he himself would probably pursue in the event of Judge Parker's nomination. Mr. Cleveland would not presume to assert whether the silence maintained by the candidate endorsed at Albany should be broken or not. He took for granted, he said, that the New-Yorker has able advisers, and he would not undertake personally to say on which side the balance of good judgment would incline in such a case. Mr. Cleveland doubtless recalls that but for the penning of a letter which he might have withheld, Henry Clay in all likelihood would have been chosen President in 1844; and it might have been well also for Hancock in 1880 had he adhered to a cautious reticence with regard to the tariff. The ex-President believes, he tells us, that should Judge Parker be nominated at St. Louis, it will turn out that the prospects of his party will have been improved materially by the silence which hitherto he has observed. The Sage of Princeton manifestly thinks that when Judge Parker writes his letter of acceptance, it will not be too late for him to say whether the platform adopted by his party meets with his unqualified approbation, or whether, as was the case with McClellan in 1864, and with Mr. Cleveland himself at a juncture still familiar, he shall subscribe to it with reservations. We note, finally, that nothing could be more unequivocal and cordial than Mr. Cleveland's declaration that should Judge Parker be nominated, the ex-President will give him loyal and earnest support. He does not promise, indeed, to stump the country for the St. Louis nominee. But he does pledge himself that if Judge Parker should be named at St. Louis, he, Grover Cleveland, will use unceasingly on Judge Parker's behalf such influence as he possesses, wherever it will be of avail, and in whatever manner it may prove of value to the cause of the redeemed Democracy.

Senator Quay, to whom President Roosevelt was at first disposed to turn when it became evident that Mark Hanna would not be chairman of the next national committee, did not long outlive the Ohio Senator. Quay never forgave Hanna for securing, as he believed, the one vote by which Quay was kept out of the United States Senate in 1899, when he had been appointed by Governor Stone of Pennsylvania to fill a vacancy caused by the failure of the State Legislature to elect a Senator. The Legislature chose him, however, as soon as it had an opportunity of doing so, and, in January, 1901, re-elected him. It is well known that in 1896 Quay and his old friend Senator Platt of New York strove to obtain the Republican nomination to the Presidency for Speaker Reed, and that in 1900 they cooperated to make Theodore Roosevelt the nominee for the Vice-Presidency against the wish of Hanna, who desired the honor to be conferred on either Elihu Root or Cornelius N. Bliss. As we have formerly pointed out, there were certain incidents in Quay's life of which, at the time when they occurred, we felt constrained to speak with severe reprobation. Neither did the fact that he avowedly exemplified an unedifying type of machine politician commend him in our eyes.

Not on that account, however, are we incapable of comprehending the grounds of his pervading and abiding political influence over the rank and file of his party in Pennsylvania. The principle upon which he acted was embodied in the advice he gave to a young man about to start on a public career. He told him to stick to his friends, and never to forget or go back upon a man who ever did him a favor. Other great experts acclaimed him as an adept in politics. Asked who, in his opinion, was the greatest Republican politician of his time, Thomas C. Platt answered unhesitatingly, "Quay." He added that he had often wished that he could have been Quay's office-boy for about six months. Governor Pennypacker testifies that he was gentle, kindly, and generous, and his political success is attributed in no small measure to his hold upon men's affections. Judge Pennypacker also avers that no other Pennsylvanian in public life conveyed to those with whom he was brought in contact so deep an impression of intellectual power. Mr. William F. Harrity, who has several times led the Democratic forces against Quay, bears witness that he was a remarkable man and wielded tremendous influence. Mr. Charles P. Donnelley, also a conspicuous Philadelphia Democrat, concurs with Mr. Harrity in thinking that the State has suffered a great loss in the Senator's death. Quay was, he says, a wonderful organizer, and a political strategist of more than ordinary ability. Mr. Eugene C. Bonniwell, one of the organizers of the Independence Democratic party in Philadelphia, declares that although his own political convictions were opposed to Quay's, he felt, nevertheless, the greatest admiration for him. Mr. Clinton Rogers Woodruff, a leader of the Municipal League, while opposed to Quay's political principles, acknowledges that there was much to admire in the man and much ground for regretting his death. In 1900, Mr. Vest of Missouri told his colleagues in the United States Senate that, in his opinion, Mr. Quay was the ablest political leader in the United States. He depicted the Pennsylvanian as resourceful, vigilant, sagacious, and, above all, as possessing the rare quality of great leadership which enabled him to inspire his followers with absolute confidence.

Some remarks made by Quay in 1901 at a dinner commemorative of his reelection to the State Senate seem curiously pertinent and pathetic in the retrospect. He told his auditors that at threescore years and ten the world grows lonely. Through wildernesses almost desolate, the stream of life glides darkly toward the eternal gulf. The associations

of youth and early manhood are gone. The objects which once filled the field of hope have been gained or lost, or have faded in importance, and we note not only a disconnection with ideas once dominant, but also a dissolution of feelings that once melted the heart. His political race, Quay declared, was run. He would never again be a candidate for, nor accept, any official position. He had many friends to remember. He had no enemies to punish. So far as vindictiveness was concerned, he put aside the past. It only remains to say, what to a majority of even his acquaintances was unknown, that the late Senator Quay was a man of broad culture. He had a large and well-chosen library, and he was a historical scholar of great range and admirable accuracy.

We note with satisfaction the awards and decisions announced by Mr. Frank Plumley, of Vermont, the American citizen who was made umpire in the dispute between the British and Venezuelan governments. It may be remembered that not only Great Britain and Venezuela, but also Holland, joined in requesting President Roosevelt to appoint an umpire to settle a number of points which were involved in claims presented at Caracas, but as to which the countries concerned were unable to agree. As it was recognized that some of the questions which Mr. Plumley was called upon to decide were new in international jurisprudence, ample time for study and reflection was allowed him, and he was permitted to take the evidence and briefs to the United States for prolonged consideration. Of particular interest to international lawyers is his decision—a decision for which there was no precedent—that interest ought to be paid on awards. It seems that Great Britain claimed interest at five per cent. on awards made by a mixed commission so long ago as 1869; the convention constituting this commission having provided that the Venezuelan government should, by its Congress, make provision without delay for the payment of the awards. As a matter of fact, there was a delay of some sixteen years in the payments. Venezuela denied the right to collect interest for the years during which she had been in default, on the ground that there was no specific provision for it in the convention concluded between the two governments. Mr. Plumley decided, however, that interest at the rate of three per cent.—the Venezuelan statutory rate when no rate is named in a contract—should be allowed from the time when the Venezuelan Congress ratified the terms of the contract, accepted the findings of the commission, and made the first payment on account.

With reference to the well-known case of the Puerto Cabello and Valencia Company, a British corporation, the umpire found that the Caracas government had guaranteed a certain income, which guaranty had not been made good. Accordingly, he made an award of $1,200,000 in favor of the company. On the other hand, two questions concerning citizenship were decided by Mr. Plumley in favor of Venezuela. In one case England had set up the claim that a man born in Venezuela of British parents resident in Venezuela—the man himself also having been always a resident of Venezuela—was a British subject under the Constitution of Venezuela existing at the time of his birth. This construction of the Venezuelan Constitution the Caracas government opposed, insisting that the man was a Venezuelan by birth and domicile. The position taken by Venezuela was sustained by the umpire. In another claim, Great Britain urged that, in the case of a British subject who had been domiciled in Venezuela, who died there, and who had been married to a Venezuelan woman, such widow became by her marriage a British subject, retained her status after her husband's death, and could appear as a claimant for a cause accruing to her husband in his lifetime. Here, again, the position taken by Great Britain failed to meet with the umpire's approval. On the whole, we presume that nobody will question Mr. Plumley's competence or impartiality.

A feature of Memorial day this year was the speech made by President Roosevelt on the battle-field of Gettysburg. The task which he undertook, and which many of our most eloquent citizens have essayed before him, is one of extraordinary difficulty; for treasured in the memories alike of auditors and readers are the imperishable sentences uttered by Abraham Lincoln, November 19, 1863, on the field of the decisive action of our civil war. Lincoln, it will be remembered, followed Edward Everett, believed to be the greatest orator then living in the United States; and, unquestionably, the theme was calculated to elicit all the skill and felicity of treatment derivable from Everett's natural gifts and mature experience. Yet the 268 words modestly pronounced by Abraham Lincoln made Everett's long oration seem academic, perfunctory, verbose, inadequate, tame. If we except the famous passage in the oration "On the Crown," wherein the great Athenian invokes "the men who fell at Marathon," it cannot be disputed, we think, that, in the speech he made at Gettysburg, Lincoln outdid Demosthenes. So large and lofty are the thoughts that, for the moment, no others seem worthy to intrude upon the scene; and so exquisitely fitting are the words, that hardy indeed would be the rhetorician who should try to edit or retouch them. In one asseveration Lincoln, however, was mistaken. He told his hearers that the world would little note nor long remember what "we" *say here*, but that it could never forget what "they"—the brave men living and dead, who had fought upon that field—*did here*. It is true enough that Everett's oration has long been forgotten; but every word of Lincoln's lives on the lips of his countrymen, although forty-one years have passed since, in all sincerity and humility, they were spoken.

In defining the policy of the Postal Telegraph-Cable Company to his lieutenants the other evening, President Clarence H. Mackay used these words: "We ask no favors; we seek no subsidies; we require and expect no more than those equal privileges, which make the heritage of American citizens, to perform the work which constitutes our contribution to civilization. Andrew Jackson once said that the most desirable and praiseworthy citizen he ever knew was a man who got rich minding his own business. That, gentlemen, is our policy. We may not get rich, but whatever results may accrue—and I am happy to say that they are so far satisfactory—we can and should and will, if you please, mind our own business; pursuing the even tenor of our way and missing no opportunity to get all of the legitimate business that the earth and the seas can afford." In these days of favor-seeking and everlasting protection of industries which obstinately refuse to grow out of the infant class, such an utterance is truly refreshing. It smacks of the genuine American spirit of independence which animated our forefathers, and which some of us had begun to suspect was dying out. If others of the younger generation charged with like responsibilities will emulate Mr. Mackay's example, the republic may yet continue to do business for quite some time in spite of trusts, labor-unions, yellow journals, and other ills too numerous to mention.

The late Charlton T. Lewis was a college graduate who knew Latin. There is one now and then, to the surprise of the general public. Usually the learned graduates become teachers. Dr. Lewis did that for a time. After graduating from Yale in the class of '53, he spent two years studying for the ministry, and of the ten years following he spent seven as professor of languages at Bloomington, Illinois, and as professor of mathematics and of Greek at Troy, New York. In 1866 he studied law in New York, and practised it the rest of his life, but not to the exclusion of other employments. For a time after the death of Mr. Bryant he was editor of the New York *Evening Post*. For many years he was one of the literary advisers of Harper & Brothers, and assisted them in the preparation of many important works, and especially of their Latin and Greek dictionaries and other more recent publications, in which his accurate scholarship and wide range of accomplishments made his co-operation exceedingly valuable. To his other labors Dr. Lewis added during the last fifteen years of his life a great deal of work for the reformation of prisons, and was president for many years of the Prison Association of New York, and of the State Charities Aid Association of New Jersey. He was a delegate to the convention of the "gold" Democrats at Indianapolis in 1896. In 1898 and 1899 he lectured on law in Harvard, Cornell, and Columbia. His address last year at New Haven at the fiftieth anniversary of the famous Yale class of '53 was a subject of comment in this paper at the time. His death removes a man very notable in his

generation for his attainments and the diligence with which he employed his powers in various fields of honorable service.

The Federal government through its control of the Post-office Department has great power to protect the people of the country from frauds and deleterious solicitations. The public is no match for sharpers. Any smart and unscrupulous adventurer who has free use of the United States mails can make a good living by selling worthless commodities or information to credulous buyers. An enthusiastic promoter who was trying to interest an acquaintance in a South-American franchise assured him that its possibilities were limitless. "It is as good," he said, "as a license to steal." So it is with the United States mails. Leave to use them to gull the simple is just as good as a license to steal. Appreciating this truth, the administration proposes to go a step farther than has been gone heretofore in restraint of fraudulent business in general, and of fraudulent traffic in patent medicine and medical advice in particular. It proposes to exclude from the mails, after due notice given, periodicals which persist in publishing advertisements which are prejudicial to public morals and contrary to the statutes. This class of advertisements includes "fake" patent remedies which claim medicinal virtues which they do not and cannot possibly possess, and the offers of quack doctors who promise what they cannot perform, and accomplish a profitable work of deceit by the aid of lying testimonials. The field which is cultivated by fraudulent advertisers of these classes seems to be practically limitless, and the crop that is gathered is measured only by the amount of seed permitted to be sown.

Strict supervision of all these frauds cannot but be beneficial to the public, yet the power of censorship which the Post-office Department proposes to exercise over the advertising columns of the papers is dangerous in its magnitude, and must be used with the utmost care and discretion. The newspapers that the Department threatens will resent the diminution of their revenues; the sharpers and quacks whose "business" it cuts down will fight hard and raise an outcry about restriction of liberty. Altogether it is a daring attempt to check a great evil. Yet the evil is so great that we must hope that the attempt will not fail. The impudent impostures put forth in some papers of the highest commercial standing and of fair reputation are an insult to the public and to law. There is no good reason why lotteries should be excluded from the mails while a legion of medical cheats —venders of every sort of quack cure, from bogus pills to absent magnetic treatment—glean an enormous harvest of dollars from millions of dupes. The lottery people gave their customers a chance. The fraudulent medical advertisers give nothing that is of value, and often injure in body those whom they delude. Hundreds of them enjoy what is virtually a license to steal. If they can be choked off, all decent people should be glad to see it done.

Premier Combes has succeeded in turning the Vatican debate into a personal triumph. During the discussion of the relations of France with the pontificate in its political aspect, several of the hot-heads in the Chamber of Deputies wished to solve matters by breaking off all relations with the Holy See forthwith. M. Allard, a socialist, made a motion in this sense. M. Combes opposed it, and gained a tremendous victory, winning no less than 385 votes to 146. On a second motion, approving the action of the French government in withdrawing its ambassador from the papal court, M. Combes increased this already great majority, receiving 427 votes to 95. A third victory was even more overwhelming; M. Ferrette, a republican nationalist, invited the French government to negotiate with Pius X. for an immediate separation of the Church and state in France. M. Combes opposed this, and on a division gained a victory which was simply overwhelming—507 votes against 18. This means an immense gain in prestige and power for the premier, but it does not mean that the relation between Church and state in France will be supported indefinitely by the government, nor that the immense subsidy of $8,000,000 paid annually to the Catholic Church in France is to continue in perpetuity. M. Combes made this perfectly clear. He simply wishes to postpone the final decision until January next, and assures the socialists and extremists that he is as anxious to make an end of the concordat as any of them, and that, in view of the fact that ecclesiastical dignitaries have violated the terms of the concordat, as understood by the French government, the latter deems itself amply justified in bringing matters to a climax.

During the Boer war universal conscription for England was again and again foreshadowed, amongst others by Lord Rosebery. Much was said, and vehemently said, both for and against it, but the prevailing view was that Englishmen would never consent to a system which so greatly curtailed their personal liberty and violated the British tradition of a volunteer army. The question has been raised once more, in a highly serious way, in the report of the commission on the volunteer and militia forces, and this report practically recommends universal conscription as the only means of providing a home-defence army, in the absence or partial absence of the regular troops. The commission is of opinion that the principles adopted by all other great European powers must at last be copied by Great Britain, and that every able-bodied citizen should be trained in arms for the defence of the nation. It is proposed that compulsory service should be for one year, with a few weeks' drill in the two or three following years, and the commissioners consider that a sufficient training could be given in this way. This is far short of what is done by Continental powers, which keep their conscripts with the colors for three, four, and five years, thus inflicting an immense loss of time and money on them personally, withdrawing them from all productive employment, and forcing the state, whose earning-power is thus diminished, to support them for four or five years while their term of service lasts. The proposed English system would reduce this loss to a minimum, but it is not by any means certain that a properly qualified soldier can be turned out in twelve months, or that the necessary physical training can be given in that time.

The Russian proverb about selling the skin of the bear before you have shot the bear seems to apply with singular point to M. Uchida's reported representations to the court of Peking. It is said that the gifted Japanese minister has announced to China that the armies of his country expect shortly to capture Port Arthur and the surrounding territory, thus terminating the situation under which Russia holds this territory on lease from China. M. Uchida is reported to have asked the Chinese authorities whether China is prepared to take over the Quan-tung district, including Port Arthur, and to administrate it, or whether China would prefer Japan to undertake the matter directly. As Japan is already assuming the administration of Korea, or at least undertaking to supervise that administration, her statesmen will have their hands full if they undertake to manage considerable sections of Chinese territory as well. But the Japanese have shown remarkable organizing power, both in preparing for the war, and in carrying out all the practical problems involved by the war itself; so that their competence seems fairly well assured. Russia, on the other hand, is said to be negotiating with China for the evacuation, at this late date, of the whole of Manchuria, asking China to lease instead a part of Chinese Turkestan north of the Pamirs and Tibet, some twenty thousand square miles in extent. M. Paul Lessar is said to have made this proposition to the Chinese Foreign Office, by a curious coincidence, on the very day on which M. Uchida made his proposals concerning Port Arthur. This is certainly taking time by the forelock, on the part of both combatants. The endless pity is that they could not have arranged the matter in some such way before, sparing the world a cruel and destructive war, and the armies of both countries an immense loss of life. But it is evident that the great struggle was bound to come, and as well now as later; for the sooner the new balance of power is reached, the sooner will the work of civilization in Asia be carried forward. Russia at one time possessed the territory in Chinese Turkestan now sought, but receded it to China, just as, after the Crimean war, she receded to Turkey a part of Rumania taken in 1812. This part of Rumania was again added to the Russian Empire in 1878, and immediately contiguous to it is the town of Kishinef, of world-wide notoriety for the recent anti-Jewish riots, which were really a Rumanian rather than a Russian outbreak. Perhaps the Ili district in Chinese Turkestan is destined in the same way to find its way back again into the domains of the Czar.

The Doubtful States

We may safely assume that the immense majorities secured by McKinley in 1896 and 1900 were made up, not only of Republicans, but also, to a material, if not decisive, extent, of sober-minded and conservative Democrats, who, never before since the outbreak of the civil war, had supported the Republican ticket in Presidential years. How otherwise can we explain a phenomenon so surprising as McKinley's success, not only in States previously doubtful, like New York, New Jersey, Connecticut, Indiana, and California, but also in such States as Delaware, Maryland, West Virginia, and Kentucky, which since, and including 1876, had given their electoral votes invariably to Democratic candidates. We may also take for granted that the vote cast this year for Mr. Roosevelt in any doubtful State will fall far short of that polled for McKinley in 1896 or even in 1900. We shall find proof of this assertion in Mr. Roosevelt's native State, New York, which, in 1898, gave him a plurality of less than 18,000 votes, though McKinley had carried New York two years before by the unparalleled plurality of 268,000, and was to carry it in 1900 by nearly 144,000.

In view of these facts, it is evident that, in order to forecast the outcome of the campaign now beginning, we should pass over the election returns of 1896 and 1900, and fasten our eyes upon the figures presented by the many doubtful States, before or since the two memorable conjunctures named—the figures exhibited when Democrats have had the shrewdness to put forward candidates qualified, not only to draw out the whole strength of the party, but to make serious inroads on the Republican ranks. That is what we purpose doing to-day.

We shall begin with California, which gave eight of its nine electoral votes to McKinley by a plurality of 2797 in 1896, and the whole nine to the same nominee four years later by a plurality of 39,710. In 1902, on the other hand, California chose a Republican Governor by a plurality of only 1550. In 1894 the Democratic nominee for Governor was elected by a plurality of 1206, and in 1892 California gave Grover Cleveland eight of her nine electoral votes. In 1886, and again in 1880, the Democrats elected a Governor, and in the last-named year Hancock obtained five of California's six Presidential electors. With such a record before us it would be absurd to say that the Democratic nominee has no chance of carrying California next November.

As for Connecticut, while it is true that McKinley carried it in 1896 by a plurality of 53,545, and in 1900 by a plurality of 28,570, it is, nevertheless, true that in 1902 a Republican was elected Governor by a plurality of only 16,008; and that in 1892, in 1888, in 1884, and in 1876 the State gave her electoral votes to Democratic nominees for the Presidency. Delaware gave her three electoral votes to McKinley in 1896 and 1900 by pluralities of 3630 and 3671, respectively; but in 1892, 1888, 1884, and 1880 she was carried by Democratic nominees for the office of Federal Chief Magistrate. Still taking the States in alphabetical order we find that Illinois was swept by the Democracy in 1892—for the first time in a Presidential year since the first election of Abraham Lincoln. Indiana, which supported McKinley in 1896 and 1900, gave her electoral votes to the Democratic nominee for the White House in 1892, in 1884, and in 1876. Even in Iowa the Republican nominee for the Presidency in 1892 secured only a little more than 23,000 plurality. That Iowa has elected a Democratic Governor is well known.

Kansas gave her ten electoral votes to Bryan in 1896 by 12,269 majority. She gave them to Weaver, the Populist nominee, in 1892 by 5874 plurality. She elected a Democratic Governor in 1882 by 8079 plurality. As for Kentucky we scarcely need to say that, except in 1896, when by the very small plurality of 281, she gave McKinley twelve of her thirteen electors, she could always be relied upon to support the Democratic nominee in Presidential years, and in 1900 resumed her place in the Democratic column. Maryland in 1896 and 1900 supported McKinley, because the Republicans were reinforced by a wing of the Democracy, but during the preceding quarter of a century the State could be depended on to uphold the Democratic nominee for the office of Federal Chief Magistrate. Even Massachusetts is not hopeless from a Democratic point of view, for in 1891 and 1892 she chose a Democratic Governor, while in the year last named and in 1884 she was carried for the Republican nominees for the Presidency by pluralities of only 24,000 and 26,000, respectively. As for Michigan, she chose a fusion Governor in 1882, a Democratic Governor in 1890, and gave Mr. Cleveland five of her fourteen electoral votes in 1892. Minnesota is commonly looked upon as impregnably Republican, yet she elected a fusion Governor in 1898, and two years later a Republican secured the same office by a plurality of only 2254.

What is there incredible in the assertion that Minnesota can be carried for a moderate revision of the tariff by a Democratic nominee for the Presidency, who will poll all the Democratic votes and draw from the progressive Republicans? Nebraska gave its electoral votes to McKinley in 1900 by a plurality of 7822, but it elected a fusionist Justice of the Supreme Court in 1899, a fusionist Governor in 1898, supported Bryan in 1896, and chose a Democratic-Populist Governor in 1894. As for New Jersey, though McKinley carried the State in 1900 and 1896, her electoral votes were given to Democratic nominees for the Presidency from 1876 to 1892, both years included. Coming to the Empire commonwealth, we scarcely need remind the reader that the Democrats elected Alton B. Parker Chief Justice of the Court of Appeals in 1897 by a plurality of 60,889, and that from 1882 until 1892, both years included, their candidates for Governor and President invariably carried the State, except in 1888, when General Harrison got the electoral votes, though David B. Hill was reelected Governor.

Few people realize that even Ohio gave Mr. Cleveland an electoral vote in 1892, and that, as regards the rest of her Presidential electors that year, the Republican plurality was only about a thousand. In 1889 Ohio chose a Democratic Governor. Oregon, whose electoral votes were secured for McKinley in 1896 and 1900, elected a fusion Governor in 1892 and a Democratic Governor in 1902. Rhode Island, also, has elected a Democratic Governor in 1893, 1902, and 1903. South Dakota withheld her electoral votes from McKinley in 1896, and chose a Democratic Governor two years later. The State of Washington gave her four electoral votes to Bryan in 1896 by 12,493 majority. West Virginia voted for McKinley in 1896 and 1900, but from 1876 to 1892, both years included, she gave her electoral votes uniformly to Democratic nominees. Wisconsin is far from being a trustworthy Republican State. In 1890 she chose a Democrat for Governor; in 1892 she gave her electoral votes to Grover Cleveland; in 1895 she elected a Democrat Justice of the Supreme Court. As for Wyoming she supported Bryan in 1896, and, four years before, chose for Governor the nominee on the Democratic-Populist ticket.

No man who will review this record candidly will despair of the election of the St. Louis nominee, especially when he bears in mind that in Illinois and Wisconsin the Republican party is split asunder, and that, underneath the surface, there is grave factional dissension in New York, Ohio, and Iowa. To us the outlook for the Democracy seems every bit as bright as it appeared in June, 1892, provided, of course, the delegates to the Democratic national convention shall this year act as wisely as they did twelve years ago.

Recent Comments on the Negro Problem

It seems to us that unwarranted deductions have been drawn by some of our Northern contemporaries from the interesting historical incident brought out by Representative Bartholdt of Missouri not long before the adjournment of Congress. For reasons that we shall presently point out, the fact, if it be one, that in 1815, Thomas Jefferson, then a private citizen, invited an educated free negro named Julius Melbourn to dine with him at Monticello, can scarcely be regarded as a precedent justifying President Roosevelt in inviting some eighty-five years afterward, at a critical conjuncture in the relations of the black and the white races, Booker T. Washington to dine with him in the White House. There is nothing inconsistent with Jefferson's character and recorded opinions, nor irreconcilable with loyalty to the interests of the white race, as those were viewed at the time, in the story which is related in a book edited by a member of Congress, and published more than half a century ago. According to this book, which Representative Bartholdt procured from the Congressional Library, and produced in the House, Julius Melbourn was born a slave in North Carolina in 1790, and sixteen years later received his freedom from his owner, Mrs. Melbourn, who had educated him. The volume, which is devoted to this negro's recollections and opinions, contains an account of a visit which he, who had read many of Jefferson's writings, and had conceived an earnest wish to converse with their author, made to Monticello in July, 1815. After recording the fact that he remained nearly a week in the neighborhood of Monticello, and was permitted to spend a part of every day in Jefferson's library, he notes that, on one occasion, he received a card from Mr. Jefferson inviting him to dine with him and a few friends on the following day at four o'clock. He went to the house, and found there, he says, Chief-Justice Marshall, William Wirt, Samuel Dexter, of Boston; Dr. Samuel L. Mitchill, of New York, and Elder John Leland, a Baptist minister, who then lived in western Massachusetts. There is nothing incredible, or even improbable, in the association of these men around Jefferson's table. Unquestionably, Jefferson, during his first administration, had regarded with distrust and dislike, John Marshall, the great Federalist expounder of the Constitution; but six years had passed since the former had retired from public life, and he and Marshall could now afford to remember only that they had been fellow patriots during the Revolutionary war, and that on many questions of primary importance they were in lively sympathy. As to the other guests mentioned, we scarcely need remind the reader that William Wirt, the distinguished Virginia lawyer, was to be the third President's biographer, or that Samuel Dexter, once a

Federalist, had gone over to Jefferson's support on some of the questions arising out of Jefferson's administration, and leading to the war of 1812. It is less generally known, and we are indebted to the *Springfield Republican* for recalling that Dr. Samuel L. Mitchill was not only a noted scientist and friend of Joseph Priestley, with whom Jefferson corresponded, but also, as a member of House and Senate during Jefferson's administration, had been one of his political upholders. As for Elder John Leland, we learn from the *Springfield Republican* that he was one of the very few clergymen of the time who could not only tolerate, but greatly admire, the free-thinking Jefferson. As to the negro's narrative, Mr. Bartholdt, who read from it to the House, pointed out that it is written, not in a boastful or controversial style, and that it lays no stress on the uncommonness of the dining incident, though it recognizes the visit to Monticello, and the opportunity of hearing Jefferson converse as memorable events in the life of the negro author. It is well known that Mr. John Sharp Williams, of Mississippi, when the book was produced in the House, denounced the story as preposterous, and averred that, if Melbourn or any other negro ever dined at Monticello, it must have been in the kitchen. In our opinion, Mr. Williams was mistaken in disputing the veracity or verisimilitude of the narrative, and, also, in imagining that it affords any justification for President Roosevelt's performance. In the first place, Mr. Jefferson's act was the act of a private citizen: he had long ceased to be the Federal Chief Magistrate. This circumstance is decisive; nobody denies the right of a private citizen to do what he likes, so long as he violates no law, in his private dwelling. The White House, on the other hand, belongs to the nation: every temporary tenant of it is bound to consider the national bearing of his conduct therein. We might stop here; yet we may add that in 1815 neither Jefferson (an emancipationist by sentiment), nor Marshall, nor Wirt, nor any other Virginian, ever imagined that, without the free consent of the whites, the enslaved blacks would ever venture to assert political, much less social, equality; and they could never have dreamed that their transient courtesy to an intelligent and educated free negro might one day be construed as an encouragement to unlimited aspirations on the part of his race. It is also evident to those familiar with Jefferson's character and accomplishments—he was not only a theoretical emancipationist, but, so to speak, a professional philanthropist and sociologist—that he invited the negro Melbourn to dinner out of scientific curiosity and interest. Mr. Roosevelt, also, for ought we know, may be a philanthropist and sociologist; but it was his business to remember, first, that, at the present time, there is an acute racial question throughout the Southern States, and, secondly, that the White House is not the residence of a private citizen. It is not assigned for a brief term to the occupancy of the Federal Executive in order that he may gratify therein his personal whims.

It will be remembered that Governor Vardaman of Mississippi formerly advocated a curtailment of the appropriation made in that State for negro schools on two grounds—if he was correctly reported—namely, that the sum allotted to negro schools should be proportioned to the share of the State's revenue derived from negro taxpayers, and, secondly, that the less education negroes receive the better. We have formerly pointed out that Governor Vardaman would scarcely venture, if he desired a re-election, to make the school appropriation assigned to certain counties of his State strictly proportioned to the share of the State's revenue derived from "poor white" taxpayers therein; and, secondly, that it would prove a mistake, not only constitutionally and morally, but economically and sociologically, to deprive negroes of a technical or even of a liberal education. We observe with gratification that the Governor of Mississippi's western neighbor, Louisiana, takes a position with reference to negro education diametrically opposite from Governor Vardaman's. He insists that, for the stability and progress of civilization, it is of the utmost importance to the whites themselves that their negro fellow citizens should be provided with the discipline, the incentive, and the opportunity derivable from a technical education, and he does not hesitate to add that, since the blacks will need leaders, such as show themselves eager and able to profit by a *liberal* education, should receive one. Obviously, the utterance is prompted by enlightened self-interest as well as by magnanimity and philanthropy.

Animated with the same spirit was the speech delivered on May 19 by Mr. Edward M. Shepard, of New York, in the Philadelphia Academy of Music, at a conference held for the promotion of the Berean Manual Training and Industrial School. Mr. Shepard began by reminding his auditors that there are two tremendous problems with which this country must deal during the twentieth century. The first is what we term the equasion of labor and capital; the second is concerned with the measure of justice, opportunity, and happiness that may be assured to the negro race. He did not fail to recognize that the second question is closely related to the first; and that, so far as our South Atlantic and Gulf States are concerned, which of themselves constitute an empire, the second problem outranks, in point of urgency, the first. Mr. Shepard avowed that he concurred with Mr. Edgar Gordon Murphy, of Virginia, in believing that, for the stability and progress of civilization, it is of vital moment to the black, as well as the white race, to maintain, on the one hand, the "prerogative"—by which was meant the social and political ascendency—that a vastly longer, deeper, and higher advancement in civilization has given to the white race, and, on the other hand, to insist on the enforcement of the corresponding duty and burden which go with that prerogative. The maintenance of white ascendency could not, he thought, with any show of righteousness or wisdom, or even common sense, be held to include a right to obstruct, or even fail to promote with every reasonable aid, the strivings of the black race upward and onward.

Reviewing the fields in which, and the conditions under which remarkable success is attainable in the United States at the present time, Mr. Shepard pointed out that for black men and white men alike, the foundations of prosperity and power, respect and influence, the key to honor, the ladder to glory, were all, in our day, to be found in the severe discipline of industrial effort and achievement. We note, however, that Mr. Shepard, like the Governor of Indiana, did not disparage literary institutions intended for negroes, where the demand for them is genuine. He recognized that the welfare of both races and of the republic required that the black man should have an opportunity of exercising his intellectual faculties. When a negro is fitted for the work, but only when he is so fitted, he should be encouraged to practise the liberal arts. None the less, Mr. Shepard did not shut his eyes to what he deems the paramount and indisputable fact, the fact, namely, that the stress of future effort on the part of the American negro will not lie in professional, literary, or artistic fields. For the blacks, as, indeed, for the whites also, industrial achievement must come first.

Is Rev. Dr. Lyman Abbott's Advice to a Troubled Wife Sound?

Rev. Dr. Lyman Abbott is a wise man, full of years, experience, reflection, and conscience. It was but natural, therefore, that a woman suffering from disappointment over the love of her husband for another woman should seek his kindly counsel. Instinctively, also, did Dr. Abbott make reply with characteristic candor and caution. The question itself is not new, but the letter containing it is so obviously sincere and Dr. Abbott's reply so different in a way from what one would ordinarily expect from him that we print both as they appeared in Dr. Abbott's paper, the *Outlook*. This is the letter, entitled by the editor "A Wife's Problem":

In great distress of mind and heart, and knowing not where to seek for help, I am impelled to turn to you. My husband and I had lived together for many years of happy wedded life, not without trials and severe ones, but happy in our relationship. He was finally thrown into the company of a woman whose personality soon took a strong hold on him. She was a woman of wealth and station, but sick and unhappy in her married life, and my husband's sympathies went out to her. In purity and goodness, he sought to cheer and brighten her life, and in time her heart clung to him, and before he was aware of his danger, he realized that he loved her, I know not through what compromises with conscience—yet I know he struggled. He fancied he could be true to me and still cherish her.

As such things usually do, in time it came to my knowledge, and was such a blow as seemed to me would surely deprive me of life or reason. I cannot tell you the terrible feeling, as though the sun had been blotted out and I wandered in a darkened world. Nothing seemed real, all a dreadful nightmare from which I *must* awaken some day. I have kept my unhappiness from everybody, although I have often felt as though I could not get up and face another day—and the feeling of unreality is so strong it often seems as though it were some one else and not I who goes about the routine of life.

We were a couple united by true love, by many similarities of taste and disposition, each with our faults, yet both striving to live the Christian life—my husband honored and loved by all who know him, ever trying to realize more fully the ideal of true manhood. Oh, can you tell me how such a horror could come into such a life? Is it possible for a man to hold two women in his heart?—for he insists he loves me as dearly as ever, and strives by every tenderness to win me back to cheerfulness. Yet truth compels him to admit that that other love still claims a place in his heart, though he has tried to banish it, and all intercourse has been broken off. Lest you should receive a wrong impression, I must state that their intimacy extended to declarations of mutual love, but was entirely innocent beyond that.

There are moments when despair overwhelms me. I feel that perhaps this passion is really the deepest, the supreme affection of his life, and in that case, what solution is there to this tragedy? Can you at least send me some one thought to cling to in those dreadful moments when I feel like giving up the struggle. **

And this is Dr. Abbott's reply:

When a difficulty arises between two friends, it is always safe for both to assume that there is some wrong on both sides, and it is always wise for each one to endeavor to discover and correct his own fault. It is much easier for you to see your husband's fault than to see your own; but it is much easier for you to correct your own fault than to correct your husband's. Correcting other people's faults is always a delicate, difficult, and frequently a dangerous business. What your husband's fault is in this case we cannot judge; nor have we any advice to give him, since he has not asked us for any. But it is easy to see from your letter that you are of a morbid, if not of a jealous, temperament, and that you have made yourself mentally sick by dwelling on circumstances until you have exaggerated them and probably misinterpreted them.

You say that your husband's action has been innocent. Why not assume that his motives also have been innocent? You affirm that for many years he has been honored and loved by all who knew him, ever trying to realize more fully the ideal of true manhood. Why imagine that he has now ceased to realize this endeavor and ceased to deserve this honor and affection? You affirm that he insists that he loves you as dearly as ever, and strives by every tenderness to win you back to cheerfulness. Why not accept his insistence and go back to cheerfulness?

Is it wrong for a husband to find interest and attraction in the society of a woman other than his own wife? Is it wrong for a wife to find interest and attraction in the society of a man other than her own husband? It may be. It may not be. It depends entirely upon the circumstances, the conditions, the nature and degree of the interest and the attraction. No one person, not even a faithful and loyal wife, can fill to the full all the life of any other person, though he be a devoted husband. Our lives are complicated; they have many elements in them, and they must get their supply through many avenues and from many springs. All that a wife has any right to ask is that kind of loyalty and devotion which puts her first and supreme in his regard. All that a husband has a right to ask of his wife is similar supreme regard. If your husband were abandoning you for some other companion, it would be right that you should feel the keenest sorrow and indignation. But the reverse is the case. He has discovered that his interest in and attachment to another woman, a woman apparently of uprightness and integrity, is troubling you. He has ceased all social relations with her. Is not this sufficient evidence that you have the supreme place in his affections, and that he gives you the loyalty which you have a right to ask?

Our advice to you, then, is to lay aside your tears, to banish your sorrows, to cease dwelling upon a circumstance which may have been ill, but which it is almost certain you have exaggerated, and to return to your cheerfulness. If your husband has been wrong, your plain duty is to win him back to righteousness; and you will do this, not by self-indulgence in your grief, but by giving to him the love which he asks and the joy which comes with love. Even if you have to pretend to some gladness which you do not feel, it were better than to impose upon him the gloom of a morbid sorrow which you ought not to feel. Stop thinking about yourself and your own sufferings; think about him and what you can do to make him happy. Happiness flees from those who pursue her. Happiness pursues those who forget themselves and think only of others.

This sounds sane and reasonable—to a man at least—and yet we are not quite sure that all right-thinking people, including ourselves, can wholly approve. Indeed, we have the most positive evidence that Dr. Abbott may never again be asked to address certain women's clubs which we could name if we felt disposed to make trouble. But that is beside the mark. Is Dr. Abbott's advice sound? Are the elements of fairness to all persons concerned satisfactorily conserved? Are "for better or worse" and "forsaking all others" phrases or promises? Perhaps they do not apply at all. Dr. Abbott ought to know; he has repeated them often enough. But is he right? Is he a true or a false teacher? We should really like to hear—briefly, of course—from some of our most intelligent readers what they think about it.

The Church and the Theatre

BUNYAN'S *Pilgrim's Progress* is to be dramatized next season under the direction of Mr. Frohman, and the Woman's Foreign Missionary Society of the First Congregational Church, Washington, D. C., recently engaged Mr. Greet's company to play for it as a mode of raising funds with which to spread the Gospel abroad. What thoughts these facts suggest! Bunyan, the tinker of Bedford, never dreamed that his great work of the imagination, written to conserve the individualistic Puritan type of religion, would be put on the stage in London of a later time, and the Puritan settlers of New England and their missionary supporting descendants who founded the American Board of Foreign Missions never imagined that the time would come at the national capital when a medieval morality play, acted by English actors, would be sanctioned by the church as a legitimate mode of education both in receiving spiritual truth from the play itself and in gaining funds with which to do missionary work.

No one who has read *Pilgrim's Progress* will be surprised that it has been seized upon for its scenic possibilities, and for its adaptation to the ingenious devices of modern stage managers. Of anything like dramatic unity it is wanting, but its cast of characters are as lifelike to-day as they were when Bunyan wrote, and its homilies touch on universal and ever constant foibles and sins, and these will afford opportunity for subtle interpretation and effective modern preachment; and if otherwise unobjectionable, the presentation will appeal to that ever-increasing number of religious people who realize that the church and the stage have so much in common that they cannot afford longer to be enemies.

It is interesting to note how now and again through all the generations that the church's adherents in this country have been under the domination of the Puritan hatred of the stage, there have been individuals here and there high placed in the church who have realized the common homiletical ideals of preaching and acting at their highest. Thus the famous Professor Austin Phelps, of Andover Seminary, wrote, "The Greek drama was oral in its form of communication; so is the pulpit. The Greek drama discussed the profoundest problems of human destiny; so does the pulpit. The Greek drama expressed the ideas which lay deepest in the most enlightened theology of the day; so does the pulpit. Above all the Greek drama existed for the people; and so does the pulpit."

The old Puritan tradition still lingers. It found expression in Spurgeon's dictum that a church member who attended the theatre thereby, without any judicial decree of the church, cut himself off from membership. It more recently has found expression in the dictum of Dr. J. M. Buckley, of the New York *Christian Advocate*, a leading expositor of the Methodist Episcopal denomination, that the Church's objection to the theatre is "by no means altogether based upon the words of any particular play, or upon all the words of even the worst of plays. It is based upon the general effect, the general character, the general associations, and the relation of the whole institution to the progress of Christianity." It has been this point of view which has shaped the formal discipline of the Methodist Episcopal Church for so many years. But discipline is not enforced. The Iroquois Theatre disaster in Chicago revealed Methodist clergymen and eminent laymen prominent in Christian work as attendants on the theatre. Disparity between the traditional ideal and present practice by a minority in the Church whom the ecclesiastical authorities dare not discipline, led an influential minority to go before the General Conference in Los Angeles, California, asking for such modification of the rules as would bring the legislation of the Church up to present-day standards, which are year by year ceasing to be Puritan, not only with respect to theatre-going, but also as to many other customs and practices formerly classed as offspring of the devil.

For John Wesley, who went to see a comedy of Terence, presented by the pupils at Westminster, who went to oratorios and to concerts patronized by the Bishop of London, was no ascetic or amusement-hater. Moreover he was not given to being a conscience for other men, for while he said he could not with a clear conscience go to the theatre of his time, he did not deny but that possibly others could go with a clear conscience.

The religious person of to-day who believes in the homiletical possibilities of the dramatic art, need not and does not shut his eyes to evils that exist, evils that are hoary. All that he does is to refuse to say that because they have existed they must necessarily exist. He refuses to boycott by wholesale and then hold up his hands in horror because of the evils that are due to his undiscriminating condemnation quite as much as to anything intrinsic.

It may often be that the theatre is ahead of the church with its preachment on social evils. Wendell Phillips contended, in his address on the Abolition Movement's Philosophy, that the theatre of the North was ahead of the church of the North in its welcoming of anti-slavery views. Ibsen long since pointed out what the practical effects of the dominant spirit of the age—individualism—is to be on the institution of the family. Fourteen of the leading denominations of the country have just issued an appeal to the Christian public to awake to the meaning of tendencies in this country which Ibsen long since saw in Europe.

So long as the best people of a community undiscriminatingly condemn an institution as old as the stage and a profession as historic and important as the actor's, it is not likely that conditions within that profession can improve. But when men have faith in the high ideals of actors such as Carlyle had in Macready when he sent him with a noble letter of introduction to Emerson, when they believe with Norman Kerr, one of the most eminent of British physicians, who said that he had found "as unaffected piety, as noble unselfishness and as true practical Christian charity" among actors and actresses as he had ever seen among medical and clerical patients, and such proofs of an inner religious life as to preclude any supposition of posing for effect, then the profession of actor will be elevated as it cannot be when it is ignorantly despised.

JAPANESE TROOPS LEAVING THE SHANAGAWA RAILROAD STATION FOR THE FRONT

The photograph shows the departure of a detachment of Japanese troops from the Shanagawa railroad station, four miles from Tokyo, for the front. The latest reports of Japanese military activity state that a third army is mobilizing at Hiroshima, it being necessary, on account of Japan's recent naval reverses, to use the second army for the movement against Port Arthur, while the first army is concentrated at Feng-Wang-Cheng. Meanwhile, according to the original plan of campaign, the Russians continue to fall back toward the north

The Start of the Brooklyn Handicap—the Field at the Barrier

Copyright, 1904, by N. W. Penfield

The Field passing the Three-quarter Pole, having gone One Mile

Photograph by Penfield

THE EIGHTEENTH BROOKLYN HANDICAP, RUN AT GRAVESEND, LONG ISLAND, MAY 26

The eighteenth Brooklyn Handicap was run at the Gravesend Race-track, Long Island, on May 26, the $20,000 stake being won by "The Picket," owned by Thomas Middleton and K. R. L. Jungbluth, of Louisville, Kentucky. The winning time was 2.06 3-5. "Irish Lad" finished second, and "Proper" third. The value of the Brooklyn Handicap stake has advanced from $5850, in 1887, to $25,000 in 1892. Its present figure is $20,000. Other winners have been "Exile," "Tenny," "Dr Rice," "Ornament," "Banastar," "Kinley Mack," and "Irish Lad"

Judge Parker—The Man and His Position

By James Creelman

A LARGE head set strongly on a tall, strong body; a full, fresh-colored face; broad, high, tranquil brow; straight powerful nose; coarse tawny mustache; brilliant brown eyes that look straight at you; long and formidable jaws; a heavy underlip; big, flat teeth and massive round chin—every movement and look suggesting immense strength and a hearty, contented spirit.

That is Chief-Judge Alton Brooks Parker in his fifty-second year—the silent man to whom the defeated and distracted Democratic leaders turn for hope.

There is no mystery about Judge Parker, in spite of his refusal to degrade his great office by talking politics from the bench. He is not so anxious to have the Democratic party nominate him for President that he will sin against the light; and he has made no secret of his belief that an officer of high judicial rank may accept a political nomination when it is offered to him, but that he disgraces his robes when he seeks it. Hence his refusal to speak when the country clamors for an expression of his political views.

The idea that Judge Parker is a colorless respectability, a mere passive availability in politics, is ludicrous to those who know him well or have taken the trouble to examine his record. Even his distinguished associates on the bench have publicly borne witness that he is a man deeply informed in questions of government and of unshakable convictions.

Can it be said that a man has shown no signs of extraordinary character when we know that, after managing a victorious campaign in the State of New York—fresh from the excitements of desperate partisan warfare—he could take his seat on the judicial bench, and from that hour remain politically mute for nearly twenty years? Where is there a parallel? Or has blatant blatherskitism, on the one hand, and cheap heroics on the other, so corrupted the popular imagination that the American electorate has at last come to look upon dignity, modesty, and common-sense conservatism, even in the high magistracy, as signs of mediocrity?

I have said that there is no mystery about Judge Parker, notwithstanding his refusal to engage in a scramble for the Presidency. He is the descendant of many generations of farmers, one of whom was a private soldier in Washington's army. He was born on his father's farm in New York State, went from the fields to be a country schoolteacher, then became a lawyer in the small city of Kingston, then Surrogate of Ulster County for two terms, then the successful chairman in the campaign that made David B. Hill Governor of New York, then a Justice of the Supreme Court, and finally Chief-Judge of the Court of Appeals.

He owns and manages three good farms, on one of which, at Esopus, he lives in a charming house overlooking the Hudson River.

His judicial position has sheltered him, given him time to be with his family, to enjoy life in the country, his fields, his trees, and his cattle, and has also offered him a satisfying employment for his intellect. It is hard to imagine a happier or fuller life. What wonder, then, that he looks with a sort of half-dread upon anything that promises to bring an end to such an environment of peace and love? Nor is it surprising that his white-haired mother exhorts him night and day to be satisfied as he is, and turn away from the agonies of political ambition.

As a voter Judge Parker has always supported the Democratic party, even, as in 1896 and 1900, he gave nothing more than his vote, reserving the right to disagree with particular issues set forth in the Chicago and Kansas City platforms, notably the free-silver heresy.

Surely there is nothing evasive about that attitude. The judge believes in the rule of the majority—in parties as well as in governments. From a Democratic standpoint the idea is fundamental.

His judicial opinions strongly emphasize his position as a strict constructionist. There is no greater stickler for a complete separation of the legislative, executive, and judicial departments of the government—the policy that answers Lord Macaulay's sneer, "Your Constitution is all sail and no anchor."

Nor is Judge Parker's attitude toward the trust question in doubt. Speaking from the Supreme Court bench in 1896 he declared that, as a matter of common law, it was immaterial whether a combination in restraint of trade was reasonable or unreasonable. He reaffirmed that opinion as Chief Judge of the Court of Appeals. The mere possession of the power to oppress the people was unlawful. And it is important to understand that the judge was *not* construing a statute, but was declaring the policy of the common law. Surely there is no uncertainty in that utterance on the question of trusts or monopolies?

In his vote on the franchise-tax law he demonstrated his belief that a special right to use the public highways is in itself real property—in the nature of an easement—and, as such, is subject to taxation like any other real estate.

No man can read his exhaustive opinions involving the rights of capital and labor in their orderly relations to each other—opinions dealing with present industrial conditions—without knowing that he stands for the principle of competition, and would rather have a continued struggle than a peace involving a modification of the rights and a consequent submergence of the interests of either capital or labor. His utterances on this most complicated of modern issues show that he is an extreme individualist. In this he is the champion of strenuousness; for extreme liberty means extreme effort. He hates paternalism and socialism, the refuges of men too cowardly or too lazy to continue the struggle between capital and labor, out of which civilization has been evolved. It was Count Muravief who declared that the mission of Russian autocracy was to relieve the tired man of the world.

In 1885, when Judge Parker was conspicuously engaged in party politics—the last year in which he had a moral right to discuss political issues in public—the Democratic party held that "Federal taxation shall be exclusively for public purposes and shall not exceed the needs of the government economically administered." He endorsed that policy heartily.

In his speech at Atlanta last year the judge asserted his firm belief that the Fourteenth and Fifteenth Amendments to the Constitution of the United States had left the rights of the States unimpaired except as to the negro question.

It will be seen that Judge Parker's position regarding trusts, strictly constitutional policies, official usurpations, public franchises, capital and labor, tariff taxation, and State rights are beyond doubt. And it is on these broad lines that the separate trend of Republican and Democratic thought and action lies to-day. So that the attempt to represent the judge as a neutral or evasive man, without courage or convictions, must fail of success.

The explanation of Judge Parker's singular unwillingness to enter the struggle for the Presidency by a proclamation of his political views is to be found in his high and delicate conception of the proprieties of his office and in his theory that the Presidency cannot properly be sought nor declined.

He believes in party responsibility for government, and, believing that, his idea is that the party in its national convention should declare its policies and name for its candidate a citizen who can be depended upon to defend and enforce those policies. I write with authority when I say that Judge Parker would refuse to be a candidate for President upon a platform which he believed to be unsound or unwise.

Personally, Judge Parker is a man of lovable qualities. He is big, virile, just, and kind. He may lack the subtlety and eloquence of McKinley, but he is deeply and widely informed, is tactful to an extraordinary degree, and is at home equally among men or women. I have seen him, in pea-jacket and top-boots, working with his farm laborers in the field, and I have seen him in evening dress among cultivated and fashionable men and women—always at his ease, always natural. Whether he sits on the bench among his black-robed associates, or trots his favorite saddle-horse over the country roads, or strides among his blooded bulls, or plays with his little grandson, or sits in a crowded drawing-room, he seems to be in his place.

It is his simplicity and earnestness that attract you. There is something manly and genuine in his character that goes well with his tall, strong body, rosy face, and big, open brown eyes. His dignity is as native as an Indian chief's. However amiable he may be, the mighty jaws and commanding chin are sufficient signs of a personality that will brook no undue familiarity.

It is said by Judge Parker's enemies—in the absence of any stain upon his public or private life—that his candidacy is too vigorously supported by certain tricky politicians and Wall Street bankers. But it is difficult to see how he can decline the support of any citizen on the ground that he is cunning in his political methods or that he earns his income as a banker. It is a demonstrable fact that, at the time of the recent New York State convention, he used his influence to seat a contested delegation after the leader of the delegation had written to him saying that he would, if seated, vote against Parker instructions. It is also a fact that when he was consulted about contests in the convention he said: "Every question should be settled on its merits. There is no other right way."

And it is illustrative of his character that on a day just before that decisive convention, when his political fate hung in the balance and when the Democratic leaders were in high council, the judge turned from politics to chloroform two sick horses and bury them in his favorite meadow. On the very day of the convention he spent his time overseeing the ploughing of his hayfields, gathering wild flowers for his wife, working on his judicial opinions, and discussing with an old friend a new book about Thomas Jefferson. It was not until nearly midnight, when a justice of the Supreme Court called him up on the telephone, that he heard a word about the convention.

Are these things characteristic of an ambitious schemer or of a sane mind in a sane body, a cheerful contentment with life as it is?

In considering the capacity of a man one must deal with matters he has actually touched. Out of his earnings Judge Parker has managed to live generously and to acquire properties valued at about thirty thousand dollars. He rescued from bankruptcy a large savings-bank in Kingston, reorganized it, and put it on a sound basis. He directs the executive work of the great Court of Appeals in a manner that has won repeated tributes from his associates. And, before he reached the bench, he conducted a successful State campaign. So marked was his political ability in his youth that Mr. Tilden sent for him and entrusted to his hands the reorganization of the Democratic organization in Ulster County.

It would be absurd to say that Judge Parker is a great man. He is a sound, learned lawyer, a capable man of business, a wise politician, a practical and successful farmer, and the kind of a citizen who is useful to his neighbors and is loved and trusted by them, regardless of political differences. There are no evidences of towering genius in his career, but there are abundant

indications that he is a sincere, old-fashioned Democrat, tenacious of the national traditions and that he represents in his make-up reverence for law, quiet courage, a hatred of demagogism and heroics and all that is strong, modest, sweet, and sober in the American character. There is no trick or warp in his mind. He is normal in all things.

Why should any one suspect such a man of being secretly in sympathy with corrupt or treacherous methods in politics or with the sinister elements of speculative finance? He is not of the uneasy ambitious type. Not even to be Governor of New York—when the office was within his reach—would he declare himself a candidate, and so break with the traditions of his office. He is not avaricious. There is no man in America who seems to be more satisfied with his lot. Nor can there be found anywhere in his long record a symptom of the intriguing spirit.

The one true charge against Judge Parker is that he is silent. But he presides over a great tribunal of justice. His party is divided because there has been too much talking. His enemies want him to speak in order that they may attack him. He is neither a knave nor a fool.

The thing which should be remembered by those who are interested in Judge Parker is that he has worked for years and still works in a centre of cynical and corrupt politics, that he has kept his name and his office free from scandal, that he knows politics from top to bottom, and that he has a serene plan of life from which he will not depart even to win the Presidency.

An Englishman on the Philippines

By Sydney Brooks

LONDON, *May 25, 1904*.

IS there any American nowadays, any average American, I mean, who thinks, writes, or speaks about the Philippines? Are Americans, as a whole, following with anything but the most spasmodic and superficial interest the progress of their apprenticeship in the government of subject aliens? Have they any clear idea of what work it is that is being done in their name out in that Far-Eastern archipelago, of the principles and policy that direct it, of the results it has produced, of the problems that are still to be faced? I suspect—at a distance of three thousand miles one cannot know—that the Philippines no longer hold American attention, that other questions and other interests have crowded them out, and that if you were to ask the man in the cars for a simple survey of conditions in the archipelago you would find him a whole encyclopædia of cloudy misinformation. I suspect this to be the case because English analogy points towards it, because the ordinary Englishman, though an imperialist to the backbone, knows next to nothing of the empire, and because the masses in any country that owns and rules dependencies content themselves with a vague pride of ownership and do not aspire to any detailed acquaintance with actualities. If, therefore, Americans have more or less dismissed the Philippines from the inner ring of living issues, the phenomenon is no new one. It merely shows that they have caught and accommodated themselves to one of the usual features of imperialism, and that they have done so with remarkable rapidity. Nevertheless, the feature is not one to be encouraged. In England's case it does not work much harm, because the foundations of British imperial rule have been laid down long ago along broad and stable lines, and the business of empire-building has become almost a species of mechanics. But in America's case, where the government of dependencies is a new venture, where policies are still in process of evolution, and where it is of peculiar importance that a right start should be made, the lack of concentrated attention on imperial problems is of very real disadvantage. If any such apathy as I suspect really obtains it should, if possible, be shaken off; and I can imagine nothing more likely to dispel it than a perusal of a book that now lies on my desk, *Greater America*, by Mr. A. R. Colquhoun (Harper & Brothers). The great value of the book is that it is a study of American imperialism, written by an Englishman who is a true friend to the United States, who has himself ruled and administered, who writes with candor, with telling emphasis, and, above all, with knowledge, and who is recognized as one of the most authoritative exponents of international and particularly of Far-Eastern politics. He is, therefore, able to bring to bear upon American policy in the Philippines a dispassionateness and a weight of comparative information such as previous writers have lacked. Mr. Colquhoun not merely describes, but explains and analyzes, getting down in all cases to first principles and penetrating beyond the facts to the ideas and policies behind them. His work, and particularly the chapters in it that are given up to the Philippines, will probably startle and confound American readers. It makes, I confess, very painful reading. It is a long and disheartening tale of blunders in method, policy, and, above all, perspective; of the neglect of the immediate and practical and the pursuit of a fantastic ideal; of failure to look facts in the face and gauge the essential elements of new conditions. Americans in the Philippines, as Mr. Colquhoun describes them, have shown a singular indifference to the teachings of experience. Considering that they speak English, that perhaps was only what might have been expected—Anglo-Saxons having a racial preference for profiting by their own mistakes rather than by other people's successes. But, in addition, American policy has proved recklessly lacking in practicality and sympathy with Filipino needs, character, and instincts; it has been marked by more idealism than common sense; it has displayed in about equal proportions the ultravisionary and the ultrabureaucratic qualities; and in foresight, a cool appreciation of realities and the capacity of understanding the Malayan temperament it has so far been remarkably deficient. That is a serious indictment to come from any one. From a man of Mr. Colquhoun's experience and ripe judgment, it deserves the best attention that the wisest heads in the United States can give it. It amounts, in effect, to a declaration, buttressed by undeniable evidence, that American policy in the Philippines is working along totally wrong lines.

To foreign observers the greatest danger ahead of Americans in the Philippines has from the first appeared to be their love of phrases, their profound belief in democracy as a cure for all ills, their conviction that salvation is to be found only in "the American influence brought to bear on them and the control exercised by the civil governor and white officials." More and more control being found necessary, sham autonomy has led step by step to an "extraordinary degree of centralization," in which everything is referred to the governor. The result is a weak paternal *régime* and an infinite multiplication of bureaus that consume a vast quantity of stationery with little practical issue. "It is possible that the American capacity for pushing things through may enable them to surmount the red-tape barriers and do some really practical work in the Philippines; but the unique opportunity they had for teaching the Latin Malays a lesson in *doing*, as opposed to *talking*, is irretrievably lost." That is the fundamental error of the American policy in the Philippines. They have tried to introduce self-government, without preparing the ground, among a people and under circumstances that were bound to turn the gift into a pernicious farce, and to encourage precisely those failings in the Malayan character which it should have been the first object of Americans to eradicate.

Turning to matters of detail, Mr. Colquhoun severely criticises the American educational system on the score of its haste, its expensiveness, its lack of continuity, and its neglect of character-training. "Although," he says, "a certain number of little Filipinos may be learning to be 'mighty smart,' and a certain amount of good influence is at work, the office of teacher has been brought into disrepute among the natives, a feeling of injustice engendered, and a great deal of time and money wasted. That this is the case is largely due to American idealism. Not content to attempt the education of the Filipinos on the simplest and least difficult lines, they were bent on infusing into the educational system that atmosphere of democracy which is their fetish. . . . Thanks to the generosity of the United States in presenting him with a ready-made social, political, and educational system, the Filipino, before he is rudimentarily educated, will be plunged in the vices of overcivilization, and the chances are that he will pass from childhood to decay without ever reaching maturity." Mr. Colquhoun, too, has a great deal to say—and all of it is pregnant and instructive—about the attitude of American administrators towards the labor question, towards secret societies, and towards foreign capital and enterprise. He dwells with especial force on their surprising failure to forward public works. "Every new country occupied by white men turns its attention first to public works, being aware that on these depend the prosperity and progress for which they hope. In conquered countries, such as India and Burma, or a protectorate like Egypt, it has been found the wisest policy to begin at once with the improvement of communications, thus providing employment for the natives, disciplining them in habits of work, and opening the way for future trade." That, however, has not been the policy of Americans. They have preferred to spend their energies on elaborating an unwieldy system of government, creating bureaus, and writing and filing reports, organizing a civil service, and planting American schoolteachers all over the islands. "We find that after three years of actual civil government—though many parts of the archipelago were pacified earlier—not one yard of railway has been begun; only one wagon-road is in process of construction; no canals or deepening of rivers have been undertaken, nor any improvements of harbors, except at Manila; while the inter-island communication has only recently been facilitated by the purchase of fifteen small coasting-steamers. The office of chief consulting engineer for the archipelago was only organized in October, 1902, and the provision made to secure improvement of public works in the provinces has proved entirely inadequate, because the extremely low salaries offered to the provincial engineers could not attract competent men, and also because those who were fairly competent had no stimulus or encouragement to bestir themselves. . . . The opening of communications would have been far more useful than the spread of democratic theories or arguments about the 'dignity of labor.'"

And it is with these searching reflections that Mr. Colquhoun concludes his survey of American achievements: "What was wanted was less idealism and more common sense—a curious criticism to make on American achievements, but nevertheless true. If the average American could see in the expansion of his race its true significance, if he could rid himself of the idea that he alone possesses the touchstone of freedom, if he were less concerned with the ethics of government and more with its

principles of 1776," that the preposterous metaphysics of the Declaration of Independence are of universal applicability, suit all peoples alike, and can be prescribed indiscriminately. It was, therefore, prophesied that Americans would begin at once by exploding democracy and Jeffersonian doctrines upon the benighted Orient, without troubling to inquire how far such a process was suited to local conditions or the local character. That, in effect, is precisely what has happened. "The first and foremost step," says Mr. Colquhoun, "was the bestowal of elective powers," for the choice of governors and municipalities. Unhappily, it was soon found that the Filipino could not be trusted with the control of funds. An American treasurer had, therefore, to be appointed to each province, and he was quickly followed by an American "supervisor" of public works. "The elections are mischievous or harmless exactly in proportion to the amount of practical justice and incorruptibility—if, in fact, he ceased to masquerade as the apostle of liberty and were content to appear simply as a peace-and-order-loving Anglo-Saxon, he would immensely simplify the task he has set himself. By all means let him strive after his ideal democracy. He can find abundant material for reform in his own continent. Let him do all he can to adjust the relations between man and man in the manner most perfectly consonant with liberty and equality. But let him not, in a blind effort to prove his own adherence to a shibboleth to which he gives the lie every day in his dealings with negroes or Indians, force the Filipino along the path that leads to anarchy. Common sense says that the Filipinos wanted peace, good government, and commercial prosperity. America has given them political institutions and legislation. Filipinos wanted education; Americans are determined to give them that. Unfortunately, they have forgotten that obedience is the first lesson, and that one must not begin to rule until one has learned to obey."

Is it an impertinence of friendship to wish, and to express the wish, that these words could be inscribed over the portals of every newspaper office in the United States, of Congress, of the White House, and of the governor's residence in Manila?

Books and Bookmen

By James MacArthur

I HAVE a distinct remembrance, while in London some four years ago, of an able critic who has frequently proved his sure scent in spotting coming popular authors, pointing out the name of Gilbert K. Chesterton to me as one that would be famous in a few years. How true his prediction was all of us know who have marked the rise of this young English writer. Yet one feels that in all Mr. Chesterton has written, able and brilliant as it is, he has not yet found the best that is in him. It is the continual fulfilment of his remarkable promise that is the most significant thing about his exceptional and unfolding powers. A growing man has constant surprises in store. So far it is as if Mr. Chesterton had been having one altercation after another with his clamoring intellectual powers before honestly beginning to mass them for concerted, earnest work. Our readers will take pleasure in following the series of fantastic stories which are now appearing in these pages under the title "The Club of Queer Trades." No one but Mr. Chesterton could have written them; they are unique in conception and in their singularly happy means to entertainment. Mr. Chesterton has been hailed as the successor to Stevenson, but he is like Stevenson in nothing save his versatility, though his personality promises to be as striking. As a poet even he has considerable attainment, as the following sonnet on "Africa," just printed in the *Speaker*, will attest:

A sleepy people, without priests or kings,
Dreamed here, men say, to drive us to the sea:
O let us drive ourselves! For it is free
And smells of honor and of English things.
How came we brawling by these bitter springs,
We of the North?—two kindly nations—we?
Though the dice rattles and the clear coin rings,
Here is no place for living men to be.
Leave them the gold that worked and whined for it,
Let them that have no nation anywhere
Be native here, and fat and full of bread:
But we, whose sins were human, we will quit
The land of blood, and leave these vultures there,
Noiselessly happy, feeding on the dead.

G. K. Chesterton
As seen by Max Beerbohm

Miss Alice Woods, after a long siege at the portals of art (witness her frontispiece illustration to *A Gingham Rose*), broke into literature about two years ago with an experiment in fiction called *Edges*. It was alive with an exuberance that betokened no ordinary mind. Unequal in power and going lame toward the end, it abounded, nevertheless, in a quality that was fresh, attractive, close to nature, and daring in its speech and ideals. It was evident that a new writer had arrived who had something to say, who had looked long and deep into life, and who had not looked in vain. Expectation was aroused, and her next work was eagerly awaited by those who had caught the new note in *Edges*. Nor are they likely to be disappointed. *A Gingham Rose*, which has been announced more than once during the past six months, and which is now published, is a remarkable book, sustained in power and interest, strong in its characterization and picturesque in its treatment of life. It is remarkable as a story, and its deep human interest would alone commend it; but it is more than that. It is a book of ideals, and is written with earnestness, great sincerity, and profound feeling. Miss Woods has written as a specialist; she is never beyond her depth. She knows the life in New York, in Chicago, and in the arid desert of Arizona, which she traverses with her characters. I believe I am safe in saying that no writer of fiction has ever before conveyed the living, sentient, appalling actuality of the dragging, depressed sands, the polished, blue, staring sky, the dirge of the great Southwest with such aching poignancy as Miss Woods has done in these pages. It is not merely a descriptive power; it is human, palpitating with reality, tensely alive. But Miss Woods is not only a specialist in her topography; it is as an ethical geographer that she excels. Her insight into character, her knowledge of human nature, her fine instinct for truth, her broad charity and sympathy are the gifts which raise *A Gingham Rose* into preeminence among the novels of the hour. With all our observation and intelligence, we are sadly lacking, as a nation of novelists, in the finer, spiritual qualities that distinguish the true artist, and go to the making of permanence in literature. For this reason, I am glad to single out *A Gingham Rose*, and to give it the prominence it deserves. Not that Miss Woods is lacking in the lighter graces of comedy; she has a very keen sense of humor which she exercises both in the making of her people and in the keen-edged things they say, and the epigrammatic things she says about them. I wish I had space to give a few illustrations; but the book itself is the best illustration—it so often happens that the arbitrary choice of an individual mars the unity of the work for other readers. I think American readers will like Anne. She is a teasing, enticing, lovable type of girl, not too far removed from any one of us. Why she was called "a gingham rose," and how she lived to outgrow its opprobrium, I must leave to the curiosity of the reader.

There is a suggestive entry, dated June, 1889, in Sir M. E. Grant Duff's *Journal*, which has an amusing significance now in view of Japan's splendid stand in the field. "Met at the soirée of the Royal Academy Sir Edwin Arnold, who is thinking of starting for a journey round the world. He was especially attracted by Japan. 'Imagine,' he said, 'a country whose grammar does not contain an imperative mood.'"

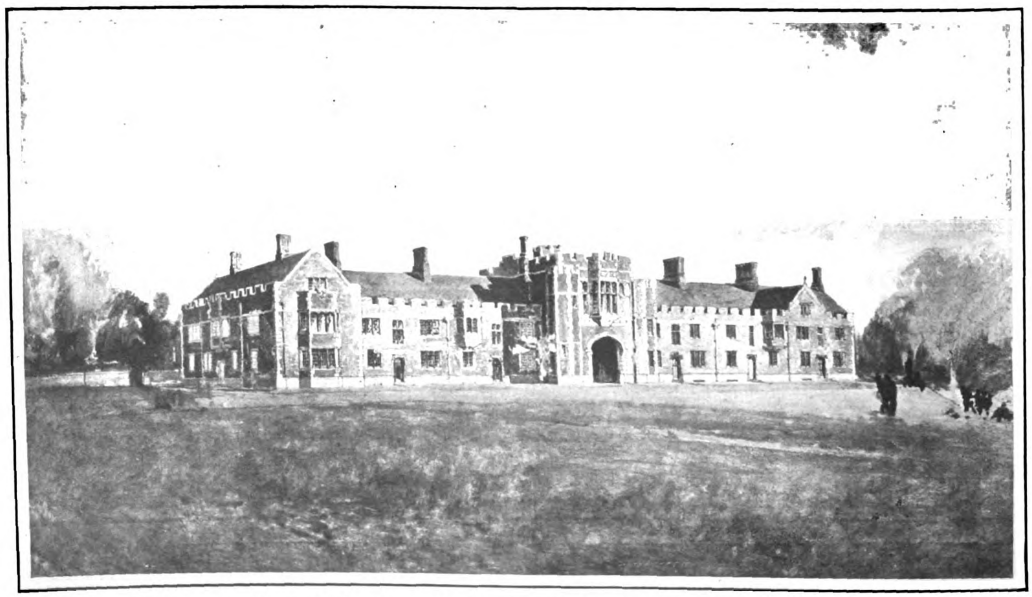
A Remarkable Class Memorial

By Robert Bridges

A REMARKABLE tribute from a college class to its Alma Mater will be formally consummated when at noon on Saturday, June 11, there will be turned over to the president of Princeton University, with simple ceremonies, the completed dormitory erected by the class of 1879 to celebrate the twenty-fifth anniversary of its graduation. Many college classes have made memorial gifts, but never before has a single class presented a building of this size or scope.

The class of '79 at Princeton early acquired the habit of giving. The bronze lions in front of Nassau Hall were presented by the class when it graduated. Ten years later they secured Augustus St.-Gaudens to make a statue of James McCosh from life—a noble study, in high relief, which is on the wall to the left of the chancel in Marquand Chapel. To the families and members of the class the university is indebted for the McCormick Professorship of Jurisprudence, Dodge Hall for the Y. M. C. A., McCosh Walk, the Theodore Cuyler prize in economics, and for $25,000 of the fund raised for the new gymnasium.



Five years ago the class decided to present a dormitory to the university to mark the twenty-fifth anniversary of its graduation. The class committee was given full authority to raise the funds, select an architect, and complete the building. It was voted that the building should cost about $100,000; as finished there has been expended $106,000. The rental of the rooms will net to the university about $4000 per year—enough to endow a professorship.

A View of the Tower of the new Dormitory from Washington Road

When Woodrow Wilson, a member of this class, was elected president of the university, the project to erect the building had added to it the personal enthusiasm of the class for him and his work. When inaugurated in October, 1902, his first official act was to turn the first spadeful of earth on the site of the '79 building. All of the following winter was spent in choosing an architect and perfecting the plans. Benjamin Wistar Morris, Jr., of New York city, was the architect finally selected. He is a Beaux-Arts man, a pupil of Blondel, and the architect of notable buildings in New York and Hartford.

The style of architecture, as in all recent buildings at Princeton, is a development of the Tudor Gothic — which is so well suited to the academic air and surroundings of the Princeton campus. Following the best English traditions it was decided to erect the walls of a deep plum-colored brick, which is trimmed with Indiana limestone. The bricks are set in English bond—with wide mortar spaces. The whole effect is rich and picturesque, and years will only add to its beauty. Its most effective feature is the tower which faces Prospect Avenue—an asymmetrical structure with mullioned windows. This tower contains a great memorial room, with oak-beam ceiling and huge stone fireplace. Here the class dinners and reunions will be held as long as members of the class survive.

The new Princeton Dormitory, erected by the Class of '79 in celebration of the Twenty-fifth Anniversary of its Graduation

Clarence H. Mackay

PRESIDENT CLARENCE H. MACKAY AND HIS LIEUTENANTS

The tenth anniversary of the opening of the Postal Telegraph Building was celebrated at a dinner given by President Mackay to the superintendents of the cable and telegraph companies. It was attended by representatives of every State—even Texas and California—and was notably successful. Among the representatives present were C. E. Merritt, G. H. Usher, T. E. Fleming, J. F. Skirrow, G. W. Ribble, H. J. Kinnucan, S. A. Duncan, W. C. Black, E. Reynolds, S. M. English, C. Priest, C. L. Lewis, R. Herne, T. L. Cuyler, Jr., A. L. Edgecombe, H. D. Reynolds, W. H. Baker, George G. Ward, L. W. Storror, S. F. Austin, Albert Beck, Captain A. Cranston, B. S. Price, E. B. Pillsbury, H. A. Tuttle, E. C. Bradley, E. C. Platt, E. J. Nally, F. W. Jones, W. I. Capen, Isaac Smith, J. O. Stevens, J. G. Blake, R. P. Martin, M. M. Davis, J. Kent, H. J. Pettingill, W. J. Camp, W. J. Slater, A. C. Kaufman, S. H. Mudge, A. B. Chandler, J. Hargrave, H. G. McGill, C. P. Bruch, G. W. Blanchard, S. S. Dickenson, E. W. Collins, H. F. Hawkins, C. Shirley, G. E. Paine, C. C. Adams, E. G. Cochrane, E. Kimmey, W. B. Vansize, A. E. Chandler, E. S. Butterfield, W. P. S. Hawk, C. M. Baker, W. H. McCollum, L. Lemon, C. F. Fox, F. W. Conger, C. R. Hosmer, W. K. Smith, F. H. Dennis, F. B. Gerrard, W. A. Portcous, T. W. Carroll, J. Costello

There is an alcove where archives and memorabilia of the class will be preserved.

The building is 240 feet long and has suites of rooms for forty-eight students—each containing a sitting-room and two bedrooms. There are open fireplaces, steam heat, and electricity in the rooms, and abundant shower baths and lavatories in a well-lighted basement which is reached by an inside staircase from each entry.

The exterior beauty of the building is much enhanced by the gargoyles and bosses from original designs by Gutzon Borglum—the well-known sculptor, who made for it forty-four new models. These grotesques show extraordinary skill in modelling and a great deal of fancy.

The class which conceived and carried to fulfilment this beautiful memorial contains an unusual number of men who have achieved honorable success. President Wilson was marked out for distinction by his classmates when he was an undergraduate. Other notable men in this class are Cyrus H. McCormick, of Chicago, president of the International Harvester Co.; Attorney-General Robert H. McCarter, of New Jersey; Mayor Talcott of Utica; Judge Mahlon Pitney, of the New Jersey Supreme Court; Judge Robert R. Henderson, of the Circuit Court of Maryland; Hon. Adrian H. Riker, of Newark, New Jersey; William B. Lee, an attorney of Rochester, New York; D. Moreau Barringer, of Philadelphia, expert in mining and author of an authoritative book on mining law; Peter Joseph Hamilton, the historian of Alabama; Dr. E. P. Davis, one of the most eminent Philadelphia physicians; Drs. C. W. Mitchell and Hiram Woods, of Baltimore; C. C. Cuyler and Parker D. Handy, bankers, of New York city; Harold Godwin, of New York; Colonel Edwin A. Stevens, of Castle Point; Major John McGaw Woodbury, head of the New York Street Cleaning Department; the Rev. Drs. A. W. Halsey and Thomas C. Hall, of New York; Edward W. Sheldon, W. R. Wilder, and George L. Prentiss, New York lawyers, and in business Cleveland H. Dodge, the philanthropist, W. B. Isham, Jr., John Farr, and John Baird, of New York; James B. Waller, of Chicago, and Walter B. Brooks, of Baltimore.

Without naming others, it may be said that of the 122 men who were graduated very few have failed to give a good account of themselves. They are professors in colleges, missionaries in the Far East, workers in the slums of great cities, country physicians, politicians of more than local fame—and always men of a certain sincerity and vigor that has left its stamp on their several communities. The class as a body has been always noted for its great unity, its depth of feeling for the university, and its persistent energy in expressing its affection by deeds. What the members of the class have done for each other can never be written. They have stood together in adversity, as well as celebrated together in prosperity. After a quarter of a century they are better friends than when they graduated. This building which they have erected is to them but the symbol of an ideal of friendship for each other and of loyalty to the university.

A Bicycle Meet at Chestnut Hill, Boston, on May 1

The Outdoor Season—Revival of Cycling

By Abbot Bassett, Secretary-Treasurer L. A. W.

THE bicycle came to us at the time of the Centennial Exposition at Philadelphia in 1876. An enterprising English firm of manufacturers exhibited three bicycles of the large wheel type, and these attracted an amount of attention hardly equalled by any other feature of the fair. The three wheels were sold to those who became pioneers in a sport that has reached astonishing proportions, and that started an industry that employs hundreds of thousands of laborers and involving many millions of capital.

A distinguished financier has told us that financial affairs move in cycles; that we have a boom on the up turn and a panic when the wheel exposes its under side. In some such way has the sport and the industry of cycling moved. We know that cycling has been going down-hill for several years, and those who are in a position to know predict a revival of interest in it in the near future. A glance at the history of the bicycle will show its many ups and downs.

Alfred D. Chandler, of Brookline, Massachusetts, is credited with being the first American to ride the bicycle in the United States for pleasure. There were track races before that, but Chandler was the pioneer on the road. Mr. Chandler still rides, and at the meeting of old-timers in Boston on May 1 he rode to the rendezvous, followed by five stalwart sons on bicycles. The high wheel did not attract many people. None but the more active cared to risk life and limb on the high perch of the "ordinary," as we called the high wheel when the "safety" bicycle came forward.

To supply the popular demand for a safe machine the tricycle was brought out, and in 1883 the first American tricycle was made. It was taken up at first by women and elderly people, but soon more active persons began to abandon their high wheels for the wide-track machine that would stand alone. In the years from 1885 to 1888 the manufacturers were selling ten tricycles to one bicycle. Then the desire for greater speed gave rise to a demand for a wheel on which two could ride and use their united strength for propulsion, and the tandem tricycle came into popular favor. In 1888 the dwarf safety began to find a ready sale, and finally drove out the tricycle. It furnished as much safety as was desired, and did away with the wide track, always a disadvantage on a poor road.

1890 saw a mechanical improvement that put new life into cycling, and started it in the direction of the boom which was to come later. The pneumatic tire was as important a step forward as the change from the high wheel to the dwarf. At races held during the L. A. W. meet at Niagara Falls in 1890 a pneumatic-tired wheel ridden by an inferior rider easily distanced the best riders in the country who rode solid-tired wheels. After that a solid-tired wheel was unsalable.

The boom in cycling occurred in the years from 1896 to 1900. Society took to the wheel, and its large following came hurrying after. To ride the wheel was the thing to do. Cycling became a fad. Cycle factories grew up on every side. Many large manufacturers abandoned their regular industry and began to make cycles. Clubs were formed, cycling tours were promoted, racing was patronized. The League of American Wheelmen, one of the best indexes of the popularity of cycling, gained a membership far exceeding a hundred thousand. At one time during the boom there were eighty-five journals issued in the interest of the wheel, and every city newspaper had its special cycling column and its cycling editor. There were but two classes of people: those who rode and those who wanted to. But every boom has its reaction, and the boom in cycling proved no exception. There came a decline in interest which surprised even those who had predicted that the boom would collapse. Manufacturers, who thought they saw fabulous profits in the manufacture of bicycles and had made the venture, found themselves bankrupt. Interest began to lag. The trolley-car came in and afforded an opportunity to get into the country without the necessity of working the passage. Riders began to fret over the trouble of getting into different clothes every time they went for a ride. Enthusiasm diminished. So-

ciety took to golf, and its long train of followers began to talk about clubs and links. The badly managed trust gave the knock-out blow which prostrated cycling. Before the formation of the trust there were some ninety manufacturers making wheels and pushing the sale of them. Bicycle agencies grew up in every village. In every large city there was what was known as "cycle row," where the dealers clustered and centralized the interest. Seventy-five hundred travelling salesmen were going about the country talking up the wheel. The trade promoted races, tours, and meets. The clubs were social centres of a most attractive kind. The L. A. W. was making a hard fight for good roads, the carriage of bicycles as baggage on the railroads, the erection of guide-boards, and the cleanliness of racing. Every one was pushing and hustling. The formation of trusts became a fad, and cycling was a victim. Forty-five active factories were concentrated under one management. Many of these were closed. The drummer was dismissed. When one has a monopoly there is no need for soliciting trade. So thought the trust. This act destroyed an army of pushing men who were talking up the wheel and keeping it in the public view. The next false step was the suspension of advertising. This lost wheeling the support of the press. The cycling press became a thing of the past. The L. A. W., which organizes wheelmen and makes them strong in co-operative endeavor, found itself unable to conduct a first-class weekly paper for want of advertising. The trust was badly managed in every way, and a decline in bicycling followed naturally.

Will cycling ever regain its former place? It is believed that it will, because it deserves to come again into popular favor. The enthusiasts among wheelmen to-day are the old-timers. They thoroughly appreciate what the wheel has done for them, and it is a great source of regret that the young people of to-day do not get the fun, the health, the exhilaration that the veterans got from the wheel when younger blood coursed in their veins. The boys and girls of to-day have been looking at wheeling as a thing not to do. They know nothing of touring and of the various functions which have been a part of wheel life.

We believe bicycling will come back because the bicycle is a practical thing. It has enduring qualities. It is a thing that ought to live and it will live. Those who have never ridden a wheel cannot begin to appreciate the exhilaration which comes from riding. No other form of locomotion can compare with it. The automobile is a lazy man's vehicle. It serves him who wants comfort and freedom from work. It provides the element of excitement and danger, but it does not provide health-giving exercise and exhilaration.

During the time of what may be called the decline of bicycling the wheel has not gone out entirely, for thousands and hundreds of thousands are riding it and will continue to ride it. It is used very largely for utilitarian purposes. The schoolboy rides it to and from school, the laborer rides it to and from his work, the horseshoer goes for the mail on it. This will continue until some better means of conveyance at a cheaper price comes into use.

For these purposes the wheel has never been superseded. It is the pleasure riders that have departed. The tourists, those who rightly enjoy a day's spin into the country, those who ride for the fun of the thing, those who ride to restore health, those who enjoy companionship on wheel trips and have lately failed to find it: these are the ones that have made bicycling a sport worth cultivating, and we believe they are coming back.

The League of American Wheelmen organized cyclists. It attracted the tourist, the club-man, and the invalid. In recent times it has seen its membership roll growing smaller and smaller with each succeeding year. The club spirit went out, the spirit of fraternity departed, and the L. A. W. viewed with dismay its rapidly diminishing numbers. They told us that its work was done; that we had secured the good roads we were working for, that we had obtained every right before the law that we had demanded, and that there was no reason for its further existence. The members stood loyally by the organization, and gave it a life and activity far and away above that of any other cycling institution. It was maintained and supported to save what we had gained, and through the loyalty of members grateful for what it had done in the past. Despite its diminished membership it claims to-day an individual membership very much larger than that of any athletic association in the United States. It is an index of the growth in interest of the popular side of cycling. The past few years have shown a steady decline from month to month, and this year the L. A. W. is gaining every month. Old members who allowed their membership to lapse are coming forward and taking their places in line once more. A new spirit is being developed and a new interest is being taken. This is one of the indications of the return of the wheel.

On the first day of May there gathered at the Chestnut Hill reservoir in Boston one of the greatest assemblies of wheelmen that has occurred for many years. Four thousand riders met to open the season. They came from all quarters and upon every kind of wheel. Several old-time high wheels were ridden by the more daring; the Star bicycle, with the little wheel in front, came to assert itself; the Kangaroo, the Facile, and several specimens of the wooden wheel velocipede. One enthusiastic rider of eighty-two years rode over from Cambridge to tell us that he rode every day during the season. A gentleman aged seventy-eight rode from Allston in company with his wife of the same age. The young, the old, the halt and the lame were there. It was an enthusiastic crowd, and all vowed allegiance to the sport. Colonel Pope, father of the bicycle industry, was present, and made a speech to the multitude. General Miles, always a believer in the wheel, told of his interest in wheeling and his belief that the cycle was again in popular favor.

It was a notable event in cycling annals. A gathering of 4000 wheelmen in 1897 would have meant little; to-day it means much, for the enthusiasm was there, the determination to ride, and to ride for a purpose.

A prominent dealer was asked the other day what prospect he saw for a resumption of trade in his line. He spoke in the most enthusiastic manner. Not for five years has there been such a demand for catalogues, he said, as this year. There are at least 2000 calls a day for them, and the demand is spontaneous and not the result of any special advertising. The repair-shops find business coming to them far in excess of their expectations. One repair man reported that he could not promise to attend to a wheel inside of two weeks.

But far and above all other reasons for the return of the wheel is the fact that the roads are better now than ever before. In the early days wheelmen had to encounter sand and mud where is now hard macadam. Wheelmen were behind the early agitation for good roads, and now that there are good roads in plenty we like to imagine them calling to their former brother cyclists, "Why don't you ride your bicycle?"

The 4000 Wheelmen gathered at Chestnut Hill, showing the stacked Wheels of different Clubs

THE CLUB OF QUEER TRADES

The Singular Speculation of the House Agent

by

G·K·CHESTERTON

Part I.

LIEUTENANT DRUMMOND KEITH was a man about whom conversation always burst like a thunderstorm the moment he left the room. This arose from many separate touches about him. He was a light, loose person, who wore light, loose clothes, generally white, as if he were in the tropics; he was lean and graceful, like a panther, and he had restless black eyes.

He was very *impecunious*. He had one of the habits of the poor in a degree so exaggerated as immeasurably to eclipse the most miserable of the unemployed: I mean the habit of continual change of lodgings. There are inland tracts of London in which, in the very heart of artificial civilization, humanity has almost become nomadic once more. But in that restless interior there was no ragged tramp so restless as the elegant officer in the loose white clothes. He had shot a great many things in his time, to judge from his conversation, from partridges to elephants, but his slangier acquaintances were of *opinion* that "the moon" had been *not* unfrequently amid the victims of his victorious rifle. The phrase is a fine one, and suggests a mystic, elvish, nocturnal hunting.

He carried from house to house and from parish to parish a kit which consisted practically of five articles. Two odd-looking, large-bladed spears, tied together, the weapons, I suppose, of some savage tribe. A green umbrella. A huge and tattered copy of the *Pickwick Papers*. A big game rifle. And a large sealed jar of some unholy Oriental wine. These always went in to every new lodging, even for one night: and they went in quite undisguised, tied up in whisps of string or straw, to the delight of the poetic gutter boys in the little gray streets.

I had forgotten to mention that he always carried also his old regimental sword. But this raised another odd question about him. Slim and active as he was, he was no longer very young. His hair, indeed, was quite gray, though his rather wild, almost Italian mustache retained its blackness, and his face was careworn under its almost Italian gayety. To find a middle-aged man who has left the army at the primitive rank of lieutenant is unusual and not necessarily encouraging. With the more cautious and solid this fact, like his endless flitting, did the mysterious gentleman no good.

Lastly, he was a man who told the kind of adventures which win a man admiration, but not respect. They came out of queer places, where a good man would scarcely find himself, out of opium-dens and gambling-hells; they had the heat of the thieves' kitchens or smelled of a strange smoke from cannibal incantations. These are the kind of stories which discredit a person almost equally whether they are believed or no. If Keith's tales were false he was a liar; if they were true he had had, at any rate, every opportunity of being a scamp.

He had just left the room in which I sat with Basil Gryce and his brother Rupert, the voluble amateur detective. And as I say was invariably the case, we were all talking about him. Rupert Gryce was a clever young fellow, but he had that tendency which youth and cleverness, when sharply combined, so often produce, a somewhat extravagant scepticism. He saw doubt and guilt everywhere, and it was meat and drink to him. I had often got irritated with this boyish incredulity of his, but on this particular occasion I am bound to say that I thought him so obviously right that I was astounded as Basil's opposing him, however banteringly.

I could swallow a good deal, being naturally of a simple turn, but I could not swallow Lieutenant Keith's autobiography.

"You don't seriously mean, Basil," I said, "that you think that that fellow really did go as a stowaway with Nansen and pretend to be the Mad Mullah and—"

"He has one fault," said Basil, thoughtfully, "or virtue, as you may happen to regard it. He tells the truth in too exact and bald a style; he is too veracious."

"Oh! if you are going to be paradoxical," said Rupert, contemptuously, "be a bit funnier than that. Say, for instance, that he has lived all his life in one ancestral manor."

"No, he's extremely fond of change of scene," replied Basil, dispassionately, "and of living in odd places. That doesn't prevent his chief trait being verbal exactitude. What you people don't understand is that telling a thing crudely and coarsely as it happened makes it sound frightfully strange. The sort of things Keith recounts are not the sort of things that a man would make up to cover himself with honor; they are too absurd. But they are the sort of things that a man would do if he were sufficiently filled with the soul of skylarking."

"So far from paradox," said his brother, with something rather like a sneer, "you seem to be going in for journalese proverbs. Do you believe that truth is stranger than fiction?"

"Truth must of necessity be stranger than fiction," said Basil, placidly. "For fiction is the creation of the human mind, and therefore is congenial to it."

"Well, your lieutenant's truth is stranger, if it is truth, than anything I ever heard of," said Rupert, relapsing into flippancy. "Do you, on your soul, believe in all that about the shark and the camera?"

"I believe Keith's words," answered the other. "He is an honest man."

"I should like to question a regiment of his landladies," said Rupert, cynically.

"I must say, I think you can hardly regard him as unimpeachable merely in himself," I said, mildly; "his mode of life—"

Before I could complete the sentence the door was flung open and Drummond Keith appeared again on the threshold, his white Panama on his head.

"I say, Gryce," he said, knocking off his cigarette ash against the door, "I've got no money in the world till next April. Could you lend me a hundred pounds? There's a good chap."

Rupert and I looked at each other in an ironical silence. Basil, who was sitting by his desk, swung the chair round idly on its screw and picked up a quill pen.

"Shall I cross it?" he asked, opening a check-book.

"Really," began Rupert, with a rather nervous loudness, "since Lieutenant Keith has seen fit to make this suggestion to Basil before his family, I—"

"Here you are, Ugly," said Basil, fluttering a check in the direction of the quite nonchalant officer. "Are you in a hurry?"

"Yes," replied Keith, in a rather abrupt way. "As a matter of fact, I want it now. I want to see my—er—business man."

Rupert was eyeing him sarcastically, and I could see that it was on the tip of his tongue to say, inquiringly, "Receiver of stolen goods, perhaps." What he did say was:

"A business man? That's rather a general description, Lieutenant Keith."

Keith looked at him sharply, and then said, with something rather like ill temper:

"He's a thingummybob, a house-agent, say. I'm going to see him."

"Oh, you're going to see a house-agent, are you?" said Rupert Gryce, grimly. "Do you know, Mr. Keith, I think I should very much like to go with you?"

Basil shook with his soundless laughter. Lieutenant Keith started a little; his brow blackened sharply.

"I beg your pardon," he said. "What did you say?"

Rupert's face had been growing from stage to stage of ferocious irony, and he answered:

"I was saying that I wondered whether you would mind our strolling along with you to this house-agent's."

The visitor swung his stick with a sudden whirling violence.

"Oh, by all means, come to my house-agent's! Come to my bedroom. Look under my bed. Examine my dust-bin. Come

along!" And with a furious energy which took away our breath he banged his way out of the room.

Rupert Gryce, his restless blue eyes dancing with his detective excitement, soon shouldered alongside him, talking to him with that transparent camaraderie which he imagined to be appropriate from the disguised policeman to the disguised criminal. His interpretation was certainly corroborated by one particular detail, the unmistakable unrest, annoyance, and nervousness of the man with whom he walked. Basil and I tramped behind, and it was not necessary for us to tell each other that we had both noticed this.

Lieutenant Drummond Keith led us through very extraordinary and unpromising neighborhoods in the search for his remarkable house-agent. Neither of the brothers Gryce failed to notice this fact. As the streets grew closer and more crooked and the roofs lower and the gutters grosser with mud, a darker curiosity deepened on the brows of Basil, and the figure of Rupert, seen from behind, seemed to fill the street with a gigantic swagger of success. At length, at the end of the fourth or fifth lean gray street in that sterile district we came suddenly to a halt, the mysterious lieutenant looking once more about him with a sort of sulky desperation. Above a row of closed shutters and a door all indescribably dingy in appearance and in size scarcely sufficient even for a penny toyshop, ran the inscription: "P. Montmorency, House-Agent."

"This is the office of which I spoke," said Keith, in a cutting voice. "Will you wait here a moment, or does your astonishing tenderness about my welfare lead you to wish to overhear everything I have to say to my business adviser?"

Rupert's face was white and shaking with excitement; nothing on earth would have induced him now to have abandoned his prey.

"If you will excuse me," he said, clenching his hands behind his back, "I think I should feel myself justified in—"

"Oh! Come along in," exploded the lieutenant. He made the same gesture of savage surrender. And he slammed into the office, the rest of us at his heels.

P. Montmorency, house-agent, was a solitary old gentleman sitting behind a bare brown counter. He had an egglike head, froglike jaws, and a gray hairy fringe of aureole round the lower part of his face; the whole combined with a reddish, aquiline nose. He wore a shabby black frock coat, a sort of semiclerical tie worn at a very unclerical angle, and looked, generally speaking, about as unlike a house-agent as anything could look, short of something like a sandwich-man or a Scotch Highlander.

We stood inside the room for fully forty seconds, and the odd old gentleman did not look at us. Neither, to tell the truth, odd as he was, did we look at him. Our eyes were fixed where his were fixed, upon something that was crawling about on the counter in front of him. It was a ferret.

The silence was broken by Rupert Gryce. He spoke in that sweet and steely voice which he reserved for great occasions and practised for hours together in his bedroom. He said,

"Mr. Montmorency, I think."

The old gentleman started, lifted his eyes with a bland bewilderment, picked up the ferret by the neck, stuffed it alive into his trousers pocket, smiled apologetically, and said,

"Sir."

"You are a house-agent, are you not?" asked Rupert.

To the delight of that criminal investigator, Mr. Montmorency's eyes wandered unquietly towards Lieutenant Keith, the only man present that he knew.

"A house-agent," cried Rupert again, bringing out the word as if it were "burglar."

"Yes . . . oh yes," said the man, with a quavering and almost coquettish smile. "I am a house-agent, . . . oh yes."

"Well, I think," said Rupert, with a sardonic sleekness, "that Lieutenant Keith wants to speak to you. We have come in by his request."

Lieutenant Keith was lowering gloomily and now he spoke.

"I've come, Mr. Montmorency, about that house of mine."

"Yes, sir," said Montmorency, spreading his fingers on the flat counter. "It's all ready, sir. I've attended to all your suggestions . . . er . . . about the br . . ."

"Right," cried Keith, cutting the word short with the startling neatness of a gunshot. "We needn't bother about all that. If you've done what I told you, all right."

And he turned abruptly towards the door.

Mr. Montmorency, house-agent, presented a picture of pathos. After stammering a moment he said: "Excuse me, . . . Mr. Keith . . . there was another matter . . . about which I wasn't quite sure. I tried to get all the heating apparatus possible under the circumstances . . . but in winter . . . at that elevation. . . ."

"Can't expect much, eh?" said the lieutenant, cutting in with the same sudden skill. "No, of course not. That's all right, Montmorency. There can't be any more difficulties," and he put his hand on the handle of the door.

"I think," said Rupert Gryce, with a satanic suavity, "that Mr. Montmorency has something further to say to you, lieutenant."

"Only," said the house-agent, in desperation, "what about the birds?"

"I beg your pardon," said Rupert, in a general blank.

"What about the birds?" said the house-agent, doggedly.

Basil, who had remained throughout the proceedings in a state of Napoleonic calm, which might be more accurately described as a state of Napoleonic stupidity, suddenly lifted his leonine head.

"Before you go, Lieutenant Keith," he said. "Come now. Really, what about the birds?"

"I'll take care of them," said Lieutenant Keith, still with his long back turned to us; "they sha'n't suffer."

"Thank you, sir, thank you," cried the incomprehensible house-agent, with an air of ecstasy. "You'll excuse my concern, sir. You know I'm wild on wild animals. I'm as wild as any of them on that. Thank you, sir. But there's another thing. . . ."

The lieutenant, with his back turned to us, exploded with an indescribable laugh and swung round to face us. It was a laugh the purport of which was direct and essential, and yet which one can not exactly express. As near as it said anything, verbally speaking, it said: "Well, if you must spoil it, you must. But you don't know what you're spoiling."

"There is another thing," continued Mr. Montmorency, weakly. "Of course if you don't want to be visited you'll paint the house green, but—"

"Green," shouted Keith. "Green! Let it be green or nothing. I won't have a house of another color. Green!" and before we could realize anything the door had banged between us and the street.

Rupert Gryce seemed to take a little time to collect himself; but he spoke before the echoes of the door died away.

"Your client, Lieutenant Keith, appears somewhat excited," he said. "What is the matter with him? Is he unwell?"

"Oh, I should think not," said Mr. Montmorency, in some confusion. "The negotiations have been somewhat difficult . . . the house is rather . . ."

"Green," said Rupert, calmly. "That appears to be a very important point. It must be rather green. May I ask you, Mr. Montmorency, before I rejoin my companion outside, whether, in your business, it is usual to ask for houses by their color. Do clients write to a house-agent asking for a pink house or a blue house? Or, to take another instance, for a green house?"

"Only," said Montmorency, trembling, "only to be inconspicuous."

Rupert had his ruthless smile. "Can you tell me any place on earth in which a green house would be inconspicuous?"

The house-agent was fidgetting nervously in his pocket. Slowly drawing out a couple of lizards and leaving them to run on the counter, he said,

"No; I can't."

"You can't suggest an explanation?"

"No," said Mr. Montmorency, rising slowly and yet in such a way as to suggest a sudden situation. "I can't. And may I, as a busy man, be excused if I ask you, gentlemen, if you have any demand to make of me in connection with my business. What kind of house would you desire me to get for you, sir?"

He opened his blank blue eyes on Rupert, who seemed for the second staggered. Then he recovered himself with perfect common sense and answered:

"I am sorry, Mr. Montmorency. The fascination of your remarks has unduly delayed us from joining our friend outside. Pray excuse my apparent impertinence."

"Not at all, sir," said the house-agent, taking a South-American spider idly from his waistcoat pocket and letting it climb up the slope of his desk. "Not at all, sir. I hope you will favor me again."

Rupert Gryce dashed out of the office in a gust of anger, anxious to face Lieutenant Keith. He was gone. The dull, starlit street was deserted.

"What do you say now?" cried Rupert, to his brother. His brother said nothing now.

We all three strode down the street in silence, Rupert feverish, myself dazed, Basil, to all appearance, merely dull. We walked through gray street after gray street, turning corners, traversing squares, scarcely meeting any one, except occasional drunken knots of two or three.

In one small street, however, the knots of two or three began abruptly to thicken into knots of five or six and then into great groups and then into a crowd. The crowd was stirring very slightly. But any one with a knowledge of the eternal populace knows that if the outside rim of a crowd stirs ever so slightly it means that there is madness in the heart and core of the mob. It soon became evident that something really important had happened in the centre of this excitement. We wormed our way to the front, with the cunning which is known only to cockneys, and once there we soon learned the nature of the difficulty. There had been a brawl concerned with some six men and one of them lay almost dead on the stones of the streets. Of the other four, all interesting matters were, as far as we were concerned, swallowed up in one stupendous fact. One of the four survivors of the brutal and perhaps fatal scuffle was the immaculate Lieutenant Keith, his clothes torn to ribbons, his eyes blazing, blood on his knuckles. One other thing, however, pointed at him in a worse manner. A short sword, or very long knife, had been drawn out of his elegant walking-stick, and lay in front of him upon the stones. It did not, however, appear to be bloody.

The police had already pushed into the centre with their ponderous omnipotence, and even as they did so, Rupert Gryce sprang forward with his uncontrollable and intolerable secret.

"That is the man, constable," he shouted, pointing at the battered lieutenant. "He is a suspicious character. He did the murder."

"There's been no murder done, sir," said the policeman, with his automatic civility. "The poor man's only hurt. I shall only be able to take the names and addresses of the men in the scuffle and have a good eye kept on them."

"Have a good eye kept on that one," said Rupert, pale to the lips and pointing to the ragged Keith.

"All right, sir," said the policeman, unemotionally, and went the round of the people present, collecting the addresses. When he had completed his task the dusk had fallen and most of the people not immediately connected with the examination had gone

(Continued on page 916.)

Correspondence

CHURCH UNION

ST. LOUIS, *May 13, 1904.*

To the Editor of Harper's Weekly:

SIR,—In response to the exceptions taken, and in acknowledgment of the acquiescing remarks made by Mr. Francis P. Marchant, of London, anent to my letter on church unionship, I should like to add a few words.

The principal exception, if exception it may really be called, made by Mr. Marchant to my letter is that what I have called a partial lack of attendance at church services on account of disgust and in some cases poor ministers he foots up as "temporary lassitude." His definition for the cause may be as good as mine, in some respects; but I would ask if the causes I have named for non-attendance do not, at least partially, answer for this temporary lassitude. Would not a union of churches be the cause of enthusiasm being aroused among some of those thus afflicted? In my opinion it would. Of course we can never hope to make church services attractive for all.

In return, I must take exception to one suggestion made by Mr. Marchant—that is, the statement that the Church of Rome offers a simple solution to the problem. In my opinion it does so no more than any other denomination. Any other church organization of Christ-believing people could probably be as well taken as the staff around which to group the whole. That is not the question, however. All organizations must be willing to make concessions in order that the compromise and the union be effected. The refusal to do so and the determination of each to have its peculiar creed adopted in whole is what will always prevent the union from being made. It is merely the same old way of saying, "I am entirely in the right and you are entirely in the wrong." Let us not yield so completely to the truth of that old Italian maxim which recites that "to every bird its own nest is charming" as to be unable to give an impartial glance towards our neighbor's.

I am, sir,

CHARLES ALMA BYERS.

MORE ABOUT THE JUMPING FROG

Mr. S. L. Clemens reports from Florence the receipt of the following letter:

4529 MCMILLAN AVE., ST. LOUIS, MO., *April 22, 1904.*

MR. CLEMENS, DEAR SIR,—I have always enjoyed books very much, but lately I have been pained to note a discrepancy in the chapter on the jumping frog in *The Man that Corrupted Hadleyburg*. On page 376, beginning with line seventeen (red bound uniform edition of Harpers), it says: "To him and his fellow gold-miners there were just two things in the story that were worth considering. One was the smartness of its hero, Jim Smiley, in taking the stranger in with a loaded frog: the other was Smiley's deep knowledge of a frog's nature—for he knew (as the narrator asserted and the listeners conceded) that a frog *likes shot* and is always ready to eat it."

Now Smiley was the owner of Dan'l Webster, and *he* was taken in, not the *stranger*, for the *stranger* knew that frogs liked shot and filled Dan'l up, thus making Smiley lose his bet.

Having drawn your attention to this inaccuracy, I remain,

Yours truly, K. MACGOWAN.

"This is very curious if true," comments Mr. Clemens, "and true it probably is, for I am an expert at making mistakes."

It is true, and being so, adds one more episode to the adventurous career of a story which was told by a Greek author 2000 years since, was told in the hearing of Mark Twain as an incident that happened in Calaveras County, California, in 1849 (and it probably did happen there), was duly recast and rehearsed in print by Mark Twain about forty years ago, and was translated into French and published in the *Revue des Deux Mondes* in 1872. When the story began—where it will end—no man may say.—EDITOR.

HOW TO TRAIN THE YANKEE TO SPEAK ENGLISH

KNOXVILLE, TENN., *May 21, 1904.*

To the Editor of Harper's Weekly:

SIR,—Having read with concern the revelations of your Philadelphia correspondent as to the linguistic degeneracy of the inhabitants of New England, as manifest in their provincial abuse of the letter "r," and having pondered earnestly the question which he raises, *e. g.*, "How can we check him (the Yankee) in his downward linguistical career?" I beg to offer the following suggestions:

1. That the people of Philadelphia and the West establish college settlements in these localities, the purpose of which shall be the training of the Yankee in the pronunciation of the English tongue.

2. That as many as possible of the young of the Yankee be captured and reared in homes and institutions where the language of the United States is spoken in its purity.

3. That itinerant missionaries from the more enlightened regions of our country be sent into such districts as shall be thought, upon investigation, to be most needy.

4. That tracts on pronunciation be prepared by persons of approved qualifications and distributed broadcast throughout the entire region.

5. That phonographic records be taken in such transmontane cities as Pittsburg and Chicago, where the letter "r" is most properly trilled, and placed on the intersections of the principal thoroughfares of the larger New England towns to the end that these people be given the benefit of the latest linguistic methods.

6. That, in view of the urgency of the situation, the Federal Executive be urged to call an extra session of Congress for the purpose of appropriating funds, and also to follow the precedent established *in re*, the coal strike, and appoint a national commission with full power to exercise restrictive measures.

7. And that, for the support and direction of these enterprises, an association be formed, with headquarters in Philadelphia, to be styled "An Association for the Keeping of the Well of English Pure and Undefiled," the purpose of which shall be to collect funds from the philanthropic, to confer with the national commission above recommended, to cooperate with other agencies of similar aims, and to endeavor, by means to be determined upon after study of the conditions, to bring to bear upon these abuses the activity of the New England conscience, the vicarious functioning of which is recognizedly a prime factor in the reformation of everything that needs reforming—outside of New England.

If we can only get *that* to work it's pretty sure to do the business. Otherwise, it's a bad outlook. A man that will pronounce *Cuba Cuber*, as I have heard the head master of a Connecticut prep. school do, will have to have a lot of coaching before he can talk like an American.

I am, sir, H. SPENCER.

IMPERIALISM VS. ILLITERACY

WHEATLAND, WYOMING, *May 9, 1904.*

To the Editor of Harper's Weekly:

SIR,—While I heartily appreciate your efforts to keep your editorial "Comments" above the "yellow" zone, I am often amused at some of the epigrams with which you regale the hungry Democracy. Take, for instance, from "Comments" in May 7, "He" (the Democratic nominee) "can rely with confidence upon Alabama, Arkansas, Florida, Georgia," etc., and then read, "Is Imperialism an Extinct Issue?" in the same number, and note how you are prepared to acknowledge the vast good that might have been done to this "sure thing" if, as you say, "Had we made for the Southern States a grant of one hundred million dollars for educational purposes, how immense, in all likelihood, would have been the observable abatement of illiteracy."

If, indeed, education means progress, it would, no doubt, be conducive to a slight diversion from the "anti-everything" policy as was evidenced by some of the opposition in the last Congress.

Altogether your journal is a good one, a great one, and its kinetoscopic flashes ought to do something in the educational line itself.

I am, sir,

L. E. UTTER.

WHAT IS THE WORTH OF A WOMAN?

NEW YORK, *May 26, 1904.*

To the Editor of Harper's Weekly:

SIR,—The recent decision of a justice of the State of New Jersey in a suit for damages that a boy, commercially speaking, is worth twice as much as a girl, is deeply significant of a grievous error of the times. This error is our neglect, in a commercial age, to give a commercial value to woman *in the home*. The justice partially explained his decision by saying that the boy was worth twice as much as the girl because he would assuredly go into business, while the girl might or might not. In other words, it appears that a girl is of value only as she produces money. Now, the woman who toils arduously within the four walls of her home—who rears children, and cooks, and scrubs, and washes clothes, makes and mends them, and does a hundred other things—earns nothing but her own maintenance, and in the eyes of the economists is a non-producing laborer. She has, apparently, no commercial value. Yet we are told by learned statisticians that the commercial value of labor is regulated—that is, it is higher or lower—in accordance with demand. The domestic woman, the home-maker, is in the greatest and most continuous of all demands. Is her commercial value thereby enhanced? Not at all. On the other hand, sentimentalists will tell you that a capable woman is above price; but can a capable woman, confronted by an unpaid bill, reply calmly in payment, "I am above price"? For thus are they pursued by commerce even into the uncommercial precincts of the home.

Again, if all the girls died at birth, the republic, since they are all potential mothers, would cease. Would it not therefore appear that this girl, this creature who is, generally speaking, unproductive of actual money, must be of a value which should be counted in coin of the realm, lest it go altogether uncounted? When women finally realize that outside of "industrial life" they have no commercial value of the kind which commands the chief respect of our age, will they rush in disgust and despair from that unrated domestic life into that underrated industrial life from which they are warned away by the inconsiderate and illogical statistician? For may he not at any moment say to them: "Woman, in industrial life, it is true that you are, commercially, worth far less than a man, but you have in that sphere some value which is at least visible to the naked (commercial) eye. In the home, however, you are of no value which the white man of commerce—(of commerce, mark you)—is bound to respect." In view of this dangerous contingency would it not be wise and even cautious, considering how, after all, our existence as a nation depends equally upon women as upon men, to convene an assembly whose lofty object would be to set a commercial and therefore more easily recognizable value upon our girls, our home-makers, our mothers?

I am, sir. A WOMAN.

Progress of the War

FROM the beginning of the war, February 9, to May 23 sixteen Russian war-ships have been sunk or disabled — the *Petropavlovsk*, *Pobieda*, *Czarevitch*, *Retvisan*, *Poltava*, *Pallada*, *Bogatyr*, *Novik*, *Askold*, *Diana*, *Variag*, *Boyarin*, *Korietz*, *Yenesei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik*, *Askold*, and *Diana* are known to have been repaired and are again in commission. Japan has lost the battle-ship *Hatsuse*, the cruiser *Yoshino*, and at least two torpedo-boats, and a Japanese cruiser was successfully torpedoed by the Russians on May 10. Other Japanese ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. After two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor, Admiral Togo on May 7 notified his government that his third attempt was successful. On May 1 the first great land battle of the war took place near the Yalu River, and resulted in a Japanese victory. The Japanese lost 218 killed and 783 wounded. The Russian casualties numbered 2394 killed, wounded, and captured. The Japanese buried 1363 Russian dead, and took 613 Russian prisoners. A large number of field and machine guns, rifles, ammunition, and supplies were captured by the Japanese. The Japanese have landed troops on both sides of the Liao-Tung Peninsula back of Port Arthur. The first Japanese army is concentrated at Feng-Wang-Cheng.

May 24.—General Kuroki reports that several small engagements have taken place between detachments of Japanese infantry and Cossacks. Twenty Cossacks were killed and a number wounded and captured. The report received to-day that the Japanese have lost 15,000 men in an attack on Port Arthur is not officially confirmed.

May 25.—General Kuropatkin to-day telegraphed to the Czar that 40,000 Japanese troops are concentrated at Feng-Wang-Cheng, and that four line regiments and fifty guns are at Pian-shin.

A despatch received to-day from Chefoo says that the report of May 12 to the effect that the Japanese had captured Dalny is now denied. On May 12 an unsuccessful attempt was made by the Russians to destroy the docks and piers at Dalny, and after the receipt of the news of the loss of the battle-ship *Hatsuse*, Lieutenant-General Stoessel ordered that further efforts to destroy the docks at Dalny be discontinued. The town is still in the possession of the Russians.

The number of men lost in the sinking of the Japanese cruiser *Yoshino* on May 15 is now given as 293, including sixty-three petty officers. Forty-eight were rescued.

May 26.—According to reports received in Tokyo, the Japanese to-day stormed and captured Kin-Chow, thirty-two miles north of Port Arthur.

May 27.—The report of the battle of Kin-Chow, which took place yesterday, was to-day officially confirmed in Tokyo. The Russians made a desperate resistance, but after twenty-four hours of fighting were forced to retire. The Russians retreated southward and the Japanese then took possession of the town.

Admiral Togo reports that he has established a complete blockade around the southern end of the Liao-Tung Peninsula. He also reports that ten men were killed and wounded on board his gunboats while assisting in the battle of Kin-Chow.

May 28.—The Japanese casualties in the battle of Kin-Chow were to-day estimated, in a despatch from Tokyo, at 3000 killed and wounded. The Russians left 400 dead on the field, and their total casualties are said to number about 2000. Seventy guns were captured by the Japanese. The Russians have abandoned Nankwanling, to which place they retreated on May 26, and are now retiring on Port Arthur.

A despatch from General Kuropatkin received to-day in St. Petersburg says the Japanese have begun an advance from Feng-Wang-Cheng.

May 29.—A despatch from Chefoo says the Russians are evacuating Dalny and are retreating to Port Arthur. All ammunition and most of the troops have been removed, and only civilians and electrical engineers in charge of the mines remain at the port.

Admiral Togo reports that he has captured a junk which was attempting to leave Port Arthur, and from letters taken from a Russian officer on board it is learned that three Russian destroyers were blown up at the entrance of the harbor on May 21.

May 30.—A telegram from Tokyo says that on May 28 a detachment of Japanese troops attacked and defeated 2000 Cossacks at Ai-Yang, about sixty miles northeast of Feng-Wang-Cheng.

May 31.—General Oku to-day reported that the Japanese forces occupied Dalny on May 30. All dock piers, except the great pier and many warehouses and barracks, were found to be uninjured. The railway and telegraph stations and about 200 railway-cars were also found intact, but all small railway bridges in the neighborhood were destroyed.

It was reported to-day that a three days' battle, which began on the morning of May 27 and lasted until daylight of May 30, has taken place at Simatsi, thirty-five miles north of Feng-Wang-Cheng. No official report of the engagement has as yet been made.

A despatch from Seoul says that a large force of Russian cavalry has been seen south of Ham-Hueng, Korea, and is moving toward Wonson (Gensan). Reinforcements are being sent from Ping-Yang to Wonson. Small detachments of Cossacks continue to harass the Japanese troops and make raids on villages in northern Korea.

A report received to-day from Vladivostok says the Japanese have mined the Peter the Great Gulf on which the town of Vladivostok is situated.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

NO SUBSTITUTE,
not even the best raw cream, equals BORDEN'S PEERLESS BRAND EVAPORATED CREAM for tea, coffee, chocolate, cereals, and general household cooking. It is the result of forty-five years' experience in the growing, buying, handling, and preserving of milk by Borden's Condensed Milk Co.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

BRONCHIAL troubles are often permanently cured by PISO'S CURE FOR CONSUMPTION. 25c. per bottle.—[*Adv.*]

ADVERTISEMENTS.

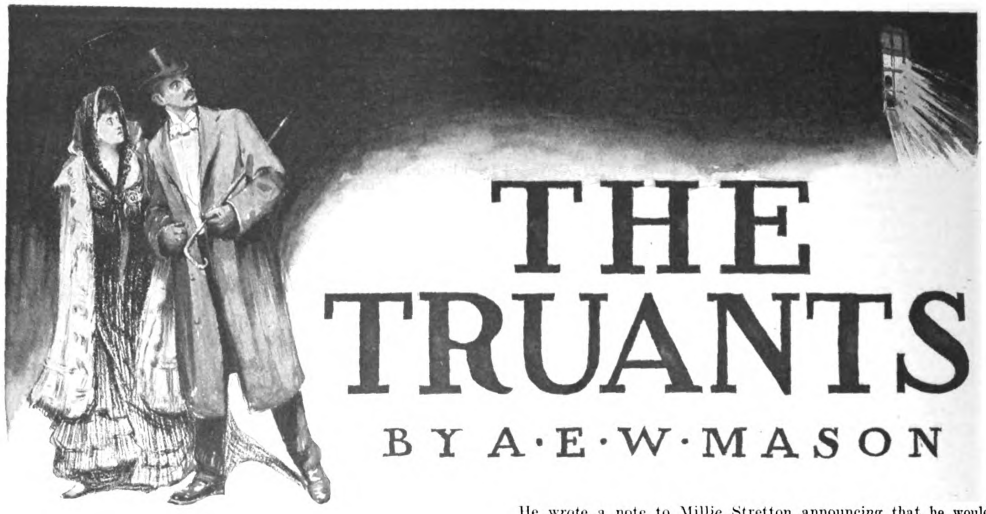
How To Keep Household Accounts

BY CHAS. WALDO HASKINS



Late Dean of the School of Accountancy, New York University

This book will be found of great help to every housekeeper. It outlines in a clear, readable manner a simple but comprehensive system of keeping the household accounts. No previous knowledge of book-keeping is required. There are sample pages showing exactly how the system is put to practical use.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She sends Warrisden on a mission to find Tony and bring him home. Warrisden learns from a friend of Tony's, a Mr. Chase, that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. Warrisden uses every argument to prevail upon him to come back, but he refuses, and Warrisden is forced to return alone. Tony remains on the trawler until the term of his cruise is over (meanwhile having learned of his father's death), and then, after much perplexity and indecision, decides to return to London, feeling that he has seen a way out of his difficulties. He reasons that he would deserve Millie's contempt if he returned at the moment when life had suddenly been made easy for them by his father's death, and decides to enlist in the French Foreign Legion, as no other career seems open to him. The same evening John Mudge, a friend of Pamela's, while at a reception given by Lady Millingham sees Lionel Callon enter the Stretton's house, where Millie is living. He learns from Pamela of the peril Millie is in from Callon, and invites Pamela to leave the whole matter in his hands. Tony goes to Algeria and joins the French Foreign Legion at Sidi-Bel-Abbès, enlisting under the name of "Ohlsen."

CHAPTER XVII

CALLON LEAVES ENGLAND

SPRING that year drew summer quickly after it. The lilac was early in flower, the days bright and hot. At nine o'clock on a May morning Callon's servant drew up the blinds in his master's room and let the sunlight in. Lionel Callon stretched himself in bed and asked for his letters and his tea. As he drank his tea he picked up his letters one by one, and the first at which he looked brought a smile of satisfaction to his face. The superscription told him that it was from Millie Stretton. That little device of a quarrel had proved successful, then. He tore open the envelope and read the letter. Millie wrote at no great length, but what was written satisfied Callon. She could not understand how the quarrel had arisen. She had been thinking it over many times since it happened, and she was still baffled. She had not had a thought of hurting him. How could she, since they were friends? She had been hoping to hear from him, but since some time had passed and no word had reached her, she must write and say that she thought it sad their friendship should have ended as it had.

It was a wistful little letter, and as Callon laid it down he said to himself, "Poor little girl"; but he said the words with a smile rather than with any contrition. She had been the first to write—that was the main point. Had he given in, had he been the one to make the advance, to save her the troubled speculations, the sorrow at this abrupt close to their friendship, Millie Stretton would have been glad, no doubt, but she would have thought him weak. Now he was the strong man. He had caused her suffering and abased her to seek a reconciliation. Therefore he was the strong man. Well, women would have it so, he thought with a chuckle, and why should he complain?

He wrote a note to Millie Stretton announcing that he would call that afternoon, and despatched the note by a messenger. Then he turned to his other letters, and amongst them he found one which drove all the satisfaction from his thoughts. It came from a firm of solicitors, and was couched in a style with which he was not altogether unfamiliar.

"SIR.—Messrs. Deacon and Sons (Livery Stables, Montgomery Street) having placed their books in our hands for the collection of their outstanding debts, we must ask you to send us a check in settlement of your account by return of post, and thus save further proceedings. We are, yours, etc.,

HUMPHREYS & NEILL."

Callon allowed the letter to slip from his fingers, and lay for a while very still, feeling rather helpless, rather afraid. It was not merely the amount of the bill which troubled him, although that was inconveniently large. But there were other reasons. His eyes wandered to a drawer in his dressing-table. He got out of bed and unlocked it. At the bottom of that drawer lay the other reasons, piled one upon the other—letters couched in just the same words as that which he had received this morning, and—still worse!—signed by this same firm of Humphreys & Neill. Moreover, every one of those letters had reached him within the last ten days. It seemed that all his tradesmen had suddenly placed their books in the hands of Messrs. Humphreys & Neill.

Callon took the letters back to his bed. There were quite an astonishing number of them. Callon himself was surprised to see how deep he was in debt. They littered the bed—tailors' bills, bills for expensive little presents of jewelry, bills run up at restaurants for dinners and suppers, bills for the hire of horses and carriages, bills of all kinds—and there were just Mr. Callon's election expenses in Mr. Callon's exchequer that morning. Even if he parted with them they would not pay a fifth part of the sum claimed. Fear invaded him; he saw no way out of his troubles. Given time, he could borrow enough, no doubt, scrape enough money together one way or another to tide himself over the difficulty. His hand searched for Millie Stretton's letter and found it and rejected it. He needed time there; he must walk warily or he would spoil all. And looking at the bills he knew that he had not the time.

It was improbable, nay, more than improbable, that all these bills were in the hands of one firm by mere chance. No, somewhere he had an enemy. A man—or it might be a woman—was striking at him out of the dark, striking with knowledge, too. For the blow fell where he could least parry it. Mr. Mudge would have been quite satisfied could he have seen Callon as he lay that morning with the summer sunlight pouring into his bedroom. He looked more than his age and his face was haggard. He felt that a hand was at his throat, a hand which gripped and gripped with an ever-increasing pressure.

He tried to guess who his enemy might be. But there were so many who might be glad to do him an ill turn. Name after name occurred to him, but amongst those names was not the name of Mr. Mudge. That shy and inoffensive man was the last whom he would have suspected to be meddling with his life.

Callon sprang out of bed. He must go down to Lincoln's Inn Fields and interview Messrs. Humphreys & Neill. Summonses would never do with a general election so near. He dressed quickly, and soon after ten was in the office of that firm. He was received by a bald and smiling gentleman in spectacles.

"Mr. Callon?" said the smiling gentleman, who announced himself as Humphreys. "Oh yes. You have come in reference to the letters which our clients have desired us to send you?"

"Yes," replied Callon. "There are a good number of letters."

The smiling gentleman laughed genially.

"A man of fashion, Mr. Callon, has, of course, many expenses which we humdrum business people are spared. Let me see. The

Progress of Science

Leprosy and Fish

An interesting discussion has been taking place recently in England among medical men on the merits of the theory that the disease leprosy is due in the main to the consumption as food of decomposing or imperfectly cured fish. This disease, which dates back to the earliest times, is very widespread, and its transmission is believed by most authorities to be due to personal contagion, and for that reason separation of lepers from the general population is practised in many countries, with the widespread belief that it is the only means of eradicating the disease. A bacillus which has in all probability never been cultivated is found in leprous tissues in large numbers and is considered the specific virus, but progress in the biological study has been hindered by the fact that the bacillus cannot be inoculated into animals, as can be done with so many other disease germs. The "fish theory" is maintained by Mr. Jonathan Hutchinson, F.R.S., who claims that "the disease is a modification of tuberculosis, and that it receives modification in connection with some specific virus (toxin or bacillus), which is occasionally, but by no means frequently, developed in connection with such fish." This virus, whose existence is hypothetical, causes a specific poisoning. Mr. Hutchinson states that in Roman Catholic countries, where fish is consumed during church feasts, there is considerable leprosy, and that in the British Isles the disease has declined since the Reformation and the abolition of fasting. Statistics are quoted showing that while in India the average occurrence of leprosy is three or four cases per 10,000 of population, in the island of Minicoy, in the Indian Ocean, whose inhabitants are devoted to fishing, it rises to 150, and at Kaligoan, a fish-curing centre, it amounts to 500. On the other hand, it is argued that fish as an article of food is rarely, if ever, employed by the Basutos, where there is considerable leprosy, while in Orkney and Shetland, where the disease once had a foothold, enormous quantities of bad fish are eaten. The eating of bad fish implies a low state of civilization where promiscuous intercourse of all kinds would readily lead to personal contagion. Mr. Hutchinson argues for the abolition of leper asylums and settlements, and advocates at least a mitigation in the severity of the policy of segregation, especially in Cape Colony. Here again his position is controverted, and it is stated that in Iceland, within five years after the asylum was opened in 1899, the disease, which up to that time had been on the increase, was not only checked, but the number of lepers reduced one-fourth.

Two New Elements

The discovery of [illegible] new elements by an American chemist, Pro[illegible] succeeded in [illegible]kerville, of the University of [illegible]tion as [illegible]lina, is an event of considerable impor[illegible] if the chemical world accepts the work of this scientist, as there is every reason to expect. The discovery was made in the course of an extended investigation on thorium, an element originally discovered by Berzelius, and which, in the form of an oxide, is an important constituent of the mantle of the Welsbach incandescent gaslight. Thorium is a radioactive substance of large atomic weight, and the same properties are also possessed by the new elements, to which the names carolinium and berzelium have been assigned by Professor Baskerville, the former in honor of the State of North Carolina and the latter for the famous Swedish chemist. Samples have been submitted to Sir William Crookes, the veteran British authority in chemistry, and he will endeavor to verify Baskerville's work, which, however, has been received favorably by chemists at large. With every discovery of this kind, and especially of the recent radioactive elements, there is a general discussion as to the nature of elements, and a large number of scientists now believe that they are all essentially the same substance, but existing under different conditions. Nearly all the elements of high atomic weight are radioactive, and it is believed that they are breaking up or undergoing some change.

[illegible]ried on a [illegible] properties of sea water, and his [illegible] life is uncertain—it may [illegible] the Darwinian theory of [illegible] points out that the [illegible] it may be short. [illegible]es exist [illegible]al

(Continued from page 912.)

total amount due is—" and Mr. Humphreys made a calculation with his pen.

"I came to ask for an extension of time," Callon blurted out, and the smiling gentleman ceased to smile. He gazed through his spectacles with a look of the utmost astonishment. "You see, Mr. Humphreys, all these bills, each one accompanied with a peremptory demand for payment, have been presented together almost, as it were, by the same post."

"They are all, however, to account rendered," said Mr. Humphreys, as he removed and breathed upon his spectacles.

"It would, I frankly confess, seriously embarrass me to settle them all at once."

"Dear, dear!" said Mr. Humphreys, in a voice of regret. "I am very sorry. These duties are very painful to me, Mr. Callon. But I have the strictest instructions," and he rose from his chair to conclude the interview.

"One moment," said Callon, bluntly, "I want to ask you how it is that all my bills have come into your hands? Who is it who has bought them up?"

"Really, really, Mr. Callon," the lawyer protested, "I cannot listen to such suggestions," and then the smile came back to his face. "Why not pay them in full?" His eyes beamed through his spectacles. He had an air of making a perfectly original and delightful suggestion. "Sit down in this comfortable chair now and write me out a little check for—let me see—" and he went back to his table.

"I must have some time," said Callon.

Mr. Humphreys was gradually persuaded that a period of time was reasonable.

"A day, then," he said. "We will say a day, Mr. Callon. This is Wednesday. Some time to-morrow we shall hear from you." And he bowed Callon from his office. Then he wrote a little note and despatched it by a messenger into the city. The message was received by Mr. Mudge, who read it, took up his hat, and jumping into a hansom-cab, drove westward with all speed.

Lionel Callon, on the contrary, walked back to his rooms. He had been in tight places before, but never in a place quite so tight. Before it was really the money which had been needed. Now what was needed was his ruin. And, to make matters worse, he had no idea of the particular person who wished to ruin him. He walked gloomily back to his club, and lunched in solitude. A day remained to him, but what could he do in a day unless?—There was a certain letter in the breast-pocket of Callon's coat to which more than once, as he lunched, his fingers strayed. He took it out and read it again. It was too soon to borrow in that quarter, but his back was against the wall. He saw no other chance of escape. He drove to Millie Stretton's house in Berkeley Square at the appointed time that afternoon.

But Mr. Mudge had foreseen. When he jumped into his hansom-cab he had driven straight to the house in Audley Square where Pamela Mardale was staying with some friends.

"Are you lunching anywhere?" he asked. "No? Then lunch with Lady Stretton, please! And don't go away too soon! See as much as you can of her during the next two days."

As a consequence when Lionel Callon was shown into the drawing-room he found Pamela Mardale in her most talkative mood and Millie Stretton sitting before the tea-table silent and helpless. Callon stayed late. Pamela stayed later. Callon returned to his club, having said not a single word upon the momentous subject of his debts.

To be Continued.

Russia's Representative at the World's Fair

By Charles Johnston

PRINCE OUKHTOMSKY is paying this country a visit, and has taken a conspicuous part in the World's Press Parliament at the St. Louis Fair. The occasion of his coming is highly interesting. Invitations were sent to the journalists of Russia, who include among their ranks many writers of world-wide fame. The Prince discovered that he alone had accepted the invitation. On inquiring the reason, he discovered that Count Lamsdorff, the Minister for Foreign Affairs, had suggested to the Russian press in general the propriety of staying away as a rebuke to this country for its anti-Russian propaganda. Prince Oukhtomsky found only one person in Russia to support his independent intention to come here: that person was the Emperor Nicholas II., who has the friendliest feeling towards Americans, differing in this radically from his Foreign Minister. Therefore Prince Oukhtomsky came. For years he has been a close personal friend of the Emperor. They were brought into daily and hourly association twelve or thirteen years ago, when, as Czarevitch, Nicholas made his memorable tour through Egypt, India, China, and Japan, landing once more on Russian soil at Vladivostok, and laying the foundation-stone of the railroad terminus there. This imperial visit was the beginning of the Far-Eastern boom, and Nicholas II. was for years president of the Siberian Railroad and the moving spirit in all that concerned Russia's eastward expansion. Prince Oukhtomsky, who had already won fame as a charming writer, was entrusted with the task of writing the account of the imperial journey, which task he accomplished on his return to Russia, producing a memorable and exceedingly interesting volume. Prince Oukhtomsky was the moving spirit in the foundation of the Russo-Chinese Bank, the enterprising institution which aroused so much jealousy among the old-fashioned English merchants in the China treaty ports. He conceived the idea of the Manchurian railroad, and strongly favored the peace policy, which was, unhappily, overruled by more ambitious designs. Prince Oukhtomsky passed through New York at the beginning of the Boxer outbreak, on his way to China, where he watched the course of events on behalf of his imperial master and the Russo-Chinese Bank. He has for years edited the St. Petersburg *Viedomosti*, the most reasonable and best-informed newspaper in Russia.

A Good Samaritan

A SOUTHERN writer tells this story of a negro preacher's version of the parable of the Good Samaritan: There was a traveller on a lonely road, said the preacher, who was set upon by thieves, robbed, and left wounded and helpless by the wayside. As he lay there various persons passed him, but none offered to assist him. Presently, however, a poor Samaritan came by, and taking pity on the wounded man's plight, helped him on his mule and took him to an inn, where he ordered food and drink and raiment for the man, directing the innkeeper to send the bill to him. "And dis am a true story, breth'ren," concluded the preacher; "for de inn am standin' dere yet, and in de do'way am standin' de skel'ton ob de innkeeper, waitin' fer de Good Samaritan to come back an' pay de bill."

The Last Straw

A PROMINENT Jew, whose racial characteristics are very strongly marked in his personal appearance, was riding in a country stage not long ago between his summer home and the railroad station, when he was accosted by a crusty-looking old gentleman whom he had noticed staring at him from the opposite seat.

"Sir," said the stranger, "it is your privilege to be a Jew; it is your privilege to act like a Jew. It is also your privilege to look like a Jew, but you have abused the privilege"—and he signalled the driver and got out.

Eulogy under Difficulties

A WELL-KNOWN minister is telling an anecdote about a brother clergyman who was required unexpectedly to officiate at the funeral of a man concerning whom he knew nothing. When he arrived at the town where the deceased had lived he had just time to make a few inquiries about his traits and achievements, the results of which he noted on a memorandum. His eulogy at the service, as reported, was about as follows:

"Our dear brother, whom we mourn today, was a man of rare character and ability. He had the mental capacity of a"—referring to his notes—"Daniel Webster; the tact of a"—again consulting his memoranda—"Henry Clay; the pertinacity of a"—another reference—"Ulysses S. Grant. We can only mourn him with a profound and sorrowful regret now that he has gone to meet his"—another reference to the notes—"God."

According to Law

THIS story is being told of a certain New York politician: He had succeeded in securing for a friend of his a position as tax assessor at the cost of considerable exertion. Not long after the friend had begun work in his new position the politician was surprised and grieved to see that he was taxed, under "personal property," $24 as the possessor of one goat. He called on his friend the assessor for an explanation, accusing him of ingratitude and forgetfulness of favors received.

"But I couldn't do less than obey the specific details of the law," protested his friend; "look—here's what it says," and he read from his papers: "*For all property bounding or abutting on the highway, $12 per front foot.*"

Interesting Facts about Insurance

AN official authority on insurance matters gives the following interesting facts: New York city continues to be far in the lead of all other places in amount of life insurance carried by its citizens, as well as in the payments to beneficiaries. More than $25,000,000 was paid out by life-insurance companies and associations in New York in 1903, against less than $23,000,000 in 1902. Philadelphia continues to rank second among the well-insured communities, the payments there in 1903 having exceeded $9,000,000. Chicago is a close third.

Japan's Customers

THE United States is Japan's largest customer. The value of exports from Japan to her most important customers in 1902 was: To Germany, 4,737,000 yen (a yen equals 49.8 cents); Italy, 13,287,000 yen; British India, 13,337,000 yen; Great Britain, 17,346,000 yen; Hongkong, 25,876,000 yen; France, 27,283,000 yen; China, 46,838,000 yen; and to the United States, 80,233,000 yen. Thus the United States takes as much of the products of Japan as all of Europe and nearly twice as much as China, Japan's second largest customer. In imports the United States stood second in 1902, and at the end of 1903 was but $1,227,000 below Great Britain, which still holds the lead. For 1902, the latest year for which the import figures of Japan are available with reference to all countries, the imports from leading countries, stated in the order of magnitude, were: From British India, 50,977,000 yen; from Great Britain, 50,364,000 yen; from the United States, 48,653,000 yen; China, 40,591,000 yen; Germany, 25,813,000 yen, and from France, 4,746,000 yen. In 1903 the imports were: From India, 70,095,000 yen; Great Britain, 48,737,000 yen; the United States, 46,273,000 yen, and China, 45,458,000 yen.

The United States has made much more rapid gains in the imports of Japan than any of her principal rivals. Comparing conditions in 1902 with those of 1890, for example, the United States shows a gain from 6,874,000 yen in 1890 to 48,653,000 in 1902, while the figures of imports from Great Britain were, in 1890, 26,619,000, and in 1902, 50,364,000 yen; from Germany, in 1890, 6,857,000 yen, and in 1902, 25,813,000 yen; from China, in 1890, 8,850,000 yen, and in 1902, 40,591,000 yen; and from British India, in 1890, 8,911,000 yen, and in 1902, 50,977,000 yen. Considering only the five principal countries from which Japan's chief importations are obtained the United States has made much greater gains than any of the others. It will also be seen from these figures that the chief rivalry for the classes of merchandise for which the United States is seeking a market in Japan is between the United States and the United Kingdom, the class of goods imported into Japan from China being chiefly non-competitive so far as relates to the United States, while in the case of India the sole article is cotton, of which Japan takes freely from India in years of large supplies in that country.

Sea Water the Source of Life

A THEORY has recently been formulated by M. Quinton in France that sea water is the natural source of all life, being the substance from which, according to Haeckel, are produced those elementary bodies which in turn develop into every other species, including human beings. M. Quinton has carried on a long and thorough research on the properties of sea water, and his results add support to the Darwinian theory of the evolution of species. He points out that the anatomical elements of living creatures exist in a marine environment, and that animal cells and tissues exert their functions in a fluid closely resembling sea water in its composition. Furthermore, the same elements that are found in sea water go to make up the human body, and in addition to those that were known to exist in the latter to the number of about fifteen, M. Quinton has found traces of some fourteen others, such as copper, lead, gold, and silver. He has also performed experiments where an animal was bled to exhaustion, and then injected with sea water to supply the place of the blood thus lost, with the result that on the following day the animal regained its strength, and after five days experienced a complete recovery. In addition, the injection into animals of large quantities of sea water has no toxic effect, whereas the injection of pure water rapidly brings about death. M. Quinton's conclusion is that sea water is a true nutrient fluid for animals or natural plasma. This research opens up many interesting philosophical and biological questions in evolution, while the experiments themselves seem to have a relation to others where various solutions are employed in the development of simple forms of life.

VACATIONS

Those who from experience know how much of pleasure is contributed to the vacation in the choice of a route select the

Lake Shore
& Michigan Southern Ry.

This is the road which reaches by its famous through trains or by its direct connections the entire resort country of the eastern, middle and western states, including Lake Chautauqua, south shore Lake Erie country, and its Islands, lake region northern Indiana and southern Michigan, Colorado, Yellowstone country, St. Lawrence River, Adirondack and White Mountains, Atlantic Coast, etc.

Reduced rate tickets on sale June 1st to September 30th. All railways sell in connection with the Lake Shore.

Privileges — Enjoyable privileges accorded on tickets over Lake Shore—stop-over Lake Chautauqua, Niagara Falls, Lake Erie Islands, option of boat or rail between Cleveland and Buffalo, etc.

Summer Books—To assist in your vacation plans the following books will be sent by undersigned for eight cents in postage: "The Ideal Vacation Land," "Quiet Summer Retreats," "Lake Chautauqua," "Lake Shore Tours," "Travel Privileges," "Book of Trains."

A. J. SMITH, G. P. & T. A., Cleveland, O.

THE MAIDS OF PARADISE

Robert W. Chambers possesses, more than any other American novelist, the feeling and quality of romance. The present tale carries the reader into the heart of the Franco-Prussian war. The Boston *Herald* writes that "Mr. Chambers is a superb master of his art as a story-teller of romantic fiction." Another Boston paper calls this romance "a wide-awake book with plenty of dash and crash in it and many tender passages." Indeed, this charming story is, to quote the Philadelphia *North American*, "the foremost of modern romances."

The Club of Queer Trades

(Continued from page 909.)

away. He still found, however, one eager-faced stranger lingering on the outskirts of the affair. It was Rupert Gryce.

"Constable," he said, "I have a very particular reason for asking you a question. Would you mind telling me whether that military fellow who dropped his sword-stick in the row gave you an address or not?"

"Yes, sir," said the policeman, after a reflective pause; "yes, he gave me his address."

"My name is Rupert Gryce," said that individual, with some pomp. "I have assisted the police on more than one occasion. I wonder whether you would tell me, as a special favor, what address?"

The constable looked at him.

"Yes," he said, slowly, "if you like. His address is: 'The Elms, Buxton Common, near Purley, Surrey.'"

"Thank you," said Rupert, and ran home through the gathering night as fast as his legs could carry him, repeating the address to himself.

Rupert Gryce generally came down late in a rather lordly way to breakfast; he contrived, I don't know how, to achieve always the attitude of the indulged, younger brother. Next morning, however, when Basil and I came down we found him ready and restless.

"Well," he said, sharply to his brother almost before we sat down to the meal. "What do you think of your Drummond Keith now?"

"What do I think of him?" inquired Basil, slowly. "I don't think anything of him."

"I'm glad to hear it," said Rupert, buttering his toast with an energy that was somewhat exultant. "I thought you'd come round to my view, but I own I was startled at your not seeing it from the beginning. The man is a translucent liar and knave."

"I think," said Basil, in the same heavy monotone as before, "that I did not make myself clear. When I said that I thought nothing of him I meant grammatically what I said. I mean that I did not think about him; that he did not occupy my mind. You, however, seem to me to think a lot of him, since you think him a knave. I should say he was glaringly good myself."

"I sometimes think you talk paradox for its own sake," said Rupert, breaking an egg with unnecessary sharpness. "What the deuce is the sense of it? Here's a man whose original position was, by our common agreement, dubious. He's a wanderer, a teller of tall tales, a man who doesn't conceal his acquaintance with all the blackest and bloodiest scenes on earth. We take the trouble to follow him to one of his appointments, and if ever two human beings were plotting together and lying to every one else, he and that impossible house-agent were doing it. We follow him home, and the very same night he is in the thick of a fatal, or nearly fatal, brawl, in which he is the only man armed. Really, if this is being glaringly good, I must confess that the glare does not dazzle me."

Basil was quite unmoved. "I admit his moral goodness is of a certain kind,—a quaint, perhaps a casual kind. He is very fond of change and experiment. But all the points you so ingeniously make against him are mere coincidence or special pleading. It's true he didn't want to talk about his house business in front of us. No man would. It's true that he carries a sword-stick. Any man might. It's true he drew it in the shock of a street fight. Any man would. But there's nothing really dubious in all this. There's nothing to confirm . . ."

As he spoke a knock came at the door.

"If you please, sir," said the landlady, with an alarmed air, "there's a policeman wants to see you."

"Show him in," said Basil, amid the blank silence.

The heavy, handsome constable who appeared at the door spoke almost as soon as he appeared there.

"I think one of you gentlemen," he said, curtly but respectfully, "was present at the affair in Capper Street last night, and drew my attention very strongly to a particular man."

Rupert half rose from his chair, with eyes like diamonds, but the constable went on calmly, referring to a paper.

"A young man with gray hair. Had light gray clothes, very good, but torn in the struggle.

"Gave his name as Drummond Keith."

"This is amusing," said Basil, laughing. "I was in the very act of clearing that poor officer's character of rather fanciful aspersions.

"What about him?"

"Well, sir," said the constable, "I took all the men's addresses and had them watched. It wasn't serious enough to do more than that. All the other addresses are all right. But this man Keith gave a false address.

"The place doesn't exist."

To be Concluded.

Matthew Stanley Quay

MATTHEW STANLEY QUAY, senior Senator from Pennsylvania, died at his home in Beaver, Pennsylvania, on May 28, after a long illness.

Senator Quay was born at Dillsburg, York County, Pennsylvania, September 30, 1833. At sixteen he entered Jefferson College, and after graduation took up the study of law, beginning practice in 1854. He was elected prothonotary of his county in 1856, and reelected three years later. During the civil war he served as colonel

Matthew Stanley Quay
Who died at Beaver, Pennsylvania, on May 28

of the 134th Pennsylvania Infantry, as Military Secretary of State, as Assistant Commissary-General of Pennsylvania, and as Military State Agent. In 1865 and again two years later, Quay was elected to the Legislature. He was Secretary of the Commonwealth from 1872 to 1878 and from 1879 to 1882, and in 1878-9 was Recorder of Philadelphia. Seven years later he was elected State Treasurer, and in 1887 took John J. Mitchell's seat in the Senate. The next year he became chairman of the Republican National Committee, and managed Benjamin Harrison's Presidential campaign.

In 1899, on the day of his acquittal of a charge of misappropriating public funds, he was appointed United States Senator *ad interim*, the failure of the Legislature to elect having caused a vacancy. Quay was reelected to the Senate in January, 1901. His term would have expired in 1905.

Railroad Building in Russia

THE total distance from St. Petersburg to Port Arthur by the Russian Trans-Siberian Railway and the Russian lines in Manchuria is 5913 miles, or practically twice the distance from New York to San Francisco. This is one of the numerous interesting facts about Russia and her railway and commercial systems presented in a monograph just issued by the Department of Commerce and Labor. Regarding the railways the report says:

The importance of railways as means of communication is now greater than that of the rivers and other water routes. The building of the trunk lines, with the exception of the St. Petersburg-Warsaw-Vienna, built during the years 1845-1848 and 1853-1862, respectively, and the St. Petersburg-Moscow (Nicholas line), constructed between 1843 and 1851, dates back to the decade between 1860 and 1870. These years witnessed the construction of the entire group of railways, with Moscow as their common starting-point. Next in point of time comes the construction of roads connecting the black-soil region with its natural outlets, the ports of the Baltic and Black seas. Simultaneously, lines were built connecting each one of the more important southern seaports with the agricultural provinces.

The Great Strategic Systems

The Russo-Turkish war of 1878-9 caused an almost entire suspension of railway building. It was only during the decade beginning with 1880 that activity in this field was again resumed, but the character and method of construction of the newly built roads changed abruptly. In place of the former trunk lines, connecting either the black-soil area with the seaboards of the Baltic, Azov, and Black seas, or with the central industrial region around Moscow, these years witnessed the construction of great strategic railroads, such as the Trans-Caspian, the Polessie system, besides roads primarily destined for the service of relatively small though important industrial regions (Catherine line, Ivangorod-Dombrovo). Moreover, the system of granting franchises (concessions) was superseded by the building and working of roads directly by and on account of the state. At the same time the redemption by the government of great railway systems was going on, so that for some time it seemed as if all private roads were going to be acquired by the state. Although of late greater latitude has been given to private initiative, by far the greater part of Russian railways is in the hands of the government. Out of 36,673 miles under the control of the Ministry of Communication on January 1, 1904, 24,436 are worked by the state, and 12,237 miles only by private companies.

Surpassed only by Germany

The adverse years, 1891 and 1892, gave a new impetus to railway building. "In order to give employment to the starving peasantry" the government undertook and encouraged the construction of new roads. A new era of railway building began with these years, which, in its vigor, soon surpassed anything seen not only in Russia itself but anywhere else in Europe. Thus, while during the above years the number of versts opened for traffic was but 123 and 419, respectively, the succeeding years mark the beginning of an exceedingly energetic ex- [illegible] of the railway system, whose termination does not seem to be at hand even in the near future. At present franchises are eagerly contested by competing corporations, a fact unheard of until recently in Russia, where the state, not so very long ago, had to guarantee the interest on the stock and bonds of the chief railroad corporations. The ministries of finance and transportation have, during recent years, been literally swamped with petitions coming not only from railroad and construction companies, but also from representatives of such interests as mining, manufacturing and agricultural groups. The length of Russian railways in Europe alone has thus considerable increased during the last ten years, and surpasses now that of France and Great Britain, being inferior only to that of Germany.

A VALUABLE PUBLICATION.

The Pennsylvania Railroad 1904 Summer Excursion Route Book.

On June 1 the Passenger Department of the Pennsylvania Railroad Company will publish the 1904 edition of the Summer Excursion Route Book. This work is designed to provide the public with descriptive notes of the principal Summer resorts of Eastern America, with the best routes for reaching them and the rates of fare. It contains all the principal seashore and mountain resorts of the East, and over seventeen hundred different routes or combinations of routes. The book has been compiled with the greatest care, and altogether is the most complete and comprehensive handbook of Summer travel ever offered to the public.

The cover is handsome and striking, printed in colors, and the book contains several maps, presenting the exact routes over which tickets are sold. The book is profusely illustrated with fine half-tone cuts of scenery at the various resorts and along the lines of the Pennsylvania Railroad.

On and after June 1 this very interesting book may be procured at any Pennsylvania Railroad ticket office at the nominal price of ten cents, or, upon application to Geo. W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia, Pa., by mail for twenty cents.

THE LADIES' HOME JOURNAL

Endorses

Beer as Opposed to Patent Medicines.

Of course, a pure, wholesome beer is meant—that is

Budweiser

Mr. Edward Bok, editor of The Ladies' Home Journal, in a page article in the May issue gives a list of 36 medicines, with official analysis, asserting them to contain **12 to 47 per cent. of Alcohol!**

And he adds in black type:

> **"In connection with this list, think of beer, which contains only from two to five per cent. of alcohol, while some of these 'bitters' contain ten times as much, making them stronger than whisky, far stronger than sherry or port, with claret and champagne way behind."**

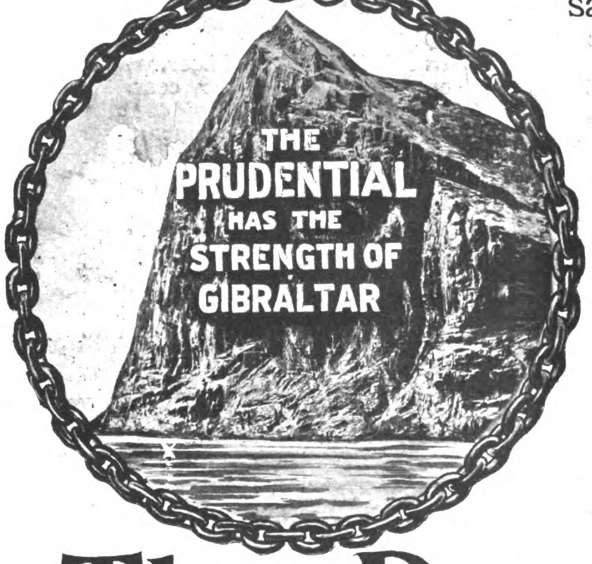
Mr. Bok continues:

> "A mother who would hold up her hands in holy horror at the thought of her child drinking a glass of beer, which contains from two to five per cent. of alcohol, gives to that child with her own hands a patent medicine that contains from seventeen to forty-four per cent. of alcohol."

Budweiser contains only $3\frac{89}{100}$ per cent. of alcohol. It is better than pure water because of the nourishing qualities of malt and the tonic properties of hops.

Budweiser is pre-eminently a family beverage; its use promotes the cause of true temperance—it guards the safety of health and home.

Budweiser is



"King of Bottled Beers"

Bottled only at the home plant of the

Geo. A. Kessler & Co.

THANK THE PUBLIC FOR THEIR GENEROUS APPRECIATION AND PATRONAGE OF

MOËT & CHANDON

CHAMPAGNE,

And take pleasure in announcing that after

June 1st 1904

Every Club, Wine Merchant, Hotel & Restaurant will have the

New Vintage, 1898

WHITE SEAL

ON SALE.

EVERY CORK BRANDED.

Never IN THE HISTORY OF CHAMPAGNE HAS SUCH A SUPERB QUALITY OF WINE BEEN OFFERED.

A Great Revelation AWAITS EVERY LOVER OF A SPARKLING WINE IN THIS LATEST VINTAGE,

Moët & Chandon
WHITE SEAL

MUCH DRYER THAN MOST SO CALLED BRUT CHAMPAGNES.

not only attracted very wide attention, but has won universal respect throughout the country. These are good arguments. Of Mr. Francis's widespread popularity there is no question. He is equally at home in genteel conversation with kings and rail-splitters. He is, moreover, we do not doubt, a good man at bottom, but somehow or other we have come to regard Mr. Folk as a *particularly* good man. He occupies a position in the estimation of the people quite similar to that held by Grover Cleveland when he had routed the rascals in Buffalo. No name in the country would strengthen the Parker ticket so much as his. Some say that he would rather be Governor of Missouri and finish up his rascal-breaking job—that, having an eye on the future, he prefers a certainty within his State to a possibility as a national candidate. We can quite believe this, but we do not believe that he would absolutely refuse a nomination for the Vice-Presidency if his party, in national convention assembled, should with practical unanimity insist that it was his duty to accept. We hope he will be named. The country is entitled to the very best available men on both tickets.

The squabble between Charles F. Murphy, the Tammany leader, and Patrick H. McCarren, the Brooklyn successor of Hugh McLaughlin, is beginning to result in the shedding of light upon dark places. McCarren has been posing quite successfully as a hitherto misunderstood patriot whose unselfish devotion to the Parker cause has induced Mr. Murphy's office-holders to dismiss his. The most serious blow was the political decapitation of McCarren's partner, Deputy Police Commissioner Haggerty. The Tammany man waited somewhat longer than some people considered becoming in making response, but when he did strike there was no lack of directness or force in the blow. "The sole cause of the disagreement between Senator McCarren and myself," Mr. Murphy declared, "was over the fulfilment or non-fulfilment of the pledges made to the people by the Democracy of this city that the Democratic administration would not stand for blackmail and corruption of any kind anywhere in Greater New York, no matter by whom encouraged, but that the people would get what was promised them—a clean, economical, and efficient government." This statement is confirmed by Police Commissioner McAdoo, who is a truthful man, and, incidentally, the most efficient head the New York police force has had in many a year. Thus far McCarren has only squirmed in reply. He could hardly appear in a worse light, even though he were where he really belongs.

The tremendous influence possessed by Speaker Cannon in Illinois was demonstrated at Springfield on June 2, when he prevailed upon the Republican State convention, over which he presided, and which had voted sixty-six times without being able to agree upon a nominee for Governor, to adopt a resolution releasing the delegates from instructions on behalf of particular candidates. The effect of his speech was such that the resolution was unanimously passed. When the roll was called, however, on the sixty-seventh ballot, there was no substantial change; but in the afternoon came a break from Yates to Lowden, and for several ballots the number of the latter's followers increased, until he received the support of 631½ delegates. On the seventy-eighth ballot, however, his vote dropped to 532½. On the same ballot Yates retained 405 supporters. We should bear in mind that 752 votes were needed to nominate. During the evening of June 2 a combination was effected between the friends of Yates and those of Deneen, whereby, in consideration of the nomination for the Governorship going to the latter, it is said to have been arranged that Governor Yates shall have the seat in the United States Senate now occupied by Hon. Shelby M. Cullom, whose term expires in 1907. On the seventy-ninth ballot, which took place in the afternoon of June 3, Deneen received 957½ votes, or upwards of 200 more than were needed, and, of course, became the nominee of the convention. Over 500 delegates, however, adhered firmly to Lowden; but as he moved to make the nomination unanimous, the convention ended ostensibly in a love-feast. Congratulatory messages were sent to the White House, and it is taken for granted that harmony has been restored among Illinois Republicans.

It remains to be seen whether Lowden's friends in Cook County really intend to bury the hatchet. Some of them will find it hard to swallow Mr. Deneen's nomination, for they know well that, having opposed him stubbornly, they can expect no preferment at his hands. It was at first presumed that the outcome of the Springfield convention would render it unnecessary to force the nomination for the Vice-Presidency on Speaker Cannon, who, it was known, would much rather retain his present post. The doubt, however, that has arisen concerning Mr. Lowden's power to control his following in Chicago may cause the Republican managers, of whom, we need not say, Mr. Roosevelt himself is chief, to insist upon selecting Mr. Cannon for the second place upon the national ticket, especially as, probably, he would prove more popular in Indiana than Senator Fairbanks, and a better vote-getter in Wisconsin than any Republican resident of that State, where, if a member of one of the Republican factions should be named for the Vice-Presidency, the other faction would be bitterly offended. We remain, therefore, of the opinion that both Senator Fairbanks and Representative Robert R. Hitt will be passed over, and that Speaker Cannon, although much against his will, will be constrained to figure as Mr. Roosevelt's "running mate."

Illinois and Wisconsin are not the only States in which the Republicans find it difficult or impossible to agree on a nominee for Governor. In New York it is understood that President Roosevelt and Senator Platt desire to force the nomination on ex-Secretary Root, believing that he would strengthen materially the national ticket. Governor Odell, on the other hand, who, also, it will be remembered, is the chairman of the Republican State Committee, is believed to see in Mr. Root a possibly dangerous rival, and to favor a nominee less likely, if elected, to organize a machine of his own. There seems to be no doubt that Governor Odell will control a majority of the delegates in the convention called for the purpose of nominating State officers, but public opinion may compel him at the last moment to conform to the President's wishes.

Since the enthusiastic indorsement of Mr. Bryan by the Democratic convention of his own State, and its peremptory demand for a reaffirmation of the Kansas City platform, Democrats have begun to discuss with interest the question whether the Nebraskan intends to organize a bolt at St. Louis, in what now seems to be the certain event of his party's national convention putting forward a platform and a nominee obnoxious to him and his followers. We do not think that Mr. Bryan has yet made up his mind as to the course which he will pursue in that contingency. He, evidently, is counting a good deal on the persuasive power of his oratory and on the expertness in political manœuvres which prolonged practice has given him. We would not deny that he has some ground for confidence in the outcome of his personal endeavors. But whatever secret and lingering hope of renewed ascendency he may cherish, he is doomed to disappointment. Will he bear the rebuff with resignation, and announce that he will offer an example of party fealty, for which he looked in vain to Gold Democrats in 1896; and will he, perchance, console himself with the prospect of securing from the reconsolidated Democracy a seat in the United States Senate from Nebraska? Or will he feed fat the grudge which he is accused of bearing toward conservative Democrats, and resolve to prove to them that he can ruin them if they will not suffer him to rule them?

We know not whether it is more than an accidental coincidence that, almost simultaneously with the demonstration of Bryan's strength in his own State, a call should have been issued for a Populist national convention, to meet at Springfield, Illinois, on July 4, with the understanding, however, that it should be adjourned until after the St. Louis convention shall have framed its platform and made its nominations. The call has been issued both to the fusionist Populists, who supported Mr. Bryan in 1896 and 1900, and to the Middle-of-the-Road Populists, who in the former year put forward a separate candidate for the Vice-Presidency, and who in the latter nominated Wharton Barker for President and Ignatius Donnelly for Vice-President. We suppose there is no doubt that the Springfield convention would make Mr. Bryan the standard-bearer of a reunited Populist party, if he would consent to figure in the rôle. In spite, however,

of his professions of disinterestedness, the Nebraskan has never shown any propensity for rainbow-chasing, and we surmise that, before accepting it, he would pause and ask himself what such a nomination would be worth. The political organization which in 1892 gave James B. Weaver 1,041,028 votes at the ballot-box, and the twenty electoral votes of Colorado, Idaho, Kansas, and Nevada, besides one electoral vote each from North Dakota and Oregon, is almost entirely extinct. Some newspapers, usually well informed, are strangely circulating the statement that in 1900 the "Middle-of-the-Roaders" cast 400,000 votes. The truth, of course, is that they gave their nominee for the Presidency, Mr. Wharton Barker, just 50,373 votes. The figures show what their organization amounted to. There is now probably not a remnant of it left.

We scarcely need point out that, between the first week in July and November, there is scarcely time for the construction of a new and efficient political machine, even if abundant pecuniary resources should be forthcoming. We know not whence such indispensable resources could be procured. It has been, indeed, suggested by some wiseacres that they might be furnished by the Republican campaign committee; but, in our judgment, it is to "consider too curiously to consider so." We opine that to place their nominee in the White House the Republicans will need all the sinews of war they can muster, provided, of course, the Democrats shall put forward a competitor who commands the trust of the American community. That Mr. Bryan could carry with him into the Populist camp any considerable number of voters hitherto steadily loyal to the Democracy we deem improbable. He certainly cannot rely on Mr. Hearst's cooperation to that end. Mr. Hearst not only realizes that he is a young man and has a political future, but he also perceives that, as a sincere reformer, he can better promote the ultimate triumph of his ideas by remaining loyally in the Democratic ranks than by making the present rejection of his views a pretext for desertion. Without the help of Mr. Hearst's newspapers what could Mr. Bryan accomplish by a bolt? He simply would commit political suicide. As for the Democratic party, considered as an organization qualified to win and keep the confidence of a majority of the voters, it would probably profit in the end by a secession of the Bryanite element. Doctors tell us that a drastic purge should often precede a tonic.

At the hour when we write, the American citizen, Ion Perdicaris, and his stepson, a British subject, who were abducted from a villa in a suburb of Tangier by a band of Moorish brigands, headed by a notorious rebel, one Raisuli, are still in the hands of their captors. Whether the imposing demonstration of naval strength made by our government in the harbor of Tangier will have the effect of assuring or expediting their release seems open to some doubt. The Sultan Mulai Abdul Aziz and the more intelligent of his ministers have been aroused, of course, to a distinct recognition of the fact that they will be held to a rigorous responsibility if Mr. Perdicaris is killed or subjected to any bodily injury. They will do what they can to rescue the prisoners, but their power over the disaffected coast tribes is slight. Public opinion might exert some coercive pressure on the bandits, but there is no certainty that it will be enlisted in favor of the captives. The Moorish capital, Morocco, is far in the interior, and, normally, its inhabitants are indifferent to the fate of the seaports. In this instance, indeed, there is some ground for the apprehension that they may be exasperated rather than awed by the threat of an occupation of Moslem territory. Whether a force composed of marines and bluejackets would be qualified to overtake mounted brigands in a rugged and trackless region is at least questionable, and the danger is that Raisuli, who, like most of his countrymen, is of a vindictive temperament, might put his captives to death if he knew himself to be pursued.

Should the French government see fit to employ on behalf of Mr. Perdicaris all of the influence which its officials on the Algerian frontier are known to possess, its interposition would probably be more efficient than that of the Moorish ruler himself. But the French government, while it might be willing to advance the ransom exacted, may dislike to guarantee the political immunities and privileges which also are said to be demanded by the abductors. Altogether, it is a difficult and delicate problem that our State Department has to solve. The ransom advanced would, of course, be ultimately repaid by the Sultan, and if Mr. Perdicaris should be murdered a vicarious retribution could easily be inflicted on the murderer or his fellow countrymen. We hope that there will be no occasion for reprisals. The first and overshadowing duty of our Federal government is to save the life of an American citizen. Dr. Paul Mohr, the secretary of the German Morocco Society, who is exceptionally well informed concerning Northwest Africa, has expressed the opinion that if the American commander should occupy Larasch and Nehdey, and then with two detachments of well-armed men should push forward from the north to the south, he would succeed in capturing the brigand chief. We must not lose sight of the fact, however, that our immediate aim is not revenge, but the liberation of the prisoners.

Raisuli, the bandit who kidnapped Mr. Perdicaris and his English stepson, is said to be a very worthy person, a good father, a faithful son, the husband of a minimum of Moslem wives, and a thrifty and enterprising genius, with a turn for commercialism, which has raised him above his former humble estate as a downtrodden peasant in the toils of Jewish moneylenders. He and his fellow villagers were falling ever deeper in debt to the Jews; the more they paid, the more they seemed to owe, and they felt the toils closing around them. Then Raisuli had a brilliant idea: why not burn the Jewish village and destroy all evidence of indebtedness at one fell swoop? He tried it, and his consequent emancipation was the beginning of a new life for Raisuli, who is said to be a second Namgay Doola, a red-headed, red-bearded savage of great muscular force and few scruples. He has prospered in the work of village-burning, and has an enthusiastic following, for whom he is what Napoleon was for the Old Guard. He is even likely to rival Bu-Hamara, the pretender, who nearly shook the throne of Morocco a year ago. As Bu-Hamara's following has diminished, the adherents of Raisouli have increased and multiplied, and he will certainly gain great prestige if the result of the present situation is that, under pressure of the powers, the Sultan sends a special embassy to the brigand to ask for terms, carrying rich ransoms for the kidnapped American and his English relative. It was a similar occurrence which gave the Kaiser his opportunity at Kiaochau, and, incidentally, precipitated the Boxer outbreak, which was China's reply to the Mailed Fist. There is a strong tide of public opinion in Germany, tending towards German intervention in Moroccan affairs, and it is a genuine grievance, though an unavowed one, that the worthy bandit did not carry off a son of the fatherland instead of an American Greek.

The home-coming of Lord Curzon of Kedleston and his investment with the Ward of the Cinque Ports, with a splendid residence at Walmer Castle, have drawn attention to a man who is the obvious successor of Mr. Balfour as Conservative Prime Minister of England. Lord Curzon gained the highest Parliamentary reputation, after a period of training in direct personal touch with Lord Salisbury; and it was for him a great and meritorious sacrifice to accept the Viceroyalty of India, which, from the standpoint of a career in Parliament, meant nothing less than five years' exile—an expatriation now to be extended by two years. It is easy to see that the present expedition to Tibet, if successful, will make Lord Curzon a popular hero, just as the acquisition of Burmah for the empire shed lustre and renown on Lord Dufferin. The latter was by profession a diplomatist, however, and not a parliamentarian; so that his success in Burmah, though it brought him a marquisate, gave him no permanent place in home politics; and his great reputation was at the end obscured by unhappy commercial ventures. The addition of Tibet to the empire, or even the extension of a British protectorate over the Land of the Lamas, will redound to Curzon's credit, and he will also undoubtedly profit by the fact that, with the diminished prestige of Russia, England's power all over Asia will once more come into the ascendent. Curzon has done well in India itself, grasping the idea that England must not be satisfied with administering the affairs of her three hundred million brown subjects, but must actively and constructively seek their welfare, by encouraging industry, com-

merce, enterprises of every kind which can add to the wealth of the vast empire of India. He is in India what George Wyndham is in Ireland—the apostle of the new England, which seeks to build, to preserve, to enrich, to heal the sores of the past and increase the hopes of the future. He will be remembered as the first great Viceroy of Edward VII. and his most promising epoch, and, if only his health allows, will undoubtedly return to English politics with a greatly enhanced reputation, with added authority, with increased prestige. He and Lord Cromer are future elements of strength to imperial England, and will be among those who carry forward the tendencies of regeneration which mark England's work in the new century.

No recent incident has given more thorough satisfaction to upright and decent citizens of New York than the clearing of the memory of the late Andrew H. Green from the smallest taint of suspicion of covert immorality. It will be remembered that Mr. Green was assassinated near the entrance of his dwelling-house by a negro crazed with jealousy, who believed him to have had improper relations with one Hannah Elias, a disreputable negress. The assassin was subsequently adjudged to be insane, and nobody who had any acquaintance with his victim harbored a doubt that the latter's private life had been as stainless as his public career had been beneficent and honorable. Yet so long as the question why the negro's homicidal mania should have vented itself upon the "Father of the Greater New York" remained unanswered, a kind of cloud rested on the latter's memory in the eyes of strangers, and it proved difficult to procure the needed subscriptions for a proposed memorial of his public services. Now it appears that the object of the murderer's jealousy was another aged rich man, one John R. Platt, who bore a remarkable personal resemblance to Mr. Green, and who had long maintained illicit relations with the negress Elias. As it happened, Mr. Green was in the habit of visiting occasionally a relative who lived next door to the house occupied by the woman on Central Park West, and the assassin, having seen him leaving the relative's house, supposed him to have been visiting the negress. He, accordingly, followed Mr. Green home and shot him. Not only relatives and personal friends, but all right-minded persons in the metropolitan community, have reason to rejoice at the conclusive demonstration that Mr. Green was in all ways worthy of his spotless reputation, and that he died, as he had lived, a man of pure, noble, exemplary, and inspiring character. We cannot replace Andrew H. Green, but we have now a double motive for erecting to his memory the monument that he deserves.

An invitation to a lady in Turkey to renew her subscription to the WEEKLY has brought from her the following response:

> As not *one number* of your WEEKLY ever reached me, I am not inclined to renew my subscription. The fault is not yours, but the postmaster's at ——, Turkey. He has no right to keep our mail-matter thus. But for eight or nine years he has done so, till we four Americans here in —— have about given up trying to have any kind of papers. But last fall I was so hungry for news from the home land I thought I would try yours. Maybe it might pass. But until I received this letter of yours I did not know that it had been sent. It does seem that *our* government ought to be able to make the government of this country treat us a little better than it does. We have, however, ceased to try for it. If one of our names appears in connection with any complaints we only suffer in other respects, while we get no relief or help in the direction complained of.
>
> ——, TURKEY, *May 12, 1904.*

We have suppressed our correspondent's name and place of residence, out of consideration for her comfort, but both are at the disposal of Postmaster-General Paine, if he is inclined to bestir himself in her behalf. There seems to be need of a strong hand at the end of a long arm to grasp the abundant slack of the Turkish trousers of the postmaster at ——, Turkey, and bring him to a sense of the inexpediency of depriving an American Christian woman of the solace of her home papers. The notion of a fat Turk suppressing the issues of this journal that a distant subscriber has paid for is not pleasing to us, and can hardly accord with the terms of the postal compact between the United States and the Sublime Porte.

A great number of American readers who have long since come to look upon Mark Twain as a family friend have grieved to read of the death of his wife at Florence, Italy, on June 5. For several years Mrs. Clemens had not been in good health, and the migration of her husband and family to Italy had her restoration for its chief motive. She was Miss Olivia Langdon, of Elmira, New York. Mr. Clemens married her in 1870. They lived in Buffalo when he made a journalistic experiment, now historical, with the Buffalo *Express*, and afterwards for twenty years their home in Hartford, near that of Charles Dudley Warner, was one of the places that all good Americans knew about. Mrs. Clemens went with her husband on his momentous lecture trip around the world a few years ago; indeed she has always been his close and helpful associate and partner.

That was decidedly an interesting opinion which is said to have been disclosed by Mr. James Bryce, of London, at the Pilgrims Club luncheon given on June 2, for ex-Mayor Low. The despatches say that Mr. Bryce, in proposing the health of President Roosevelt, spoke of him as the greatest man who has occupied the Presidential chair since Washington. Did he, really? And, if he did, did he mean it? It seems probable that his words have been inexactly quoted, but evidently he said something handsome, and the managers of the Republican end of the impending campaign ought to find out exactly what it was, and use it in their advertisements. When Whistler was told that he was the greatest painter since Velasquez his reply was, "Why drag in Velasquez?" So President Roosevelt might well say to Mr. Bryce, "Why drag in Washington?" Why, indeed, tie any string to so handsome a bouquet? We Americans cannot discuss the President's greatness. He is still too much alive, too much with us, to be weighed against Lincoln, Jackson, Jefferson, and the illustrious dead. We can only smile—as doubtless he smiles—at Mr. Bryce's reputed estimate.

But does our President really loom up so very big to Mr. Bryce? Mr. Bryce is an exceptional Englishman. He not only knows American history, but his mind has dwelt long on the comparative powers of statesmen. If he said what is attributed to him he had reasons for saying so. Will he not expound his tribute, and tell us what he really thinks, and why? Nobody disparages the President's energy, the quickness of his mind, his vigor, his readiness to take responsibility, his faculty for choosing wise counsellors, his ability to come to a conclusion on any mooted subject and act on the conclusion reached. And he can change his mind, too, and take a different course, and yet his mind is not so open that it wobbles. He has remarkable qualities; he has done remarkable things; there are many of the marks of greatness about him. But can he think anything clear through? His mind is quick; how profound is it? We have had Presidents who could beat him, apparently, at sitting tight, and Presidents that had a different notion than his of the Presidential function and its limits. What does Mr. Bryce think of him as a bulwark of the Constitution? Does he think Washington a greater President because he was a safer one?

Mr. Bryce's remarks suggest that, great as is the impression that President Roosevelt has managed to make on the American mind, he had made an impression that is still stronger on the minds of some thoughtful Europeans. It is probable that he is better known to more Europeans, and more thought about, and perhaps more respected, in Europe, than any President that has preceded him. That is largely because of the immense increase in the attention bestowed on the United States by Europe since the Spanish war, and our resulting participation in various international concerns in which Europe is deeply interested. A straw which helps to show how fresh the Roosevelt breeze blows in Europe appears in the report of a dealer in autographs, that President Roosevelt's autographs are in constant demand in Europe and bring the highest price paid for autographs of the Presidents, except Washington's. "The European newspapers," says that authority, "are full of Mr. Roosevelt all the time, and the popular interest in his personality does not abate." At a recent sale in London where autographs of Beaconsfield, Gladstone, and others were put up, the only one that brought a higher price than Mr. Roosevelt's was one of the poet Chaucer.

Some Negro Views of the Negro Question

It is, in respect of diction, a remarkable article on "Lynching from a Negro's Point of View" which is contributed to the June number of the *North American Review* by Mrs. Mary Church Terrell, and scarcely less striking in form, while in substance more judicious and useful, is the speech that was delivered on June 4 at the yearly meeting of Progressive Friends at Longwood, near Kennett Square, Pennsylvania, by Professor Roscoe Conkling Bruce, of the college for colored youth at Tuskegee. We purpose to indicate the widely different views concerning the actual and prospective status of negroes in the United States, at which these highly educated mouthpieces of the colored race have arrived. First, however, we would say a word about their respective qualifications to discuss the problem. Mary Church Terrell, who was born in Memphis, Tennessee, is the daughter of Robert R. Church, one of the richest colored men in the country. She was educated in the public schools of Oberlin, Ohio, and graduated at Oberlin College with the degree of A.B. Subsequently, she studied in Germany, France, and Italy. After returning from abroad she taught languages in the Washington High School and at Wilberforce University, and was invited to become a member of the Faculty of Oberlin College. She married Robert H. Terrell, a graduate of Harvard, who was recently appointed by President Roosevelt a judge in one of the subdistrict courts in the District of Columbia. She was one of the first two women to be made trustees of the public schools of the Federal capital; she was the first president of the National Association of Colored Women, and is now its honorary president. She is to be one of the speakers at the International Congress of Women to be held in Berlin in June of this year, and her subject, we are told, is to be the progress of colored women in the United States. Professor Roscoe Conkling Bruce is a son of the late B. K. Bruce, who, at one time, represented his race in the Federal Congress, and who, subsequently, was Registrar of the Treasury. Professor Bruce himself graduated with distinction from Harvard University, and now teaches, as we have said, in Booker T. Washington's college at Tuskegee. So far, then, as education is concerned, honors are easy as between Mrs. Terrell and Professor Bruce.

Now let us see what views are taken of the negro question by these representatives of the colored race. Mrs. Terrell says that throughout their entire period of bondage, colored women were debauched by their masters, and she quotes with approval an assertion ascribed to a white Methodist minister that, "If you wish to know who taught the negro licentiousness, you have only to look into the faces of thousands of mulatto people, and get your answer." Here the assumption is made for the first time, so far as we know, that the sexual instincts of the negro are less indiscriminate and brutal than those of the white race. Those travellers and sociologists who have studied the temperament of the black in his original home—Central Africa—have arrived at an opposite conclusion. They are speaking, it should be remembered, of blacks who never have been brought in contact with whites, yet they concur in describing the sexual appetites of the former as unparalleled elsewhere, and ungovernable. Indeed, the surprising spread of Islam in Central Africa is explained on the express ground that the law of Mohammed makes large concessions to the sexual appetite, not only permitting the faithful to have four wives apiece, but also an unlimited number of concubines. The most insuperable bar to the propagation of Christianity in the same region is the rigor with which it enforces monogamy and sexual purity. Mrs. Terrell does not seem to perceive that her assertion proves too much. If it be true that, during their period of bondage negroes learned licentiousness from their white masters, how did it happen that, during the four years of the civil war, although the mothers, wives, and daughters of Confederate soldiers were entrusted to the care of black men, not a white woman was violated? How does she explain the fact that a crime which, as she admits and boasts, was unheard of before the negroes were emancipated, became rampant after unscrupulous carpet-baggers had assured them that, politically and socially, they were the equals of the whites? How would Mrs. Terrell account for the undisputed fact that, in Mississippi, since the negro was deprived even of political equality, the raping of white women by black men has become altogether extinct?

Strange to say, Mrs. Terrell, although she was born in Memphis, and, one would think, ought to know better, makes the paradoxical assertion that negroes, and especially those who try to raise themselves in the educational scale, are hated by the Southern whites. Lynching is due, in the first place, she alleges, to "race hatred, the hatred of a stronger people towards a weaker, who were once held as slaves." She goes on to aver that "the men who lynch negroes to-day are, as a rule, the children of white women who sat by their firesides happy and proud in the possession and affection of their own offspring, while they looked with unpitying eye and adamantine heart upon the anguish of slave mothers whose children had been sold away, when not overtaken by a sadder fate." Even Mrs. Harriett Beecher Stowe was sufficiently observant, open-minded, and just to give a more correct impression of the real attitude of white women during the ante-bellum régime toward the wrongs and griefs which, unhappily, seem inseparable from slavery. Of many a tender-hearted and noble white woman in slavery days it might with truth be said that, when the eye of the negro saw her it blessed her, for she wiped away the tears from many faces, nursing the sick, and consoling the sorrowful with her earnest pity.

We have by no means exhausted the tale of Mrs. Terrell's inconsistencies. In one paragraph she charges that in the Southern States efforts are continually making to curtail the educational privileges of colored children. In another paragraph she admits that the illiteracy of the negro has been reduced in the Southern States nearly fifty per cent. in forty years. Curiously futile must have been the attempt of Southern whites to deprive the blacks of education, if such is the statistical result. Illiterate negroes, Mrs. Terrell says, although these "are the only ones contributing largely to the criminal class," are "coddled and caressed at the South," and held up to the educated, cultivated members of the colored race as bright and shining examples of what a really good negro should be. On the other hand, no language is sufficiently severe, bitter, and caustic to express the disgust, hatred, and scorn which Southern gentlemen feel for what is called the "New Issue," by which is meant, she says, the aspiration of negroes for knowledge and culture, and the acquisition of a taste on their part for "the highest and best things in life." Now, as a matter of fact, the records of the new negro crime at the South show that most of the assaults upon white women by black men have been committed, not by illiterate blacks, but by more or less educated representatives of the colored race. Moreover, at the North, where few, if any negroes are illiterate, and where the colored people come nearest to social equality, the examples of the new negro crime have, of late, tended to become quite as frequent, in proportion to the respective numbers of the races in that section, as they are at the South. The obvious reason why white people at the South look with distrust on highly educated negroes is because the latter are most likely to aim at social equality, and to lose the awe with which, in slavery times, black men had learned to regard the women of a superior race.

It is refreshing to turn from Mrs. Terrell's wrong-headed, not to say morbid, pages to the frank concessions made by Professor Roscoe Conkling Bruce, who evidently believes that the white man of the South is the colored man's best friend, and who himself is engaged in imparting to his brethren what he believes they most stand in need of, to wit, technical instruction, which will keep them employed and enable them to earn a living. He acknowledges that, even among the negroes in Northern cities, there is an excess of crime as compared with the offences chargeable to their white fellow citizens. He believes that the chief cause of the imperfect moral development of the negro is the lack of steady employment. The failure to get steady employment is ascribed partly to the loss of the habit of persistent labor which the black men had before the war and partly to the lack of industrial training which was often provided for intelligent slaves by their masters. Professor Bruce pointed out that in Philadelphia, although that city contains sixty thousand negroes, there were last year only nineteen colored children in the public manual-training institutions, and less than 300 receiving any kind of industrial instruction in other schools. Professor Bruce's conclusion was that, on the one hand, it is cheaper for the whites to train the negroes than to imprison them; and that, on the other hand, colored people will experience no difficulty in winning respect and consideration in any American community, wherever they shall exhibit habits of industry and excellence of workmanship.

We Should Deal with Morocco as We Dealt with Other Barbary Powers

The notion that our Federal government should pay the ransom demanded by the Moorish abductors of Ion Perdicaris, an American citizen, is preposterous. It is the business of the ruler of Morocco, the Sultan Mulai Abdul Aziz, to rescue Mr. Perdicaris, to restore him unharmed to his friends in Tangier, and to make adequate reparation for the wrong that he has suffered. In the performance of that duty the Sultan will fail at his peril. We can quickly place in Moorish waters a fleet strong enough to bombard or occupy not only Tangier, but every seaport in Morocco. We can force the Moorish ruler to maintain peace and order in his dominions, so far as our citizens are concerned. That is what we ought to do, and what we shall do, unless, now that we number upwards of eighty millions and are acknowledged to be the richest nation on the earth, we prove recreant to the example set for us in Jefferson's administration, when we numbered but little more than five millions, and when our financial resources did not constitute a hundredth part of their present magnitude. It is timely and relevant to recall how we dealt with the

Barbary powers a century ago when American citizens were harmed in person or in property.

We had begun by following the humiliating precedents established by some of the principal powers of Christendom—*i. e.*, by making periodical payments of blackmail to the piratical Moslem states which occupied the coasts of North Africa. During the last year of John Adams's administration the insolence of these organized pirates, fostered by the disgraceful submission of Christian nations to their pretensions, had been strikingly exhibited in the conduct of the Dey of Algiers toward Captain Bainbridge, on his arrival in September, 1800, in the frigate *George Washington*, with the annual tribute. The frigate was pressed into the Dey's service, for the purpose of carrying presents to Constantinople, by a threat of an immediate renewal of hostilities against the United States. To the remonstrances of Bainbridge and those of the American consul the Dey replied, "You pay me tribute, and thereby become my slaves; I, therefore, have a right to order you to do what I think proper." He added that all the tributary nations of Europe submitted to render him like services. "I hope," wrote Bainbridge, in his report of the matter to the Navy Department, "I shall never again be sent to Algiers with tribute, unless I am authorized to deliver it from the mouth of our cannons."

Not long afterward, the Bey of Tripoli, dissatisfied with the amount of blackmail which he had received, declared war against the United States, and sent two Tripolitan cruisers to Gibraltar to lie there on the watch for American vessels. One of the first acts of President Jefferson was to despatch Commodore Dale, with four out of the six vessels still retained in commission, to note the proceedings of the Bey, and, if necessary, to repel hostilities. Dale himself sailed in the *President*, followed by the schooner *Experiment*, to cruise off Tripoli. The *Experiment*, on her passage thither, fell in with, and after three hours' fighting captured, a Tripolitan cruiser of fourteen guns. The appearance of Dale's squadron in the Mediterranean was seasonable, for already Algiers and Tunis, as well as Tripoli, were demanding additional tribute.

Congress, having recognized the existence of war with Tripoli, authorized the fitting out of such a naval force as the President might deem necessary, and, accordingly, in 1802, a squadron, manned and equipped for two years' service, consisting of two large and three smaller frigates, to which was added the schooner *Experiment* just mentioned, was got ready to relieve Dale's ships. The command was first offered to Commodore Truxton, who declined it because the administration refused to give him a captain for his flag-ship. The command of the squadron was then given to Morris.

It effected less than was expected, however. A vigorous blockade of Tripoli required a number of small vessels, while for a bombardment the armaments of the American frigates were not well adapted. Not that the blockade was altogether useless. The *John Adams*, while cruising off the port, captured a cruiser, and, not long afterwards, another Tripolitan ship of war, the largest belonging to the Bey, was blown up while attempting to get into the harbor. In 1803 the frigates *Constitution* and *Philadelphia*, under the command of Edward Preble, were sent out to relieve the other vessels. Both Algiers and Morocco had lately shown signs of animosity, for which reason the *Philadelphia*, Captain Bainbridge, on her outward passage, attacked and captured, just within the Straits of Gibraltar, a Moroccan cruiser of twenty-two guns, which, however, was presently restored on the Emperor of Morocco's disavowal of any intention to commit hostilities.

Before Preble's arrival at Tripoli a serious accident had occurred. The frigate *Philadelphia*, which had preceded him, while attempting to enter the port, had run with great force upon a sunken rock, where she remained immovably fixed. Attacked by a flotilla of Tripolitan gunboats, Bainbridge, unable to bring any of his guns to bear, was obliged to strike his flag, and he and his crew were made prisoners. The officers were held for ransom, but the men were all reduced to slavery. A little later a bold exploit repaired the credit of the American navy. Scarcely had the *Philadelphia* been captured than Preble arrived in the *Constitution*, and conceived a plan for destroying the surrendered frigate in the harbor of Tripoli. The execution of the plan was intrusted to Decatur. In a small vessel, manned by volunteers, he entered the port of Tripoli about midnight on February 16, 1804, boarded the *Philadelphia*, drove out the Turkish guard, set fire to the combustibles which he had brought with him, and in less than half an hour had the frigate in a blaze. He and his men then escaped uninjured. During the earlier half of the same year the harbor of Tripoli was blockaded, and, ultimately, bombarded, and five of the Tripolitan gunboats were sunk or taken.

Finally, a negotiation was entered into with the Bey, but as he demanded five hundred dollars per head for his captives, no arrangement was effected. In February, 1805, Eaton, the American consul at Tunis, conceived and carried out a project for attacking Tripoli by land. Proceeding to Egypt, he concerted with one Hamet, elder brother of the reigning pasha of Tripoli, measures for a march across the desert, and eventually mustered for the purpose a force of about four hundred men. After enduring frightful sufferings in the wilderness the expedition reached and took the fortified town of Derne on the eastern frontier of Tripoli, whereupon the Bey was quickly brought to terms, and entered into a treaty of peace which provided for an exchange of prisoners. Loud threats of war had recently been uttered by Tunis, in consequence of the capture of two or three vessels of that regency which had tried to evade the blockade of Tripoli; but the appearance off that port of Commodore Barron, with the whole Mediterranean fleet of the United States, soon brought the Moslem ruler to terms. He retracted his threats, and asked permission to send an ambassador to Washington.

Our chastisement of Tripoli administered a lesson to the Barbary powers which they did not forget for several years. Just after the war with Great Britain had broken out, however, in 1812, the Dey of Algiers declared hostilities, and having captured an American vessel, reduced her crew to slavery. We deferred retaliation until after the treaty of peace with England had been ratified. In the spring of 1815, however, Decatur sailed for the Mediterranean with three frigates and seven other war-vessels, and soon after passing Gibraltar fell in with and captured the largest ship in the Algerine navy. Only a day or two afterwards an Algerine brig was taken. When Decatur appeared off Algiers the terrified Dey at once consented to a treaty, which he signed on Decatur's quarter-deck, and by which he surrendered all prisoners on hand, made certain pecuniary indemnities, and renounced all future claim to any American tribute or presents, together with the practice of reducing prisoners of war to slavery. Decatur then proceeded to Tunis and Tripoli, and obtained from both states indemnities for American vessels captured under the guns of their forts by British cruisers during the recent war with England. Such was the self-respecting and decisive way in which we dealt with the Barbary powers a hundred years ago when the United States collectively were less popular and incomparably less affluent than is the single State of New York to-day.

A Nucleus of Labor

"WHO will do the actual digging of the Panama Canal?". The discussion of this question in the newspapers is serving a good purpose if it is convincing every one, in and out of public office, that there is no single source from which the War Department can obtain an adequate supply of labor for the task entrusted to it. Workmen to cut the canal in the fashion of Americans, not of Pharaoh, cannot be drawn from even two or three, or any limited number, of local labor markets. The government is being warned through the press not to count upon getting great numbers of Jamaicans or other West-Indians; not to put trust in Chinese labor wholly, or white labor at all, etc. We need not repeat the long list of warnings here, either to accept or to deny their validity, since all are beside the mark.

The canal—it has so often been said—is to be cut for the benefit of the whole world; and in the sharing of benefits no states are likely to gain more than the Latin-American republics. The old conditions on the isthmus, that added to the peril of a tropical climate the perils of filthy and dissolute living, are to be utterly changed; and problems of sanitation and engineering are to be attacked with spirit, and thoroughly solved. The work is of such a character that while it proceeds the isthmus will be a school of applied science: it will be in some ways the best of schools at which to learn, through participation and observation, how to solve problems of sanitation in the tropics, and how to carry on successfully in the very worst parts of the tropics the most difficult sort of constructive undertakings. Now, these are precisely the problems which confront the Latin-American countries. Their governments will do well if they send to the isthmus a few of their brightest young men with some of their best laborers, as Japan sent her young men to work and study in Europe and the United States during the last two or three decades.

"But," it may be objected, "Japan had men to spare, while nearly all of the Latin-American countries are in need of immigrants." We answer that the Latin-American countries know full well what course they must adopt to attract immigration to their shores: they understand that good results follow any conspicuous effort they make to put themselves in line with progressive states. Cooperation in the work on the isthmus will, therefore, bring a twofold advantage: it will increase their prestige while hastening the completion of the canal. For such a purpose the least populous of the coast states can spare a few hundred men. If contingents are furnished by one-half of the islands of the Greater Antilles and one-half of the Central and South American countries, the War Department will have as a certain reliance at least several thousand picked laborers, inured to the climate, and placed in charge of responsible engineers from their own homes.

It may be worth while to add that nearly every one of the Latin-American communities has made a practice of sending students to good foreign schools for a few years, sometimes at the government's expense. They are, therefore, already more than half pre-

pared to appreciate the opportunity to secure for some of their young men practical training in the most useful professions or occupations at the expense of the United States. A better nucleus of labor for the isthmus could not be found. And other laborers —as many as may be required to cut a canal for the benefit of the whole world—should be sought in the open market of the world. When it becomes known that people are to be well paid and well cared for, working-men will go to Panama readily enough, without being prompted thereto by their governments, from the tropical parts of Asia, Africa, and America.

The Latin Half

LATIN America's area is about one-sixth greater, its population about one-third less, than that of the North-American continent above Mexico. It may, therefore, be referred to as the Latin half of the Western Hemisphere—an expression which suggests at once the magnitude of the questions connected with it, in which our country is most deeply concerned. But more than three words are required to suggest the essential differences between the several Latin-American communities in respect to the component elements of population, and that diversity of race characteristics which makes such questions hard to answer.

Professor Latané, in his *Diplomatic Relations of the United States and Spanish America*, writes: "It should be borne in mind that in Spanish America the native Indian races were not driven beyond the frontier of civilization, as they were by the English settlers, but became and remain to this day an integral part of the population. There were thus in the Spanish colonies an unusual admixture of races. There were: (1) European Spaniards; (2) Creoles, or children born in America of Spanish parents; (3) Indians, the indigenous race; (4) negroes, of African race; (5) mestizos, children of whites and Indians; (6) mulattoes, children of whites and negroes; and (7) Zambos, children of Indians and negroes." This may be taken as a convenient generalization to serve as a starting-point. Our next steps beyond it would lead us to examine (1) the by no means identical characteristics of the Spanish and Portuguese ruling classes—the latter mainly in Brazil; (2) the varying proportions in which the white, Indian, and negro components are found; (3) the exceedingly important matter of recent immigration from Europe and the Orient; and (4) the physical and moral characteristics of the Indian element, since we must sometime awaken to the fact that members of different native races are quite as unjustly treated, when they are forced against nature into a single class or category, as citizens of different European countries would be if sweeping generalizations were in the same reckless way applied to them. Here, surely, are questions enough, difficulties enough, that cannot be removed, and that oblige us to study each South and Central American country as a separate problem.

The Literary Instinct

BENEATH Jowett's elaborate memorial in Balliol Chapel, Oxford, there is a plain tablet bearing the name Richard Lewis Nettleship and the words: "He loved great things and thought little of himself; desiring neither fame nor influence, he won the devotion of men and was a power in their lives, and seeking no disciples he taught to many the greatness of the world and man's mind."

Nettleship died, leaving little writing behind him. Some editing, the biographical sketch of Thomas Hill Greene, an essay on Plato's conception of goodness sum up about all he left for the press. Two volumes of Remains, letters, chance annotations upon the essays of his pupils, reports of lectures and what those who knew him can tell make Nettleship still, to the student, one of the real and living lights of his century. It was he who said: "I feel more than I used to do that the fact that men like Socrates and Christ *wrote* nothing does somehow go along with their unique greatness. . . . I do seem to see that if one could literally live one's theories and beliefs it would be something greater than any book one would be likely to write."

This is the key-note of a great lesson. Life is to live. To make a transcript of life is never enough. Being, not doing, was and is the first great verb. By what we are, not by what we accomplish, do we ultimately, as the Celts say, "make our soul."

The literary instinct has had an undue amount of glorification. The food of other men's thoughts is so nourishing and solacing a part of our lives that we are apt to attribute some special merit to the mere plying of the trade, fancying that it demands some special endowment, some unique gift. We forget that merit never attaches to an act, but always depends on the force that projects the act.

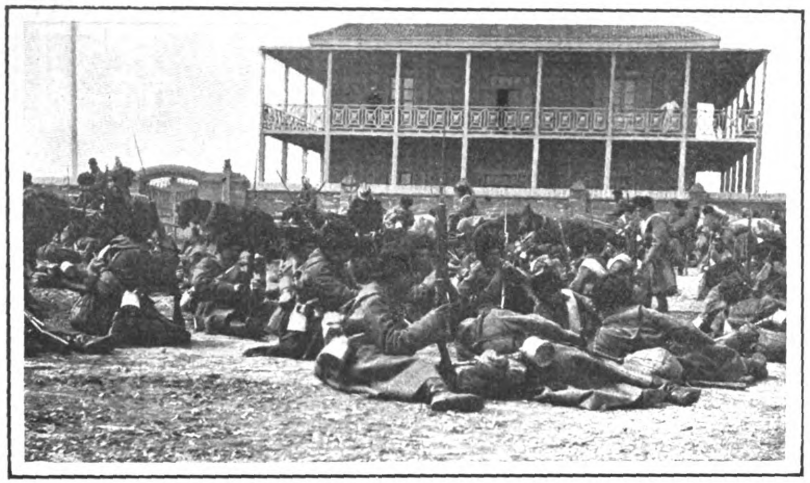
If one sift it, the literary instinct in itself is only the lust of self-expression and the common yearning for sympathy; at its very best it is the love of the word for the word's sake and the devotion to beauty just because it is beauty. It was the literary instinct at its best when the little girl of five rocked her doll to sleep, improvising to a monotonous chant:

> Oh, the queen of heaven bowed down low,
> She bowed down low at *night*.
> And gold of heaven shone round the babe,
> The triumph babe at night.
> 'Tis Jesus is the triumph,
> And so is the sea and the sky.
> And angels is a triumph,
> And so is Santa Claus.
> And all shall come again
> When I am six years old,
> And I will lie still in my bed,
> And *think* of beautiful words.

In the first place, this was evidently the love of the word for the word's sake. The new, mysterious, import-weighted word, "triumph," had been presented to her. Such was the power and significance in the clang of it that it might mean anything, and surely it must include all that was best of the world—a babe, Jesus, the sea, the sky, angels, and Santa Claus. Again, it was, in very truth, the true literary instinct, for, like Nettleship, she sought no audience. She planned to lie in the dark and *think* beautiful words, as one lies in the dark and thinks of whatever is best beloved just for its own sake.

We have recently been introduced, in a leading magazine, to a series of stories of the literary instinct as it purports to work itself out in the child's mind. But this is the literary instinct when the whole life,—even that holiest thing on earth, a child's life,—is reduced to a mere pose. It is a mind forgetful of all but the garment of words in which some pretence may be dressed. These stories show, with a candid and satirical cruelty, the literary instinct when it is merely the "Look at me! I must have notice!" attitude toward life. Even Stevenson, great artist and gentle soul that he was, faced this degradation to the craft. "Not so much the love of art as an impatience of all honest trades," it is, he says. "The artist steps forth and proposes to delight, an impudent design in which it is impossible to fail without odious circumstances." "To live by a pleasure is not a high calling; it involves patronage however veiled; it numbers the artist, however ambitious, along with dancing-girls and billiard-markers."

There are two things the literary artist craves—praise and money. Of the latter it is interesting to speak, because the matter of money-making is changing the whole course of literature, and a few great fortunes made, have beckoned all sorts of stragglers, halt and crippled, into the field. In view of the fortunes made by Hall Caine and Marie Corelli, it is wholesome to reflect upon the twenty-five dollars that Milton got for "Paradise Lost." Shelley never made anything out of his poetry; Browning for twenty years and over paid to get his work printed; the greatest of English novelists earns his livelihood by reading for publishers, and although we have no data, it would be safe to guess that Mr. Swinburne could not support himself by his poetry. To sum up, in Stevenson's words again: "What you may decently expect if you have some talent and much industry is such an income as a clerk will earn with a tenth or perhaps a twentieth of your nervous output."



And as to praise, what is it when it comes? Poor, little, tottering, unpoised puppets that we are, trying to stay ourselves on some one else's approval! It is true that to every one who gets into print some sort of flattery or notice comes. But if a man approve what we say it can only be because he is something less than we are; for whoever writes knows that the real thing he tried to say lies still-born at his heart yet, and that the printed word is the mere projected ghost of that for which he suffered birth pangs.

> Where are the great whom thou wouldst wish to praise thee,
> Where are the pure whom thou wouldst choose to love thee,
> Where are the brave to stand supreme above thee,
> Whose high commands would cheer, whose chiding raise thee?
> Seek, seeker, in thyself; submit to find
> In the stones, bread; and life in the blank mind.

The work is the wages. If we choose expression as a trade we must admit that, like virtue and marriage, it is its own reward. Who chooses it for any other motive than love must pay a bitter penalty, and who chooses it for love ought to be ready to pay the costs.

The only ideal way to pursue the calling is to treat it as a mistress. Spinoza made and repaired watches, and in the idle intervals of his trade he wrote of the improvement of the understanding, ethics, the theologico-political treatise, and other matters. The Brontë girls made literature in the interim of hard, manual housework, sweeping, and stove-cleaning. George Eliot explained her larger right hand by the fact that it had made so much butter. Tolstoi works on a farm. It is safe to say that the whole world would be better if once and finally literature and money could be divorced. If those who love her could be persuaded to turn elsewhere for a livelihood and serve the muse as the true *fille de joie* that she is.

The President's Choice for Campaign Manager

By Albert Halstead

THE choice for national campaign manager of one inexperienced in practical political management is as unprecedented as it is remarkable and exemplary. Though not a politician, George Bruce Cortelyou has all the other qualities that are needed in the chairman of the Republican National Committee. While he never served an apprenticeship in local politics, nor undertook to manipulate a city, control a district, boss a legislature, or capture a State from political opponents, he is still not a novice in politics or unacquainted with politicians or political organization. He has had an arduous training in the work of administration, in trying situations where tact and patience were necessary, and in dealing with public men—a training that should fit him admirably for the conduct of such a campaign as that which is to be waged for the election of Theodore Roosevelt to the Presidency.

Recognition by Three Presidents

Thirteen years ago Mr. Cortelyou went to Washington as private secretary to Fourth Assistant Postmaster-General Rathbone. With the incoming of the second Cleveland administration, in 1893, he tendered his resignation, with the intention of accepting a railroad position in Iowa. He remained in the Post-office Department, however, at the solicitation of the new Fourth Assistant, Mr. Maxwell. Though a Republican, Mr. Cortelyou was advanced to the position of acting chief clerk of this postal bureau. In November, 1895, when Mr. Cleveland asked his cabinet advisers if they knew of a good stenographer, Postmaster-General Bissell suggested Mr. Cortelyou, whose good work had come to his favorable attention. This was the opportunity which led to Mr. Cortelyou's later success. He served in the White House sixteen months under Mr. Cleveland, and had not been there three months before he was promoted to the position of executive clerk. His recognition by a Democratic administration has been the foundation for the charge that he was, then, a Democrat. He has, however, always been a Republican. In the campaign of 1884 he marched over Long Island with the "Plumed Knights" for Blaine. He was also the secretary of the managers of President Harrison's fight for renomination at Minneapolis in 1892. Mr. Cleveland and his other superiors knew Mr. Cortelyou as a Republican, and respected him for his party loyalty. He has voted the Republican ticket at Hempstead at every election since he came of age, except in 1900, when duty called him to Canton with President McKinley.

It was indicative of his merit that, despite his politics, he obtained distinct promotions at the hands of Democrats. Mr. Cleveland thought so well of Mr. Cortelyou that when McKinley was inaugurated he commended his executive clerk to his successor's attention as one in whom absolute reliance could be placed, and who was worthy of favorable consideration. McKinley, on July 1, 1898, promoted Mr. Cortelyou to the assistant secretaryship that had just been created because of the immensely increased volume of public business. This was the first opportunity for McKinley to show his appreciation of Cortelyou's abilities.

Unusual, indeed, has been the career of the new Republican national chairman. He was advanced, within nine years, from the position of clerk in the Post-office Department to that of secretary to the President, to the cabinet, and finally to be the manager of a great national campaign. Brought to the White House by a Democratic President, he was successively secretary to two Republican Presidents, a cabinet officer under the second, and, following that, his political manager.

"Secretary of Silence and Work"

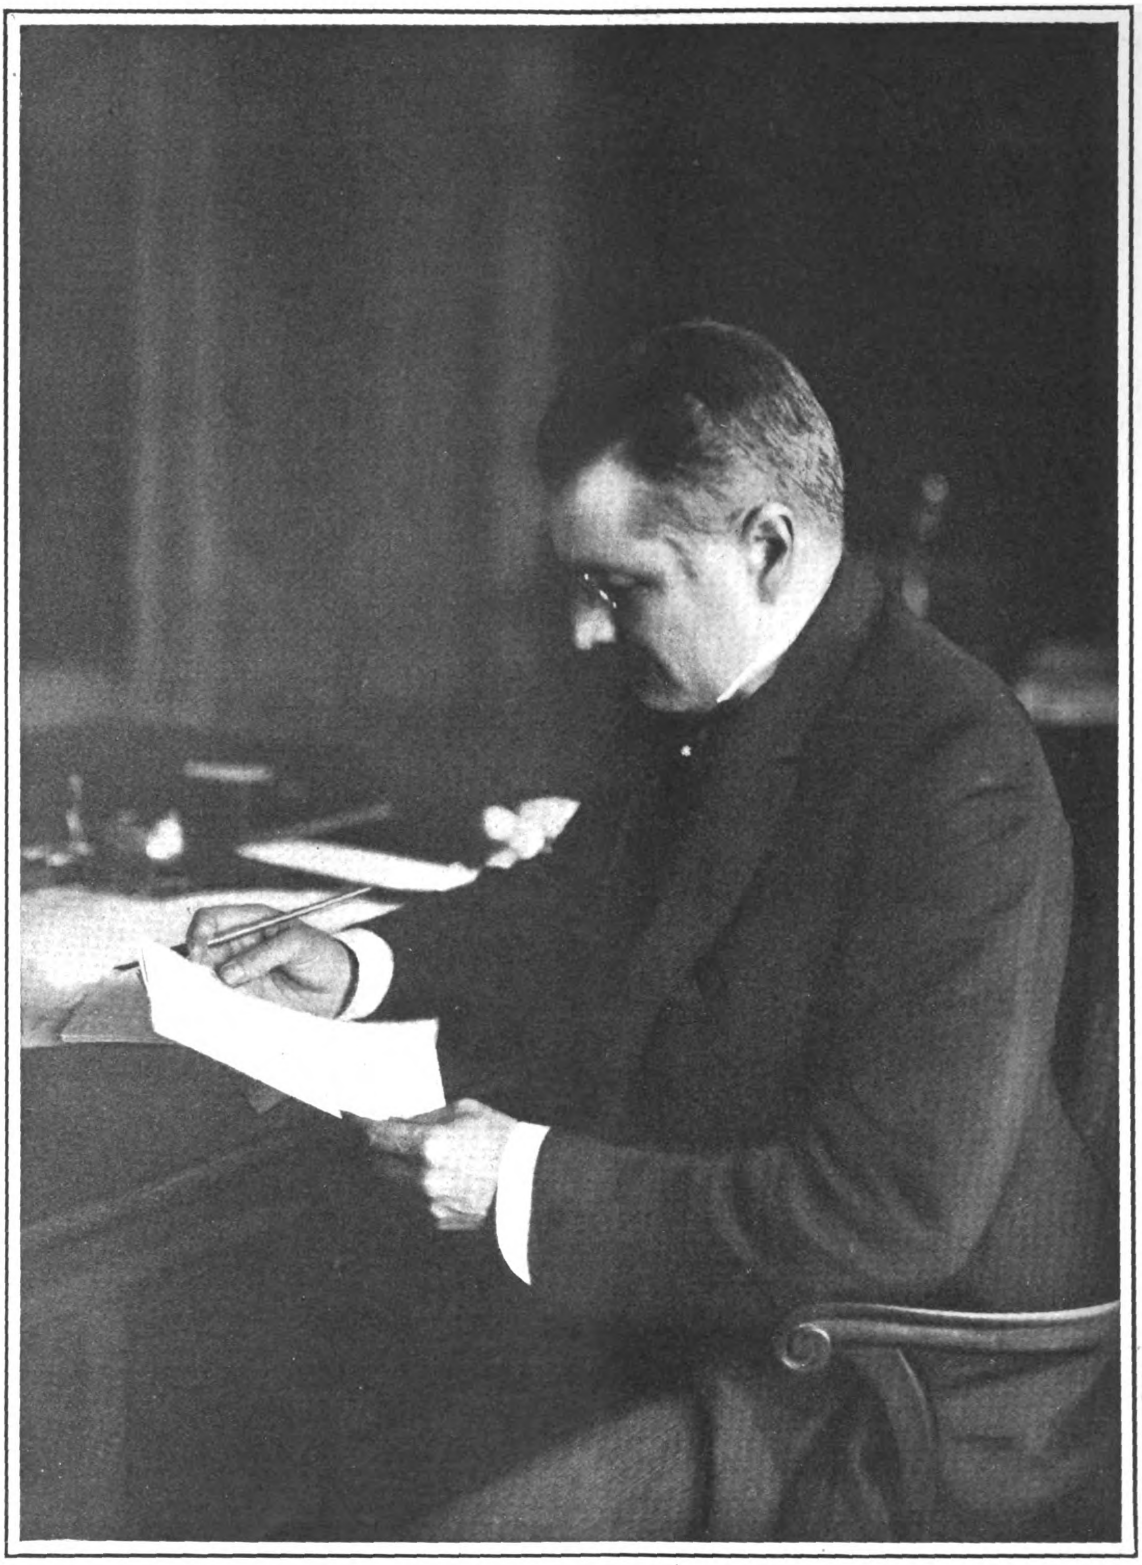
It is natural that one interested in Mr. Cortelyou's rapid advance should inquire as to the causes of his success. They are not difficult to discover. He has uncommon intellectual force. He has been faithful to every trust and indefatigable in the performance of every duty. He has the executive initiative to a pronounced degree, and is a master of detail, thorough in everything. He is orderly and exact, and each day's duty is promptly done. He is calm and never perturbed, and has tact and good judgment. He is dignified, capable of severity, yet affable and approachable. He is industrious and studious. President McKinley once said of him, "Cortelyou never loses his head." A friend of opposite politics recently referred to him as the "secretary of silence and work."

He has shown in every position a capacity, loyalty, and devotion that have marked him as fitted for higher duties and responsibilities. Mr. Cortelyou had the advantage of a good home training and equally good schooling. He graduated at sixteen from the Hempstead Institute, and went thence to the Normal School at Westfield, Massachusetts, where he gave indication of those qualities which have contributed to his success. His teacher of English literature said of him: "Mr. Cortelyou's school work was not so brilliantly done, as it often was by exceptionally bright and, I may add, shallower students; but he possessed far greater thoroughness and accuracy, and the spirit of investigation, while in industry he outdid all others. All the details of his tasks were carefully worked out, and he was never in arrears with his work. Nothing was put over into the next day. He was an independent thinker."

After graduating from the Normal School Mr. Cortelyou studied music at the New England Conservatory of Music in Boston, and later in New York. The characteristic of utilizing his time to advantage is shown in his acquisition of the art of shorthand while he was perfecting himself in music. He became assistant in the stenographic school after his graduation. While there he took the clinical course at the New York Hospital, and practised stenography by reporting the lectures. It is just twenty years since he became stenographer and private secretary in the office of the appraiser of the port of New York, which position he resigned upon the incoming of the first Cleveland administration in 1885. Then he devoted himself to general law and verbatim reporting, assisting James E. Munson in his duties as an official stenographer of the Superior Court. Here he soon developed into one of the most expert medical stenographers of New York. Afterwards he taught in preparatory schools in New York until 1889, when, with the return of the Republicans to power, he returned to the government service as private secretary to the post-office inspector at New York. In March, 1891, he was appointed confidential stenographer to the surveyor of the port of New York, resigning four months later to go to Washington as private secretary to the Fourth Assistant Postmaster-General.

Requirements of a Difficult Post

Up to the time of his entrance into the cabinet of President Roosevelt, Mr. Cortelyou's experience had been chiefly that of secretary to men of lesser or greater public prominence. It is often said that a successful private secretary must so merge his personality in that of his employer as to lose his own identity. That may be true in many instances, but it was not true in the case of Mr. Cortelyou, any more than it was in the experiences of John Hay, Secretary of State, of Daniel S. Lamont, private secretary to Mr. Cleveland, and later his Secretary of War, or of Representative Robert R. Hitt, reporter of the Lincoln-Douglas debates, and the probable Republican candidate for Vice-President. It was because Mr. Cortelyou performed his duties so well that he advanced steadily in usefulness and importance. It may be, as is sometimes said, that "there are no opportunities for advancement in the government service," but Cortelyou's life seems to prove that generalization inaccurate.



There is no more difficult position in the government service than that of secretary to the President. That official is the buffer between the President and the public. If he be tactless, the President is certain to be unpopular. He must be both a judge of character and a wise counsellor. He should be able to act for the President in many respects, and to decide what should and should not come to the Executive's attention. He must be able to weigh each caller and determine whether it is worth while to admit him to the President. He can relieve his superior of many burdens and quietly and unobtrusively advise him. He must make friends rather than enemies, must know how to refuse an interview without offending. He must be able to judge how much to say for publication without seeming to suppress information. He must have a memory for faces and know the relative importance of each caller. He must have the patience of Job and the wisdom of Solomon. If he lacks in any of these qualities he will fail of success. Mr. Cortelyou succeeded.

From Stenographer to Organizer

It was not long after McKinley became President that he recognized Mr. Cortelyou's proficiency. Mr. Porter, the secretary, was not a stenographer, and he had had no previous experience to make him qualified for his delicate task. He was conscientious and loyal, but he had ill health. He soon relied largely on Mr. Cortelyou, and assigned to him many of his own duties. Mr. Cortelyou was a model of good taste in this trying relation. As Mr. Porter's health became more impaired, Mr. Cortelyou relieved him more and more of the burdens of the secretaryship. For more than a year before Mr. Porter resigned, during several months of which period he was absent because of illness, Mr. Cortelyou was the acting secretary, though he had neither title nor the salary. So when Mr. Porter retired, Mr. Cortelyou was his natural successor, a promotion which he received on April 13, 1900.

As secretary to the President, Mr. Cortelyou organized the office on the most systematic and efficient basis. He obtained the pick of employees of the several departments and chose stenographers in every case. A stenographer himself, he recognized that the work could be facilitated by the employment of stenographers only at the White House. On the upper left-hand corner of every communication requiring a formal answer, directions were written in shorthand for its disposal, and the reply prepared accordingly. So in most routine matters no dictation was necessary. All letters filed retained these directions, so the action taken could be seen at a glance. Every important paper was briefed in typewriting, so as to give an accurate record. Mr. Cortelyou prepared a "precedent index," covering practically every case that was likely to arise. This served as a guide to the clerks in answering correspondence, and expedited as well as lessened the work. Indorsement slips were printed for use in referring to communications properly belonging to departments to the appropriate cabinet officer. Mr. Cortelyou required that the work of every desk should be finished on the day of its receipt, that there might be no accumulation. By his own example he created an *esprit de corps* where there had been none. He required the most conscientious service, and reduced the percentage of error to a minimum. It was no easy task to serve in the White House offices under Mr. Cortelyou, but good work was always recognized. He took care that there was the incentive of promotion for those who merited it. He labored many hours a day himself, and required almost as long hours of his subordinates. The White

House became a model of executive accuracy under his administration, and was better organized than any private business—surely a striking innovation in the government service. It was this painstaking efficiency that first impressed Mr. McKinley, and then followed his knowledge of Mr. Cortelyou's good judgment, good sense, tact, clear-headedness, and quick understanding. Mr. Cortelyou, while secretary to McKinley, was in influence the equal of a cabinet officer.

A Week as Acting President

It was to Mr. Cortelyou that President McKinley first spoke after he was shot at Buffalo. "Cortelyou, my wife," he said, thus assigning the delicate duty of breaking the news to her who was dearest to him. He knew in his weakness that there was no one better fitted for that painful duty. Even in that paralyzing moment Mr. Cortelyou was self-possessed. Remembering how Mrs. McKinley had been cared for at a private house in California when desperately ill, he insisted that the President should go to the house of President Milburn of the Exposition. While realizing from his own study of medicine that an operation was necessary, he still refused the service of physicians at hand, waiting for the best there were in Buffalo. He did not hesitate about permitting the operation when the doctor vouched for by Mr. Milburn arrived. It was in the trying week following the shooting that Mr. Cortelyou displayed his highest qualities. Then he was, in fact, the acting President of the United States, performing all of the duties of that office. He made every arrangement for the comfort of his chief. He was almost unceasingly on guard, and was the means of communication between the sick room and the world outside. At the same time his duties as secretary were not neglected. It would have been a tax on any man, but it was doubly so on Mr. Cortelyou because of his personal affection for Mr. McKinley. He made no mistake, never lost his judgment, and met every emergency. Calm, patient, and firm, he did his full duty—no man could have done more.

Under Mr. Roosevelt

President Roosevelt was quick to appreciate Cortelyou's worth and urged him to remain as secretary. Mr. Roosevelt had pledged himself to continue the McKinley policies. Mr. Cortelyou had devoted his life to the late President, so he felt it a duty to continue and aid the successor in carrying out the McKinley plans. It required no small sacrifice for Mr. Cortelyou to do this. With a wife and four children, and living on a small salary, he was tempted by the business propositions that followed Mr. McKinley's death. Offer after offer was refused, including one of $40,000 a year and several of $25,000.

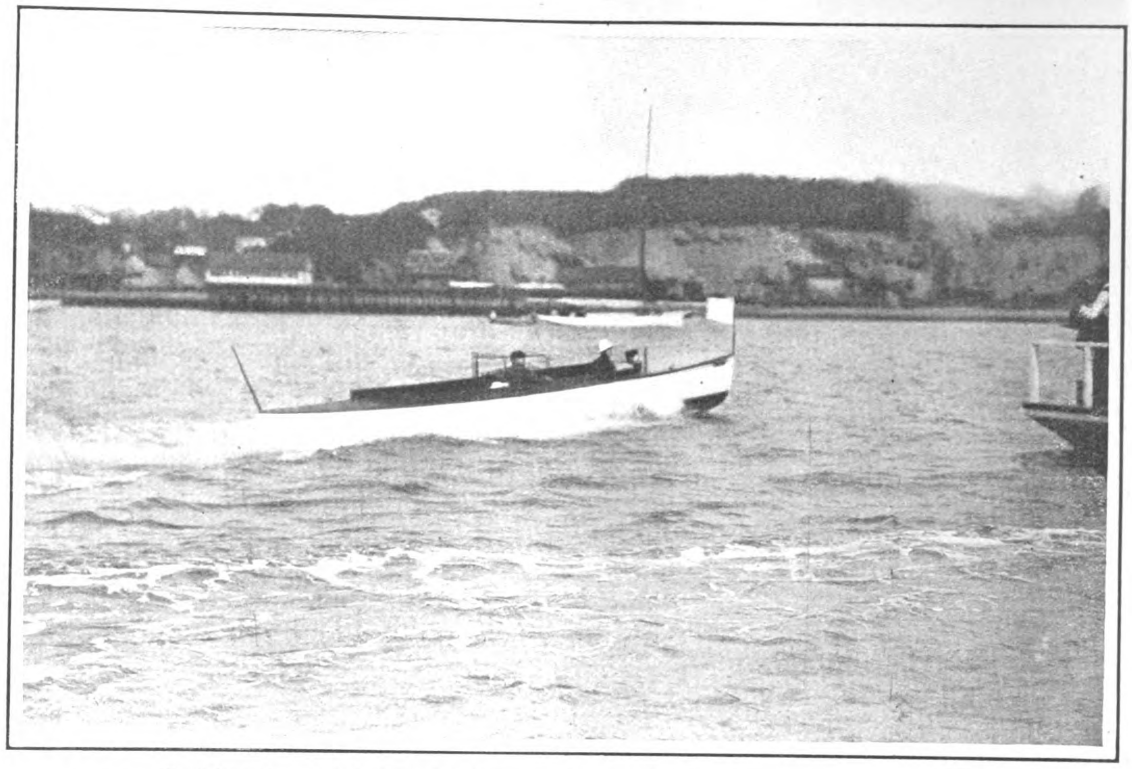
The accident at Pitt-field two years ago, when an electric car ran into the President's carriage, furnishes another illustration of Mr. Cortelyou's characteristic devotion to duty. When he saw that the collision was inevitable, he leaned forward to protect the President with his own body. Dazed and stunned though he was by the contact of his head with the car-fender, his first thought was of Mr. Roosevelt. Before he would have his own wounds attended to he insisted on finding the President and ascertaining if he were safe and receiving proper attention. Then he permitted his own wounds—which were serious—to be dressed.

In the President's Cabinet

For about a year before the Department of Commerce and Labor was created it was President Roosevelt's purpose to promote Mr. Cortelyou to his cabinet, where he might become in title what he was in reality—a valued adviser. The new department was a certainty long before Congress established it, and Mr. Cortelyou was slated for its head. The President wanted this department to stand as one of the great accomplishments of his administration. He sought the best abilities to perfect its organization—hence Cortelyou's appointment. Probably the President also appreciated that he could not long retain Mr. Cortelyou as an aid, because of the tempting business propositions he constantly received, without some promotion that would testify to his worth.

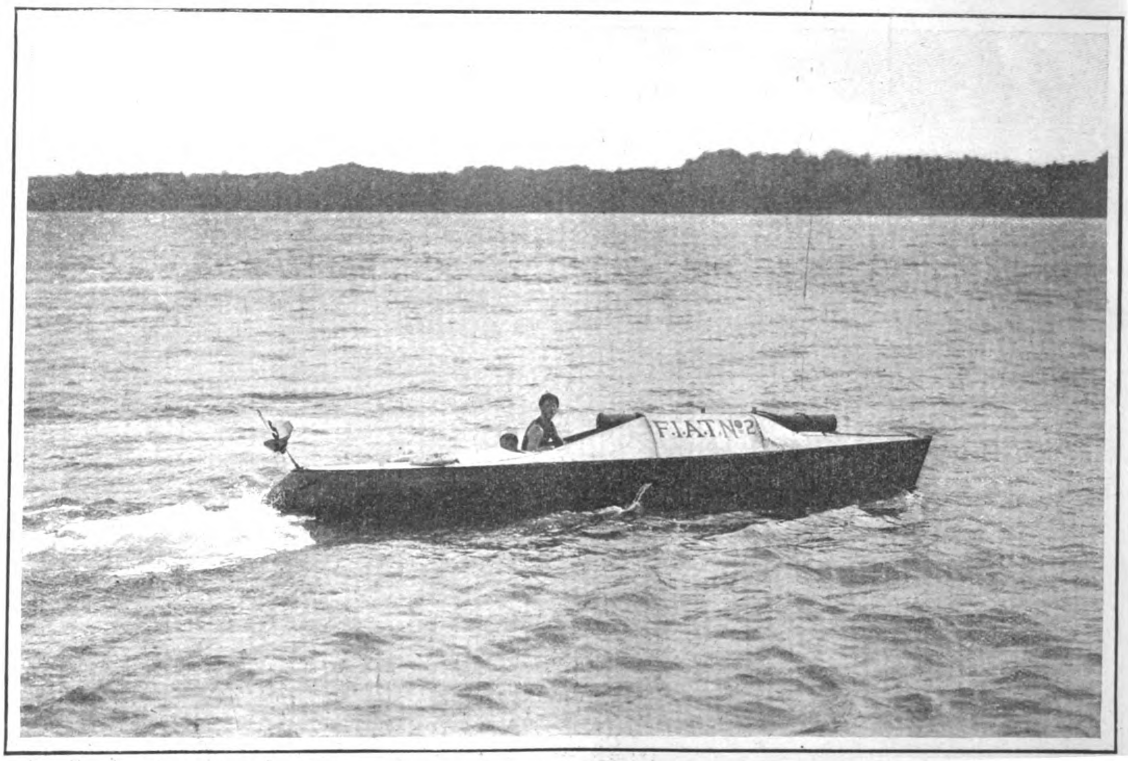
The duty of the Secretary of Commerce and Labor is to promote the commerce of the United States and its mining, manufacturing, shipping, fishery, transportation, and labor interests. He is charged with the investigation and supervision of corporations engaged in interstate and foreign commerce, with the exception of railroads; the collection and publication of information concerning labor interests and controversies here and abroad; the lighthouse service and protection and aid to shipping; the taking of the census and the gathering and publication therewith of statistical information; the making of coast and geodetic surveys; the collection and compilation of statistics relating to domestic and foreign commerce; the inspection of steamboats and the enforcement of the laws for the protection of life and property on the water, and with the supervision of fisheries, including the Alaskan fur seal and salmon fisheries. He has jurisdiction over merchant vessels and over the seamen of the United States. He is charged with the supervision of immigration and the administration of the laws relating to alien arrivals and Chinese exclusion. He gathers and supplies information regarding industries and markets for the fostering of manufacturing, and has the responsibility for the custody, construction, maintenance, and application of standards of weights and measurements. Though the youngest of the great government departments, none has a wider scope than his or affords better opportunities for the promotion of prosperity and the welfare of the people. Great as is its power for good, its potentiality for harm is equal if it is not administered in a spirit of conservatism and impartiality. It is in touch with those factors that have in recent years been most influential in the growth and development of the wealth and business of the United States, and is intimately concerned with the problems of development and the sociological questions that must be met with courage and caution.

Before the Department of Commerce and Labor was created, most of its powers rested in bureaus that were either independent or attached to other departments. Two new important bureaus were established, that of corporations and that of manufactures, while the bureau of statistics of the Treasury and the bureau of foreign commerce of the Department of State were combined and assigned to Mr. Cortelyou's department. To the bureau of corporations was granted authority and power to make "diligent investigation into the organization, conduct, and management of any corporation, except common carriers, and to gather such information and data as will enable the President to make recommendations to Congress from time to time as he may require, and this information, or as much thereof as the President may direct, shall be made public." The bureau has the same authority in respect to corporations engaged in interstate and foreign commerce as is conferred on the Interstate Commerce Commission, including that to subpœna and compel the attendance of witnesses, the production of documentary evidence, and the administration of oaths.



Creating a New Department

To the administration and organization of this new department Mr. Cortelyou has applied himself with untiring energy. It is difficult for the outsider to understand the magnitude of this task. His has been the problem of initiating new work, or harmonizing the bureaus, of eliminating the duplication of labor, especially in the collection of statistics, and of directing the energies of more than ten thousand employees and controlling an annual expenditure of almost ten million dollars. Mr. Cortelyou has "made haste slowly," taking pains to lay well the foundations of the new department. It has required unceasing effort, the closest attention to detail, and the utilization of his trained faculty of organization. He started out with the determination that his department should be no "asylum for decayed politicians," and that it should be an example of thorough organization, in which, with harmonious cooperation and strict discipline, individual effort should be encouraged. Red tape has been cut, and the work has been carried on with a smoothness that is exceptional in the government service. This labor of sixteen months has not been spectacular. There has been little to indicate publicly what has really been accomplished, but Mr. Cortelyou's successor will find that the department has been started and is running with the regularity of perfected machinery. The statistical work of the government has been reorganized. Upon Mr. Cortelyou's recommendation, Congress has created a Congressional commission to determine the best method for the upbuilding of our merchant marine, while laws have been enacted for the better protection of seamen. New work and new investigations have been undertaken by every bureau, the efficiency of the immigration service has been improved, and each bureau has grown in usefulness. Considering the inadequacy of appropriations, it was an admirable record. During the difficult work of organization, from which his successor will gather reputation, Mr. Cortelyou has been the constant adviser of the President, first in matters directly touching the work of the White House, and later in the great affairs of the government and the problems of its administration.



For National Chairman

The choice of Mr. Cortelyou for national chairman was an innovation of the kind to be expected of President Roosevelt. Because of his close relations with them, it was a tribute to the memories of Mr. McKinley and of Mr. Hanna. The President had watched Cortelyou's work, and learned his abilities, seeing in him every quality necessary for campaign management. Consultations with Republicans prominent in national affairs and with others outside of Washington, confirmed his opinion of Cortelyou's availability. A few politicians, displeased that one of their number was not selected, have criticised the President's decision, but the great majority have frankly acknowledged its wisdom. The death of Senator Hanna, whose previous success in the same field had made him the President's first choice, left a vacancy difficult to fill. Several accomplished Republican politicians were then considered, including ex-Governor W. Murray Crane, of Massachusetts; ex-Secretary of War Elihu Root, of New York, and ex-Secretary of the Interior Cornelius N. Bliss, of New York. These three the President sounded. Mr. Crane's health was not robust. Mr. Root could not be released from his obligations to his clients, and Mr. Bliss was reluctant because he feared the strain would be too great. Then came Cortelyou. The suggestion of his name by Mr. Loeb, the President's secretary, was a revealing flash. It immediately commanded approving attention. The wonder was that it had not occurred in the first place. Doubtless it would have, had it not been for the idea that a practical politician was needed for an undertaking where executive talent is essential and good judgment and tact most necessary. It was a manifestation of self-confidence, which has never been tarnished by conceit and which has contributed to his advancement in the past, that Mr. Cortelyou should without hesitation have consented to undertake so burdensome a task and one of a kind of which he had had no previous experience. It means, of course, added reputation if success follows, as it means loss of prestige earned by years of service if failure shall be the result of his management.

The "Japansky," fastest of the Auto-boats, covering the Nineteen-and-a-half-mile Course in 1.06.29

"Fiat II." Winning the Class S Contest over the Nineteen-and-a-half-mile Course in 1.13.23

POWER-BOAT RACES ON LONG ISLAND SOUND

A speed test of power-boats was held at Manhasset Bay on May 30 in a regatta of the American Power-boat Association. Twelve boats competed, four of them being of the auto type. Of this class the "Japansky," owned by F. H. Waldorf, proved the fastest, covering the nineteen-and-a-half-mile course in 1.06.29 (corrected time). Winners in other classes were C. H. Tangerman's "Fiat II.," and Alexander Stein's "Allure." Mr. W. K. Vanderbilt, Jr.'s, "Hard Boiled Egg"—so named because it "couldn't be beat"—was injured by an accident to her rudder and obliged to retire from the contest

ARTILLERY PRACTICE IN THE FIELD

One of the most important operations of the Japanese in the field is the storming and capture of Kin-Chow, north of Port Arthur, on the Liao-Tung Peninsula, which has revealed the retreat of the Russians after twenty-four hours' hard fighting. The Russian forces are said to be retiring before the Japanese, who are said to be landing another army of 50,000 men at Taku-Shan

Books and Bookmen

By James MacArthur

IT would form a curious and interesting study for a critic of insight and patience to institute an inquiry into the reasons why English women cling more and more conservatively to conventional lines in fiction, while American women seem to aspire to more adventurous and original paths. Servile imitation of familiar and long-accepted types is the common characteristic of fiction written by English women, even when distinguished by excellence of style and sincerity of feeling, whereas in the stories and novels of American women you find a fresher outlook on life, a more daring exposé of human experience, and a sense of revelation which is pregnant with unusual and sometimes startling significance, even when, as not infrequently happens, the treatment is crude, inartistic, and lacking the graces of style. Whatever her defects, the last thing the American woman can be accused of is the smug and commonplace. The one great exception in England—I think my readers will bear me out—is Mrs. Humphry Ward; indeed, it is just by reason of her imaginative power to be strongly individual and strikingly creative in her selection of the social congeries of English life, and to realize her types as characters with fresh meaning for us in the dramatic solvent of her imagination, that she rises above the common level, and is the great novelist she is to-day. For example, in the opening chapters of her new novel, *The Marriage of William Ashe*, which appear in the June HARPER'S, we recognize in the masterly touch of the artist and in the firm intellectual grasp the hand of Mrs. Ward, but the grouping of the characters and the situation involved present a fresh and piquant problem. The strange admixture of girlish ingenuousness and flowerlike innocence with frank unsuspecting worldliness and knowledge of good and evil that is embodied in Lady Kitty Bristol, just fresh from a French convent and new to the strange privileges and amenities of her mother's social coterie, is wonderfully fascinating and tense with reality. Kitty is so alive, so fresh and naïve in her young charm and grace and piquant personality, that you feel the thrill of life in her while she is on the scene, and the others seem to sink into the background to serve as a foil, or to gain significance only as they are related to her. It looks as if Mrs. Ward would add yet another new type of character to her heroines, and the story certainly promises in its initial situation to be the most daring that she has attempted. The mystery that surrounds the earlier years of Lady Kitty's mother, the hint of scandal that disturbs William Ashe, who is already captivated by the beautiful young girl and has promised to befriend her, the contrast between Madame d'Estrées, throned in her hothouse of a salon, and her child, breathing Eden, savor somewhat of De Maupassant's *Yvette*. As I saw this story adapted to the stage at a recent matinée performance, I wondered whether it was not possible for some novelist to give us a study of *Yvette's* English counterpart as surrounded and affected by the social life of London instead of Paris. Has Mrs. Ward done it? That is what I am eager to find out. Certainly the theme could not be in safer or better hands.

Omar as seen by the late Phil May

"I was talking with a journalist recently," writes Claudius Clear in the *British Weekly*, "and we happened on the subject of George Meredith. The conversation took an inevitable turn. I expressed for the thousandth time my amazement that a book like *The Ordeal of Richard Feverel* was so little appreciated by reviewers and the reading public. Hardly one cordial notice appeared when the book was published, and many copies of the small edition were sold as a remainder. Said the journalist:

"*Journalist.* Do you think it conceivable that this could happen now?"

"*I.* Certainly not. Critics and publishers and publishers' readers are so much on the lookout for any trace of talent that they would certainly lay hold of such a book and make the best of it.

"*Journalist.* Do you know that there is a writer among us quite as important as Meredith, and quite as much neglected as Meredith ever was?

"*I.* I do not believe it. Has he published anything lately?

"*Journalist.* Yes, he published a new book not many weeks ago, and it is a better book than *Richard Feverel*.

"*I.* Who is he?

"*Journalist.* —— ——."

I invite my readers to fill up the blank.

Mr. Clement Shorter, editor of the *Sphere*, has just come across a piece of new information concerning the author of *Robinson Crusoe* in an out-of-the-way corner. In Volume VI. of *English Army Lists and Commission Registers, 1661–1714*, edited and annotated by C. Dalton, there is to be found this bit of biography:

"Daniel Defoe was a captain-lieutenant in Colonel John Desbordes's regiment of dragoons in Portugal in 1714. There is every reason to believe that Captain-Lieutenant Daniel Defoe is identical with the renowned and versatile author of *Robinson Crusoe*, whose checkered career from 1688 to his death in 1731 afforded many interesting details for contemporary as well as for nineteenth, and even twentieth, century historians and biographers; but up to the present time no writer appears to have discovered the fact that Defoe was a commissioned officer in a cavalry regiment in Queen Anne's service (see preface). It is not strange that his commission is not forthcoming in the commission entry books, as Desbordes's dragoons were raised in Portugal and the commissions signed by the Earl of Galway. Defoe (then known as Foe) was "out" with Monmouth and had joined the Prince of Orange's army on the famous march to London; in the following year he was a trooper in a London regiment of volunteer horse. It is also on record that Defoe was no mean Spanish scholar, and he was employed by Harley on a secret political mission. Defoe's name appears likewise in a manuscript list of half-pay officers for 1722."

Mr. Shorter is to be congratulated upon unearthing this literary nugget from the dry-as-dust pages of a Blue Book.

Some of my readers may recall the fact that just before his sudden death in Liverpool in April, 1888, Matthew Arnold had attended service in Sefton Park Presbyterian Church, where he listened with devout attention to a sermon by Dr. Watson (Ian Maclaren) on the subject of the Great Sacrifice. He was deeply moved, and on his way home spoke earnestly with a friend of the passion and death of Christ. A similar incident which John Brown relates of Thackeray has come to my notice. When the novelist visited Edinburgh, near the end of his days, he walked out with two friends one evening in the direction of Corstorphine Hill. The sun was setting, and a yellow bar of light lay above the horizon. On the top of the hill was a crane that had been left there by some workmen, which in the evening dusk seemed to shape itself into the form of a cross. Thackeray paused, and pointing to it, uttered, in a low voice, the one word, "Calvary." The friends walked home in silence, and the impression made on the great novelist's mind was so profound that during the rest of the evening his only theme was the death and love of Christ.

THE CLUB OF QUEER TRADES

The Singular Speculation of the House Agent

by

G·K·CHESTERTON

Part II.

THE breakfast-table was nearly flung over as Rupert sprang, slapping both his thighs.

"Well, by all that's good," he cried. "This is a sign from heaven."

"It's certainly very extraordinary," said Basil, quietly, with knitted brows. "It's odd the fellow should have given a false address, considering he was perfectly innocent in the . . ."

"Oh, you jolly old early Christian duffer," cried Rupert, in a sort of rapture, "I don't wonder you couldn't be a judge. You think every one as good as yourself. Isn't the thing plain enough now? A doubtful acquaintance; rowdy stories, a most suspicious conversation, mean streets, a concealed knife, a man nearly killed, and, finally, a false address. That's what we call glaring goodness."

"It's certainly very extraordinary," repeated Basil. And he strolled moodily about the room. Then he said: "You are quite sure, constable, that there's no mistake? You got the address right, and the police have really gone to it and found it was a fraud?"

"It was very simple, sir," said the policeman, chuckling. "The place he named was a well-known common quite near London, and our people were down there this morning before any of you were awake. And there's no such house. In fact, there are hardly any houses at all. Though it is so near London, it's a blank moor with hardly five trees on it, to say nothing of Christians. Oh no, sir, the address was a fraud right enough. He was a clever rascal, and chose one of those scraps of lost England that people know nothing about. Nobody could say offhand that there was not a particular house dropped somewhere about the heath. But as a fact, there isn't."

Basil's face during this sensible speech had been growing darker and darker with a sort of desperate sagacity. He was cornered almost for the first time since I had known him; and to tell the truth I rather wondered at the almost childish obstinacy which kept him so close to his original prejudice in favor of the wildly questionable lieutenant. At length he said:

"You really searched the common? And the address was really not known in the district—by the way, what was the address?"

The constable selected one of his slips of paper and consulted it, but before he could speak Rupert Gryce, who was leaning in the window in a perfect posture of the quiet and triumphant detective, struck in with the sharp and suave voice he loved so much to use.

"Why, I can tell you that, Basil," he said, graciously, as he idly plucked leaves from a plant in the window. "I took the precaution to get this man's address from the constable last night."

"And what was it?" asked his brother, gruffly.

"The constable will correct me, if I am wrong," said Rupert, looking sweetly at the ceiling. "It was 'The Elms,' Buxton Common, near Purley, Surrey."

"Right, sir," said the policeman, laughing and folding up his papers.

There was a silence, and the blue eyes of Basil looked blindly for a few seconds into the void. Then his head fell back in his chair so suddenly that I started up, thinking him ill. But before I could move further his lips had flown apart (I can use no other phrase) and a peal of gigantic laughter struck and shook the ceiling—laughter that shook the laugher, laughter redoubled, laughter incurable, laughter that could not stop.

Two whole minutes afterwards it was still unended; Basil was ill with laughter; but still he laughed. The rest of us were by this time ill almost with terror.

"Excuse me," said the insane creature, getting at last to his feet. "I am awfully sorry. It is horribly rude. And stupid, too. And also unpractical, because we have not much time to lose if we're to get down to that place. The train service is damnably bad, as I happen to know. It's quite out of proportion to the comparatively small distance."

"Get down to that place?" I repeated, blankly. "Get down to what place?"

"I have forgotten its name," said Basil, vaguely, putting his hands in his pocket as he rose. "Something common near Purley. Has any one got a time-table?"

"You don't seriously mean," cried Rupert, who had been staring in a sort of confusion of emotions. "You don't mean that you want to go to Buxton Common, do you? You can't mean that!"

"Why shouldn't I go to Buxton Common?" asked Basil, smiling.

"Why should you?" said his brother, catching hold again restlessly of the plant in the window and staring at the speaker.

"To find our friend, the lieutenant, of course," said Basil Gryce. "I thought you wanted to find him?"

Rupert broke a branch brutally from the plant and flung it impatiently on the floor. "And in order to find him," he said, "you suggest the admirable expedient of going to the only place on the habitable earth where we know he can't be."

The constable and I could not avoid breaking into a kind of assenting laugh, and Rupert, who had family eloquence, was encouraged to go on with a reiterated gesture:

"He may be in Buckingham Palace; he may be sitting astride the cross of St. Paul's; he may be in gaol (which I think most likely); he may be in the Great Wheel; he may be in my pantry; he may be in your store cupboard; but out of all the innumerable points of space, there is only one where he has just been systematically looked for and where we know that he is not to be found—and that, if I understood you rightly, is where you want us to go."

"Exactly," said Basil, calmly, getting into his great coat; "I thought you might care to accompany me. If not, of course, make yourselves jolly here till I come back."

It is our nature always to follow vanishing things and value them if they really show a resolution to depart. We all followed Basil, and I cannot say why, except that he was a vanishing thing, that he vanished decisively with his great coat and his stick. Rupert ran after him with a considerable flurry of rationality.

"My dear chap," he cried, "do you really mean that you see any good in going down to this ridiculous scrub, where there is nothing but beaten tracks and a few twisted trees, simply because it was the first place that came into a rowdy lieutenant's head when he wanted to give a lying reference in a scrape?"

"Yes," said Basil, taking out his watch, "and, what's worse, we've lost the train."

He paused a moment and then added: "As a matter of fact, I think we may just as well go down later in the day. I have some writing to do, and I think you told me, Rupert, that you thought of going to the Dulwich Gallery. I was rather too impetuous. Very likely he wouldn't be in. But if we get down by the 5.15, which gets to Purley about 6, I expect we shall just catch him."

"Catch him!" cried his brother, in a kind of final anger. "I wish we could. Where the devil shall we catch him now?"

"I keep forgetting the name of the common," said Basil, as he buttoned up his coat. "The Elms—what is it? Buxton Common, near Purley. That's where we shall find him."

"But there is no such place," groaned Rupert; but he followed his brother down-stairs.

We all followed him. We snatched our hats from the hat-stand and our sticks from the umbrella-stand; and why we followed him we did not and do not know. But we always follow him, whatever was the meaning of the fact, whatever was the nature of this mastery. And the strange thing is (a thing which, I fancy, lies somewhere near the root of all religions) that we followed him the more completely the more nonsensical appeared the thing which he said. At bottom, I believe, if he had risen from our breakfast-table and said, "I am going to find the Holy

Pig with Ten Tails," we should have followed him to the end of the world.

I don't know whether this mystical feeling of mine about Basil on this occasion has got any of the dark and cloudy color, so to speak, of the strange journey that we made the same evening. It was already very dense twilight when we struck southward from Purley. Suburbs and things on the London border may be, in most cases, commonplace and comfortable. But if ever by any chance they really are empty solitudes they are to the human spirit more desolate and dehumanized than any Yorkshire moors or Highland hills, because the suddenness with which the traveller drops into that silence has something about it as of evil elfland. It seems not only to be one of the ragged suburbs of London, it seems to be one of the ragged suburbs of the cosmos half-forgotten by God—such a place was Buxton Common, near Purley.

There was certainly a sort of gray futility in the landscape itself. But it was enormously increased by the sense of gray futility in our expedition. The tracts of drab turf looked useless, the occasional wind-stricken trees looked useless, but we the human beings more useless than the hopeless turf or the idle trees. We were maniacs akin to the foolish landscape, for we were come to chase the wild goose which has led men and left men in bogs from the beginning. We were three dazed men under the captaincy of a madman going to look for a man whom we knew was not there in a house that had *no* existence. A livid sunset seemed to look at us with a sort of sickly smile before it died.

Basil went on in front with his coat collar turned up, looking in the gloom rather like a grotesque Napoleon. We crossed swell after swell of the windy common in increasing darkness and entire silence. Suddenly Basil stopped and turned to us, his hands in his pockets. Through the dusk I could just detect that he wore a broad grin as of comfortable success.

"Well," he cried, taking his heavily gloved hands out of his pockets and slapping them together, "here we are at last."

The wind swirled sadly over the homeless heath; two desolate elms rocked above us in the sky like shapeless clouds of gray. There was not a sign of man or beast to the sullen circle of the horizon, and in the midst of that wilderness Basil Gryce stood rubbing his hands with the air of an innkeeper standing at an open door.

"How jolly it is," he cried, "to get back to civilization. That notion that civilization isn't poetical is a civilized delusion. Wait till you've really lost yourself in nature, among the devilish woodlands and the cruel flowers. Then you'll know that there's no star like the red star of man that he lights on his hearthstone; no river like the red river of man, the good red wine, which you, Mr. Rupert Gryce, if I have any knowledge of you, will be drinking in two or three minutes in enormous quantities."

Rupert and I exchanged glances of fear. Basil went on heartily, as the wind died in the dreary trees.

"You'll find our host a much more simple kind of fellow in his own house. I did when I visited him when he lived in the cabin at Yarmouth and again in the loft at the city warehouse. He's really a very good fellow. But his greatest virtue remains what I said originally."

"What do you mean?" I asked, finding his speech straying towards a sort of sanity. "What is his greatest virtue?"

"His greatest virtue," replied Basil, "is that he always tells the literal truth."

"Well, really," cried Rupert, stamping about between cold and anger, and slapping himself like a cabman, "he doesn't seem to have been very literal or truthful in this case, nor you either. Why the deuce, may I ask, have you brought us out to this infernal place?"

"He was too truthful, I confess," said Basil, leaning against the tree; "too hardly veracious, too severely accurate. He should have indulged in a little more suggestiveness and legitimate romance. But come, it's time we went in. We shall be late for dinner."

Rupert whispered to *me* with a white face.

"Is it a hallucination, do you think? Does he really fancy that he sees a house?"

"I suppose *so*," I said. Then I added aloud, in what was meant to be a cheery and sensible voice, but which sounded in my ears almost as strange as the wind:

"Come, *come*, Basil, my dear fellow. Where do you want us to *go*?"

"Why, up here," cried Basil, and with a bound and a swing he was above our heads, swarming up the gray column of the colossal tree.

"Come up, all of you," he shouted out of the darkness, with the voice of a schoolboy. "Come up. You'll be late for dinner."

The two great elms stood so close together that there was hardly a yard anywhere, and in some places not more than a foot, between them. Thus occasional branches and even bosses and boles formed a series of footholds that almost amounted to a rude natural ladder. They must, I supposed, have been some sport of growth, Siamese twins of vegetation.

Why we did it I cannot think; perhaps, as I have said, the mystery of the waste and the dark had brought out and made primary something wholly mystical in Basil's supremacy. But we only felt that there was a giant's staircase going somewhere, perhaps to

the stars; and the victorious voice above called to us out of heaven. We hoisted ourselves after him.

Half-way up some cold tongue of the night air struck and sobered me suddenly. The hypnotism of the madman above fell from me, and I saw the whole map of our silly actions as clearly as if it were printed. I saw three modern men in black coats who had begun with a perfectly sensible suspicion of a doubtful adventurer and who had ended, God knows how, half-way up a naked tree on a naked moorland, far from that adventurer and all his works, that adventurer who was at that moment, in all probability, laughing at us in some dirty Soho restaurant. He had plenty to laugh at us about, and no doubt he was laughing his loudest, but when I thought what his laughter would be if he knew where we were at that moment, I nearly let go of the tree and fell.

"Swinburne," said Rupert, suddenly, from above, "what are we doing? Let's get down again," and by the mere sound of his voice I knew that he too felt the shock of wakening to reality.

"We can't leave poor Basil," I said. "Can't you call to him or get hold of him by the leg?"

"He's too far ahead," answered Rupert: "he's nearly at the top of the beastly thing. Looking for Lieutenant Keith in the rook's nests, I suppose."

We were ourselves by this time far on our frantic vertical journey. The mighty trunks were beginning to sway and shake slightly in the wind. Then I looked down and saw something which made me feel that we were far from the world in a sense and to a degree that I cannot easily describe. I saw that the almost straight lines of the tall elm-trees diminished a little in perspective as they fell. I was used to seeing parallels taper towards the sky. But to see them taper towards the earth made me feel lost in space, like a falling star.

"Can nothing be done to stop Basil?" I called out.

"No," answered my fellow climber. "He's too far up. He must get to the top, and when he finds nothing but wind and leaves he may go sane again. Hark at him above there; you can just hear him talking to himself."

"Perhaps he's talking to us," I said.

"No," said Rupert, "he'd shout if he was. I've never known him to talk to himself before: I'm afraid he really is bad tonight: it's a known sign of the brain going."

"Yes," I said, sadly, and listened. Basil's voice certainly was sounding above us, and not by any means in the rich and riotous tones in which he had hailed us before. He was speaking quietly, and laughing every now and then, up there among the leaves and stars.

After a silence mingled with this murmur, Rupert Gryce suddenly said, "My God!" with a violent voice.

"What's the matter—are you hurt?" I cried, alarmed.

"No. Listen to Basil," said the other in a very strange voice. "He's not talking to himself."

"Then he is talking to us," I cried.

"No," said Rupert, simply, "he's talking to somebody else."

Great branches of the elm loaded with leaves swung about us in a sudden burst of wind, but when it died down I could still hear the conversational voice above. I could hear more; I could hear two voices.

Suddenly from aloft came Basil's boisterous hailing voice as before: "Come up, you fellows. Here's Lieutenant Keith."

And a second afterwards came the half-American voice we had heard in our chambers more than once. It called out:

"Happy to see you, gentlemen: pray come in."

Out of a hole in an enormous dark egg-shaped thing pendant in the branches like a wasp's nest, was protruding the pale face and fierce mustache of the lieutenant, his teeth shining with that slightly Southern air that belonged to him.

Somehow or other, stunned and speechless, we lifted ourselves heavily into the opening. We fell into the full glow of a lamplit, cushioned, tiny room, with a circular wall lined with books, a circular table, and a circular seat round it. At this table sat three people. One was Basil, who, in the instant after alighting there, had fallen into an attitude of marmoreal ease as if he had been there from boyhood; he was smoking a cigar with a slow pleasure. The second was Lieutenant Drummond Keith, who looked happy also, but feverish and doubtful compared with his granite guest. The third was the little bald-headed house-agent with the wild whiskers, who called himself Montmorency. The spears, the green umbrella, and the cavalry sword hung in parallels on the wall. The sealed jar of strange wine was on the mantelpiece, the enormous rifle in the corner. In the middle of the table was a magnum of champagne. Glasses were already set for us.

The wind of the night roared far below us, like an ocean at the foot of a lighthouse. The room stirred slightly, as a cabin might in a mild sea.

Our glasses were filled, and we still sat there dazed and dumb. Then Basil spoke:

"You seem still a little doubtful, Rupert. Surely there is no further question about the cold veracity of our injured host."

"I don't quite grasp it at all," said Rupert, blinking still in the sudden glare. "Lieutenant Keith said his address was . . ."

"It's really quite all right, sir," said Keith, with an open smile. "The bobby asked me where I lived. And I said, quite truthfully, that I lived in the elms on Buxton Common, near Purley. So I do. This gentleman, Mr. Montmorency, whom I think you have met before, is an agent for houses of this kind. He has a special line in arboreal villas. It's being kept rather quiet at present, because the people who want these houses don't want them to get too common. But it's just the sort of thing that a fellow like myself, racketing about in all sorts of queer corners of London, naturally knocks up against."

"Are you really an agent for arboreal villas?" asked Rupert, eagerly, recovering his ease with the romance of the reality.

Mr. Montmorency, in his embarrassment, fingered one of his pockets and nervously pulled out a water-rat, which ran about the table.

"W-well, yes, sir," he said. "The fact was—er—my people wanted me very much to go into the house-agency business. But I never cared myself for anything but natural history and botany and things like that. My poor parents have been dead some years now, but—naturally I like to respect their wishes. And I thought somehow that an arboreal villa agency was a sort of—of compromise between being a botanist and being a house-agent."

"Rupert could not help laughing. "Do you have much custom?" he asked.

"N-not much," replied Mr. Montmorency, and then he glanced at Keith, who was (I am convinced) his only client. "But what there is—very select."

"My dear friends," said Basil, puffing his cigar, "always remember two facts. The first is that though, when you are guessing about any one who is sane, the surest thing is the most likely; when you are guessing about any one who is, like our host, insane, the maddest thing is the most likely. The second is to remember that very plain literal fact always seems fantastic. If Keith had taken a little brick box of a house in Clapham with nothing but railings in front of it and had written "The Elms" over it, you wouldn't have thought there was anything fantastic about that. Simply because it was a great blaring, swaggering lie you would have believed it."

"Drink your wine, gentlemen," said Keith, laughing, "or this confounded wind will upset it."

We drank, and as we did so, although the hanging house, by a cunning mechanism, swung only slightly, we knew that the great head of the elm-tree swayed in the sky like a stricken thistle.

Politics in England

By Sydney Brooks

LONDON, *June 1, 1904.*

A YEAR has passed since Mr. Chamberlain's plunge into protection. A more stirring and eventful year this country has not known since the home-rule crisis of two decades ago. It was, to begin with, wonderful enough that protection, of all issues supposed to be the most completely dead, should be resurrected at all. Americans would be scarcely less surprised if they were suddenly confronted with slavery as a living question. But even more remarkable have been the ups and downs, the amazing fluctuations, of the movement which Mr. Chamberlain set on foot. For a while it seemed to carry all before it, and to meet with something like a national response. The number of unconverted protectionists in England has always been a large one. They, of course, sprang full-armed and joyously to the side of their unexpected champion. They were reinforced by the lukewarm free-traders, the men who, noting the giant strides of Germany and the United States under protection, thought that there must be "something in it." Cobden and John Bright, like all reformers, exaggerated their case and painted the future too brightly. The reaction that had been palpably setting in for thirty years and more against the severe tenets of the Manchester school, and the discovery that not all of their prophecies had been verified, immensely helped the Chamberlain agitation. Agriculturalists, in England as everywhere else, are natural protectionists. They, too, flocked to a man round the old standard so astonishingly raised anew. The very general feeling that England had been falling away in the commercial race, that "something ought to be done about it," made thousands incline to protection as a novel, and therefore conceivably the right, remedy. Again, the hatred of Germany that in May, 1903, obtained among all classes worked powerfully on Mr. Chamberlain's side. Teutophobia and the possibility of giving expression to it by means of preferential tariffs made up a tune to which England at the moment—the moment has now happily passed—was overready to dance. Moreover, there was the strength of imperial sentiment. It was by threatening England with "the dissolution of the empire" that Mr. Chamberlain set out to win support for his scheme. Unless it was carried, unless Englishmen abandoned their "economic pedantries," their "old shibboleths," and renounced free trade in favor of protection, Mr. Chamberlain warned them that the empire was doomed. Without a closer and ever closer commercial connection with the colonies, Mr. Chamberlain was "sure we shall fall to pieces and into separate atoms"—"we shall deserve the disasters that will infallibly come upon us." That was a very clever line to take. England is so thoroughly imperialistic in policy and sentiment that Mr. Chamberlain could hardly help succeeding if he once persuaded the nation that free trade spelled imperial disruption

and that protection alone would lastingly consolidate. And, finally, greatest asset of all, there was Mr. Chamberlain himself, the one minister in whose efficiency the average Englishman had real confidence.

There could not, therefore, have been a riper moment for the launching of a protectionist programme. It immensely caught on. The fiscal issue engrossed all discussions public and private. The press lived on it. The audacity of the proposal and the extraordinary skill with which Mr. Chamberlain baited it for popular consumption had apparently done their work. What looked like an overwhelming flood of approval and support set in. It was increased when Chamberlain resigned his office to devote himself solely to his new programme. So striking an act of self-abnegation appealed to the chivalry of the people. I think any one landing in England at that moment and remarking how unanimously all the public signs pointed in one direction, would have concluded that Mr. Chamberlain's was the winning side. I confess I thought so myself. I know as a fact that Mr. Chamberlain thought so too. He wrote to a friend in October last saying that he was at last convinced that he would win the next election. Up till then he had expected that he would be defeated at the first appeal to the country, that the Liberals would come in, would disgust the country in their usual fashion, and that then, as the result of a second election, he would be swept into power. But by October so rapidly did the proofs of popular support crowd in upon him that he was persuaded that success even at the first trial of strength would be his. A great many observers shared his opinions. Yet suddenly there came a few by-elections. Victory after victory fell to the free-traders. Constituencies that had never before returned any one but an out-and-out Tory now chose a Liberal to represent them. For a while it seemed as though not a protectionist seat in the country was safe or beyond the reach of a successful attack. Nothing could have illustrated more aptly the immense difficulties of gauging public opinion in England. The British Demos kept silent until it was time to roar, and when he roared it was in a way that those who were supposed to know him best expected least. In a moment the protectionist edifice collapsed. To add to the confusion Mr. Chamberlain broke down in health, was obliged to go for a two months' trip abroad, and has only now taken up his campaign again. His absence proved that the whole protectionist *movement* was a one-man agitation. When he left England it fell utterly flat. To-day it has almost ceased to exist as an issue in which *people* are interested.

What, then, has he accomplished? He has for one thing provided England with a *stimulating topic*. He has made the people dive down into the foundations of their fiscal system and their whole economic and commercial position. That, as Americans found in 1896, is to perform a service that braces and widens the national mind. Nothing, indeed, could have been more encouraging to believers in democracy than the way in which the English people have grappled with the complexities of the tariff question during the past twelve months, arguing and worrying it out with little appeal to rhetoric or vague generalization, but with an intense desire to get at the real facts. Secondly, Mr. Chamberlain has successfully split the Unionist party in two. He has captured the party machinery, and the bulk of the Tories look to him and not to Mr. Balfour for leadership; but he has driven into the free-trade camp some fifty of the most brilliant and most experienced members of the party. Thirdly, he has given Mr. Balfour an opportunity for displaying his genius as a Parliamentary tactician. It is perfectly true that no one takes an interest in Mr. Balfour's policy of retaliation, and that every one looks on it as merely the forerunner to Mr. Chamberlain's bolder scheme. Nevertheless, it has proved a most convenient refuge for the irresolute and the doubters; it has been of immense assistance in staving off a dissolution, and it has in some sort kept the party together. To abandon it would be to produce a cleavage far more serious than any that has yet appeared; to maintain is to be able to point to a barrier against Mr. Chamberlain's total domination of the Tory party. And yet while this is true, it is also true that Mr. Chamberlain is the controlling influence, that his supporters within the party outnumber Mr. Balfour's, and that the Balfour ministry exists only by his tolerance. He could turn it out and force a dissolution at any moment that suited himself. When that moment will come it is impossible to predict. The point is that though protection is for the moment out of fashion, Mr. Chamberlain has not by any means abandoned it. He will make it the dominating issue of the next election and the election after. Himself a man of the most sanguine temperament, he will neither admit the possibility of ultimate defeat nor allow his followers to admit it either. It does not affect him that no single statesman of the first rank has sided with him, that the country regards his case as still unproved, that by-election after by-election tells against him, or that a general appeal to the country can only end in his overthrow. He still goes persistently on, painting the same lurid pictures of British decline, using the old statistics, hashing up the same arguments, and trusting to the next Liberal ministry to so mismanage things that the country will welcome his return to power, even on a protectionist platform. He is, in short, risking a long shot—always a dubious sort of proceeding in politics. His immediate defeat one may take as certain; his ultimate victory is no more than a shadowy possibility.

The Message of Asia

By William Westcott Fink

THEY stand on the shores of Europe, kings, gazing across the sea.
('Tis the time of the "Times-and-half-times" prophetic of woes to be.)
They have drawn them close together, for danger waits without,
Each pledging true allegiance, each sharing a secret doubt.
A ship, with unknown design, brings one of the swarthy race;
No message lights his Orient eye; thought-masked, his patient face:

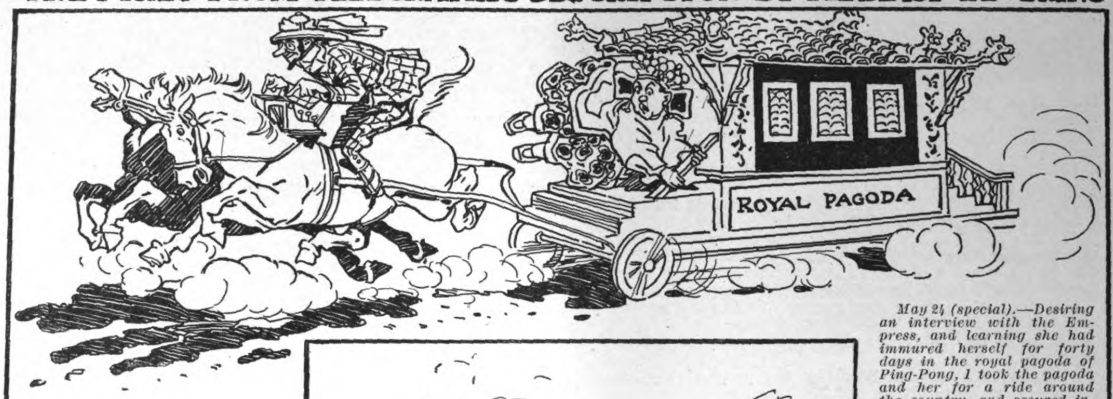
"I come to speak for Asia, for its millions yellow and brown,
For the golden rule your Christ set up and your arms have broken down.
You have taught us Christ is Mammon, that God is a god of greed;
You have preached the sweet-souled Nazarene while sowing destruction's seed.
You have rent our lands asunder and parcelled them out by lot,
The larger lot to the stronger with the dice of your cannon's shot."

Speaks one whose mien is kingly: "We have driven your night away;
We have loaned you the keys of science; brought civilization's day."

"Yea! Loaned us the keys of science through usurious laws of trade!
A thousand *yen* for a hundred *yen* we have paid, and the debt is paid!
We bought the white man's wisdom, the skill of the white man's hand;
The fateful force of your demon arts we have studied,—we understand!
You speak of our night: Aye! long we slept while the smoke of our incense curled
And a century marked but one degree in the journey around the world.
We wake: and kinship's bonds are brazed in our race's quenchless fire,
And the bounding blood of our scattered stock is burning with one desire.
Our blood has felt that kinship, from Hondo's sea-washed shore
To Asia's farthest fringe that sleeps beneath the evening star,
Since the awful curse at Babel, through cycles of untold years.
To this time of the 'Times-and-half-time' in the books of our ancient seers.
I come to speak for Asia, but come with palms of peace;
Your lease has run its limit; I but ask our land's release.—
Nay! 'Time to weigh the question in your various halls of state?'
The time of the 'Times-and-half-time' has struck on the clock of Fate!"

They stand on the shores of Europe while his ship sweeps out to sea.
They have drawn the closer together, save only one, and he
Stands brooding on dreams of conquest. Half-brother to brown and white,
He feels the fires of Tartar blood in the veins of the Muscovite.
In dreams he has waved his sceptre from Nebuchadnezzar's throne
Round the vastly sweep of the Orient to the Neva he calls his own.
He dreams, though cringing distance gleams bright with a million swords
And Asia quakes beneath the tramp of myriad tawny hordes.
They have changed their junks to battle-ships, their arrows to steel-tipped hail,
And the threshing-floors of Europe ring to the blows of Asia's flail.

The Hindu and the Buddhist, the bearer of Islam's blade,
Have crouched like hungry tigers o'er the mangled corpse of trade.
Join! sons of the mighty Aryan sire, Goth, Saxon and Gaul and Greek!
What matter your chance dividing lines? what matter the tongues you speak?
A common pall is over you all—from Scandia's wintry seas,
Round the ragged coasts of Christendom to the pillars of Hercules.
The ocean boils with navies as if lashed by a whirlwind's breath,
For the Occident and the Orient lock prows in the clutch of death.
A cloud obscures the ocean, a chill comes out of the cloud,
But the great guns peal till the awed coasts reel and Ruin laughs aloud.



They stand on the shores of Europe, they who loosened the bands of hell,
While thunders roll through the darkness, but the issue—who can tell!

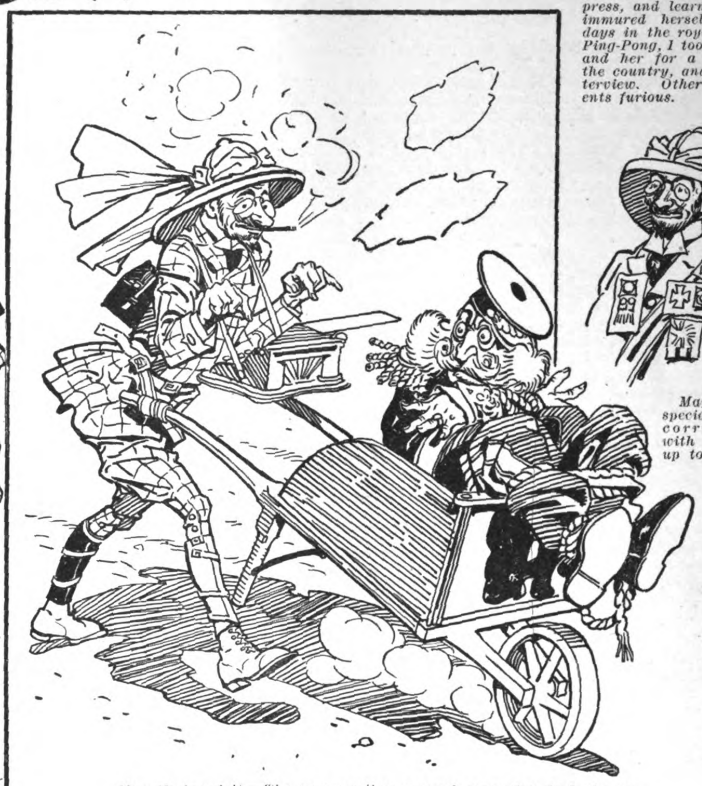
NEWS FROM THE WAR

THE PROGRESS OF THE SPECIAL CORRESPONDENT AT THE FRONT



SKETCHES FROM TELEGRAPHIC DESCRIPTION BY ALBERT LEVERING

May 24 (special).—Desiring an interview with the Empress, and learning she had immured herself for forty days in the royal pagoda of Ping-Pong, I took the pagoda and her for a ride around the country, and secured interview. Other correspondents furious.

May 26 (special).—Reported Japanese using poisoned swords. Hired a sword-swallower yesterday to swallow one; slight indigestion followed. Poison theory exploded.

May 28 (special).—The commanding general yesterday had the audacity to refuse to tell me the plan of campaign. I immediately haled him to my press bureau, and by force secured the desired information.

May 25 (very special). — Your correspondent with decorations up to date.

May 29 (special).—The reason I failed to send inside facts yesterday was, after tunnelling through 400 feet of solid rock, by a miscalculation (which I admit was my mistake) I came up outside the fortifications.

June 1 (special).—I visited the Boxers in their native territory, in order to learn their strength, and found that they are preparing to take no active part in the war

Correspondence

PRINCE OUKHTOMSKY ON RUSSIA—A REPLY

BROOKLINE, MASS., *May 31, 1904.*

To the Editor of Harper's Weekly:

SIR,—Allow me to write a few words in reply to Prince Oukhtomsky's article in derogation of the Japanese. He there brings the following three charges against these people:

(1) The Japanese are sea-pirates, deriving their civilization from other peoples, notably, I suppose, from the Chinese and Koreans.

(2) The Japanese, instead of seeking new lands to colonize, have enough to do in taking care of Formosa.

(3) The Japanese are hated by the people whom they have conquered or are seeking to conquer.

Therefore the United States should sympathize with Russia.

Let me reply as follows:

(1) The Russians are barbarians and Black Sea pirates. Consult for this statement the Byzantine historians. Their civilization is undoubtedly imported, notably the autocracy and the Orthodox Church, direct borrowings from degenerate Hellenism.

(2) The Russians have plenty enough to do for a hundred years in colonizing Siberia. There is much less excuse for them to hunger after new lands, for their own country is not nearly as densely peopled as Japan.

(3) The Russians are hated by the peoples they have conquered. Consider the Poles and the Finns.

Therefore the United States should sympathize with Japan.

Now why was it that an intelligent gentleman and one largely acquainted with Asiatic affairs could give no better an account of Russia in Manchuria than the silly tirade he wrote in the last number of HARPER'S WEEKLY? The real reason is that Russia has no good ground on which to ask for American sympathy in the present war. All Americans know, or ought to know, that, apart from all other reasons, Japan stands for enlightenment, progressive constitutionalism, religious freedom; while Russia, as at present constituted, is the antithesis of all these. In fact, a member of the Orthodox Church is not legally allowed to become even a member of another Christian body. Prince Oukhtomsky, not being able to appeal to Americans on grounds of civilization and enlightenment, or even commercial freedom, was obliged to resort to such empty reasons as he has used. He could not even allow himself to use his own favorite argument, which is this, that Russia, as being more in sympathy with Asiatic ideas, ought to be allowed to have a free hand in dealing with China and Korea, in preference to other European nations. The same argument would give the preference to Japan over Russia; so the Prince again had to fall back on abuse.

Let your readers compare such an article as that by Prince Oukhtomsky with the speeches of Baron Kaneko, reported almost every few days in the daily press. Compare the moderation and really Christian gentleness of the latter with the rude statements of the former. After such a comparison, one is apt sorrowfully to admit that the Russian, at least in reasoning and judgment and speech, is decidedly inferior to the Japanese in civilization. The ordinary American will be confirmed in his idea that Japan ought to win; and should show his appreciation of what Japan is really doing for civilization in this war by contributing his mite to the Perry Memorial Fund in aid of the widows and children of Japanese who shall fall in Manchuria in behalf of that civilization. The treasurer of the Commodore Perry Fund is Mr. James S. Fearon 96 Wall Street, New York city.

I am, sir, JOHN FOGG TWOMBLY.

THE LATEST ARRAIGNMENT OF WOMEN

CAMBRIDGE, MASS., *June 1, 1904.*

To the Editor of Harper's Weekly:

SIR,—The average American woman must by this time be weary of the gross misrepresentations as well as misconceptions to which she is subjected on the part of her foreign critics, whose estimate of her is so false that, despite the most rigid self-scrutiny on her part, she fails to recognize in it any approach to her real self.

Accustomed as she is to the startling characteristics attributed to her, it must, nevertheless, come to her as a distinct surprise, the recent accusation, which appeared in the WEEKLY of May 28, of Dr. Emil Reich, this new Daniel come to judgment, that she is contemptuous of men.

It has seemed to me that one of her most strongly developed attributes was her great admiration, especially for American manhood, which suffers nothing, but rather gains, when compared with that of other nationalities. Otherwise, why do we so often hear from her the assertion that "There are no other men in the world as nice as our American men." Doubtless there is a certain satisfaction in the greater punctiliousness in the lifting of hats and attention to minor conventionalities, the outgrowth of a more careful training in matters of etiquette, on the part of her foreign friends; but she finds in her own countrymen what is far better, a mental attitude towards her which implies protection, as well as a brotherliness which does not misunderstand her, and to which she can appeal with impunity all the way from the fine gentleman to the tramp. Unlike her foreign friends, they give deference to her womanhood alone, irrespective of social rank or position in life.

The camaraderie which exists between her and her youthful male friends is delightful to her, as is that wholesome companionship of the married estate, which precludes anything like subserviency on her part, and the assumption of mastership on the part of her husband.

That "self-effacement" which Dr. Reich so admires in European women, but which seems unworthy of the dignity of even a German frau, does not appeal to her any more than does the masterful assumption, often amounting to boorishness of the average German spouse. She wishes to stand upon an equality with her husband, which surely seems a laudible ambition.

Contempt, indeed! Despite the carping of these foreign critics, American manhood, as expressed in its attitude towards womanhood, is the finest flower of the whole-world civilization, and American women are quick to recognize it and happy in their appreciation of it. I am, sir, A. C. H.

CAPTAINS OF INDUSTRY

NAPOLEON, OHIO, *May 10, 1904.*

To the Editor of Harper's Weekly:

SIR,—Will you oblige some of your old readers by publishing a list of the "captains of industry" who attended the famous dinner given to Prince Henry on the occasion of his visit to this country? There have been so many rapid changes in the financial ranks during the past year that it will be instructive to read the list of captains mustered at that time.

I am, sir, DESHLER HOLGATE.

Following is the list asked for by our correspondent.—EDITOR.

TABLE OF HONOR—HOSTS AND PRINCIPAL GUESTS.

1.—Edward D. Adams. 2.—Commander von Holleben. 3.—Alexander E. Orr. 4.—Consul-General Buenz. 5.—William Rockefeller. 6.—Commander von Grumme. 7.—George F. Baker. 8.—Vice-Admiral von Seckendorff. 9.—Levi P. Morton. 10.—General von Plessen. 11.—Abram S. Hewitt. 12.—Ambassador von Holleben. 13.—J. Pierpont Morgan. 14.—H.R.H. Prince Henry of Prussia. 15.—Morris K. Jesup. 16.—Vice-Admiral von Tirpitz. 17.—Elbert H. Gary. 18.—Vice-Admiral von Eisendecher. 19.—James Stillman. 20.—Rear-Admiral Count von Baudissin. 21.—Ludwig M. Goldberger. 22.—Captain von Muller. 23.—John Claflin. 24.—Commander Hipper.

GUESTS SELECTED FOR THEIR ACHIEVEMENTS IN SCIENCE, INDUSTRY, OR FINANCE.

Edward G. Acheson, James W. Alexander, J. Ogden Armour, George F. Baer, Alexander Graham Bell, Edward J. Berwind, John S. Billings, E. W. Bliss, Emil L. Boas, Fred G. Bourne, Henry P. Bowditch, John A. Brashear, Alexander E. Brown, Charles F. Brush, Adolphus Busch, Alexander J. Cassatt, Frank W. Cheney, Duane H. Church, Charles F. Clark, William B. Cogswell, John H. Converse, Charles H. Cramp, Francis B. Crocker, Charles Deering, Theodore L. De Vinne, William E. Dodge, John F. Dryden, James B. Duke, W. H. Dunwoody, Thomas A. Edison, Marshall Field, Stuyvesant Fish, David R. Francis, John Fritz, George J. Gould, James B. Grant, Clement A. Griscom, James D. Hague, Charles M. Hall, Edward H. Harriman, Henry O. RESPECT *VS.* EQUALITY

GRENADA, MISS., *April 11, 1904.*

To the Editor of Harper's Weekly:

SIR,—I have just read your "Correspondence" in the April 9 issue of HARPER'S WEEKLY. Now, Mr. Editor, I am a Southern woman, and not at all thirsting for literary or political fame. But as I am in the South, of the South, and have always lived among the negroes, I know them, and think "Joseph Liles" has expressed the true sentiments of the majority of the Southern self-respecting negro. They do not want social equality any more than we do—a Southern woman is either *above* or *beneath* her negro servant. If she puts herself on an equality with her, the negro has no respect for her, and will immediately show to her that this is the case. I have in my kitchen one of the old-fashioned "black mammys"—a truly sensible, good woman; she is faithful and kind, and we *love* her. Now, Mr. Editor, do you Northern people understand that? This is the truth; she will vouch for it; we respect her, and she is *always* respectful. She made a remark on this line a few days ago—it struck me at the time, and now seems most applicable. She was deploring the lack of virtue among her "color." She said: "De Lawd knowed what He was doin' when He made *white folks white* and *black folks black*. An' He knowed what He was doin' when He made de red bird *red* an' de jaybird *blue*. An' ye ain't gwine to find de *red bird* mating wid de *blue*." We are a different race; God made the difference. Left to ourselves with this matter, we can adjust it, amicably and with justice, and I think the better class of negroes understand that the Southern white man is his friend, so long as he keeps within the law, and is himself a self-respecting and respectful citizen.

"Joseph Liles" gives a very true picture of the great numbers of negroes with whom I am acquainted. From his letter you may judge that he is a man who aspires to learning and to the citizenship of his country. That he should be educated I agree, but that he is capable of managing the affairs of State, or qualified by nature or education to conduct public affairs, his utter inability is too palpable to discuss. And he is one among many. Booker Washington, I think, has the respect of the majority of the Southern people. He understands the conditions existing better than many Northern men. This letter is written, not in a spirit of controversy, but simply to tell the truth as it exists in the South. Many people are wofully ignorant.

I am, sir, "SOUTHERN WOMAN."

Progress of the War

FROM the beginning of the war, February 9, to May 31 sixteen Russian war-ships have been sunk or disabled — the *Petropavlovsk, Pobieda, Czarevitch, Retvisan, Poltava, Pallada, Bogatyr, Novik, Askold, Diana, Variag, Boyarin, Korietz, Yenesei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik, Askold*, and *Diana* are known to have been repaired and are again in commission. Several Russian gunboats also are known to have been destroyed. Japan has lost the battle-ship *Hatsuse*, the cruiser *Yoshino*, and at least two torpedo-boats, and a Japanese cruiser was successfully torpedoed by the Russians on May 10. Other Japanese ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. After two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor, Admiral Togo on May 7 notified his government that his third attempt was successful. On May 1 the first great land battle of the war took place near the Yalu River, and resulted in a Japanese victory. The Japanese lost 218 killed and 783 wounded. The Russian casualties numbered 2394 killed, wounded, and captured. The Japanese buried 1363 Russian dead, and took 613 Russian prisoners. The first Japanese army is concentrated at Feng-Wang-Cheng. The second decisive land battle took place on May 26 at Kin-Chow, thirty-two miles north of Port Arthur, and the Japanese, though suffering the greater loss, were again victorious. The Japanese casualties are estimated at 3000 killed and wounded. The Russians left 400 dead on the field, and their total casualties are said to number about 2000. The Japanese have occupied Dalny.

June 1.—A despatch was received from Liao-Yang to-day giving details of the engagement of May 30 at Vagenfuchu between the Japanese and a detachment of Cossacks. The Russians lost 17 killed and 25 wounded. According to Russian reports the Japanese casualties numbered 200.

June 2.—A telegram from Rear-Admiral Wittsoeff, received at St. Petersburg to-day, says that the channel at Port Arthur is clear, and all the Russian ships in the harbor except the battle-ship *Pobieda* are now ready to go to sea at a moment's notice, should an attack on Port Arthur begin.

It is reported that another Japanese army of 50,000 men began landing yesterday at Taku-Shan. Two divisions of the force are said to be going to reinforce General Oku, making his army number 120,000, and the remainder are to reinforce General Kuroki, bringing his army up to 140,000 men.

June 3.—The first official report of the battle of Kin-Chow was received to-day in St. Petersburg from General Stoessel, in command of the Russian forces at Port Arthur. He says that the number of losses on the Russian side amounted to 30 officers and 800 men killed and wounded. The official report of the Japanese casualties were also given out to-day at Tokyo. According to this report 36 officers and 703 men were killed and 100 officers and 3344 men were wounded, making the total casualties number 4183.

Fifteen thousand Russians, under General Stalkenberg, are reported concentrated at Kaiping, south of Newchwang; 4000 Russian cavalry are reported on their way to Kaiping.

The Japanese to-day announced the number of their casualties during the engagement at Vagenfuchu on May 30 as 26 men killed and 37 wounded.

It is reported in Tokyo that Field-Marshal Yamagata has been appointed commander-in-chief of the Japanese armies in the field, and will leave shortly for the Liao-Tung Peninsula.

June 4.—News was received to-day from Seoul of a number of small engagements between Cossacks and Japanese forces in northern Korea. The Russians have occupied Ham-Heung, north of Gensan, and have landed field pieces. In an engagement on June 3 twelve miles north of Gensan the Russians lost six killed. The Japanese loss is not known.

June 5.—A report from Chefoo says that on June 2 the Japanese forces which are approaching Port Arthur arrived within seven miles of the outer forts, and were only two miles from the Russian army. Japanese divers are engaged in clearing Talienwan Bay, in the vicinity of Dalny, of the mines laid by the Russians before the evacuation of that place. The Japanese are reported to have moved their base of supplies from Talienwan to Dalny.

June 6.—General Kuropatkin is reported to have moved his headquarters forty miles south of Liao-Yang. Two outpost fights are said to have taken place on June 3, one on the Liao-Tung Peninsula, twenty-five miles above Kin-Chow, and the other in southern Manchuria, north of Taku-Shan. In the first engagement the Russian losses were 18 men killed and wounded, and in the second the Cossack commander, Colonel Starkoff, was killed and 2 officers and 9 men were wounded.

A despatch to-day from Tokyo says that a Russian gunboat of the *Gilyak* type was struck by a Japanese torpedo and sunk at the entrance to Port Arthur on June 4.

Vice-Admiral Togo was to-day promoted to be an admiral of the highest rank.

The Czar to-day issued an edict mobolizing the First Army Corps at St. Petersburg.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

FEED BABIES
properly and they will be healthy and strong. The proper way to feed a baby, next to mother's milk, is by the use of BORDEN'S EAGLE BRAND CONDENSED MILK. It offers the maximum of digestibility, thus avoiding the troublesome diarrhœas and colics of infancy.—[*Adv.*]

A STOMACH SPECIALIST
solved the problem. "The New Philosophy" shows a permanent cure for Stomach and Intestinal Troubles and Neurasthenia. The book is free to sufferers. Address, with stamps, A. H. SWINBURNE, M.D., Sta. Q, Marietta, Ohio. During July and August at Hotel Elwood, Atlantic City, N.J.—[*Adv.*]

MANY mothers administer PISO'S CURE when their children have Spasmodic Croup. It is effectual.—[*Adv.*]

ADVERTISEMENTS.

WISE WORDS
A Physician on Food.

A physician of Portland, Oregon, has views about food. He says:

"I have always believed that the duty of the physician does not cease with treating the sick, but that we owe it to humanity to teach them how to protect their health, especially by hygienic and dietetic laws.

"With such a feeling as to my duty, I take great pleasure in saying to the public that in my own experience and also from personal observation I have found no food to equal Grape-Nuts, and that I find there is almost no limit to the great benefit this food will bring when used in all cases of sickness and convalescence.

"It is my experience that no physical condition forbids the use of Grape-Nuts. To persons in health there is nothing so nourishing and acceptable to the stomach, especially at breakfast, to start the machinery of the human system on the day's work. In cases of indigestion, I know that a complete breakfast can be made of Grape-Nuts and cream, and I think it is necessary not to overload the stomach at the morning meal. I also know the great value of Grape-Nuts when the stomach is too weak to digest other food.

"This is written after an experience of more than 20 years treating all manner of chronic and acute diseases, and the letter is written voluntarily on my part, without any request for it." Name given by Postum Co., Battle Creek, Mich.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She sends Warrisden on a mission to find Tony and bring him home. Warrisden learns from a friend of Tony's, a Mr. Chase, that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. Warrisden uses every argument to prevail upon him to come back, but he refuses, and Warrisden is forced to return alone. Tony remains on the trawler until the term of his cruise is over (meanwhile having learned of his father's death), and then, after much perplexity and indecision, decides to return to London, feeling that he has seen a way out of his difficulties. He reasons that he would deserve Millie's contempt if he returned at the moment when life had suddenly been made easy for them by his father's death, and decides to enlist in the French Foreign Legion, as no other career seems open to him. The same evening John Mudge, a friend of Pamela's, while at a reception given by Lady Millingham sees Lionel Callon enter the Stretton's house, where Millie is living. He learns from Pamela of the peril Millie is in from Callon, and invites Pamela to leave the whole matter in his hands. Tony goes to Algeria and joins the French Foreign Legion at Sidi-Bel-Abbés, enlisting under the name of "Ohlsen." Meanwhile Mudge has conceived a plan for getting Lionel Callon out of the way and so saving Millie from peril. He buys up all Callon's debts and places them in the hands of a single firm of solicitors, who insist on a settlement from Callon within twenty-four hours.

CHAPTER XVII.—*(Continued.)*

CALLON LEAVES ENGLAND

At his club, Callon ordered a stiff brandy and soda. Somehow he must manage to see Millie Stretton alone. He thought, for a moment, of writing; he, indeed, actually began to write. But the proposal looked too crude when written down. Callon knew the tactics of his game. There must, in a word, be an offer from Millie, not a request from him. He tore up his letter, and while he was tearing it up Mr. Mudge entered the smoking-room. Mudge nodded carelessly to Callon, and then seemed to be struck by an idea. He came across to the writing-table and said:

"Do I interrupt you? I wonder whether you could help me? You know so many people that you might be able to lay your finger at once on the kind of man I want."

Callon looked up carelessly at Mudge.

"No. You are not interrupting me. What kind of man do you want?"

"I want a man to superintend an important undertaking which I have in hand."

Callon swung round in his chair. All his carelessness had gone. He looked at Mr. Mudge, who stood drumming with his fingers on the writing-table.

"Oh," said Callon. "Tell me about it."

He walked over to a corner of the room which was unoccupied and sat down. Mudge sat beside him and lighted a cigar.

"I want a man to supervise, you understand. I don't want an expert. For I have engineers and technical men enough on the spot. And I don't want any one out of my office. I need some one on whom I can rely, to keep me in touch with what is going on, some one quite outside my business and its associations."

"I see," said Callon. "The appointment would be for how long?"

"Two years."

"And the salary would be good?"

Callon leaned back on the lounge as he put the question, and he put it without any show of eagerness. Two years would be all the time he needed wherein to set himself straight; and it seemed the work would not be arduous.

"I think so," replied Mudge. "You shall judge for yourself. It would be four thousand a year."

Callon did not answer for a little while, simply because he could not trust himself to speak. His heart was beating fast. Four thousand a year for two years! He would be able to laugh at that unknown enemy who was striking at him from the dark.

"Should I do?" he asked at length, and even then his voice shook. Mr. Mudge appeared, however, not to notice his agitation. He was looking down at the carpet and tracing the pattern with the ferrule of his walking-stick.

"Of course," he said, with a smile, as though Callon had been merely uttering a joke. He did not even lift his eyes to Callon's face. "Of course. I only wish you were serious."

"But I am," cried Callon.

Mr. Mudge looked at his companion now and with surprise.

"Are you? But you wouldn't have the time to spare. You are standing for a constituency."

Callon shrugged his shoulders.

"Oh, I am not so very keen about Parliament. And there are reasons why I would welcome the work."

Mr. Mudge answered with alacrity.

"Then we will consider it settled. Dine with me to-night at my house, and we will talk the details over."

Callon accepted the invitation, and Mudge rose from his seat. Callon, however, detained him.

"There's one difficulty in the way," and Mr. Mudge's face became clouded with anxiety. "The truth is I am rather embarrassed at the present moment. I owe a great deal of money, and I am threatened with proceedings unless it is immediately paid."

Mudge's face cleared at once.

"Oh, is that all?" he exclaimed, cheerily. "How much do you owe?"

"Pretty nearly my first year's salary."

"Well, I will advance you half at once. Offer them two thousand on account, and they will stay proceedings."

"I don't know that they will," replied Callon.

"You can try them, at all events. If they won't accept half, send them to me, and we will make some other arrangement. But they are sure to. They are pressing for immediate payment because they are afraid they will get nothing at all by any other way. But offer them two thousand down, and see the pleasant faces with which they will greet you." Mr. Mudge was quite gay now that he understood how small was the obstacle which hindered him from gaining Lionel Callon's invaluable help. "I will write you a check," he said, and sitting down at a writing-table he filled out a check and brought it back. He stood in front of Callon with the check in his hand. He did not give it to Callon at once. He had not blotted it, and he held it by a corner and gently waved it to and fro so that the ink might dry. It followed that those tantalizing "naughts," three of them, one behind the other, and preceded by a two like a file of soldiers with a sergeant at the head, and that excellent signature "John Mudge" were constantly before Callon's eyes, now approaching him like some shy maiden in a flutter of agitation, now coyly receding. But to no shy maiden had Lionel Callon ever said "I love you" with so glowing an ardor as he felt for that most tantalizing check.

"I ought to have told you," said Mr. Mudge, "that the undertaking is a railway abroad."

Callon had been so blinded by the dazzle of the check that he had not dreamed of that possibility. Two years abroad, even

Iron and Steel We Sell

In the ten months ending with April, 1904, the total American exports of iron and steel amounted to $89,094,415, against $79,839,462 in the corresponding months of the preceding year—an increase of nearly eleven million dollars; while the single month of April shows an increase of about one and a half millions as compared with April, 1903. This suggests that the exports of iron and steel in the full fiscal year will considerably exceed 100 million dollars, though it is hardly probable that they will reach the figures of 1901, when the total was 117 millions, or of 1900, when the total was 122 millions.

The principal increases in iron and steel exports occur in billets, ingots, and blooms, which amount to nearly two and a half million dollars in the ten months ending with April, 1904, as against but $65,174 in the same months of last year; steel rails, $1,860,107 in the ten months ending with April, 1904, as against $665,695 in the corresponding period of last year; locomotives, $3,947,225 in the ten months of the present fiscal year, as compared with but $2,998,491 in the same period of last year; typewriters, which show an increase of about a half-million dollars, and firearms, an increase of nearly a half-million dollars in the ten months in question, as compared with the ten months of the preceding year.

In locomotives the chief increase is in shipments to Canada and Mexico. To Canada the increase is about 600 thousand dollars as compared with the ten months of last year, and to Mexico there is an increase of about 150 thousand dollars, as compared with the ten months of 1903, and of over 700 thousand as compared with the corresponding period of 1902. In steel rails the increase in the ten months, as compared with the same period of last year, is about one and a quarter million dollars.

An Ant to Kill the Boll-Weevil

If a peculiar form of ant recently discovered in Guatemala can be acclimated and caused to flourish in Texas, it is possible that the cotton-boll weevil which has done so much damage to the cotton crop can be checked and the cultivation of this staple restored to its former basis. This insect is a form of beetle that feeds on the newly developed bolls, and has spread so widely over certain districts of the South that the annual damage to the cotton crop aggregates millions of dollars. Consequently, investigations have been carried on by the United States Department of Agriculture to determine the best way of dealing with this evil, or to find a variety of cotton which had increased power of resistance to the insects.

In Guatemala cotton was found which was not affected by the weevil, and this was discovered to be due to the presence of a large reddish-brown ant which fed on the nectar from the leaves and blossoms. This ant has an intense antipathy to the cotton-boll weevil, attacking it on sight and killing it almost instantly by inserting its sting in the joint between the thorax and the abdomen. These ants spread themselves over a field, and from two to five are found on each plant.

Wherever there are no ants the weevil flourishes, and the injured leaves and bolls were found as in the United States and Mexico, so that the Indians who raise cotton realize that there is some connection between its culture and the brown ant. In the territory under examination all the conditions for the propagation of the boll-weevil were excellent, and the successful culture of cotton seems due to the activity of the ants in holding the beetles in check.

The boll-weevil has been carried with the cotton-plant to the many countries where cotton is now raised, and has flourished readily; it now becomes a question for entomologists to determine whether this ant, which has not as yet appeared away from a somewhat limited territory can likewise live and be propagated in a new country.

This Victoria is the most widely known and the most extensively used of any automobile in the electric class. Its artistic lines, quiet elegance of finish, superb running qualities and all-round reliability have given complete satisfaction to hundreds of pur hasers. The new model has radical improvements in the running and operating parts.

Flowers of Field Hill, and Swamp
By CAROLINE A. CREEVEY
Author of "Recreations in Botany."
The volume is the outcome of the author's idea that a grouping of plants upon the natural basis of environment, including soil, shade, moisture, etc., is possible. She describes all of the wild flowers commonly met with in the Atlantic States in so careful and thorough a manner that the amateur botanist will find no difficulty in readily placing them in their proper groups and families. The illustrations, about one hundred and fifty in number, have been drawn from the living plants, and will prove to be an invaluable guide in determining the several varieties.

(Continued from page 948.)

at four thousand a year, did not at all fit in with his scheme of life.

"Abroad?" he repeated, doubtfully. "Where?"

"Chile," said Mr. Mudge; and he looked at the check to see that the ink was quite dry. Perhaps Mr. Mudge's voice was a trifle too unconcerned. Perhaps there was something a little too suggestive in his examination of his check. Perhaps he kept his eyes too deliberately from Callon's face. At all events, Callon became suddenly suspicious. There flashed into his mind by some trick of memory a picture—a picture of Mr. Mudge and Pamela Mardale talking earnestly together upon a couch in a drawing-room and of himself sitting at a card-table—fixed there till the game was over, though he knew well that the earnest conversation was aimed against himself. He started, he looked at Mudge in perplexity.

"Well?" said Mudge.

"Wait a moment!"

Pamela Mardale was Millie Stretton's friend. There was that incident in the hall—Millie Stretton coming down the stairs and Pamela in front of the mirror over the mantelpiece. Finally there was Pamela's persistent presence at Millie Stretton's house this afternoon. One by one the incidents gathered in his recollections and fitted themselves together and explained each other. Was this offer a pretext to get him out of the way? Callon, after all, was not a fool, and he asked himself why in the world Mr. Mudge should, just at this moment when he was in desperate straits, offer him £4000 a year to superintend a railway in Chile?

"Well?" said Mudge again.

"I must have time to think over the proposition," replied Callon. He meant that he must have time to obtain an interview with Millie Stretton. But Mudge was ready for him.

"Certainly," said he. "That is only reasonable. It is seven o'clock now. You dine with me at eight. Give me your answer then."

"I should like till to-morrow morning," said Callon.

Mr. Mudge shook his head.

"That, I am afraid, is impossible. We shall need all to-morrow to make the necessary arrangements and to talk over your duties. For if you undertake the work you must leave England on the day after."

Callon started up in protest. "On the day after!" he exclaimed.

"It gives very little time, I know," said Mudge. Then he looked Callon quietly and deliberately in the eyes. "But, you see, I want to get you out of the country at once."

Callon no longer doubted. He had thought, through Mr. Mudge's help, to laugh at his enemy, and lo! the enemy was Mudge himself. It was Mudge who had bought up his debts, who now held him in so secure a grip that he did not think it worth while to practise any concealment. Callon was humiliated to the verge of endurance. Two years in Chile pretending to supervise a railway! He understood the position which he would occupy; he was within an ace of flinging the offer back. But he dared not.

"Very well," he said. "I will give you my answer at eight."

"Thanks. Be punctual." Mr. Mudge sauntered away. There could only be the one answer. Mr. Lionel Callon might twist and turn as he pleased, he would spend two years in Chile. It was five minutes past seven. Callon could hardly call at the house in Berkeley Square with any chance of seeing Lady Stretton between now and eight. Mudge was contented with his afternoon.

At eight o'clock Callon gave in his submission and pocketed the check. At eleven he proposed to go, but Mudge, mindful of an evening visit which he had witnessed from a balcony, could not part from his new manager so soon. There was so little time for discussion even with every minute of Callon's stay in England. He kept Callon with him until two o'clock in the morning; he made an appointment with him at ten, and there was a note of warning in his voice which bade Callon punctually keep it. By one shift and another he kept him busy all that day, and in the evening Callon had to pack, to write his letters, and to make his arrangements for his departure. Moreover, Pamela Mardale dined quietly with Millie Stretton and stayed late. It thus happened that Callon left England without seeing Millie Stretton again. He could write, of course, but he could do no more.

To be Continued.

How the Republican Party Started

By George H. Frey, Sr.

Mr. Frey is one of the five delegates now living who took part in the first Republican National Convention at which the Republican party was organized

THE Republican party had its birth at Pittsburg in February, 1856. Luckily, I had the good fortune to be present. I was a newspaper publisher at the time, and kept in close touch with politics, and especially national politics. Of those who attended that initial convention of the party there are, as near as I can estimate, but five now living. Those five are General R. O. Brinkerhoff, of Mansfield, Ohio; Judge Rush Sloan, of Sandusky, Ohio; Judge Upsom, of Akron, Ohio; Senator Joseph Hawley, of Connecticut; and myself.

The convention had in it many discordant elements. Largely through the efforts of Horace Greeley, who abandoned the ultra position he occupied, order was brought out of chaos, and the foundations of a great party were laid. The first meeting to select delegates to attend a convention which was to be called in Pittsburg in February of that year for the purpose of organizing a national Republican party was held in Clark County, Ohio, in February, 1856. The call was by a body of men, mainly members of Congress, for delegates from either States or districts.

The delegates selected were Richard Rodgers, General Charles Anthony, R. D. Harrison, Mr. Martin, Mr. Algernon, Paige A. Baker, E. D. Baker, Perry Stewart, F. King, Dr. R. Houston, C. M. Clark, Joseph Carst, and myself, and, as I remember, all those who were selected attended the convention.

A large number of delegates came with written platforms, among them Henry J. Raymond, of the New York *Times*, and Francis P. Blair, of the Washington *Globe*. After Greeley's speech, which came as a great surprise in its conciliatory tone, the convention favored a brief, plain, and straightforward expression of the platform of the party, free from useless words and phrases. The cardinal features of the convention were opposition to the extension of slavery in the Territories then free, homesteads free to the actual settlers in the public domains, and the extension of the railway to the Pacific. During the progress of the convention a delegation arrived from Kansas, where there had been a bushwhacking contest with the pro-slavery advocates and border ruffians.

There were five different classes of men—Free-Soilers, Abolitionists, Democrats, Whigs, and Know-Nothings—represented in the Pittsburg convention, which was called for the specific purpose of effecting a national organization and giving it a name. The name chosen, Republican, it was felt would not arouse the jealousy of any of the others.

The feeling that pervaded the body was one of extreme anxiety, lest some of the parties would feel that in the making up of the platform it might not be "ultra" enough. Horace Greeley, known all over the country as an ultra Whig, was among the first to take the platform and make an address. With all the ability he could command he urged moderation and conciliation. There was, he claimed, one chief purpose in the calling of that assembly—to organize a party opposed to the extension of slavery in the Territories then free. He argued that there ought to be unanimity on a point of that kind; there must be, if any one entertained any hope or desire of ultimate success.

The platform as finally adopted was a simple declaration of hostility to the extension of slavery and hostility to polygamy; besides favoring free homesteads for the people and the building of the then projected transcontinental railroads. After the adoption of the platform the next business of the convention was to constitute a Republican national committee with authority to call a national convention for the purpose of nominating a President of the United States.

Each Congressional district was entitled to three delegates, and at a convention held in Springfield, Ohio, Judge Phelps, of Marysville, W. T. Critchfield, of Columbus, late reporter for the Supreme Court of Ohio, and myself were chosen.

I started for Philadelphia, where the convention was to be held, on June 12, going through Columbus, where I met Governor Chase at the station. He wanted me to stop over and go with George Hoadley, later Governor of Ohio, who was *en route* from Cincinnati, but as some friends at Canton, who were going on to Philadelphia, were waiting for me, I did not stop. I arrived at Canton, and then proceeded with my friends to Philadelphia.

On arriving at Philadelphia we found the city crowded, and I was assigned to quarters at the St. Lawrence Hotel, on Cherry Street. The only Ohioans with me were George Spaulding, of Cleveland; Christopher P. Wolcott, then Attorney-General of the State of Ohio; Robert Neal, Sr., of Columbus; and Judge Swain, late of the United States Supreme Court.

Among the dozen or so delegates from Pennsylvania was Thaddeus Stevens, of Lancaster, Pennsylvania, one of the most interesting characters I have ever met. The club-footed statesman was a great power in Congress. He urged the Ohio delegates to do their State the honor of supporting for President Judge McLain, of Cincinnati, at that time a justice of the United States Supreme Court, but it was soon found that the majority of the convention was in favor of Fremont.

James A. Saxton, father of Mrs. William McKinley, attended the convention; also Henry J. Raymond and Preston King, at one time a Senator from New York, and Judge Keeley, for years a tariff leader in the House. Another conspicuous figure at the convention was "Abe" Lincoln, of Illinois. He had not yet risen to prominence. The incident was recalled that his first public employment had been given him by John Calhoun, then Surveyor-General of Kansas. In six weeks' time Lincoln prepared himself to do surveying. He was afterward made County Surveyor of Sangamon County, Illinois. George Hoadley, ex-Governor of Ohio, occupied a seat upon the platform, and while trying to make an address broke down from the excitement of the occasion and took his seat.

On the nomination of Fremont, the California delegates felt inclined to a jollification, and old Mr. Sulover, formerly of Ohio, asked me for the use of my room at the St. Lawrence. I consented, as I was to leave that night at twelve o'clock, and Mr. Saxton had gone ahead of me. A general lunch was the principal feature of the jollification, and as the majority of those present were not regular drinkers the results came somewhat as a surprise.

Some of the Pennsylvania and Ohio delegates were not very cordial in yielding to the Fremont supporters. However, the convention passed off in a thoroughly good spirit. There were marked indications even at that time that the Atlantic States would support Buchanan, who in the election was the successful candidate.

Things that Happened to Smith

SOME entertaining reminiscences of John Thomas Smith, author of the *Book for a Rainy Day* (1766-1833), are recalled by "T. P." Smith had seen and heard much that was interesting. In a friend's biographical album he wrote that he could boast of "seven events, some of which great men would be proud of." Here are six of the "seven events":

"Was patted on the head by Dr. Johnson;

"Have frequently held Sir Joshua Reynolds's spectacles;

"Partook of a pint of porter with an elephant;

"Saved Lady Hamilton from falling when the melancholy news arrived of Lord Nelson's death;

"Three times conversed with King George the Third;

"And was shut up in a room with Mr. Keen's lion."

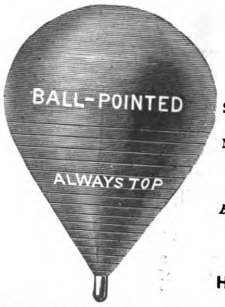
The Limit

A NUMBER of actors were discussing recently the merits of different boarding-houses in a certain Western city, and the argument turned on the comparative meagreness of the table board provided by the various landladies. One of the party who had listened quietly to the talk now spoke up.

"If any of you fellows really want to put yourself on a rigid diet," he said, "go to Mrs. ——'s boarding-house in Cincinnati. I came down to breakfast there one morning, and the servant waltzed up and asked me if I'd have ham *or* eggs. I said I didn't want to be grasping, and ordered the yolk of an egg—said I'd have the white of it for lunch."

Wagner's Newly-Discovered Score

RICHARD WAGNER'S long-lost overture, "Rule Britannia," composed at Königsberg in 1837 as a complimentary tribute to the British people and discovered recently by accident, is interestingly described in the London *Daily Chronicle*. The music comprises forty-one pages of manuscript. "There is no cover, and the score begins on the first line of the first page, while over it is the simple title. It is a full score for thirty-one instruments, including several which are now obsolete,—such as the serpent and the ophicleide. It is scored on thick music-paper of a creamy shade, with a rather rough surface, and, although it is somewhat faded by age, every note and accidental is clear and perfectly distinct. There are in it some passages which remind one of 'Tannhäuser,' and, among other things, the air of 'Rule Britannia' is introduced in a quartette for French horns."



"The year I passed at Königsberg," says Wagner in one of his reminiscences, "was completely lost to my art through the pettiest cares. I wrote one solitary overture, 'Rule Britannia.'" Wagner's attitude toward the English is partially indicated in the following passage, written fourteen years after the composition of the "Rule Britannia" overture: "The practical sense of the English is nowhere more brilliantly displayed than in their vast arrangements for the public well-being, and the technique with which they carry them out; so that in this respect they are masters to all other nations."

The Difference

PHILIP HALE, the Boston musical critic and annotator of the Symphony programme-books, was talking not long ago with a woman who is strenuously pursuing musical culture.

"Mr. Hale," she asked him, "what is the difference between the first and second violins in an orchestra?"

"About ten dollars a concert, madam," replied the critic.

LUXURIOUS WRITING

BALL-POINTED PENS (H. HEWITT'S PATENT)

Suitable for writing in every position; glide over any paper; never scratch or spurt.

Made in England of the finest Sheffield rolled steel, BALL-POINTED pens are *more durable*, and are ahead of all others

THE MAIDS OF PARADISE

Robert W. Chambers possesses, more than any other American novelist, the feeling and quality of romance. The present tale carries the reader into the heart of the Franco-Prussian war. The Boston *Herald* writes that "Mr. Chambers is a superb master of his art as a story-teller of romantic fiction." Another Boston paper calls this romance "a wide-awake book, with plenty of dash and crash in it and many tender passages." Indeed, this charming story is, to quote the Philadelphia *North American*, "the foremost of modern romances."

Illustrated by Castaigne. $1.50

Korea's Commerce

"COMMERCIAL Korea in 1904" is the title of a monograph recently issued by the Department of Commerce and Labor through its Bureau of Statistics. It discusses commercial and other conditions in Korea, showing area, population, transportation facilities, railways, telegraphs, postal service, and foreign commerce, including imports and the countries from which they are drawn, and exports and the countries to which they are sent. The population of Korea, says the monograph, is about fifteen millions in round numbers; its area is about equal to that of the State of Kansas, and its foreign commerce is about twelve million dollars, of which imports form about seven and a half millions.

Important Treaties

Commercially, the development of Korea began in 1876, when two ports, Gensan and Fusan, were, upon the insistence of Japan, opened to trade with that country only. In 1882 Admiral Shufeldt, of the United States navy, visited Korea, and secured a treaty of friendship between the United States and Korea by which American vessels were given access to its treaty ports and the safety of American vessels and citizens assured. This was followed by treaties with Germany and Great Britain in 1883, Russia and Italy in 1884, France in 1886, Austria in 1892, and China in 1897. The formation of the treaty between Korea and the United States in 1882 was immediately followed by a visit from a Korean embassy to Washington, sent to exchange ratifications of the treaty. From this time forward Korea was opened to foreign trade and Western civilization, and the Korean government established its legations in the United States and other great commercial nations.

Millions for Rice

The most important articles in Korea's export trade are rice, which shows an annual exportation of more than a million dollars; beans, a half-million; ginseng, nearly a half-million; and hides, about one hundred thousand dollars in value in the latest available year. Of the importations, cotton goods form the largest item—from three to three and a half million dollars per annum; silk piece goods imported from Japan and China amount to six hundred thousand dollars per annum; kerosene oil, about three hundred thousand dollars; railway materials, about two hundred and fifty thousand dollars; mining supplies, about two hundred thousand dollars; and bags and ropes for packing, one hundred and fifty thousand dollars.

The foreign commerce is carried on through the treaty ports of Chemulpo, Fusan, Wonsan, Chinampo, Mokpo, Kunsan, Masampo, and Song Chin. Chemulpo has by far the largest commerce. Its imports in 1902 were reported at $1,250,000 out of a total of $1,920,000. The exports of the port, however, are very much less than those of other ports, being $45,000 in 1902 out of a total of $1,830,000.

A Theatrical Experiment

THE appearance on the vaudeville stage of actors and actresses of the first rank is one of the interesting developments in the theatrical world of to-day. At two of Mr. Proctor's theatres, Charles Hawtrey, the well-known English actor, recently played an engagement, and the following week Miss Jessie Millward was secured to make the same appearances, while Mr. Hawtrey undertook the journey between Harlem and Twenty-third Street each afternoon and evening, making appearances at both houses. Miss Millward followed Mr. Hawtrey to Harlem, also continuing at the Twenty-third Street Theatre, while Miss Blanche Ring engaged in a series of appearances in New York and Newark, performing six times daily in two cities. Mr. Proctor, who controls four theatres in New York city alone, promises that these are but forerunners to other important engagements to be announced later.

High-Speed Railroading in Europe

WHILE much has been heard of the recent trials in Germany over a specially constructed track of high-speed electric locomotives which have attained wonderful velocities, it must not be understood that designers of steam locomotives have not been attempting new developments in respect to speed. A locomotive has recently been constructed at Cassel, Germany, with which a speed of seventy-nine miles an hour has already been attained, and from which still higher speeds are expected. This record, which was made on the ordinary line between Göttingen and Bovenden, is probably the best speed performance by any steam locomotive, but the design of the new engine calls for a speed of ninety-three miles an hour with a train of forty axles.

A New Kind of Engine

In appearance the locomotive resembles a vestibule car, being encased in sheet-iron, but having a pointed front to diminish air resistance and a smokestack which projects only about ten inches above the casing. The engine, which weighs 174,000 pounds, is 88 feet 6 inches in length, and is followed by a tender which is similarly encased, the whole forming a single unit with an absolute minimum of projecting surfaces which might increase the resistance of the air. There is a high-pressure interior cylinder whose piston is connected with the axle of the front driving-wheels, while the two low-pressure cylinders are outside, and drive the rear pair of wheels. In addition to these two pair of driving-wheels, the locomotive is also supported on two sets of four-wheel trucks, in front and behind, respectively, and all wheels, both for locomotive and tender, are fitted with air and hand brakes. The boiler has 2766 square feet of heating surface. Two engineers and two firemen are required, each pair having a cab at opposite ends of the locomotive, communication being maintained between them within the casing and also by speaking-tubes.

The Fastest Trains in the World

The test already mentioned was, in the main, to try the track and get the machinery running smoothly. Further trials will occur with four or five vestibuled cars, and attempts at better records will be essayed. Then the locomotive will be given a record run on the Marienfeld-Zossen track, and will probably be sent to the St. Louis Exposition. While it is hardly fair to compare a brief speed run with one made on actual schedule, yet it may be interesting to give the rate of the Philadelphia and Reading Atlantic City and Camden express, which makes the fifty-five and a half miles journey at a speed of 67.96 miles per hour, this being the fastest train in the world. Next to this is the Paris to Calais express of the Northern Railway of France, which for 185.14 miles maintains a speed of 59.72 miles an hour. The Zossen experiments have shown that an electric locomotive can be run at a speed as high as 131 miles an hour, and there is under discussion at present a proposition to construct a high-speed electric railway between Berlin and Hamburg which will cover the distance in one and a half hours, instead of three, as at present. As the present steam-railway facilities between these two points are inadequate and a third track is demanded, there is a probability that it will be constructed and equipped for high-speed electric service, with a central power-generating station at Wittenberg.

Russia's Religion

To many the nature of Russia's religion is only vaguely understood. Christianity was introduced into the country in the ninth century. The Established Church, says our authority, is identical in doctrine with the Greek Church. The liturgy, which is read in Slavonic, is the one used originally by the Church at Constantinople. Until recently, any form of dissent was not tolerated. Under the laws of Alexander II., Catholics and Protestants have equal rights with members of the Established Church.

Progress of Science

Radium and the Temperature of the Earth

How far radium is responsible for the heat of the earth is one of the philosophical questions now interesting scientists. Professor Rutherford, before a recent meeting of the Royal Institution of London, stated that he believed the amount of radium present and uniformly distributed throughout the earth would be sufficient to account for all the heat lost from that body. In this event the cooling of the earth, so that ultimately it would become uninhabitable, as was calculated by Lord Kelvin, would be postponed, and a few million more years would be afforded for the various forms of animal life. Such a possibility was anticipated doubtless by Lord Kelvin himself, for in his calculations he inserted "provided no new form of heat is discovered." This is now held to exist in the minute quantities of radium which are widely and universally distributed over the earth, and which may account for the gradual increase of temperature as the interior of the earth is approached.

Brains of Men and Apes

According to the examinations of the brains of Europeans that have been made by anatomists, one of the most important physical differences between men and apes and monkeys has been the absence of the so-called simian fold in the human brain. This simian fold or sulcus, which occurs on the posterior portion of the main hemispheres, has recently been discovered by Professor G. Elliot Smith, of the Egyptian Government School of Medicine, in the course of an examination of a number of brains of Egyptians and Sudanese. He has found that in certain examples of brains in his collection the characteristic folds found in anthropoid apes are so closely reproduced that he is able to trace and clearly establish the identity of every sulcus or fissure. Professor Smith has also succeeded in finding human brains where the occipital pattern corresponds closely with the brain of the gorilla.

As these points of identity between man and his nearest relations have not previously been encountered by European scientists in their brain studies their importance can be realized, as they do away with one of the supposed and hitherto recognized structural distinctions.

The Radioactivity of Mineral Spring-Waters

Some recent investigations on the subject of radioactive substances found in spring-waters when they issue from the earth seem to suggest that at great depths below the surface radium exists in considerable quantities. It has been found by scientists, in an elaborate series of experiments, that all spring-water when it escapes from the earth contains a certain amount of radioactive material, which has been identified with the emanation of radium. Not only does spring-water possess this property, but it has been found that petroleum drawn from a spring contains twenty times as much of the radium emanation. The method of studying these liquids was to pass air through them and then test its conductivity with the electroscope, it being found to possess considerable radioactivity.

By passing this radioactive air through an inactive liquid the radioactivity was communicated to the latter, proving that the water had received its radioactivity from some subterranean sources. The radioactivity of fluids drawn from springs does not endure, but diminishes rapidly when the liquid is exposed to air, as in a running brook, whose water does not possess this property. It was also found that the water from hot-water springs was much more radioactive than that from cold springs, while the most radioactive of the waters experimentally tested was that from the hot Musquelle at Baden-Baden. On the basis of these and other experiments the assumption has been made that the therapeutic properties of thermal springs are due to the presence of radium emanation.

Our Lady's Inn

By J. STORER CLOUSTON

Author of "The Adventures of M. d'Haricot," etc.

The story of young Barbara Cheyne, who was left penniless and dependent on her unsympathetic aunt, Mrs. Strynd, of Fogo House, Scotland. Barbara finally escaped to London, having to run away in men's clothes to accomplish her purpose. On her way she lost the kit containing her proper attire; still in men's clothes, she put up at Our Lady's Inn, the lodging-house of impecunious young men. She passed through many adventures, unusual and entertaining, in the course of her charming romance. The story is told with the pleasantest, sunniest humor.

How To Keep Household Accounts

BY CHAS. WALDO HASKINS

Late Dean of the School of Accountancy, New York University

This book will be found of great help to every housekeeper. It outlines in a clear, readable manner a simple but comprehensive system of keeping the household accounts. No previous knowledge of book-keeping is required. There are sample pages showing exactly how the system is put to practical use.

Cloth, $1.00 net (postage extra)

5c. The Only High-Class Journal of Outdoor Life In the World at Five Cents

THE ILLUSTRATED SPORTING NEWS

Published Every Friday

SUPERB ILLUSTRATIONS **AUTHORITATIVE WRITERS**
FINE COATED PAPER **CLEAN AND WHOLESOME**

THE NEW DEPARTURE The success of THE ILLUSTRATED SPORTING NEWS has been very gratifying, but we want a more rapid growth in circulation. To accomplish this the price has been reduced to *five cents a copy*, and in the matter of text and illustration more attention will be given to country life and popular recreations, thus materially broadening the field.

QUALITY OF TEXT, ILLUSTRATIONS AND PAPER UNCHANGED

making THE ILLUSTRATED SPORTING NEWS, at five cents a copy, the most attractive proposition in the outdoor field ever offered the public.

Send for free sample copy announcing special features and ask for our great 50c. offer

Sir Mortimer

By

MARY JOHNSTON

Author of "To Have and To Hold"

THE love of Sir Mortimer for the fair Damaris Sedley, a lady-in-waiting, holds unswerving course through a narrative alive with stirring incidents of the days of Sir Walter Raleigh, when all England loved, sang, adventured, and fought, in the flush of youthful power. Herein is a love story of uncommon charm cast among stirring scenes —love in the lap of adventure, set forth with rare imaginative power.

Readers of "To Have and To Hold" will welcome in this tale of love and gallantry the distinct advance Miss Johnston has made upon her former success. The romance is instinct with new life and color, like the golden days with which it deals.

"The witchery of romance pervades its scenes, and once in the grasp of the story the reader will be swept along the current to the end."—*Chicago Chronicle.*

"Her thousands of admiring readers will thank her for the book—a strong, vigorous, original story, with honor as the theme."—*Syracuse Herald.*

"May be classed among the gems of modern novels."—*Birmingham News.*

"She has reproduced in a wonderful manner the time of Elizabeth, with all its greatness and its littleness."—*N. Y. World.*

HARPER & BROTHERS, NEW YORK

Rulers of Kings

by

GERTRUDE ATHERTON

Author of "The Conqueror," "The Aristocrats"

IN this novel is pictured the conflict between the two greatest forces in the world—American wealth and European royalty—in which the former triumphs. Gertrude Atherton, from whom the reading public has learned to expect surprises, has evolved a story both daring and original. Fessenden Abbott, the son of America's most colossal millionaire, in the midst of great financial undertakings that are watched by all the world, falls in love with the daughter of the Austrian Emperor. In her heart duty to the weakening monarchy of her fathers battles with an overmastering love for the young American. How Fessenden Abbott bends the will of emperors and alters the diplomatic relations of kingdoms to win the girl he loves is an original and most romantic piece of fiction writing.

Doctors Say Drink More

Schlitz

The body requires ten glasses of fluid per day.

Most people drink less—too little to flush the body of its waste. The result is bad blood, nervousness, disease.

Then the doctor says "Drink more;" and he knows this advice to be worth more than medicine.

That's one reason why pure beer is good for you. It leads you to drink more—gives the body more fluid. And that fluid is also a food and a tonic.

But the beer must be pure.

Schlitz beer is brewed in absolute cleanliness and cooled in filtered air. It is aged for months before we market it, so it will not cause biliousness. And every bottle is sterilized after it is sealed. That's why doctors always say "Schlitz." Ask for the brewery bottling.

THE FUNNIEST OF BIOGRAPHIES

The Memoirs of a Baby

By JOSEPHINE DASKAM

NEVER before has the dignified title of "Memoirs" graced so funny a book as this latest tale of Josephine Daskam's—a writer widely known for her clever child studies. The sorry side of life—the tribulations of the little tots—have no place in this irresistibly amusing record of the home-life of a typical American couple. The baby refuses to develop psychologically or scientifically according to the theories set down in his Aunt Emma's books, but he grows to robust boyhood after a fashion of his own. All the various incidents of a lively youngster's boyhood here find laughable portrayal. The unceasing arguments between the common-sense young father and the theoretical "Aunt Emma" not only afford such amusement as Josephine Daskam alone can give us, but go to make a clever satire on "modern" methods of rearing children.

F. Y. Cory, whose pictures of baby-life have never been equalled for cleverness and humor, has illustrated the book copiously with pen-and-ink drawings. The pictures are every bit as funny as the narrative, and the book will provoke the laughter of any one who turns the pages.

R. Hitt, who has been indorsed for the Vice-Presidency by the Illinois Republican convention, and Speaker Cannon—both of them, by the way, septuagenarians—were invited to lunch at the White House; and, naturally, wiseacres have drawn the deduction that the Speaker is not so much out of the running as he would like to be. Naturally, the President's trusted spokesmen repudiate the notion that the matter of the Vice-Presidency was mentioned at the luncheon. The Chief Magistrate, we are assured, would deem it impertinent to try to influence the course of the party's accredited representatives, who are amply qualified to determine for themselves who should be selected for his "running-mate." It follows *a fortiori* that his lively sense of decency and dignity must have prevented Mr. Roosevelt from striving in any way to further his own nomination for the Presidency. The Republican organizers and managers, however, who have no motive for emulating Mr. Roosevelt's modesty, but who have an eye single to the success of their party, are by no means convinced that they should let the Cannon boom be shunted to one side by the outcome of the Illinois Republican convention. Not only were the Lowden delegates, without whose cordial cooperation it may prove impossible to carry Chicago for the Republican national ticket, observed to smile mysteriously as they left Springfield, but since then Governor Yates, instead of essaying conciliation, has missed no opportunity of aggravating and provoking those who declined to vote for him at Springfield.

If Governor Yates really cherishes a desire to make Deneen his successor, and to give the electoral votes of Illinois to Mr. Roosevelt, he is taking a curious way of showing it. Since the adjournment of the State convention, he has swung the axe with extraordinary vigor. Almost a hundred State office-holders have already fallen, and the work of the headsman is by no means over. Whether such a performance is likely to infuse vigor and enthusiasm is a question that Speaker Cannon, as a veteran politician, will doubtless be invited to consider. Among the plausible reasons assigned for the slaughter, of which so many Republicans are the victims, does not figure, probably, avowed resentment at the order, said to have been brought to Springfield as coming from the White House, that Yates must not be renominated. With Lowden lukewarm in Cook County, and Yates wielding a vindictive knife in the rural districts, it looks as if Speaker Cannon might have to be "drafted," after all, to play the part of harmonizer, for which he is peculiarly qualified. For the moment, indeed, the Republican managers seem to have fixed upon Senator Fairbanks of Indiana, notwithstanding the fact that he, when asked if he would accept a nomination for the Vice-Presidency, continues to dally with his watch-chain and to put the question by. Yet nobody can tell what the Chicago convention will do when it sees Cannon on the platform in the rôle of its presiding officer. He is quite as likely to be stampeded as was Horatio Seymour in 1868. No doubt Mr. Cannon can rule out of order all motions mentioning his name, but that is just what Seymour did, and he found it a futile expedient. It is almost certain that Pennsylvania and New Jersey will demand Cannon, and New York and Ohio seem not unlikely to cooperate. We suspect that the Speaker was premature when he joyfully pronounced his boom as "flat as a pancake."

Elsewhere we have directed attention to the qualifications of Attorney-General Philander C. Knox to represent the great State of Pennsylvania in the United States Senate. Here we would point out that the posthumous influence of the late Senator Quay was revealed in the choice of his successor. It was Quay that originally picked out Mr. Knox, who, although eminent at the Pittsburg bar, was, as yet, obscure politically, for the place of United States Attorney-General, although Mr. John B. Elkins, as, first, Deputy Attorney-General, and subsequently Attorney-General of Pennsylvania, was thought by himself and many others to have a much superior claim to represent the Keystone commonwealth in the cabinet. After the death of Senator Quay, the controllers of the Republican organization in Pennsylvania went through the form of consulting local leaders, and it was reported on good authority that the next occupant of the seat now vacant in the United States Senate would be one of a number of active Republican politicians, among whom Mr. Knox never has been, and is not now, included. It turns out that as long ago as last December it was made known to President Roosevelt, either by Senator Quay or through an intermediary, that, under circumstances easily foreseen, his Attorney-General might be needed as one of Pennsylvania's spokesmen in the United States Senate; and we have since learned that when Quay, in his last moments, sent for ex-Senator Don Cameron, he expressed a desire that Mr. Knox should succeed him. The wish was communicated to Mr. Henry C. Frick, the well-known steel magnate, and to Mr. A. J. Cassatt, President of the Pennsylvania Railroad Company. The selection being approved by the latter, it was announced to the rank and file by the ostensible masters of the machine. Whether Mr. Elkins, who has a large and zealous following of his own, and who would have much preferred a seat in the United States Senate to the place on the bench of the Supreme Court of Pennsylvania, for which he has been slated, will submit meekly to the fiat of the leaders was at first regarded as doubtful in some quarters, but it now seems to be believed that Mr. Elkins will be pacified by the promise of the Republican nomination for the Governorship in 1906. Naturally the Democrats and independents of Pennsylvania resent the usurpation by "bosses" of the elective function delegated by the Federal Constitution to the State Legislature; but in this instance their protest is rendered somewhat perfunctory by their frank acknowledgment of Mr. Knox's fitness for his new position.

It is well known that the national conventions of the Republican and Democratic parties are to be petitioned to make an unequivocal declaration of our nation's intention to give independence to the Filipinos, or, in other words, to treat them—at some date which, if not definitely fixed, shall be declared to be not distant—precisely as we have treated the Cubans. Among the signers of the petition are Judge George Gray of Delaware, Chief Justice Mitchell of the Supreme Court of Pennsylvania, Charles Francis Adams, of Massachusetts, ex-United States Attorney-General Wayne MacVeagh, of Washington, D. C., Professor W. G. Sumner, of Connecticut, Professor Henry Van Dyke, of New Jersey, Dr. Felix Adler, of New York, and many other jurists and members of the liberal professions. It will be remembered that Judge Taft, now Secretary of War—and actually, though not nominally, Secretary of the Colonies—has also declared that, in his judgment, we should eventually make the Filipinos independent, but has expressed a doubt, nevertheless, as to whether a date should be named. In the joint resolution passed by Congress in April, 1898, we did not name any particular date at which we would carry out our pledge to give Cuba independence, but, in spite of the omission, we fulfilled our pledge with all practicable celerity. In some quarters the impression is now gaining ground that, without designating a particular date, the platform of the Chicago convention will include a pronouncement that will make it possible for Mr. Roosevelt in his second term to concede partial if not complete self-government to the Filipino people.

The impression seems to be based on the presence of the Rev. Dr. Lyman Abbott at the White House as a guest, for the avowed purpose of discussing with the Philippine Commissioners to the St. Louis Exposition the independence of the archipelago. Dr. Abbott has publicly pointed out that most of the steps preparatory to such a concession have already been taken. A public-school system has been organized, and is being rapidly developed. Local governments have been established in the provinces and towns. An enumeration has been made preliminary to the convocation of a representative assembly, which itself will be called together at no distant time. The diffusion of education and public intelligence having been assured, the guarantees of freedom of debate having been provided, and a common language in which debates may be held having been agreed upon, some experience in local self-government having been acquired, a public opinion having been created, and a representative body having been organized through which the ideas and wishes of the people may be expressed—in a word, when the conditions and the safeguards of the people's liberty shall have been secured—it will then, in Dr. Abbott's opinion, be our duty to let the Filipinos determine for themselves whether they will be independent of the United States, or whether they prefer to remain under our protection, and, in the enjoyment of the

privileges and powers which, under that protection, would remain intact. Should they deliberately prefer to retain some political association with the United States, Dr. Abbott, for his part, has no doubt that such a relationship might be established between us and the Filipinos as would be mutually advantageous to both communities.

Those who recall the Vigilance Committees which twice in the Fifties were invoked to deliver San Francisco from the rule of murderers and scoundrels, must watch with interest the acts of a somewhat similar agency which, of late, has been called into being for the restoration of order in a section of Colorado. It will be remembered that, in San Francisco, judges, juries, sheriffs, and policemen—in a word, the whole normal machinery of justice—were brushed aside, and that by the leaders of the Vigilance Committees notorious criminals were arrested and summarily tried, and, if convicted, were forthwith executed or deported. The reign of terror, arson, and murder, which union miners have maintained for ten or fifteen years in Teller County, Colorado, and especially in Cœur d'Alene, Butte, Leadville, Idaho Springs, Telluride, and Cripple Creek, culminated on Monday, June 6, in a dynamite explosion, by which fifteen men were killed, and nearly as many more maimed so grievously that death might have been preferred. The Governor of the State has evinced a relentless resolve to restore order and to crush lawlessness, which, had it been exhibited by Governor Stone of Pennsylvania, would have made superfluous President Roosevelt's unconstitutional interposition in the anthracite-coal strike. The Executive Board of the Western Federation of Miners decided on Friday, June 10, to appeal to the President, but we know of no ground on which the appeal can be entertained, in view of the position taken by the Governor of Colorado. On the same day seventy-six union miners were deported to Kansas, and Adjutant-General Sherman Bell, of the Colorado National Guard, announced that within forty-eight hours the disturbed district would be freed from all objectionable men.

What is meant by "objectionable men" was defined on the same day by the Secretary of the Cripple Creek District Mine-Owners' Association, when he declared that the Citizens' Committee, which is cooperating with the military, and which has driven away the district judge, the county judge, and other local officials, on the charge of conniving at the acts of violence committed by the union miners, will never stop their fight against unionism until not a single member of the Western Federation of Miners is left in Teller County. There are still, it seems, a few desperate agitators in hiding among the hills, but they are to be hunted down. The simple truth is that the curse of lawlessness from which Teller County, Colorado, has suffered for many years at the hands of union miners has at last come home to roost. What we are now witnessing in the Cripple Creek district of Colorado is a civil war, in which the worm has turned; that is to say, the normally peaceful and law-abiding members of the community have risen against their oppressors; and, with implacable logic, are meting out to the union miners the dire alternative of banishment or death, to which the latter themselves have so long subjected non-unionist workers and their sympathizers. If the mass of the community in the anthracite region had risen in a similar way, and had found the same kind of Governor to back them, the coal strike would have been over in a trice, and many years would have elapsed before a second attempt to terrorize non-unionist workmen would have been made in Pennsylvania.

Seldom, indeed, are the political and sociological views of a seventeen-year-old schoolboy worth consideration or even mention. Exceptional, if not unique, was the valedictory address delivered, June 3, on his graduation from the Atlantic City High School by Wu Chao-chu, the son of Wu Ting-fang, long and favorably known as the minister of the Chinese Empire to the United States. Although this youth labored under the grave disability of acquiring knowledge through the medium of a language radically different from his own, his averages, we are told, were the highest in every department; and his address, which appropriately had for its subject the conservatism of the Far East, was marked by a rare maturity of thought. Young Wu began by admitting that the Japanese are relatively progressive, whereas the Chinese are justly looked upon as typical of Oriental conservatism. He recognized that a people whose conservatism is not ingrained may change easily from its ancient customs and manners to new. He pointed out, however, that what can be changed easily once may probably be changed just as easily again. A volatile and mutable nation that flickers with every wind may return to its old ways, and its very relish for novelties may prove an archenemy to progress. By way of illustration, the young Chinese recalled the difference in the outcome of the French and English revolutions. Since 1789 France has known innumerable political transformations, almost all of them accompanied with bloodshed and horror. Yet, if we look at realities rather than names, we must acknowledge that the ultimate outcome of her numberless revolutions has been less substantial, less far-reaching than that of the single English rebellion in the seventeenth century.

The young Chinese student expressed the conviction that his own people, though slow to begin, would, when once started, carry out to the end the work resolved upon. He compared the Middle Kingdom to a heavy body in physics. A great deal of force is needed at first to overcome its inertia, but, if it can be made to move at all, its momentum will carry it far, and it cannot be diverted from its course like a light, excessively mobile body. To exemplify what he meant, Wu Chao-chu adduced the evidence of Christian missionaries, who report that the Japanese are easy and the Chinese hard to proselytize, but that, on the other hand, a good many Japanese converts have returned to their old faith, whereas there are but few such cases in China. It was further suggested by the young Chinese student that conservatism may prove of benefit to a nation in that it conduces to the continuity of national life. Conservatism, also, he thought, might be advantageous to a people because it preserves the foundations on which the inherited civilization and its inherited ethical system have been reared. When a nation is conservative, it adheres not only to superannuated customs, but also to the old standards of morality. The former are but superficial defects, while the latter may be of imperishable usefulness. Culture may be revolutionized with time, but virtue is immutable. This aphorism seems to savor of Confucius.

Young Wu assigned yet another reason for valuing conservatism, namely, that it may be looked upon as constituting a reserve of energy. Is it according to nature, he asked, that the nation that is quivering and humming with nervous activity should last as long as another which is frugal of its resources? At the outset of a battle, the skilful general is careful to hold back a part of his force, well knowing that the ultimate victory is often decided by the strength of the reserve. When we add that this Chinese graduate of an American high school quotes aptly not only Tennyson, but Edmund Burke and Francis Bacon, we have probably said enough to show that his distinguished father may well regard with satisfaction the outcome thus far of an educational experiment which is to include, we are informed, a course in finance and in political economy at the University of Pennsylvania.

In an article contributed to the WEEKLY of June 11, accompanying a picture of Prince Oukhtomsky, Russia's representative at the World's Press Parliament at the St. Louis Fair, it was stated that Count Lamsdorff had suggested to the Russian press in general the propriety of staying away from St. Louis as a rebuke to this country for its anti-Russian sentiment. Prince Oukhtomsky says that in this particular our contributor was mistaken. Count Lamsdorff, he says, encouraged his coming to St. Louis, and warmly approves of everything likely to diffuse in the United States a better understanding of Russia's position.

The London *Spectator* foreshadows the fall of Count von Buelow as Chancellor of the German Empire. The occasion is the recent verbal duel of the Chancellor with Herr Bebel, the famous Socialist, whom the *Spectator* describes as "like an English Radical." Herr Bebel declared that Count von Buelow had muddled German foreign politics to such an extent that the Fatherland is now politically isolated. Germany, he declared, had become an object of general antipathy, and a sort of Ishmael among the nations. The situation in Southwest Africa was drifting from bad to worse; the revolt of the

natives was based on real grievances, on the cruelty and injustice inflicted by Prussians intoxicated with a little brief authority. In fact, Von Buelow was an all-round failure. To this the Chancellor replied that some of the charges of cruelty were true, but that the majority of German colonists behaved well. He followed this with an extraordinary statement, saying that the charges brought by the missionaries were founded on fact, but that the missionaries were "unpatriotic" in bringing these charges. As to general unpopularity, he doubted its universality, but saw no remedy except "keeping the German sword sharp." This was far from pleasing to the Chamber, and it is said that the Catholic Centre, aroused by some new irritation inflicted on the Catholic Poles, is inclined to withdraw its support from the government, as a protest against the policy of Count von Buelow. The *Spectator* closes with the curious reflection that it is believed that there would soon be a new Chancellor, but that there is no statesman of sufficient mental power and general repute to take up so great an office. It is the old story. Personal government pushed to a certain length extinguishes original ability near the throne. The shade of the big tree is so deep that smaller trees cannot grow beneath it.

The American Society in London, through its secretary, Mr. F. C. Van Duzer, unfolds a tale of woe concerning forty agricultural Texans who shipped last August from Galveston, in charge of cattle on the British steamship *Cranley*, to Lorenzo Marques in South Africa. Certain scamps named Womack and Adams, representing themselves to be deputy United States marshals, gave them assurances that they would receive certain wages and would be brought home. These assurances they trusted, though the ship's articles which they signed contained no bargain about returning home. When they got to Lorenzo Marques they found their voyage was at an end, and that no one was responsible for seeing them home. The British consul at that port sent them to London. Arriving there on November 12, 1903, destitute and friendless, they were succored by the American Society, which paid their board in London and their passage back to Galveston, at a total cost of £170.

Recounting this case in a letter to Ambassador Choate, Mr. Van Duzer submits that while the American Society is always willing to help distressed individual Americans in London, cattlemen in squads of forty draw more heavily than is reasonable on its benevolence. He thinks such cases when they transpire should be financed by the American government. Still more he considers that the regulations of the Agricultural Department which carefully safeguard the comfort of American cattle which leave our ports should take some thought for the men who go in charge of them, and make it impossible for such confiding travellers to be gulled by United States officers or men assuming to be such. The society, through Mr. Choate, asked our government to reimburse it for its expenditures in behalf of these men. It got word back that there was no available fund out of which it could be reimbursed. It now makes the case public, declaring that its resources are overtaxed by the frequency of such calls upon it as that of the forty cattlemen from Texas, and that its members ought no longer to be called upon to pay out money "to help those citizens of the United States who, but for the inaction of the officials of our government, would not, in the great majority of cases, be stranded in a foreign country without means." The society's protest seems well founded. Relief on the scale it describes should surely devolve upon the government whose citizens are concerned. If we can spend money freely to send ships to worry a Moroccan bandit into giving back a Greek-American millionaire, we ought to be able to find the means to fetch home a squad of farmers whom a couple of Texan scamps have exported on false pretences. We hope Congress, when it meets again, will pay back the £170 to the American Society in London, and if justice has leisure to pursue Womack and Adams, the deceivers, they surely should be brought to book.

There will be many mourners for Laurence Hutton, who died on June 10, at his home in Princeton. He was one of the kindest and most companionable of men, a man of many friends and strong attachments, a Scotchman of New York, who did credit both to the country of his forebears and the city of his birth. He was born here in 1843, and lived in the home of his birth until 1898, when he moved to Princeton. For some years prior to that time he wrote the literary notes for *Harper's Magazine*, and for many years he was a frequent contributor to the Harper periodicals. He was a near friend of Edwin Booth, whose life he wrote, and also of Mark Twain. He wrote a good many books, including *Curiosities of the American Stage*, *A Boy I Knew*, the *Literary Landmarks* series, and other volumes relating to art and the stage, and books of reminiscence. He was a zealous collector in certain lines, and his famous collection of death masks now in the library of Princeton University has no rival in its class. Mr. Hutton became a lecturer at Princeton after he went there to live, and would have gone farther and no doubt with much success in that field of exertion, but for an affection of the throat which overtook him three years ago, and which was presumably the indirect cause of his death.

Last week a Brooklyn jury gave a verdict which involved the transfer of $1,112,000 from the former president of a New York Trust Company to a promoter. The promoter and another witness, his friend, swore that the Trust Company's president had promised to pay the promoter a million dollars for certain information about a railroad in case he used it. The Trust Company's president denied having made the promoter any promise whatever; denied indeed all recollection of any personal interview with him. No writing of any kind passed. The road in question was ultimately bought, and the capitalist sued had some (comparatively small) share in buying it, but according to testimony given in the case, it was not bought as a result of the promoter's suggestion or of any information he gave. The Brooklyn jury believed the testimony of the promoter and his friend as against the testimony of the capitalist and such witnesses as he summoned, and awarded the promoter the largest sum ever awarded in a civil suit in Brooklyn. It was a very remarkable case. The amount involved in the verdict, the absence of any written agreement or memorandum, and the absolute conflict of testimony between the promoter and the capitalist make it notable, and makes the course of the appeal from the Brooklyn jury's verdict worth following. If it is as easy to separate a New York capitalist from his money as appears in this case, the wonder is that ingenious Brooklynites should ever stoop, like 520-per-cent. Miller, to rifle the poor.

One hundred and twenty candidates from the United States have passed the examinations for the Rhodes scholarships, which is more than twice as many as can be appointed this year. In Massachusetts the committee selected a student for appointment from a group of eight competitors who passed the tests. Considering the complicated desires of Mr. Rhodes about his scholars, the process of selection as worked out by this Massachusetts committee must have been interesting. It is related that the most capable and popular student now at Oxford is a Rhodes scholar from Germany. He was asked how he got his appointment. Did he pass an examination? No. "On Thursday I received a telegram from the Kaiser: 'You go to Oxford on Tuesday,' and I came." The Kaiser, it seems, looks around and selects the Rhodes scholars from Germany. That is probably the ideal way. If President Roosevelt should be invited to lay aside the cares of state long enough to select the scholars from America, he would probably do it more nearly to the testator's taste than it will be done, and Oxford, which has no race prejudices, would like the result. Selection by committees after examinations is only a second-best method, but for this country it is the most practicable, and no doubt it will give interesting and satisfactory results.

In New Jersey they are trying to find a way to escape hanging a woman who killed her rival in the affections of a man to whom she had borne four children. The man, who had never married her, abandoned her and her children. The natural, righteous, human instinct would be to let the woman off and hang the man. But as there is no legal excuse for that it seems warrantable to hope that Jersey justice won't make a bad business worse by hanging the woman. She has had trouble enough. She has been reprieved until July 6.

Pennsylvania's New Senator

AN incident of importance, not only to Pennsylvania, but to the United States—for it obviously concerns the whole country that one of its greatest constituent commonwealths should be represented worthily in the Upper House of the Federal Legislature—was the appointment on June 10 by Governor Pennypacker of Philander C. Knox, Attorney-General of the United States, to fill the seat in the United States Senate made vacant by the death of Matthew S. Quay. How high a place on the roll of States is occupied by the Keystone commonwealth it should be superfluous to point out. In population Pennsylvania surpasses many a European kingdom, being credited by the last census with 6,302,115 inhabitants. On this side of the Atlantic it is almost the sole producer of anthracite coal, and its output of bituminous coal in 1901 was almost three times as large as that of its closest competitor. The value of its manufactured products in 1890 was over $1,835,000,000, an amount transcended by New York alone, and that but slightly. In 1901 its railway mileage was 10,538 miles, considerably more than that of Italy, and exceeded by none of our States, except Illinois. As a producer of iron and steel it has outstripped Great Britain, and as a producer of petroleum it is Russia's principal rival. Assuredly, a commonwealth so mighty should have for its spokesmen in the United States Senate citizens who, in ability and character, exemplify the highest type of manhood. It can hardly be said that this has been the case of late, or, indeed, for many years. Yet there was a time when Pennsylvania had reason to be proud of the sons, native or naturalized, who upheld her dignity and interests in the Senate or in the cabinets of Presidents. It was she who sent to the Senate Albert Gallatin, although, on a constitutional quibble, the Federalists refused to admit him. That did not prevent him from holding for thirteen years the post of Secretary of the Treasury. For a long period James Buchanan was the mouthpiece of the Keystone commonwealth in the Upper branch of Congress, and it is well known that, subsequently, he became Secretary of State and President. Among other cabinet ministers whom Pennsylvania sent to Washington may be mentioned Alexander J. Dallas, Richard Rush, William M. Meredith, Jeremiah S. Black, Edwin M. Stanton, and Wayne Mac Veagh. That in Attorney-General Knox the State once more has a qualified representative seems to be generally acknowledged by its Democratic and independent newspapers. We read, for instance, in the Philadelphia *Record* (Democratic) that "Mr. Knox is fit, clean, and able. With him in the Senate, Pennsylvanians would not need to stand abashed, or afraid of belittling comparisons with the brainest favorites of other States." In the Pittsburg *Gazette* we read: "While we can hardly regard the State engineers as guided by the exclusive desire to give the State the highest grade of Senator, they must be credited with the fact that, from whatever motive, they have selected a candidate who will put the Senatorial representation of the State on the highest plane of ability and character." The Philadelphia *Public Ledger*, which is consistently independent, pronounces Knox an ideal Senator, and declares that so happy a solution of a perplexing situation had not been hoped for. It adds that "he is the most distinguished Pennsylvanian now in public life, and the reputation, which he won at the Pittsburg bar, not merely has been sustained, but has immeasurably broadened in the high office of Attorney-General of the United States." It thinks that he is destined to regain for Pennsylvania her just measure of intellectual influence.

Philander Chase Knox is fifty-one years old. He was born in Brownsville, Fayette County, Pennsylvania. His early education was received in the public schools. His father, a country banker, wished him to follow his own vocation, but the boy's ambition was to become a lawyer. Accordingly, he was sent at the age of sixteen to Mount Union College at Alliance, Ohio, where he graduated in 1872. Thence he went to Pittsburg to study law, and three years later was admitted to the Allegheny County bar. During his early professional career he was known as a tireless worker, never leaving to a subordinate any of the preparations for an important case. Early in the eighties the firm of which he was a member won several important suits for the Carnegie Steel Company, and he and his partner were soon credited with making more money than any other two lawyers in Pittsburg. His last great argument before he was invited by President McKinley to become United States Attorney-General was delivered in Indianapolis. Associated with him was ex-President Benjamin Harrison. The Indiana courts decided in their favor. Some time later Mr. Knox met General Harrison on the boardwalk in Atlantic City. In the course of a chat the latter said: "By the way, Knox, how did you come out in the settlement of your account with the Indianapolis Street Railway Company? For *my* services I got twenty-five thousand dollars out of them." "I am very glad to hear it, general," replied Knox, pleasantly. Then, in a modest, deferential way, he continued, "I got $125,000." "What!" blurted out the ex-President, who, wheeling, continued his walk without another word.

We scarcely need remind the reader that, as Attorney-General, it fell to Mr. Knox's lot to appear for the Federal government in one of the most important cases ever heard before the United States Supreme Court. We refer, of course, to the Northern Securities case. Mr. Knox contended that the great railway merger violated the Federal statute known as the Anti-Trust Act. In order to succeed he had to prevail on the highest Federal tribunal to put the stamp of its approval on the law which Mr. Richard Olney, when he was Attorney-General, had declared unconstitutional. Mr. Knox secured a judgment in his favor, although opposed to him were ex-Attorney-General Griggs, whom he had succeeded in office, and the well-known corporation lawyer, Mr. John G. Johnson, of Philadelphia. It has been suggested in certain quarters that the "trusts," smarting under the decision wrung from the highest Federal tribunal, have been disposed to think that Mr. Knox proved himself too clever by half; and that it is they, who, acting through Mr. A. J. Cassatt, president of the Pennsylvania Railroad, have contrived to kick him upstairs, or, in other words, to transfer him to a field where, in their opinion, he can do less harm. This view of the incident has been propounded not only by some Democratic organs, but also by a few Republican newspapers, among which figures conspicuously the Boston *Advertiser*, which, after noting that "Philander Knox, the Trust-Buster, goes into the United States Senate," says: "He will be out of the Department of Justice, and, therefore, cannot be offensive to Wall Street in his present position. Nobody expects that he will be succeeded [in the Attorney-Generalship] by a lawyer equally able and eminent." On the other hand, the Philadelphia *Public Ledger*, which is, as we have said, independent, denounces the *Advertiser's* slur as unfounded, perverse, and morbid. It concedes that, if Mr. Knox had, at any time in his career, shown any lack of personal, professional, or official honor, or of fidelity to any confidence that might be reposed in him, there would be some excuse for the charges that, having deserted the corporations and trusts, that were once his clients, to take high executive office, he now returns to them as a legislative servant, bound to their sordid interests. But, under the circumstances, the *Ledger* does not hesitate to declare that, "Mr. Knox having been always faithful in his personal, professional, and official relations, there is no excuse for the assumption that, at this late date, he is going to sacrifice his good name, and sell his high character to the representatives of any sinister interests."

There is force, also, in the *Ledger's* intimation that, if it is the trusts who have put Mr. Knox out of the way, by transferring him from the cabinet to the Senate, they have made the blunder of beginning at the wrong end, and dealing with the servant instead of with the master. It was not Mr. Knox, but the President, who initiated the suit against the Northern Securities Company. It will matter but little what Attorney-Generals may come and go so long as Mr. Roosevelt stays.

The American Soldier Away from Home

INASMUCH as some anti-imperialist newspapers have seen fit to comment in what seems to us a carping and unfair way on the doings of American soldiers in the Philippines, we are glad to note the testimony to the worthiness of their character and conduct given by a foreign observer. What we have in mind is an article on the subject contributed to the latest number of the *North American Review* by an eye-witness, Mr. A. H. S. Landor (a grandson of Walter Savage Landor), whose books on the aborigines of Yezo, on Korea, and on Tibet are known to many readers on this side of the Atlantic. Travel and residence have made Mr. Landor exceptionally well acquainted with most of the countries constituting the "Far East," and he has had occasion to meet a great many of our officers, both during the Chinese war and in various parts of the Philippine Archipelago. He does not, of course, deny that there have been cases where American military men have lost their heads and behaved in an inhuman way; but he asserts that such cases have been very few, and that, in almost every instance, there was strong provocation. He condemns unequivocally the so-called "water-cure" and every other mode of torture, and if it can be shown that any man wearing the United States uniform has resorted to such methods of procedure, Mr. Landor would have him subjected to condign punishment. It would, in truth, be monstrous if we, whose mission it is to introduce a higher civilization, should, in the maintenance of order, or in the infliction of retaliation, stoop to copy the degrading and revolting customs of barbarians. At the same time the British contributor to the *Review* holds it to be a national duty on our part not to suffer the names of innocent officers to be defiled by spite or jealousy, or on meagre and untrustworthy testimony. He is right in declaring that nothing can be more demoralizing to soldiers serving abroad than the knowledge that, in their absence, unmerited accusations are brought against them at home, and harbored by ungrateful fellow citizens. Mr.

Landor, from his own observation, testifies that the officers of the American forces in the East are exemplars of a type morally admirable—businesslike, hard-working, just, open-minded men, combining patience in plodding through routine work with the display not only of pluck and dash, but of tact and accurate judgment, in the field. He deems it no matter for regret that the American officer lacks the love for gaudy wearing apparel which stamps so many military men on the European Continent; that there is on his part no superfluity of gold braiding, no monocle deforming one section of the face and impeding the sight, no needless sword-dangling, and no swagger. Of show and pomp there is next to none; but when it comes to the actual work of warfare it is done well.

That graduates of West Point should exhibit much polish of manner is, no doubt, to be expected from the training that they undergo; but our foreign observer was almost equally impressed with the gentlemanlike demeanor of many of those officers who had risen from the ranks. This is a phenomenon which, naturally, would surprise one previously familiar with self-made officers in the British army: it is ascribed by Mr. Landor to the fact that, on an average, the American private soldier is vastly superior in native intelligence to the British recruit, and, ordinarily, is better educated. Hence the relative ease with which he reascends to a social grade from which, in enlisting, he had temporarily stepped down. In the British army the officers who rise from the ranks are comparatively few, as not many representatives of the well-educated classes have the moral courage needed to become a private soldier in order to make a fresh start in life. In England, moreover, conventionalities and red tape render it difficult, and, in any event, unpleasant, for such men to get on in the army, their career being generally hindered and hampered in their private relations, if not officially, by brother officers who entered the service under luckier circumstances. Even if caste feeling were absent, the ablest of young officers who in England have risen from the ranks, but who have no private means of their own, would find it up-hill work to keep pace with the expenditure deemed inseparable from their rank in the service. Our British observer was moved to admiration by the inexpensive way in which he saw the American army officers living in the Philippines. He recalls that the regimental mess was entirely devoid of luxuries; such articles as silver plate were never dreamed of. One had to sit on empty packing-boxes, and the food was of the simplest kind. Bacon, Boston baked beans, and canned tomatoes constituted the chief features of a meal which was washed down, not with wine, or even beer, but with boiled water.

Mr. Landor points out that in the Philippines an American officer is often overtaxed to an extraordinary, not to say unreasonable, degree. In view of the amount of paper-work required of them, it is no wonder, he says, that they sometimes break down. He also noted with interest how, under the stress of circumstances, an American officer, besides being a first-rate professional soldier, could, when detailed to outside work, perform it with facility and efficiency. He says that some of the most sagacious and practical civil governors had been transferred from military posts, and he arrived at the conclusion that American army officers could turn their hands to almost anything.

Turning from officers to the rank and file, our British observer declares that, if you can overlook a blunt manner, assumed to display independence, and the profusion of swear words with which his conversation is emphasized, you will find something singularly attractive about the American private soldier. Quick, shrewd, exceptionally resourceful, he is, at the same time, good natured, and, so far as Mr. Landor's experience of other nationalities has gone, he is humane beyond comparison. Behind a startling roughness of speech he carries a heart of gold: this witness testifies that in the field, on more than one occasion, he has seen men whom, from outward appearances, you would put down as brutes, as considerate and gentle as women towards wounded comrades or fallen enemies. It is further pointed out that the American soldier has a rude code of honor of his own, devoid of conventionalities, but embracing some sound, gentlemanlike principles.

To the current charge that the rank and file of our regular army are undisciplined, compared with European soldiers, and, especially, with the German, Mr. Landor replies that the finest "parade soldier" does not always make the best soldier in the field; and that, to his mind, discipline, carried to an inordinate extent, is detrimental rather than helpful to the production of an efficient fighter. It seems to him that, with the vastly improved weapons of our day, it is rather the development than the suppression of individual intelligence that is tending to become a condition of vistory. In view, in fine, of his own extensive observations in the Philippines, Mr. Landor does not hesitate to aver that, for fighting purposes, the American soldier is as nearly perfect as he can be made under the existing circumstances. He does not, for a moment, deny that, when off duty, the American soldier drinks more copiously than wisely; but for such excess he attaches less blame to the soldier himself than to the busybodies at home who have abolished the canteen, being unable to distinguish between rules that read well on paper and those which will bear the test of practice. Mr. Landor is convinced by what he has seen that if the temptation of doing that which is forbidden were removed, and if drink in moderation were permitted, or at least controlled, as it used to be by our military authorities, much poisoning of soldiers by liquor obtained clandestinely could be averted. If occasional excess in drinking be excepted, our British observer cheerfully bears witness that the American soldier is no more immoral than the average civilian, and, in fact, much less so, because his work, by its very nature, is not conducive to a life of leisure.

The Position of Germany

It seems absurd to talk of the "isolation" of a power that has two such weighty and faithful allies as Austria-Hungary and Italy. Yet the popular instinct which insists on looking upon Germany as by so far the predominant partner in the Triple Alliance as to be almost independent of it, is probably right. It is, at any rate, certain that the Triplice is far from covering the whole field of German foreign policy; that Germany's aims and aspirations are largely regulated with little enough regard to the problems and policies of her allies; and that it is only in reference to a few special contingencies that one thinks of Germany as being bound by her obligations to other powers. For the most part she stands and acts alone, and though the Triplice has done much to preserve the peace of Europe for a whole generation, was renewed a year ago, and will long remain an important part of European polity, it can hardly be doubted that the progressive weakening of Austria-Hungary and the resumption of the old cordiality between France and Italy will more and more emphasize Germany's detachment and drive her in upon her own resources. Some consciousness of this has begun to permeate and trouble the German mind. The comments of the Berlin press upon the Anglo-French agreement showed an unusual disquietude. The Germans, with all their excellent qualities, have not yet compassed the diplomatic arts of concealment. When they are hurt, they cry out. When their dignity is affronted, they let the world know that they take the affront to heart. When they conceive that their position as a world-power is not receiving its due, they consider that to sputter ineffectual protests is better than silently making the best of things. That is always the sign of a state that is not quite sure of itself. The Germans would not, as they are, be still growling over the Anglo-French agreement and vowing that the neglect to consult Germany in the distribution of Morocco invalidates the entire compact, if they were quite sure of themselves. As a matter of fact, they appear to be entering a zone of national depression. The Kaiser's health fills them with anxious and unsettling solicitude; in Southwest Africa they are learning, almost for the first time, the expensive disabilities of colonization; the strength of the Socialists has passed from the stage of a problem to that of a menace; the Polish difficulty grows more insistent and less soluble with the years; the friendship both of England and the United States has been estranged, and the phenomenal recovery which France has made in the past decade is taken to argue a corresponding decline in German prestige. Only in the Far East is the outlook hopeful. Whatever weakens Russia or distracts her from Europe is of advantage to Germany, and the singeing of the Emperor of Russia's beard in Port Arthur is an event which the Wilhelmstrasse and all Germany may affect for policy's sake to regret, but can really only regard with relief. But apart from this, the signs of comfort are few. Not for many years has the international position of Germany seemed so precarious and so isolated; not for long have Germans displayed such a morbid fearfulness lest, after all, they may have miscalculated their future.

There is no need to exaggerate these little fits of pessimism. They come from time to time to all nations. They are just as inevitable as the recurrent setbacks that disturb the march of commercial prosperity. But there are some special reasons for thinking that in Germany's case they are not the product of mere irrational sentiment and that they are destined to increase rather than diminish. In other words, there is ground for thinking that Germans have been a little too sanguine about their future, and that the programme they have mapped out is really beyond their power of fulfilment. Consider what that programme is—we do not, of course, mean the official programme of the Wilhelmstrasse, but the programme which the instincts of the German people, guided by the one statesman in Europe, who, though a king, is also a genius, have inspired. A wit declared that for the Continent the net result of Sedan was to exchange a mistress for a master. Unquestionably Germany is the master of Europe; her fiat is law to an extent that forty years ago would have been thought incredible. But that is no more than the starting-point of German ambitions; it is for a far bigger stake that the hegemony of the Continent that the Kaiser is playing. No statesman in the world has more irons in the fire than he. To found one empire in China without

colliding with the Czar; to establish a sphere of influence in South America, that may easily turn to something else later on, without rousing the suspicions of the United States; to gather to himself the *disjecta membra* of the Ottoman Empire, with a special eye on Syria; to absorb all of Africa he can lay hands on; to acquire all possible coaling stations in the Pacific; and to be the quickest and highest bidder whenever any territory anywhere comes into the market—such is a mere outline of his extra-European policy. How far has it been, how far can it be, realized? In Africa, it is now pretty clear, Germany has come too late in the field to do more than gather up the crumbs from the French and English tables. Even the division of the Portuguese Empire between England and Germany, if and when it takes place, will fail to provide the Kaiser with that outlet for German emigration of which he is persistently in quest. In South America the Monroe Doctrine effectually blocks the imperial path, and the realization, quite a recent one, that this is so, is at the bottom of German antagonism towards the United States. In China it is both possible and probable that Germany may peg out a larger claim than any she has yet secured. Even so the vigilant rivalries of England, Russia, and Japan set a distinct limit to her ambitions, and Shantung, however valuable as a trading centre and *point d'appui*, is most unlikely to become a German colony in any vital sense. A Greater Germany that will spread the German language and the German idea and receive the surplus population, can only be realized, if at all, outside of Europe, in Syria and Asia Minor. In those regions the prospects are really bright, though time, much labor, and an infinity of hazardous diplomacy will be needed to turn them to account. Otherwise, and apart from the unpredictable chances of war, the question of whether Germany is ever to become a veritable world-power is in the main already decided against her.

But, then, not all German ambitions are transmarine. Even within the present boundaries of Europe there is more than one chance of expansion which she aims at seizing. As it figures itself to the enthusiasm of the Pan-Germans, Greater Germany is a much bigger affair than we always remember. It includes Holland, a part of Belgium, and the whole of German-speaking Austria. It extends from Amsterdam to Trieste, with the Dutch colonies (providing the United States can be hoodwinked) thrown in. A grandiose and inspiring programme, if ever there were one! And even here we are not at the end of it. There is no policy which the Kaiser has furthered with such zeal and brilliant adroitness as that of the creation of a navy powerful enough at the very least to hold the balance of European sea-power, and perhaps powerful enough to fling down a decisive challenge to England or the Monroe Doctrine. The same patient energy and microscopic forethought that fashioned the German army before Sedan are now being devoted to the building and training of an equally efficient navy. We are inclined to regard that as the greatest international fact of the present day. We believe that possibly for ourselves, more probably for England, it is destined and intended to have momentous consequences. But while the creation of a navy is being pushed on with an enthusiasm somewhat singular in a people whose genius is essentially non-maritime, the army, so far from being neglected, is maintained in all its preeminent efficiency. To do all this and, in addition, to build up an immense mercantile marine, to become the greatest manufacturing country in Europe, to live on good terms with France, and, above all, with Russia, without foregoing the Triple Alliance, and to lose no opportunity of stealing a march on England or of undermining her commercial and imperial supremacy—this is the goal of twentieth-century Germany. Little wonder that with such scattered and diverse aims, such a length of political communications to be guarded, with the need for such infinite diplomatic dexterity, with capable and vigorous foes at home to be overcome or persuaded, and with a gathering cloud of domestic troubles—little wonder, when anything goes wrong, that Germans should show fretfulness, disappointment, lassitude. Such moments, however, are transitory. The Germany of the future may not be all that the Pan-Germans imagine, but she will certainly be greater than she is to-day; her place and her growth are assured; she cannot break down or fail. And that one should be able to prophesy that much, with any confidence, is, when you come to think of it, one of the marvels of history.

The Bourgeois and the Philistine

ALL words are symbols of some meaning, and so when we see in the monthly periodicals Mrs. Atherton explaining why American literature is *bourgeois*, and Mr. MacArthur telling us that Mrs. Atherton's works are *philistine*, we realize that these words so flung across the printed page stand for some fact, or supposed fact, of current literature.

Mrs. Atherton accuses American literature of being *bourgeois* because it is anæmic and bloodless; and yet of all classes one would somehow think of the *bourgeoisie*,—the great middle class of well-to-do manufacturers, tradespeople, and professional people,—as being, perhaps not the most daintily, but the most plentifully fed. The complaint usually made of them is not that they lack appetite, not that they are prone to a discourteous carelessness as to the things of the body, but rather that they are immersed in the concrete; the nutriment and care of the blood assume to them an importance out of all proportion to its ultimate value.

Then comes Mr. MacArthur saying that Mrs. Atherton's works are *philistine*, because she obeys no rules and because she flings aside all classical models. Now this is an excellent definition of a romanticist, but Mr. Arnold, who ought to be an authority on the modern philistine, having practically invented him and set him going, never accused him of lawlessness. The philistines he described are the people who believe that "our greatness and welfare are proved by our being rich." They are the people who set their trust on the attainable and who scorn dreams and visions. They believe heartily in rules, establishments, concretions, in machinery, coal, comfort, and conventionality.

It was the barbarian, Mr. Arnold's amused name for the aristocrat, that he accused of a "stanch individualism, that passion for doing as one likes, for the assertion of personal liberty. The stronghold and natural seat of this passion was in the nobles, of whom our aristocratic class are the inheritors."

We have only to reflect upon the aristocrats among our English poets—Byron, Shelley, Swinburne—to realize what class is a law unto itself. There is all through English fiction the stock character of the plain-spoken aristocrat—usually a duchess—who speaks her mind bluntly because she has no favors to ask at Fortune's hands. We see her in *Evelina*, in *Vanity Fair*, and as Lady Busshe she sweeps through the pages of *The Egoist*. It is not the man born to estates and positions that make him the natural mark for envy and subservience who questions his right to express his own individuality. When we wonder why we Americans should be the least individual people in the world we should reflect that we are the first people robbed of all established position. It is a country where each man decides his own social status, and usually decides it by conformity. Only where ancient traditions still obtain, as happens, they say, in Virginia, do we find the old-fashioned, untrammelled, self-assured, outspoken aristocrat. The first mark of the aristocrat is a graceful faith in himself. "L'état c'est moi!" is his motto. He is never afraid of being in a minority, realizing that "eagles fly alone; daws and crows flock together."

The mark of the philistine is the inability to be led by an ideal, together with a troubled consciousness of a critical audience outside the radius of the individual soul. It is the fault of the philistine that he cannot do away with rules or free himself from the comical "what-people-may-think" attitude. It is the fault of the aristocrat that he sets up his own standard and is content therewith, instead of making sure, as Mr. Arnold so strenuously advised him to do, that he is "making an intelligent being more intelligent," and "seeking his total perfection by means of getting to know on all the matters which most concern us the best which has been thought and said in the world."

So, after all, Mrs. Atherton's works are not philistine. If the judicious Mr. Arnold could be called upon to beg the case he would doubtless admit that she showed to admirable advantage many of the qualities of the aristocrat, namely: faith in the individual judgment, unconventional opinions, fearlessness in expression. The defect he would doubtless point out as a lack of fine distinctions and exquisite sense for proportionate values. Certainly in the recent very searching article in the *North American Review* force would have been gained by omitting the ill-judged little dash for freedom, near the close. Indeed, nearly all her books would gain if the line could be more definitely drawn between self-confidence in exploiting the ego and self-confidence in the pursuit of an ideal.

The word *philistine* thus thrown at Mrs. Atherton's work should be changed to *romantic*, and then the original critic might decide whether *flippantly* or *wildly* should precede it. The word *bourgeois* applied to American literature should be changed to anæmic, which so completely fills the bill. For the bourgeois, without whom the machinery of the world would founder, is, after all, the orderly, healthy, well-regulated mass of us; we who avoid disturbances, believe in comfort, and are a little impervious to new ideas. We have a little of the disease which Fichte speaks of as most prevalent and fatal to man—*Inertia*—but we attend to the daily chores of the world. Once wound up, we are warranted to go with admirable regularity and few hitches for a lifetime.

In the end, whoever seeks with all diligence the truest, inward perfection can always afford to scorn the names he is called by. This diligence imposes such absorbing exercises, such a thrifty apportionment of the brief space called life that there is little time to waste on the mere names of things. One remembers the aged priest who responded to the young man, who said, "Ah, but, father, you do not think as other men do!" with, "My son, I have not been rising at dawn every morning for more than thirty years, to pray, in order, at the end, to think like other men."

RUSSIAN SOLDIERS HAULING GUNS UP THE STEEP HEIGHTS AT PORT ARTHUR

The photograph shows a body of Russian soldiers dragging heavy artillery pieces up the heights at Port Arthur for use in the defence of the Czar's most important Far-Eastern stronghold. Recent news regarding the situation at Port Arthur fails to confirm the earlier reports of a decisive attack by the Japanese, although it is believed that the fall or abandonment of the town is inevitable. According to the latest reports at the time of writing the Japanese forces have approached within seven miles of the outer forts at Port Arthur

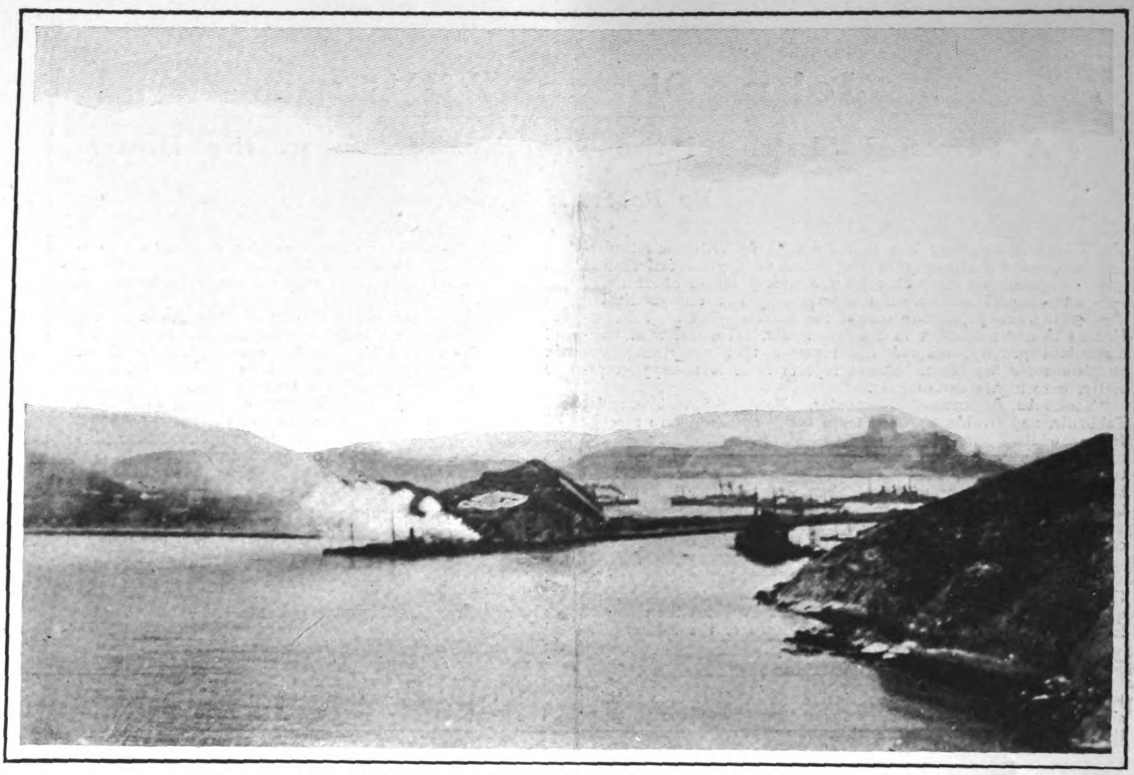
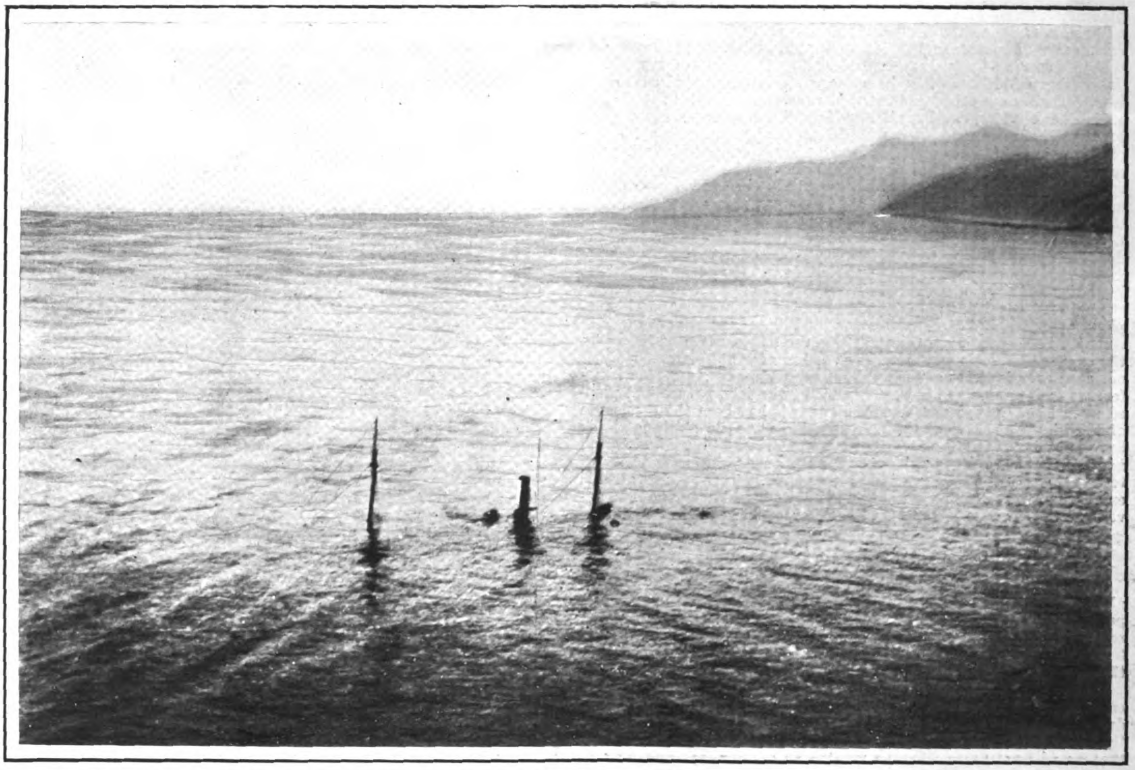
Photograph of the "Petroparlovsk," taken from the Shore of the Harbor at the Moment of the Explosion



A second Snap-shot taken from the same Position a Moment later as the Ship was going down



TWO REMARKABLE PHOTOGRAPHS OF THE BLOWING UP OF THE RUSSIAN FLAG-SHIP, THE "PETROPAVLOVSK," AT PORT ARTHUR, ON APRIL 13

The snap-shots on this page were taken at the moment of the destruction of Admiral Makaroff's flag-ship, the "Petropavlovsk," at Port Arthur on April 13, by accidental contact with a mine. The catastrophe—the most serious that has been sustained by Russia in the present war—was described in "Harper's Weekly" of April 30. The photographs were sent from Port Arthur the day after the event. They show the scene of the explosion immediately after contact with the mine

The "Retvisan," on the Rocks, resisting a Japanese Attempt to block the Harbor Entrance

The Wreck of a Japanese Fire-ship sunk near the Entrance to Port Arthur Harbor in an Attempt to block the Channel

PHOTOGRAPHS OF SCENES CONNECTED WITH THE ATTEMPTS BY JAPANESE TO BLOCK PORT ARTHUR HARBOR

The photographs, just received from Port Arthur, show incidents of the repeated attempts of the Japanese to block the entrance of the harbor at Port Arthur by sinking vessels as obstructions in the channel. In the upper picture, the "Retvisan," which was disabled and sent on the rocks by her commander, is seen firing on one of the ships sent in by the Japanese. The lower photograph shows the result of an ineffectual attempt by the Japanese to block the channel by sinking a fire-ship near the entrance

John Sharp Williams

A Personal Sketch of the Minority Leader in the House

By Robert H. Watkins

IT was in February last that John Sharp Williams's leadership of the minority in the House of Representatives had so spread his fame that he was widely talked about as of Presidential calibre. An enterprising but unsophisticated young newspaper man sought the Mississippian for information as to any movement in his favor. Mr. Williams, with well-dissembled gravity, assured the reporter that everything was auspicious for his boom. Recent reports from Mississippi, especially, were highly encouraging.

"Toomsuba, Ofanoma, Noxapater, Nanachehaw, Toccopola, Tabbville, and Grubbs Springs, I am told," he said, "are already for me, while I have every reason to believe that I shall have the undivided support of such places as Nittayuma, Wahalak, Bolatusha, Hushpuckena, Pelahatchie, Mittayuma, Estabutchee, Ittabena, Scutch, Chinquapin, Pawtickfaw, Octoc, Leggo, Yellow Rabbit, Chunkey Station, Hambone, Deoxolente, and Whynot."

When the reporter had sufficiently recovered to scrutinize the countenance of the Mississippi statesman, he asked:

"How do you spell those?"

Mr. Williams patiently and with dignified deliberation spelled the words. The reporter took it all down, and went away with a quizzical look, almost as quizzical as that with which the minority leader disappeared within the swinging-doors of the House.

His Rise to Fame

Every Congress, with its political contests, if it does nothing else for it, affords opportunity for distinction to the party of the opposition. It goes without saying that this distinction is most effective for future results in the courage and sagacity of the leadership. The test of the opposition in the Fifty-eighth Congress has been, thus far, exceptionally well met. In John Sharp Williams, of Mississippi, it has furnished a leader who has surpassed the expectation of the minority and surprised the complacency of the majority. No opposition leader has become, in as brief a time, so well, widely, and favorably known as the Representative from the Eighth Mississippi District.

Southerner as he is, born and reared in the heart of the South, John Sharp Williams has been more named and praised in the North than any other Southerner who has served in Congress since the civil war. Frank and fair, bold and pugnacious, as ready with magnanimity as with aggression, pitching his democracy on the high plane of the humanities, with a self-poise unruffled by any heat of debate, unshaken by reverse and unspoiled by triumph—these are things which have marked and adorned the Democratic leadership in John Sharp Williams. For these things his political foes have respected and admired him. Loyal, generous, sympathetic, cheerful, and patient under the burdens of responsibility to his friends, he has knit and bound the minority to him by exceptional ties of devotion and implicit trust in his integrity, his judgment, and his resourcefulness. The strength of his leadership has been not merely in magnetism of physical mien and grace. Nature had been a little chary and churlish in dispensing to him the fine factitious parts which equip the orator best. His was not the make-up of a statesman. He was not even ever in dress a "marvellous proper man"; a serene indifference to fashion was his way of meeting the joke nature had played upon him. Above and beyond all this it has been the disclosure of the high character of the man and his versatile abilities which have most impressed the House. He has addressed himself with zeal and animation to every subject and with an adaptable mobility of temperament fit for every phase presented. Throughout all his exercise of versatile performance his followers knew and his adversaries knew where to find the anchor of his political faith.

His "Stand-pat" Speech

Mr. Williams has surprised his friends and enemies in politics alike. If the former were at first a little apprehensive and prepared to make excuses for him, they are now, if anything, given to unreserved exultation over him. As he has met the best debaters of the majority and come out second best in no encounter, they have learned not to underestimate him.

While Mr. Williams has distinguished himself and been of credit to his party in every debate in which he has borne a part during the present Congress, it was to the discussion of the tariff that he brought the best powers of his rare equipment. He showed that he at least knew what he wanted as a Democrat and how to set about getting it. Perhaps his strongest speech of the session recently ended was that of January 21 last, in which he arraigned the Republicans of Congress for their "stand-pat" policy. In this speech Mr. Williams had quoted from the second inaugural address of Governor Cummins his exposition of the "Iowa Idea" as applied to the question of reciprocity with Canada, showing how irreconcilable with the stand-pat policy were the declarations for progress and free trade for the Iowa farmers which came from their Governor. The Mississippian was amplifying the idea that the country was best benefited by expansion of homogeneous populations and contiguous territories, when a Republican member, Mr. Watson of Indiana, sought categorically to commit the minority leader on whether he believed in reciprocity with Canada or absolute free trade with Canada. Mr. Williams's answer was:

"I think the nearer the nations of the earth can come to leaving their commerce totally untrammelled the happier and the better and the more prosperous the entire world would be. But I know what you want. You want to raise up amongst a lot of people the bogey man of free trade! What a terror it is to the highwayman to be faced with fear of having to drop his booty! You know that under the decision of the Supreme Court, setting aside the income tax, no party in this country could get along without a very high rate of import duties, even if it wanted to cut them down."

The Government as a Highwayman

This the Republican protectionists of the House apparently were ready to adopt as an admission justifying their own tariff policy, but Mr. Williams soon destroyed that notion, as he proceeded:

"I will tell you," he said, "just the limits to which we can get along without import duty, just the line of demarcation beyond which your duties are robbery and within which they are legitimate taxation, because they are taxation, and, like all taxation, a necessary evil, after all. You have a right to levy import taxation or any other sort of taxation upon the citizen; you have a right to burden him—it is a burden—you have a right to weigh him down—it is a weighing down—just to the extent of the necessities of a government carried on economically, constitutionally, and effectively, and above that you have no right to do it.

"Above that you not only have no right, but it ceases to be moral; it becomes robbery, a crime under the thin cloak of law. The moment the government takes one dollar out of my pocket that is not needed for public purposes, that government has taken advantage of its power, as a highwayman does, to hold me up and rob me."

Republican speakers, defending the stand-pat policy, had insisted that the tariff should be revised only by "its friends." Mr. Williams emphasized "now" as the "accepted time," and asked the friends of the tariff why they were afraid to tell the American people how and on what principle revision should be had through the party in power.

"Have you a Senator in the majority that is not its friend?" he asked. "Are you afraid that the President of the United States is not its friend?"

In this speech Mr. Williams gave the text for a number of measures introduced by him during the session with the approval of his party associates as showing that the Democrats of the House knew what they wanted and how to ask for it, and how on every proposition the majority, standing pat, was the real party of negation and obstruction to progress, blocking the way of every reform.

Not a Republican member of the House ever attempted to answer Mr. Williams's speech on the stand-pat policy.

America's Two Unwritten Laws

The name of John Sharp Williams has been used seriously by many citizens, even in the North, as that of a suitable candidate for President. The minority leader, who at least has vaunted the virtue of not taking himself too seriously, has always deprecated the suggestion. He remembers, if there were nothing else to constrain him, that he is from one of the old "secession States," and that he is the "son of a rebel soldier."

What his sentiment may be on the subject of the nomination of a Southern man is perhaps best indicated by a speech delivered in the House on January 26 last.

Mr. Boutell of Illinois had descanted upon the prosperity of the South "under the Republican protective tariff." Mr. Williams, replying, contended that the South was indeed prosperous, but prosperous in despite of legislation unfriendly to her interests, and would be "trebly as prosperous but for the indefinite, vague dread of some sort of outside superimposition of Africanization through the Republican party at some day in the future." Then he said:

"I will be still prouder than I am now of the fact that this is a reunited country, and that the South and North stand together, whenever you cease to let ooze out of you unconsciously the conviction down in your hearts that we are not the children, but the stepchildren, of this republic. There are two unwritten laws in America to-day. Gentlemen talk to me about being reunited and all under one government, and proud of it, and we are proud of it and glad of it; but there are two unwritten laws in this country to-day equally unjust. We boast that we have absolute religious freedom and equality, and yet no Roman Catholic, if he were the wisest man in the land, could possibly be nominated for the Presidency; so we boast that we have absolute sectional peace and equality, and you boast your magnanimity, and yet it is a known fact that no Southerner, if he

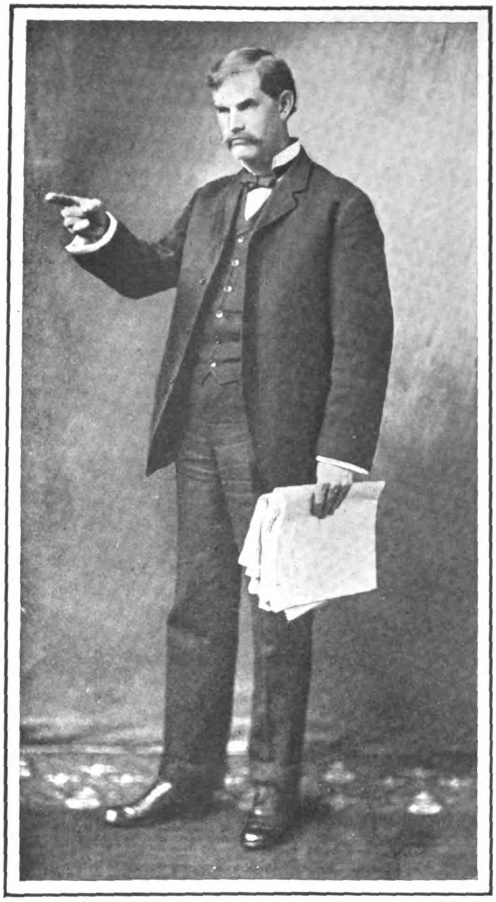
were the wisest and most patriotic man in the land, even if he drew the breath of life for the first time as late as 1866 or 1867, after the unpleasantness was over, could be nominated for the Presidency of the United States, or, if nominated, could be elected."

Mr. Williams has also been urged as a proper man to nominate for Vice-President. His friends say that he would rather be the Representative of his district in the House, even without the prospect of leading his party, than be Vice-President of the United States.



John Sharp Williams was born nearly seven years before the "unpleasantness"—at Memphis, Tennessee, July 30, 1854. He was early provided with ample means for beginning his education. He went first to the Kentucky Military Institute, then to the University of the South at Sewanee, and in 1870 entered the University of Virginia. In 1873 he left this institution for the University of Heidelburg, where he spent about two years in study.

While abroad he also attended lectures at Paris and Dijon, in France.

He returned home in 1876, and again entered the University of Virginia as a law student.

A year later he removed to Memphis to study law, and was there admitted to practise in 1877.

In 1878 he moved to Yazoo City, Mississippi, near which were the large planting interests left by his father's estate. In 1877 he married Miss Elizabeth Dial Webb, a daughter of Dr. Robert Dickens Webb, of Sumter County, Alabama. There were eight children from this marriage, seven of whom are still living.

John Sharp Williams as he appears in Debate

As showing the stamina of the man, and as, according to those who have longest known him, tending to cast some light upon John Sharp Williams's distinguished disregard for fashionable attire, it is related of him that, having finished his course at the various colleges he had attended at home and abroad and having married, when he went to Mississippi to plant cotton and practise law he found his father's estate very heavily in debt. The young man went to work with the utmost energy, and by perseverance and the most rigid economy lifted the debt burden and freed the fine estate. It was in these days of self-denial, it is said, that Mr. Williams acquired the habit of wearing modest and homely raiment. It has never been as costly as his purse could buy, but his generosity, charity, and conception of duty have induced him to buy better clothes for many another within the circle of his kin and kind.

The descendant of good Anglo-Saxon stock, able to trace an honorable lineage to the earliest settlement of America, with a family name in which he has always cherished a proper pride, John Sharp Williams has exemplified in sentiment and practice a liberality of contemplation of mankind such as is given only to the highest and broadest natures.

The principle of democracy with him is serious, as is his religion, for both embrace his warm-pulsing love of humanity.

In his address made at the two hundred and fiftieth anniversary of the founding of Harvard College, James Russell Lowell, defining the aim of that institution, said that the purpose of Harvard was to make every young man who entered its gates a gentleman—"to cultivate in him that good tact which is the conscience of the mind and that conscience which is the good taste of the soul."

Mr. Williams is not a product of New England; he is not a product of Harvard. But the ideal expressed in the words of Lowell is finely exemplified in the mental and moral attainments of this man from Mississippi. He is gentle through and through, and he is manly through and through. He has showed his fellows in temperament, character, and daily walk a warmth of democratic sympathy which is not inseparable from the statuesque calm and suavity of the old-time aristocratic ideal.

The day the House adjourned at the last session of Congress, while members were crowding about Speaker Cannon to say good-by and godspeed for a pleasant vacation, there was a little procession of Republican members who went over to the Democratic side and paid to the leader of the opposition the beautiful homage of praise for a brave, honest, and manly foe. "We are all proud of you," one of them said. And the object of this tribute of manliness to manliness bent his head and blushed like a schoolgirl.

Trials of the War Correspondent

By William Dinwiddie

Special Correspondent of "Harper's Weekly" in the Far East

WIJU, *April 23, 1904.*

LIMPING along the road with blistered feet, dragging their lame horses behind them, several war correspondents pushed on toward the Yalu, nearly forty miles away. The booming of the big guns—the signal of a great land battle—died away just before the sun sank in a murky red bank of mist on the evening of April 20.

To-morrow at daylight the great fight between the Japanese and the Russians would surely take place, and to be desperately tired and hungry, with the knowledge that there was a whole day's hard march between us and the front, caused us to plod along speechlessly, heartsick with disappointment over the situation.

We left the Frenchman at daylight at Syen-chong, twenty-seven miles to the rear, where, thrusting his head out of the paper door of his unfurnished Korean room to see us off, he had announced: "I cannot go on. **Eet eez** deesgusting. I haf not zee towel nor zee soap. I haf nozings at all wiz me. I must stay here and wait for zee canteen." An English correspondent, when out of ear-shot, remarked spitefully: "I never before heard of a Frenchman who could not travel without soap. I thought they never washed," which was an indication of how sorely tried was his usual happy temper.

To return to the road: Tamen was reached after dark, and there remained—or so we had thought—thirty-two miles between us and Wiju. Our spirits rose, however, when it was learned that only twenty miles separated us from the front, and plans were made to get away before daylight and see at least a part of next day's battle.

The sun came up slowly as two men—all that remained of the original party which started from Ping-Yang—pressed onward, chilled to the bone, straining their ears for the first sound of the stunning roll of small arms or the bellow of big guns, as the light grew a little stronger. But we heard nothing save the soughing of a gentle morning breeze in the tops of the scrubby pines along our way. Several hours passed, while the sun warmed us and the continual silence at the front cheered our hearts into the rational conclusion that an hour's firing from a single cannon at sunset the night before had meant some attempt to unmask a position, and not the beginning of a great engagement at all.

What had really happened, as we found out at headquarters in the field some four miles from Wiju, was that the Russians had attempted to send four Chinese junks filled with soldiers across one of the several wide mouths of the Yalu, and, in doing so, had located a whole line of Japanese riflemen buried in trenches on the opposing islands. It is said that sixteen litters were carried up the bank, after their quick repulse, while the Japanese had but one man scraped on the back of the hand by a Russian bullet. In order to protect the retreat of the junks, the Russians opened up with one of their big field-guns, but the shells fell fully a mile behind the screened position of the Japanese.

But, not to anticipate, it should be said that the coolie carriers, between Anju and Syen-chong, had thinned out until all suggestion

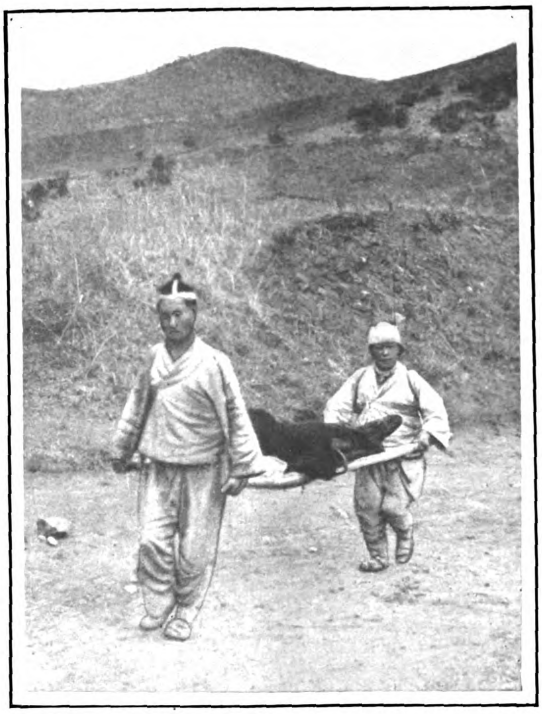
of an army in the advance was lost. As for seeing soldiers, there were apparently none in the whole land of Korea, except the handfuls at the supply garrisons in the towns. Like a shifting scene, however, the effect was all changed beyond this town, when the branch military roads coming from a landing-port known as Na-ma-si and another six miles further on called Ri-ka-ho (port of the pear blossom) were reached. Suddenly, from the top of a hill, the white winding road was filled with crawling ants, miles and miles of them, winding through the villages and over the hill-tops—the wagon-trains of the army; two-wheeled carts by the thousand, carts drawn by men, and carts drawn by horses; pack-trains carrying ammunition; light, four-wheeled carts dragging great sheet-iron pontoons, painted blue on their up-turned bottom and a brick-red on the inside.

The call of the bugle to the cavalry horse, the clang of the fire-gong to the restless animals in an engine-house, must produce a sensation similar to the stimulation of the heart and brain of the professional war correspondent at the sight of rumbling wagon-trains and the hurly-burly of a great army moving forward. At least we were within striking distance of the fighting men of war.

The high-banked road became difficult to travel upon, without danger of being crowded off, at the narrowest places, into the miry fields. When these fields changed to non-irrigated crops, prompt use was made of them by both animals and men, until many hard-beaten paths lay along the roadway, smooth or like corduroy, according to the parallel or transverse trend of the plough furrows.

While the highway was generally of excellent surface and wide enough, in spots, for two carts abreast, there were long reaches barely wide enough for one cart, and the ridges and hollows were a portent of the clayey mixture a few hours' rain could make of the now much-trodden and sun-baked surface.



In the event of a hasty retreat through Korea by the Japanese army—or rather if the army became stampeded—it is safe to say that their heavy artillery of six-inch howitzers would first be abandoned, as they have been going painfully forward in short hauls, remaining packed while the limited number of horses available were sent back to bring up the next instalment; then would come their smaller guns, which, surely, in a precipitous flight, would leave the narrow pathways and be overturned in the soggy rice-fields, while the thousands of light one-horse and man carts would litter the highway in a mass of débris. All this, of course, in the event of the plucky Japanese soldier failing to hold tenaciously and fight rear-guard actions from the mountain ridges overtopping the narrow valleys of rice morasses. The country is an ideal one for defensive rather than for offensive tactics, and, even with the avenue of retirement almost limited to a single narrow highway, by means of dogged fighting resistance, the Russians might be held back sufficiently to permit baggage and artillery to move rearward.

So far, I have never seen a piece of artillery exposed, as the barrels and breech mechanism are kept carefully concealed in their oiled-canvas coverings. The light gun—corresponding, I should say, to our 3.2 field-piece—has the gun-barrel swung so low that its centre is below the wheel hubs, giving it great stability on the road. The big six-inch howitzers, with their short barrels, heavy trails fitted with recoil springs and ponderous wheels, make an imposing display, when passing with their six horses and outriders, and their guard of twelve gunners marching at the rear. The small caissons are of the flat-topped usual type of two-wheeled box, but the heavy marching order includes a four-wheeled house, with a hip-roof, for ammunition in quantity.

These howitzers, found packed along the road one day's march from Wiju, were part of the same previously seen by the correspondents at their Korean landing-place, Chinampo, whence they had been transferred by sea to Ri-ka-ho.

The coolie soldiers, working like bees, thousands upon thousands of them, are the happiest soldiers I have ever seen. Laughing, singing, joking, as they struggle forward with heavily loaded carts, or race rearward with the empty vehicles for new burdens from the landing ports. It is claimed that their greatest grievance is that they have to work as coolies, instead of carrying a gun, but if they feel any real sorrow upon this point it does not manifest itself for long at a time. In the middle of the day they sit in groups on the roadside, cleverly conveying the rice from their small oblong lunch-baskets to their mouths with chop-sticks. They appear literally to live on rice, for it is seldom that they are seen nibbling at small pieces of raw fish in the evening. Japanese tea, so much used in weak decoctions by them at home, seems never to be issued to them now. In fact, their life has turned into one continuous round of toil, with unsalted boiled rice three times a day—an existence unleavened except by their own happy temperaments and patriotic souls.

No other soldier on earth would stand for such drudgery at three cents gold a day and plain rice as a steady diet. One can hear the American soldier growl, even yet, at his comparatively regal army ration, demanding certain privileges as a free and independent citizen, and there would be open mutiny if he were worked half as hard, paid as little, and fed on the—to him—starvation rations of the Japanese soldier.

Korean Coolies carrying Japanese Wounded Soldiers to the Rear near Wiju

Again, seldom does the Japanese soldier smoke in the field; possibly now and then a private will be possessed of a box of innocuous Japanese cigarettes and will puff away at half a dozen a day. Strong coffee, smoking and chewing tobacco are stimulants necessary and vital to all Caucasian troops in the field, while the average Jap will work twenty hours out of twenty-four, if necessary, and eat nothing besides rice and now and again a few salted, pickled radishes or turnips, and still keep in fine condition.

There are thousands of casks of saké—the national beverage of Japan—being landed and sent forward, it is said, for issue to the soldiers. The writer has never seen any of it drunk, so far, except by the officers at night in their quarters, and, if it is issued, it must be to the fighting soldiers with whom the headquarters staff have not yet allowed the foreign correspondents to become intimate.

As the front is approached, the better appointment and caretaking of the horses is apparent. When in camp in the scrubby pines of the country they are picketed in lines, two ropes from the nose in each direction being necessary to prevent a general fight from spreading among these fiery, kicking, biting ponies of the Far East. Immense quantities of barley and oats are moving forward, and are fed with fair liberality to the animals, while some little baled hay and straw is seen, but not much, the horseman usually gathering the dry yellow straw of the Korean farmer for his animal's food, and this very dry fodder is eaten ravenously. It should be said that the spring is just sufficiently advanced (the latter part of April) to start the new grass in the fields. As the season advances the grazing question will be settled. The animals of the army are not particularly well groomed, except the horses of the officers and artillerymen, but this is not at all surprising, as using the curry-comb and brush about the legs of these little demons is like playing with dynamite or signing a death-warrant.

It is exceedingly interesting to watch a supply-train of carts, each with its soldier horse-leader, unpack and get into motion, and the same is true of the reverse when they go into camp. The manœuvre is to unwind five hundred or more carts from a compactly built rectangle, whose sides consist of rows of men, horses, and carts as straight as if planted with a corn-planter, into the long, sinuous, single line of the road march. It is like unwinding a piece of folded tape. The movement is orderly and precise, and indicates considerable drill on the part of men and horses. When packed, each wagon has an inverted V-shaped prop which is dropped from its fastening under the front bed of the cart, and which supports it horizontally when the horse is removed. From any of the high hills on our road to Wiju a dozen squares of these mobile wagons could be seen drawn up in the field alongside the road, while the horses nibbled the short winter grass on some near-by wooded knoll, or fumbled about in their nose-bags for the remaining grains of feed.

Within six or seven miles of Wiju, Korean carpenters were cutting down a small pine forest, and, with logs upended and braced in this vertical position, were sawing out boards for the pontoon-bridge-to-be, with their clumsy framed saw whose teeth point in opposite directions from the centre.

To get the heavy artillery forward in the high-hilled country

which guards the valley of the Yalu, the Japanese have had to do considerable road-building, as the gradients of the old highway are entirely too steep for the easy handling of big guns.

In connection with road-building, it should be said that the engineer corps have had to construct hundreds of bridges, all the way from Seoul to the Korean boundary, a distance of over three hundred miles, and when the short period the army has really been in the field and the dreadful weather of late winter and early spring are taken into consideration, the feat of engineering is a very remarkable one, and reflects much credit on the capacity of the corps for expeditious work.

The large streams are swift and deep, and the spring floods had to be contended with, so that the bridge flooring is often fifteen feet above low water. A very simple system of tripod piling, driven with man-handled drivers, is used. All abutments are made of sand-bags piled into walls, and these same bags are used more firmly to anchor the ends of the piles which stand in the water. The artillery is usually forded, but, at two or three rivers, the bridges have been made especially strong so as to bear the weight of the heavy guns.

The last walled city in our ride to the front was passed before midday; as we climbed through the single dirty street of a few houses in a town which once was populous, we could see, far above us on the sky-line, a ceaseless procession of army stores passing through the great stone gate of the steep-sloped hill. Twice in ten years has Japan passed through this moss-grown and crumbling barrier in martial panoply, this last time with every device known to thoroughly modern warfare, and she is to meet, beyond what was once a formidable fortification protecting Korea, her first really great enemy in a conflict for national supremacy.

This old wall—older than the Christian era—which has been stormed and stoned and taken and retaken, is to have its very blocks, which have resisted valiantly the strife of conflict and the stress of age so long, shaken to their foundations by the reverberation of great cannon hurling bursting pots of fire for miles, such as were never dreamed of by the ancient race who, screaming with frenzy on the wall above, cast devilish burning pitch upon the mailed heads of an ascending foe.

Over the last rise the purpled Manchurian hills rose mistily beyond a river silvered by a western sun—no, not a single river, but a dozen great silver threads winding about many tree-covered islands to the great ball of the sea, blazing in the afternoon light, in one direction, and to a single bright thread, made up of the strands of all the others, in the other direction to the north. Hail to the beautiful Yalu, flanked by its formidable hills hiding among their crannies and folds grim destroyers of men! A peaceful, pastoral, limpid valley, watched over by opposing monsters crying for human blood! But to-day, at least, one might enjoy the sea, the river, and the broad fields growing green below.

As the divide was crossed it was noted that the left-hand side of the road displayed a remarkable growth of pine-trees, planted closely together at its edge and forming a continuous row on all the high places, but breaking away when the highway dipped behind the hills. It took several minutes to discover that this was a screen built by the Japanese to cover the movements of their troops into the Wiju Valley. There are miles of these carefully built tree shelters, and they give an indication of how painstakingly and secretively Japan is working up on her enemy in the hope that her final spring will land her straight at the throat of her prey.

A little sign-board on the right, so the interpreter said, proclaimed the bypath as leading to the headquarters of the First Army Corps. The scattered soldiers whom we met now and then knew less as to the whereabouts of these same headquarters than the soldiers of any army I have ever seen, and evidenced less curiosity about them, but finally a military messenger pointed out a beautiful clump of cedars on a sloping hill as the place. As the crow flies it was two miles away, but as the road ran—with all its miserable twists and wanderings, sometimes in exactly the wrong direction—it was a long tiresome five miles.

A headquarters without a flag is on a par with the feeling among Japanese military staffs that it is best not to be photographed or to make public the names of the men who control a corps.

There was no suggestion that headquarters was reached, beyond the small road sign at the turning of a foot-path from a larger foot-path. No colors over the group of Korean temples in the sacred grove, and yet inside was the commanding general of the central and western army sections and one of the many princes of Japan, as well as a whole army staff, in full working order, including Captain Okada, the specially appointed protector and nurse for foreign correspondents.

There are two political schools in Japan to-day; one, the old conservative who wants no new-fangled reforms and hates the foreigners on the principle that what was good enough for my ancestors is good enough for me, and the other, the liberal who dislikes the foreigner, but takes advantage of every suggestion, invention, and development offered by modern civilization.

A man of the first party never receives a foreigner if he can help it, while a representative of the second is apt to courteously cultivate his acquaintance.

With this explanation, it may be said that headquarters received the worn and tired correspondents, as they came in from a two-hundred-mile ride prescribed for them, with a keen sense of humor, by the Japanese government, with a frozen stare and politely icy civility.

Our records were looked up by Captain Okada, who is really a very pleasant chap, but, like all officials without much rank, servile to a degree to the officers who outrank him. We were permitted to keep our passports—now riddled with the Japanese vermilion seals of the various offices through which we had passed *en route*. A small pamphlet was handed us whose title read "Regulations for Press Correspondents. The First Army Headquarters."

Here, then, at last, was the sequel of the first orders received in Tokyo. These regulations are a joy forever to every one except a war correspondent, and even he hopes to be able to smile about them before he dies.

Some of our English friends took article 4 very much to heart, This choice bit says, "Press correspondents should look and behave decently, and should never do anything disorderly." Why the chap who takes a bath in his field canvas tub every morning and never misses a daily shave should feel affront at this paragraph it is difficult to see.

The following article is also a gem, and may be taken as a caution to the big foreign giants to tread gingerly among the little soldiers: "Press correspondents should take care not to do anything harmful to the troops and never enter the office rooms of the Headquarters."

Probably it is the most unique set of instructions ever issued by a government to correspondents, and it contains such ironclad restrictions that nothing is left to the newsman except his dessicated brains. He cannot go anywhere without his military chaperon. He can write nothing except those things practically chosen for him by the press censor.

Such was our introduction to headquarters, and after travelling more than two miles over ploughed fields and along rice-dikes to the swamp-surrounded group of extremely dirty mud hovels, which were set aside for what the general staff in Tokyo has been pleased to call "The distinguished foreign correspondents," we were quite prepared to meet two hungry and unhappy English correspondents, who had raced to the front without food or personal effects, and to find them eking out existence on a handful of rice each day, though the preliminary regulations state that officers' rations will be issued to correspondents.

Our hearts sank at the prospect, and it was a great fall from the hospitable treatment we had received from garrison commanders along the line of march, we had strained their limited larders to furnish us with excellent food, and who had cleaned up temples for us to live in. We meekly crawled into some straw

THE CLUB OF QUEER TRADES

The Noticeable Conduct of Prof. Chadd

by

G·K·CHESTERTON

Part I.

BASIL GRYCE had comparatively few friends besides myself; yet he was the reverse of an unsociable man. He would talk to any one anywhere, and talk not only well but with perfectly genuine concern and enthusiasm for that person's affairs. He went through the world, as it were, as if he were always on the top of an omnibus or waiting for a train. Most of these chance acquaintances, of course, vanished into darkness out of his life. A few here and there got hooked on to him, so to speak, and became his lifelong intimates, but there was an accidental look about all of them as if they were windfalls, samples taken at random, goods fallen from a goods train or presents fished out of a bran-pie. One would be, let us say, a veterinary surgeon with the appearance of a jockey; another, a mild prebendary with a white beard and vague views; another a young captain in the Lancers, seemingly exactly like other captains in the Lancers; another, a small dentist from Fulham, in all reasonable certainty precisely like every other dentist from Fulham. Major Brown, small, dry, and dapper, was one of these; Basil had made his acquaintance over a discussion in a hotel cloak-room about the right hat, a discussion which reduced the little major almost to a kind of masculine hysterics, the compound of the selfishness of an old bachelor and the scrupulosity of an old maid. They had gone home in a cab together and then dined with each other twice a week until they died. I myself was another. I had met Gryce while he was still a judge on the balcony of the National Liberal Club, and exchanged a few words about the weather. Then we had talked for about half an hour about politics and God; for men always talk about the most important things to total strangers. It is because in the total stranger we perceive man himself; the image of God is not disguised by resemblances to an uncle or doubts of the wisdom of a mustache.

One of the most interesting of Basil's motley group of acquaintances was Professor Chadd. He was known to the ethnological world (which is a very interesting world, but a long way off this one) as the second greatest, if not the greatest, authority on the relations of savages to language. He was known to the neighborhood of Hart Street, Bloomsbury, as a bearded man with a bald head, spectacles, and a patient face, the face of an unaccountable non-conformist who had forgotten how to be angry. He went to and fro between the British Museum and a selection of blameless tea-shops, with an armful of books and a poor but honest umbrella. He was never seen without the books and the umbrella, and was supposed (by the lighter wits of the Persian MS. room) to go to bed with them in his little brick villa in the neighborhood of Shepherd's Bush. There he lived with three sisters, ladies of solid goodness, but sinister demeanor. His life was happy, as are almost all the lives of methodical students, but one would not have called it exhilarating. His only hours of exhilaration occurred when his friend Basil Gryce came into the house, late at night, a tornado of conversation.

Basil, though close on sixty, had moods of boisterous babyishness, and these seemed for some reason or other to descend upon him, particularly in the house of his studious and almost dingy friend. I can remember vividly (for I was acquainted with both men and often dined with them) the gayety of Gryce on that particular evening when the strange calamity fell upon the professor. Professor Chadd was, like most of his particular class and type (the class that is at once academic and middle-class), a Radical of a solemn and old-fashioned type. Gryce was a Radical himself, but he was that more discriminating and not uncommon type of Radical who passes most of his time in abusing the Radical party. Chadd had just contributed to a magazine an article called "Zulu Interests and the New Makango Frontier," in which a precise scientific report of his study of the customs of the people of Tchaka was reinforced by a severe protest against certain interference with those customs both by the British and the Germans. He was sitting with the magazine in front of him, the lamplight shining on his spectacles, a wrinkle in his forehead, not of anger, but of perplexity, as Basil Gryce strode up and down the room, shaking it with his voice, with his high spirits, and his heavy tread.

"It's not your opinions that I object to, my esteemed Chadd," he was saying, "it's you. You are quite right to champion the Zulus, but for all that you do not sympathize with them. No doubt you know the Zulu way of cooking tomatoes and the Zulu prayer before blowing one's nose; but for all that you don't understand them as well as I do, who don't know an assegai from an alligator. You are more learned, Chadd, but I am more Zulu. Why is it that the jolly old barbarians of this earth are always championed by people who are their antithesis? Why is it? You are sagacious, you are benevolent, you are well informed, but, Chadd, you are not savage. Live no longer under that rosy illusion. Look in the glass. Ask your sisters. Consult the librarian of the British Museum. Look at this umbrella." And he held up that sad but still respectable article. "Look at it. For ten mortal years to my certain knowledge you have carried that object under your arm, and I have no sort of doubt that you carried it at the age of eight months, and it never occurred to you to give one wild yell and hurl it like a javelin—thus—"

And he sent the umbrella whizzing past the professor's bald head so that it knocked over a pile of books with a crash and left a vase rocking.

Professor Chadd appeared totally unmoved, with his face still lifted to the lamp and the wrinkle cut in his forehead.

"Your mental processes," he said, "always go a little too fast. And they are stated without method. There is no kind of inconsistency"—and no words can convey the time he took to get to the end of this word—"between valuing the right of the aborigines to adhere to their stage in the evolutionary process, so long as they find it congenial and requisite to do so. There is, I say, no inconsistency between this concession which I have just described to you and the view that the evolutionary stage in question is, nevertheless, so far as we can form any estimate of values in the variety of cosmic processes, definable in some degree as an inferior evolutionary stage."

Nothing but his lips had moved as he spoke, and his glasses still shone like two pallid moons.

Gryce was shaking with laughter as he watched him.

"True," he said, "there is no inconsistency, my son of the red spear. But there is a great deal of incompatability of temper. I am very far from being certain that the Zulu is on an inferior evolutionary stage, whatever the blazes that may mean. I do not think there is anything stupid or ignorant about howling at the moon or being afraid of devils in the dark. It seems to me perfectly philosophical. Why should a man be thought a sort of idiot because he feels the mystery and peril of existence itself? Suppose, my dear Chadd, suppose it is we who are the idiots because we are not afraid of devils in the dark?"

Professor Chadd slit open a page of the magazine with a bone paper-knife and the intent reverence of the bibliophile.

"Beyond all question," he said, "it is a terrible hypothesis. I allude to the hypothesis which I understand you to entertain, that our civilization is not or may not be an advance upon, and indeed (if I apprehend you) is, or may be a retrogression from states identical with or analogous to the state of the Zulus. Moreover, I shall be inclined to concede that such a preposition is of the nature, in some degree at least of a primary preposition, and cannot adequately be argued, in the same sense, I mean, that the primary proposition of pessimism, or the primary proposition of the non-existence of matter cannot adequately be argued. But

I do not conceive you to be under the impression that you have demonstrated anything more concerning this proposition than that it is tenable, which, after all, amounts to little more than the statement that it is not a contradiction in terms."

Basil threw a book at his head and took out a cigar.

"You don't understand," he said, "but, on the other hand, as a compensation, you don't mind smoking. Why you don't object to that disgustingly barbaric rite I can't think. I can only say that I began it when I began to be a Zulu, about the age of ten. What I maintained was that although you knew more about Zulus in the sense that you are a scientist, I know more about them in the sense that I am a savage. For instance, your theory of the origin of language, something about its having come from the formulated secret language of some individual creature, though you knocked me silly with facts and scholarship in its favor, still does not convince me, because I have a feeling that that is not the way that things happen. If you ask me why I think so I can only answer that I am a Zulu; and if you ask me (as you most certainly will) what is my definition of a Zulu, I can answer that also. He is one who has climbed a Sussex apple-tree at seven and been afraid of a ghost in an English lane."

"Your process of thought," began the immovable Chadd, but his speech was interrupted. His sister, with that masculinity which always in such families concentrates in sisters, flung open the door with a rigid arm and said:

"James, Mr. Bingham of the British Museum wants to see you again."

The philosopher rose with the dazed look which always indicates in such men the fact that they regard philosophy as a familiar thing, but practical life as a weird and unnerving vision, and walked dubiously out of the room.

"I hope you do not mind my being aware of it, Miss Chadd," said Basil Gryce, "but I hear that the British Museum has recognized one of the men who have deserved well of their commonwealth. It is true, is it not, that Professor Chadd is likely to be made keeper of Asiatic manuscripts?"

The grim face of the spinster betrayed a great deal of pleasure and a great deal of pathos also. "I believe it's true," she said. "If it is, it will not only be great glory, which women, I assure you, feel a great deal, but great relief, which they feel more; relief from worry from a lot of things. James's health has never been good, and while we are as poor as we are he had to do journalism and coaching, in addition to his own dreadful grinding notions and discoveries, which he loves more than man, woman, or child. I have often been afraid that unless something of this kind occurred we should really have to be careful of his brain. But I believe it is practically settled."

"I am delighted," began Basil, but with a worried face, "but these red-tape negotiations are so terribly chancy that I really can't advise you to build on hope, only to be hurled down into bitterness. I've known men, and good men like your brother, come nearer than this and be disappointed. Of course, if it is true—"

"If it is true," said the woman, fiercely, "it means that people who have never lived may make an attempt at living."

Even as she spoke the professor came into the room still with the mazed look in his eyes.

"Is it true?" asked Basil, with burning eyes.

"Not a bit true," answered Chadd after a moment's bewilderment. "Your argument was in three points fallacious."

"What do you mean?" demanded Gryce.

"Well," said the professor, slowly, "in saying that you could possess a knowledge of the essence of Zulu life distinct from—"

"Oh! damn Zulu life," cried Gryce, with a burst of laughter. "I mean have you got the post?"

"You mean the post of keeper of the Asiatic manuscripts," he said, opening his eye with childlike wonder. "Oh yes, I got that. But the real objection to your argument, which has only, I admit, occurred to me since I have been out of the room, is that it does not merely presuppose a Zulu truth apart from the facts, but infers that the discovery of it is absolutely impeded by the facts."

"I am crushed," said Basil, and sat down to laugh, while the professor's sister retired to her room, possibly to laugh, possibly not.

It was extremely late when we left the Chadd's, and it is an extremely long and tiresome journey from Shepherd's Bush to Lambeth. This may be our excuse for the fact that we (for I was stopping the night with Gryce) got down to breakfast next day at a time inexpressibly criminal, a time, in point of fact, close upon noon. Even to that belated meal we came in a very lounging and leisurely fashion. Gryce, in particular, seemed so dreamy at table that he scarcely saw the pile of letters by his plate, and I doubt if he would have opened any of them if there had not lain on the top that one thing which has succeeded amid modern carelessness in being really urgent and coercive—a telegram. This he opened with the same heavy distraction with which he broke his egg and drank his tea. When he read it he did not stir a hair or say a word, but something I know not what made me feel that the motionless figure had been pulled together suddenly as strings are tightened on a slack guitar. Though he said nothing and did not move, I knew that he had been for an instant cleared and sharpened with a shock of cold water. It was scarcely any surprise to me when the man who had drifted sullenly to his seat and fallen into it, kicked it away like a cur from under him and came round to me in two strides.

"What do you make of that?" he said, and flattened out the wire in front of me.

It ran: "Please come at once. James's mental state dangerous. Chadd."

"What does the woman mean?" I said after a pause, irritably. "Those women have been saying that the poor old professor was mad ever since he was born."

"You are mistaken," said Gryce, composedly. "It is true that all sensible women think all studious men mad. It is true, for the matter of that, all women of any kind think all men of any kind mad. But they don't put it in telegrams, any more than they wire you that grass is green or God all-mereiful. These things are truisms, and often private ones at that. If Miss Chadd has written down under the eye of a strange woman in a post-office that her brother is off his head you may be perfectly certain that she did it because it was a matter of life and death, and she can think of no other way of forcing us to come promptly."

"It will force us, of course," I said, smiling.

"Oh yes," he replied; "there is a cab-rank near."

Basil scarcely said a word as we drove across Westminster Bridge, through Trafalgar Square, along Piccadilly, and up the Uxbridge Road. Only as he was opening the gate he spoke.

"I think you may take my word for it, my friend," he said; "this is one of the most queer and complicated and astounding incidents that ever happened in London or, for that matter, in any high civilization."

"I confess with the greatest sympathy and reverence that I don't quite see it," I said. "Is it so very extraordinary or complicated that a dreamy somnolent old invalid who has always walked on the borders of the inconceivable should go mad under the shock of great joy? Is it so very extraordinary that a man with a head like a turnip and a soul like a spider's web should not find his strength equal to a confounding change of fortunes? Is it, in short, so very extraordinary that James Chadd should lose his wits from excitement?"

"It would not be extraordinary in the least," answered Basil, with placidity. "It would not be extraordinary in the least," he repeated, "if the professor had gone mad. That was not the extraordinary circumstance to which I referred."

"What," I asked, stamping my foot, "was the extraordinary thing?"

"The extraordinary thing," said Basil, ringing the bell, "is that he has not gone mad from excitement."

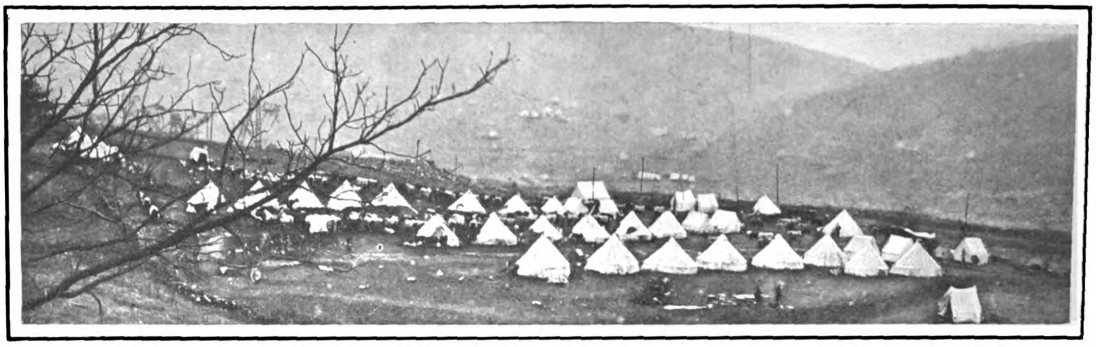
The tall and angular figure of the eldest Miss Chadd blocked the doorway as the door opened. Two other Miss Chadds seemed in the same way to be blocking the narrow passage and the little parlor. There was a general sense of their keeping something from view. They seemed like three black-clad ladies in some strange play of Maeterlinck, veiling the catastrophe from the audience in the manner of the Greek chorus.

"Sit down, won't you," said one of them, in a voice that was somewhat rigid with pain. "I think you had better be told first what has happened."

Then, with her bleak face looking unmeaningly out of the window, she continued, in an even and mechanical voice:

"I had better state everything that occurred just as it occurred. This morning I was clearing away the breakfast things, my sisters were both somewhat unwell, and had not come down. My brother had just gone out of the room, I believe, to fetch a book. He came back again, however, without it, and stood for some time staring at the empty grate. I said, 'Were you looking for anything I could get?' He did not answer, but this constantly happens, as he is often very abstracted. I repeated my question, and still he did not answer. Sometimes he is so wrapped up in his studies that nothing but a touch on the shoulder would make him aware of one's presence, so I came round the table towards him. I really do not know how to describe the sensation which I then had. It seems simply silly, but at the moment it seemed something enormous, upsetting one's brain. The fact is James was standing on one leg."

Gryce smiled slowly and rubbed his hands with a kind of care.



"Standing on one leg?" I repeated.

"Yes," replied the dead voice of the woman, without an inflection to suggest that she felt the fantasticality of her statement. "He was standing on the left leg and had the right drawn up at a sharp angle, the toe pointing downwards. I asked him if his leg hurt him. His only answer was to shoot the leg straight at right angles to the other, as if pointing with his toe to the wall. He was still looking quite gravely at the fireplace.

"'James, what is the matter?' I cried out, for I was thoroughly frightened. James gave three kicks in the air with the right leg, flung up the other, gave three kicks in the air with it also, and spun round like a teetotum the other way. 'Are you mad?' I cried. 'Why don't you answer me?' He had come to a standstill, facing me, and was looking at me as he always does, with his lifted eyebrows and great spectacled eyes. When I had spoken he remained a second or two motionless, and then his only reply was to lift his left foot slowly from the floor and describe circles with it in the air. I rushed to the door and shouted for Christina. I will not dwell on the dreadful hours that followed. All three of us talked to him, ran after him, tried to soothe him, tried to rouse him, implored him to speak to us with appeals that might have brought back the dead, but he has done nothing but hop and dance and kick with a solemn silent face. It looks as if his legs belonged to some one else or were possessed by devils. He has never spoken to us from that time to this."

To be Concluded.

General View of the Military Encampment at Cripple Creek

The Labor Crisis in Colorado: Cripple Creek

By Charlotte Teller

ON June 6 twelve non-union miners were killed and seven wounded by the explosion of a charge of dynamite at the Independence railroad station near Cripple Creek, Colorado. This is only one incident in the troubles between the metalliferous miners and the mine-owners of Colorado which have now extended over a period of sixteen months.

The Western Federation of Miners, who have a membership in the State of at least 40,000, show no signs of yielding, and the mine-owners show no sign of giving up the fight, although they are now losing heavily. The federation realizes that to yield now means a much worse defeat than at any other time of the strike, and the mine-owners realize that for them to yield means a recognition of their opponents' power which they are loath to give.

The original difference in February, 1903—the demand of the employees that union men should not be discriminated against—has not been lost sight of at any time. It is a fight between those who believe in the union principles and those who do not. The Western Federation and its sympathizers are lined up against the Mine-Owners' Association and the Citizens' Alliance. The Citizens' Alliance of the State claims a membership of 40,000, and numbers many influential persons within its secret domain. The Mine-Owners' Association is very wealthy, and represents capital from all parts of the country and England. It has brought in several hundred strike-breakers—non-union miners—and has subscribed to the support of the Citizens' Alliance. It has several attorneys in its employ. On the other hand, the Western Federation is said to have several millions as a reserve fund; it has supported the striking miners, opened stores and restaurants, leased a coal-mine or two, and paid several attorneys to defend its members in court, and to bring damage suits for them whenever it was feasible.

The maintenance of the militia will cost the State of Colorado something over a million dollars. As the population of Colorado is not more than 500,000, the strike is becoming an expensive thing for the individuals all over the State, whether or not they are directly concerned.

The damage suits being brought against the Governor of Colorado already amount to $400,000, and those against the adjutant-general and the higher officers to $600,000. The expense of the strike is of importance, but it does not seem to hinder either side from continuing without regard to it. The questions at issue are of greater magnitude.

The first trouble in the Cripple Creek district began February 14, 1904. Just previous to that time the men had been unionized in the mills at Colorado City. The mill managers had then discharged all union members, and after several conferences in which no settlement was reached the mill-men struck. The employees also asked an increase, and objected to the compulsory insurance, for which they were assessed five cents a day. On the 3d of March the Governor of Colorado gave the following order to the adjutant-general:

"Ordered.—It being made to appear to me by the sheriff of El Paso County and other good and reputable citizens of Colorado City, and that vicinity in said county, that there is a tumult threatened, and that a body of men are acting together by force with attempt to commit felonies and to offer violence to persons and property in the said town of Colorado City, and that vicinity, and by force and violence to break and resist the laws of the State, and that the sheriff of El Paso County is unable to preserve and maintain order and secure obedience to the laws and protect life and property and to secure the citizens of the State in their rights, privileges, and safety under the constitution and laws of this State, in such cases made and provided, I, therefore, direct you, in pursuance of the power vested in me by the constitution and laws of the State, to direct the brigadier-general commanding the National Guard of Colorado to forthwith order out such troops to immediately report to the sheriff of that county in the enforcement of the laws and constitution of this State, and in maintaining peace and order."

When the citizens of Colorado City heard that the militia had been ordered there the council met, and the following telegram was sent:

"GOVERNOR PEABODY.—It is understood that the militia has been ordered to our town. For what purpose we do not know, as there is no disturbance here of any kind. There has been no disturbance more than a few occasional brawls since the strike began, and we respectfully protest against an army being placed in our midst. A delegation of business men will call on you tomorrow with a formal protest of the citizens of the city."

This telegram was signed by the Mayor, the chief of police, and the city attorney. The protest which followed was signed by more than 600 persons, but no attention was paid to either the telegram or the petition, and no personal investigation was made of the conditions existing in the place; the "brawls" mentioned were fist-fights on the streets of the town, and there were no firearms in evidence, nor, as far as was known, in the possession of the striking miners.

The soldiers closed the saloons and confiscated the tents of the union pickets. Later the Governor made a tour of the mills, interviewed the strike-breakers, and held a reception at Colorado Springs. The union men agreed to arbitrate, but the employers said there was nothing to arbitrate. After some delay, however, two of the three mills acceded to the demands of the men, which were: 1, an eight-hour day, except in the sampling rooms, where a day of ten hours is allowed; 2, no discrimination against union men; 3, a reinstatement of the men on strike; and 4, a conference on the wage scale.

The Standard Mill did not agree to these conditions, and so prolonged the fight, but after the men went back to work for the other two mills the militia were recalled from Colorado City, and the first act of the labor drama was closed.

The officials of the Western Federation then went up into the hills, where the mines themselves were, and gave notice to the mine managers at Cripple Creek that if ore were shipped from their mines to the Standard mills the miners would be called out on strike. All the managers except two agreed to send their ore to the union mills. Managers employing 550 men agreed to the demands of the federation; the other managers, employing 863 men, refused.

In this Cripple Creek district there are some 300 properties. Only thirty of these produce more than $100,000 a year. The Portland heads the list with an annual production of $2,500,000. This mine is unionized, and ran until June 9, when it was closed by the troops under General Bell. The chief owner said that he found it paid him to meet the union squarely and come to an understanding of any question that might arise. He found it more economical to recognize the union than to fight it. But his stand aroused hostility among his business competitors, and he would probably have suffered some business embarrassment did he not own his own mine at Colorado City and a large amount of stock in the railroad which carries the ore on its three-hour trip from mine to mill.

The Independence Mine, located near the Portland, is a close second in annual production; and the other mines of which one hears the most are the Vindicator, the Strong, the Gold Coin, and the Ajax.

After the settlement of the Colorado City trouble there was no event to attract public attention until August, when the members of the Western Federation of Miners who were employed in Cripple Creek and Victor were called out because, as it was said, the mine managers continued to send their ore to the non-union mill, the Standard, at Colorado City. While this was the immediate cause, the cause behind lay in the conditions which had existed since 1894, when the big strike contracts were made between the employees and employers. The employees claimed that in so many respects were these contracts broken by the mine-owners that the time had come for readjustment. They struck.

From the very first the strike was a peaceable one, but the mine-owners did not like to bring in the necessary hundreds of strike-breakers without some protection, so they appealed to the Governor, and he at once, in September, sent in troops. The mines

opened with a considerable force of men, most of whom, however, were not skilled miners, and therefore not satisfactory. The work went on peaceably, and as some of the citizens of the district were entering protests against the presence of the militia, both on the ground that it resulted in false impressions elsewhere, and on the ground that the militia itself was a disturbing, if not a riotous, element in the place, the Governor consented to withdraw the troops.

This was early in November. The day before the departure of the military force there was a terrible disaster at the Vindicator Mine. An explosion of dynamite killed two men, one of whom was the superintendent. At once public indignation ran high. It was given out to the press that evidence had been found which pointed to a union conspiracy. Union men were arrested. The coroner's jury found only mystery in the case, and could attach no blame to any persons or party. But it served to draw a reinforcement of the troops already on the ground. When this case finally came up in court there was absolutely no evidence that could implicate any one, and the case was dismissed March 7.

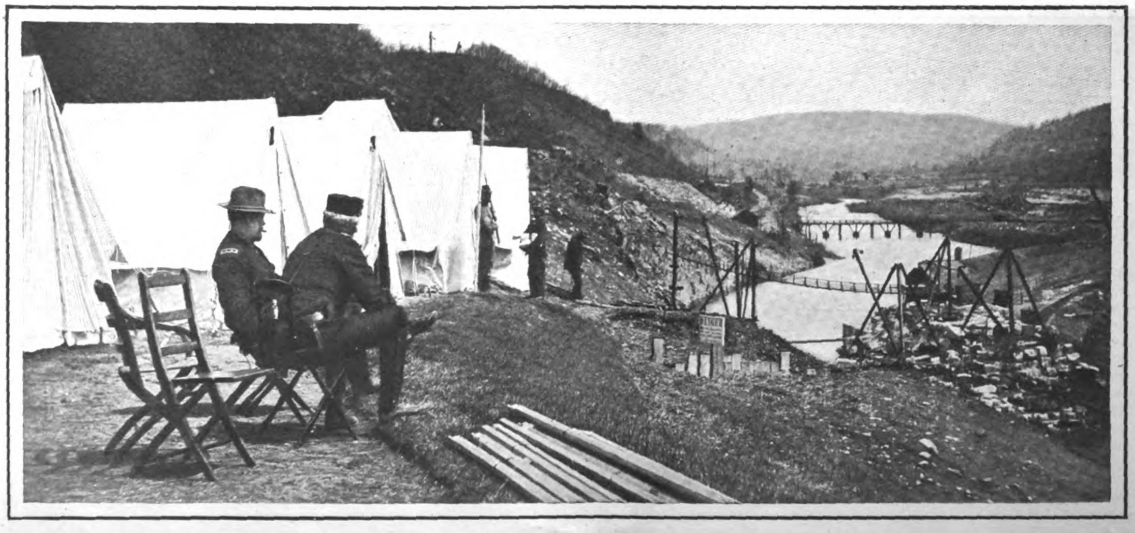
Excitement ran high when shortly after the Vindicator disaster there was an attempt (November 17) to destroy the track of the Florence and Cripple Creek Railroad within a short distance of the camps. On the train, which it was probably the intention to wreck, were at least 200 persons—miners, non-union and union. For some reason, deputies who were riding on the engine got off at a curve in the road and ran ahead to inspect the track. They saw, 200 yards away, two men taking spikes out of the rails. The attempt to wreck the train was a failure. No lives were lost.

Among the men arrested on the charge of conspiracy to destroy life by the derailment was Sherman Parker, the president of the union in this district. After his arrest he was two months in the county jail. Then the civil authorities decided they had no cause to hold him and he was released. As soon as he appeared on the street he was arrested by the military authorities and taken to the "bull-pen." Habeas corpus proceedings freed him after a month or two there, and he was out on a bail of $19,000. The charge of assault with attempt to murder was then brought against him, and he was taken to the jail again. No one appeared against him, and the judge discharged him. On the steps of the court-house he was once more arrested by the officers and taken to the "bull-pen," where he stayed until March. Then the case came up in the district court, and it was found that he had had no connection in any way with it. The conflict between civil and military authorities was clearly shown in this one instance. For the civil courts dismissed him at once, declaring him innocent, but under the interpretation of the martial law he could still be arrested and subjected to the discomforts and hardships of military imprisonment.

This "bull-pen" near Camp Goldfield in the Cripple Creek district has been for months the most vital point in the State and in the situation. Most of the suspected miners have been thrown in there—even to the crowding of sixty of them into its small area at one time. And many of the damage suits will centre about it even after it is torn down. It is within hailing distance of the Independence, the Vindicator, and the Portland mines. The camp is made up of "tepee" tents and odd frame houses covered on the outside with red paper. Except for the barred windows, the "bull-pen" looks like the other structures of the camp, though not quite so large as the commissary department, the stables, or the mess-house. It is perhaps fifteen by thirty-five feet and has but one door—padlocked—and two windows. At one end there is a bunk filled with straw and covered by an army blanket; at the other end a bench which must be used for both seat and table. The only other article in the room was a stove. When the military official showed me in I found but one occupant—Sherman Parker.

Since last November there have been anywhere from 300 to 1000 of the militia stationed at Camp Goldfield, and the maintenance of the post has cost from $700 to $2500 a day. Yet there was nothing but the most primitive accommodations for the militia. The "tepee" tents each had one stove in the centre and four wide bunks on the sides. Each tent holds eight persons, and has held as many as sixteen. There are no seats or tables, and the occupants were only supposed to come in at night.

Another case of some importance in this district is that of ex-Congressman John M. Glover, of Missouri. When an order was sent out by Colonel Verdeckburg that all firearms should be brought to military headquarters, Mr. Glover wrote to the colonel and said that he should retain his arms as the Constitution of the United States permitted him to. But the colonel insisted that the Constitution had nothing to do with the case, and sent an officer and several privates to the office of Mr. Glover, who is a lawyer in Cripple Creek. Finding the door locked the officer in charge ordered two of the boys to barricade it from the outside and so starve the occupant out. As they were doing this Glover fired, and the officer fired back and shot him through the wrist. He then opened his door and was arrested and taken to the "bull-pen." He has appealed his case, and hopes to reach the Supreme Court and there prove that the proclamation of martial law by the Governor of Colorado was unconstitutional. He claims that he was entitled to resist by force.



The attitude of one of the newspapers in Victor—the *Victor Record*—toward the striking miners was such that one night the whole force, editors and printer's devil, were all arrested by the military authorities. It was generally supposed then that the paper would not appear. But the wife of one of the force, herself a competent newspaper woman and printer, went into the office, and with the help of a boy got out the paper as usual next morning, the principle piece of news being the events in the office of the *Record* on the previous night. On June 8 the *Record* office was invaded and wrecked, and the staff and employees driven out of the building. Long before this occurred it was one of the regulations in Victor and Cripple Creek that no jokes should be made on the stage which should bring in by word or implication the military or the Governor, and no one on the streets was allowed to use the word "scab."

A noteworthy action in this strike which has attracted the attention of the judiciary of the country is that of the Governor of the State with regard to the privilege—or right—of the writ of habeas corpus. He issued on December 9 an historical proclamation in which, after setting forth the previous proclamation of martial law and the arrest of one, Victor Poole, the Governor says:

"Now, therefore, I, James H. Peabody, Governor of the State of Colorado, by virtue of the authority vested in me by the constitution of the State of Colorado, and the laws thereof, do hereby declare and proclaim that, in my judgment, the public safety especially requires that the privileges of the writ of habeas corpus be suspended in his case, to wit: In the case of Victor Poole, aforesaid, and I further direct that the said writ be suspended in his case until further ordered by me."

Not since the time of King John and the Magna Charta has any king, judge, or Governor set aside this writ. In the Supreme Court, however, the Governor's position on this question has just been upheld.

Two days after the Governor's proclamation Senator Patterson offered a resolution in the United States Senate, in which he asked that the Judiciary Committee make an investigation of all matters

connected with the strike and the behavior of the State officials. No sooner did the resolution reach the press than there was a free expression of opinion throughout Colorado which threatened to complicate matters still more than before. The Citizens' Alliance of Victor sent in a resolution to the President of the Senate demanding the resignation of Senator Patterson on the ground that he was making a continuous attempt "to disrupt, disorganize, and destroy the principles upon which our government has been founded."

Two telegrams which were sent at the time show the conflicting opinions held by various constituents. One reads:

"The law-abiding citizens of Teller County, Colorado, and of the whole State, congratulate Senator Patterson on the splendid resolutions offered yesterday, and confirm the truth of the statements therein contained."

The other one reads:

"The good people of Teller County, Colorado, and of the whole State, characterize the resolutions of Senator Patterson, offered yesterday, as false and grossly misrepresenting the conditions which prevail in this State, and as grossly misrepresenting the acts and motives of Governor Peabody and the law-abiding citizens of this State and county."

As yet there has been no investigation made by the Judiciary Committee. Martial law prevailed in Teller County, the Cripple Creek district, from December 4 until February 15, when the troops were withdrawn, a few at a time. Since that time, however, there has been a recall of troops, not only to Teller County, but to San Miguel, and to Las Animas County.

As a result of a recent conflict between the civil and military authorities, the judge of the district fined the adjutant-general and the officer in command at Telluride, and publicly denounced the acts of the Governor. What the outcome of this conflict will be cannot be foretold. The district court declares that the striking miners have obeyed the laws and maintained order, and that the Citizens' Alliance and other factions of the State are anarchistic in that they will not obey the laws nor respect the holdings of the courts.

Whether or not the strike will be broken remains to be seen. There seems to be at present no sign either of truce or final settlement.

How Star-Distances are Measured

By Harold Jacoby, Ph.D.

Professor of Astronomy at Columbia University

WHAT is the length of this room? Any one can make this simple measurement with a two-foot rule. How far is it from this house to the end of the street? This question also can be answered easily with a surveyor's tape-measure. But how many people ever think of the possibility of measuring the distance of an inaccessible object? To discover how far away a thing is, when we cannot reach it in order to measure the distance—this is a problem of a very different kind. And when the distant goal of measurement is one of those luminous stars from which we are sundered by the profound depths of space; when that object is not only supremely inaccessible, but also remote to a degree as nearly infinite as the human mind can grasp—in such a case the problem of distance is not merely one of attractive difficulty; it is one that stirs the imagination strongly.

We shall endeavor to explain further on what astronomers are now doing to throw light on this ancient problem—this problem so old that there has never been a time when the study of star-distance has not been conspicuously important to those who cherish the advancement of human knowledge. It is no mere prying curiosity that leads the astronomer to pierce into the nothingness of space in a search for our nearest cosmic neighbor. The very foundations of the accepted Copernican system of this universe depend for their validity upon the possibility of star-distance measurement.

It was realized by astronomers at an early stage of scientific inquiry that if this earth is travelling around the sun each year in an orbit of great size, then the directions in which we see the stars must change throughout the year. The older Ptolemaic theory placed our earth, an immovable body, at the exact centre of all things; the stars, immutable, clinging to their crystalline sphere, were subject to no motions whatever. So, when the Copernican philosophers placed the sun at the centre, with the earth circling around, followers of the older theory were not slow to ask for those indispensable observations of stellar changes. The only escape for the Copernicans was to declare star-distances to be so great and the cosmic universe to be constructed upon a scale so vast, that even the huge orbit of our earth around the sun shrinks to a mere point in comparison.

The idea of these supposed changes of stellar position becomes much clearer if we consider for a moment a simple terrestrial experiment. Suppose, on looking out through a window, we note some well-defined object to be exactly east of us. If we now move to another window from which the same object can be seen, we shall find that it is no longer due east of us. The change of the observer's position has changed somewhat the direction in which he sees the object, although the latter has not itself moved in the least. Similar changes of the apparent directions in which we see celestial bodies are called parallax; stellar parallax is the quantity of change in a star's apparent position on the sky, caused by the observer being transported by our earth in its orbital motion around the sun.

Modern researches have demonstrated that the old Copernicans were quite right when they ascribed their inability to observe actual parallactic changes in the stars to the fact of their distance being almost inconceivably great. Recurring again to our window experiment, it is obvious that any apparent change in an observed object's position, caused by the observer's shifting from one window to another, will be much diminished if the object is quite far away. A lamp-post across the street, for instance, would be quite appreciably affected, while the top of a mountain ten miles off would appear in almost precisely the same direction from all the windows of the same house. And as a ten-mile distance masks all parallactic effect in the case of two windows of a single house, just so, said the Copernicans, does cosmic stellar distance conceal the similar parallactic phenomena due to our earth's annual orbit around the sun. These phenomena must certainly exist, but they are too small to admit of detection with our comparatively rough instruments.

The lapse of time, of human generation following generation, brought with it a gradual but continuous improvement in the precision of instruments, accompanied with a corresponding promise of the actual detection of stellar parallactic shift. Yet it was not until the middle of the nineteenth century that the efforts of astronomers met with assured and unquestioned success.

Bessel was the first to solve this observational problem. His method was simple enough. We have seen that the actual quantity of parallactic change in a star's position diminishes with the star's distance. Consequently, we have but to measure the amount of this change in order to have at once an estimate of the star's distance.

To be more exact, mathematical calculations, based on such measures of stellar parallactic shifting, enable us to determine exactly by how much the star's distance from the solar system is greater than the distance from our earth to the sun. This latter distance is the great cosmic measuring unit; astronomers merely ascertain how many million times, perhaps, this unit must be laid down, before we could cover the profound distance by which we are separated from even the nearest fixed star.

We have seen that the practical difficulty of the parallax problem arises from the extreme minuteness of the changes that must be measured observationally,—a minuteness due simply to the exceeding vastness of the scale belonging to the universe as a whole, when taken in comparison with the scale on which our solar system is constructed. Bessel attacked the problem by selecting for observation a star suspected of having a measurable parallax—in other words, a star thought to be comparatively near us in space. The reason for this suspicion was an obvious one. It was well known that the so-called fixed stars are not in reality absolutely fixed, but that they are more or less subject to small progressive motions of their own across the face of the sky. As centuries pass these small motions become appreciable; the comparison of old catalogues of star positions with more recent ones had made this perfectly plain.

Bessel came to the conclusion that stars possessing these little motions in a rather larger degree than the average were probably near us. Other things being equal, increased rapidity of motion should indicate comparative proximity, since a given amount of actual motion in space might be plainly seen by us in the case of a star comparatively near, but would surely shrink into invisibility if removed to the outermost fringe of the stellar universe.

So Bessel selected his star on account of its large motion, as indicated by the older star-catalogues. His method of observation, like every method destined for conspicuous success was perfectly simple. Two small auxiliary stars were selected near the one under observation for parallax. Every observing night Bessel measured the exact distance on the face of the sky between each small star and the parallax star. He judged quite correctly that these two insignificant objects must really be almost infinitely far from us. If such was the case, they must, as we have seen above, be perfectly free from any appreciable parallactic shift, even according to the Copernican theory. If, on the other hand, the suspected star really is near us, it must suffer parallactic changes; and these must make it appear to swing back and forth during the year between the two auxiliary stars.

Bessel did not depend upon the ordinary astronomical telescope. He was provided with a more accurate measuring contrivance than had ever been used before his time. This instrument, called a heliometer, is especially adapted for the most precise determination of short distances on the sky,—such distances as those separating his parallax star from the two auxiliary ones. With it he was able to determine exactly the parallactic changes in his star's position; and he proved that these changes satisfied perfectly the mathematical conditions that govern motions of this kind. Astronomers thus became assured, beyond the possibility of doubt, that Bessel's observations had reference to real paral-

Correspondence

Opinions of Dr. Abbott's Advice to "A Troubled Wife"

BROOKLYN, N. Y., *June 9, 1904.*

To the Editor of Harper's Weekly:

SIR,—I have just read the editorial comment in HARPER'S WEEKLY on the remarks of Dr. Lyman Abbott in reply to a "troubled wife." Now I have a great respect for the character and mind of Dr. Abbott; but I must confess that his offhand, irresponsible, shallow, and very unsympathetic reply to the troubled wife who asked for his advice impressed me unfavorably. In it he makes a number of careless and dogmatic assertions and inferences which will hardly enhance his authority as a spiritual counsellor. "When a difficulty arises between two friends," he says, "it is always safe for both to assume that there is some wrong on both sides." That is not true, and it does not apply in this case anyhow. It is not here a question of doing wrong. The trouble arises not from an act, but from a condition. Dr. Abbott makes the childish mistake of assuming that the affections are directed or dictated by the will. "It is easier for you to correct your own fault than to correct your husband's," he says, failing to distinguish between a fault and a defect. The wife herself does not accuse her husband of committing a fault: he did not wilfully fall in love with the other woman. The wife knows what Dr. Abbott overlooks—that she lacks something which the other woman possesses, and that that something, satisfying a deep need of the husband's nature, is the cause of his love for the second woman. And she feels that it is not in her power to supply that defect in her own personality. Dr. Abbott makes some other statements which are altogether beside the mark. One would think he had read the wife's letter over a quick lunch and written his reply while shooting the chute. Here is one of his dicta: "All that a wife has any right to ask is that kind of loyalty and devotion which puts her first and supreme in his regard." The reverend gentleman does not discern that though duty from husband to wife is an indispensable element of marital felicity, the reasoned, conscientious duty that the husband *exacts* from himself in this case, a duty not perfectly voluntary and spontaneous, cannot satisfy the woman's need of his full, free love. Asking her to accept duty and loyalty, as far as her husband's conduct is concerned, is offering her a stone when she craves for bread.

The fact is this situation is one of those tragic circumstances—more or less intense according to the intensity of the temperaments concerned in them—which life is continually weaving about us human beings, mainly with the warp and woof of our own dispositions, faculties, and personalities. No human reason can devise a happy issue out of them. And yet they are rarely hopeless: life itself and time so often devise such unforeseen, such amazingly effective dénouements. If I were asked for advice in this connection I should say,—Do your best and be your best and bravest, little wife. Though you lack something which your rival possesses, it may be something which she will lose—some physical quality. Doubtless, too, you have attributes which she has not, and these may shine out in your affliction in such a way that your husband cannot fail to estimate their worth and be influenced by them. But you must not *seek* to impress him with them. If, through courageous and beseeming conduct in this crisis, you keep his high respect and esteem, there is always a chance of a sentimental reversion on his part, and in that case your union would be closer than it has ever been. Finally, remember that Fate is often our friend when it seems to be our enemy.

I am, sir,

RICHARD A.

BROOKLYN, N. Y., *June 10, 1904.*

To the Editor of Harper's Weekly:

SIR,—I do not know very much of Dr. Abbott, and after reading his reply to the wife who sought his counsel, I could never have faith in his judgments and opinions. He has shown himself to be sadly lacking in that intimate understanding of the processes of the human heart and mind which generates sympathy and fits a person to be a "guide, philosopher, and friend." His advice to the suffering woman is almost brutal in its uncomprehending sophistry, and almost insolent in its narrow, commonplace sermonizing. It is evident from the wife's letter that her nature is highly sensitive and that love is her whole life. The drama of this situation, then, must be intensely poignant. Let her not listen to the foolish wisdom which would encourage her to shut her eyes and live in a fool's paradise. Salvation surely does not lie that way. If it be possible let her, without at present doing anything irrevocable, brace up her will and live apart from her husband for a while. That would be a test for both of them, and it would give the wife time to determine her attitude and arrange her future. It would probably teach the husband, too, how much she was to him and what a void her absence makes in his existence.

I am, sir,

MAWHERA.

NEW YORK, *June 11, 1904.*

To the Editor of Harper's Weekly:

SIR,—Poor woman! I pity her profoundly. But I pity the others, too: the man, who seems to be honorable and of the best intentions and has fallen in love with another man's wife, not because he wanted to, but because, having seen and known her, it could not be otherwise; he must suffer for both women—for love of the one and for wounding the other; and the second woman, who has found love after a period of loveless marriage, and who may not have it now she has found it! They must suffer, all three. God help them! Love is a scourge and a crown of thorns when it plays tricks like this.

I am, sir, A BACHELOR.

(From "The Rose of the Kennebeck.")

JAMAICA PLAINS, MASS., *June 9, 1904.*

To the Editor of Harper's Weekly:

I am a mansion with a score of rooms:—
If she who might possess the whole of me
Is satisfied with using two or three,
Where scarce the Lamp of perfect Love illumes
The farthest corners full of lurking glooms,
Shall I not make the closed apartments free
To innocent friendship, Joy and Sympathy,
To floods of sunlight, bathing fragrant blooms?

No one is wronged: still holds the power of choice.
But I my full abundant life must live,
In Music, Art, and Poesy rejoice:
To all acquaintance ever entrance give,
And, in the silence, to the sweeter voice
Of one dear Friend be duly sensitive.

I am, sir, NATHAN HASKELL DOLE.

NEW YORK, *June 13, 1904.*

To the Editor of Harper's Weekly:

SIR,—Is a wife "of a morbid, if not of a jealous, temperament" if she suffers when the husband she loves loves some other woman? Should she accept this tragedy in her life as she would accept a mistake on the part of her butcher or the non-arrival of an expected ashman? This appears to be what Dr. Lyman Abbott expects of a woman who sees her house of happiness crumbling to ruins, if we may judge his frame of mind by his extraordinary letter to a "troubled wife," to which the WEEKLY pointed its readers' attention. Dr. Abbott hears the unhappy woman's appeal—"In great distress of mind and heart. . . . I am impelled to turn to you"—and what is his reply? "Why not go back to cheerfulness," says the bland doctor, turning comfortably in his chair. (It sounds like some of the irrelevant remarks of one Harold Skimpole.) "There are moments when despair overwhelms me," continues the mourning wife, dwelling upon the poignant fact that her husband has confessed to her his love for the other woman. Surely a situation fraught with misery for a loving heart, but what says her religious pseudo-consoler? "Stop thinking about yourself and your own suffering, think about him and what you can do to make him happy"; and finally the desperate woman cries, "What solution is there to this tragedy?" Here one may fancy the thoughtful doctor referring to the files where he keeps, neatly ticketed and ready for just such emergencies, his own original brand of solutions. This is what, after some quite necessary fumbling, he produces: "Even if you have to pretend to some gladness which you do not feel, it were better than to impose upon him the gloom of a morbid sorrow which you ought not to feel." The learned doctor then returns to his armchair, serenely unconscious of the fact that in his masterly handling of the case he has done very well for the presumed defendant, but has altogether overlooked the petition of the plaintiff, who asked him for bread and received a stone. Is this all that a minister of Christ can do for a Christian in despair?

I am, sir, AN AMERICAN WIFE.

NEW YORK, *June 8, 1904.*

To the Editor of Harper's Weekly:

SIR,—Please do not feel obliged to consider me one of your "most intelligent readers" merely because I accept your kind invitation, to those readers to express "what they think about" Dr. Abbott's "advice to a troubled wife."

That man had no business to fall in love with a woman other than his wife, if he did, without his wife's consent. If, however, unwittingly or unintentionally, he did do so, he was real mean and no gentleman to tell the woman of it. Wifie says "their intimacy extended to declarations of mutual love." But that's no sign of love, it seems—really, truly love, that is; for he had, years before, declared his "love" of his wife. Perhaps none of the three knows what love is. The wife certainly does not. She is a strange compound of suspicion and credulity. She says "he insists he loves me as dearly as ever"; but she evidently suspects he doesn't. And yet she readily believes that beyond these "declarations of mutual love" their intimacy "was entirely innocent"! She is blind—not seeing in his own frank statement the fact that he never really loved *this* wife of his.

Why? Because, no doubt, if the defendant's side of the case were in evidence, we would find that she isn't the wife she used to be. She likely became a club woman, neglected the children, and all that sort of thing. He, wisely, used the only method of saving her from herself—of saving their home. He used, very skilfully, the defensive weapon—jealousy. Her letter shows that she is on the road to recovery. She is now in the self-petting, abused state. Perhaps, some day, she will awaken to the fact that her husband is a man whose love is deep and ever-abiding.

I am, sir, E. B. LYMAN.

Correspondence.—(Continued)

NEW YORK, *June 13, 1904.*

To the Editor of Harper's Weekly:

SIR,—Dr. Abbott is wrong. He writes: "No one person, not even a faithful and loyal wife, can fill to the full all the life of any other person, though he be a devoted husband." Precisely the contrary is true. Christian civilization rejects polygamy, free love, or promiscuity, etc., not to lose, but to gain. Add together the loves of a dozen, and you find the sum less than the love of one: that's the paradox of matrimony or monogamy, as Americans view it. And if that is not true, then monogamy is a mere experiment.

A "Troubled Wife" writes words of the heart that get close up to the truth. When her husband's mishap became known to her, "nothing seemed *real*," and, as time passes, "the feeling of unreality is so strong it often seems as though it were some one else and not I who goes about" trying to hide unhappiness. Why doesn't she try to "fill to the full all *her* life" with the assistance of some supplementary man? She knows better. There's not the slightest danger of the acceptance of a substitute—an unreal thing: an addition that doesn't add—by a woman whose heart tells her so plainly what *is* real.

In practice, men and women who share Dr. Abbott's view of the insufficiency of any "one person," "even a faithful and loyal wife" or husband, *may* halt where a cool philosopher assumes that, as a matter of course, they will halt. But do they? The news of the day includes an uncommon number of elaborate chronicles of crime that reveal one particular form of weakness. This is not a time for mincing matters. Strong doctrine about wholesome family life—with the absolute integrity and stainless honor of the family as the paramount consideration for both husband and wife—would be more opportune. You have done well to ask what your readers think. I am, sir,

O. M.

MOUNT VERNON, INDIANA, *June 11, 1904.*

To the Editor of Harper's Weekly:

SIR,—Quoting Dr. Abbott's words in HARPER'S WEEKLY, June 11, 1904, page 894, Is it wrong for a husband to find interest and attraction in the society of a woman other than his own wife? That *depends* upon the attraction the other woman has for him. It is reasonable to suppose, when an intimacy extends to a declaration of mutual love between the husband of one woman and the wife of another man, that danger is imminent. No true husband or wife will permit such sentiment to grow to a declaration of love. 'Tis better to follow the poet's advice, to go through life

> With wistful eyes that never meet,
> With groping hands that never clasp,
> And lips calling in vain to ears that
> Must never hear.

The marriage vows should be respected. The unhappy wife should seek sympathy from a lady friend. The disappointed husband can travel, and his heart will soon return to his honest, virtuous, loving wife. I am, sir,

MRS. M. ALEXANDER.

---

414 EAST FOURTH STREET,
CINCINNATI, OHIO, *June 12, 1904.*

To the Editor of Harper's Weekly:

SIR,—Your implied unfavorable criticism of Dr. Abbott's "Advice to a Troubled Wife" in your issue of the 11th opens, I think, a fertile field for discussion. And I shall not be surprised if he be understood as committing himself to an unorthodox opinion of the institution of marriage. With this in mind, I shall point out why his article seems to me to preclude such an interpretation.

The troubled wife, in the extremity of her distress, implores Dr. Abbott for a "thought to cling to" in her moments of black despair. Dr. Abbott calls her attention to the complexity of human lives and to the consequent naturalness of her husband's response to a foreign appeal: he points out that all a wife can in reason ask of her husband is the supreme place in his regard; and, further, sanely advises her, by cheerfulness and the joy of her love, to win her husband back to righteousness.

A critical estimate of this advice involves, first of all, the recognition that Dr. Abbott's attitude toward the problem is determined for him in advance by its presentation. He cannot concern himself with the unrealized possibilities of the situation: for an important aspect of the criterion of the soundness of his conclusions is rigid adherence to the determinate factors before him.

Again, the interest of the problem before Dr. Abbott is intensely practical. Whatever his conception of the perfect marriage state may be, it is certainly irrelevant here. It is a question of expedient compromise, and as such he deals with it.

This, then, is, as I conceive it, Dr. Abbott's attitude toward this practical problem. It is the temperate middle way between the fervid "there shall be *no* other," of the devout lover seeking individual expression, and the bold promiscuity of Shelley's:

> Narrow the heart that loves, . . .
> One object and one form, and builds thereby
> A sepulchre for its eternity.

Consistently, Dr. Abbott does more than suggest a philosophic pose, through which the wife, in her loneliness, may win consolation,—he indicates her plain duty, and advises her to lose herself in specific action. Further, he seeks a mean of practical compromise between the claims of the wife and all other claims. To the wife he awards the supreme place in her husband's regard. He assures her, with his certitude of long experience, that, this claim satisfied, she can have no further grievance; but he kindly refrains from adding that, not the division of her husband's interest, but her innate, naked selfishness, is the true source of this hysteria and grief—the reverberation of her infantile despair when, with outstretched arms and tearful eyes, she claimed the moon as her birthright.

The final justification of the most authoritative, ethical mandates is the happiness of those to whom it is directed. And if, through overemphasis, it fails of its end, it must, so far, lose its significance. Dr. Abbott settles this case, so to say, on its own merits, and the objective, moral aspect of his decision,—that element which demands from all men a recognition of its universal validity,—is its intent, in some part, to smooth the jagged edges of reality where they tear. I am, sir,

LAMAR RANKIN.

SOUTH BETHLEHEM, PA., *June 11, 1904.*

To the Editor of Harper's Weekly:

SIR,—Last summer the small boy was singing, to the tune of "Hiawatha," these words: "Let the women do the work, do the work, do the work, while the men take it easy." I submit them as my "brief" comment on the letter you publish from Dr. Lyman Abbott to a "troubled wife." I am, sir, LOGIC.

NEW YORK, *June 8, 1904.*

To the Editor of Harper's Weekly:

SIR,—Evading the assumption of plus intelligence which any answer to your invitation to discuss Dr. Lyman Abbott's manly, unsentimental letter to a distressed wife would seem to imply, I wish only to call to the attention of your readers (and possibly of the distressed wife herself) Mr. Meredith's astonishing, mordant, and (I fear) little-read poem, "Modern Love." While the "given case" may not be precisely analogous to the perplexing, supersubtle, but very *real* tragedy of two souls presented by Mr. Meredith, it exhibits so many sensitive points of contact that a comparison cannot fail to be interesting, and might conceivably lead to some solution less terrible than that recorded by the unrelenting poet.

The "given case" is further suggestive as proving that the delicate spiritual tangles which our modern psychologic school of fiction delights in picturing and analyzing for us, are not merely fine-spun literary problems, but are the necessary products of our nervously disorganized civilization.

I am, sir, L. W. D.

CHICAGO, *June 8, 1904.*

To the Editor of Harper's Weekly:

SIR,—*Re* Rev. Lyman Abbott and "The Troubled Wife": As one of your perhaps not over "intelligent readers" I wish to say a word. While I have no idea the letter purporting to have been sent to Dr. Abbott is a letter from a "troubled" or any other wife, as it seems to me every line of it shows it is not, yet as you seem to think it is, I will treat it as it is, what it purports to be. I think Dr. Abbott's advice in the case is simply damnable. It is merely an excuse for sexual promiscuousness. If he knows anything about the human kind he must know that the woman who is troubling the wife has no love for her husband. It is lust and nothing else that governs her and also the husband. The talk of "mutual love" between them is simple "rot." The tie is sexual and nothing else, and if both were given their deserts they would be arrested and confined, as is done with the woman who plies her vocation on the streets of your city. If Dr. Abbott is so ignorant of the relations that alone can exist in such cases he is utterly unfit to be a teacher in any sense of the word.

I am, sir, JAMES P. MOORE.

ROSELLE, N. J., *June 9, 1904.*

To the Editor of Harper's Weekly:

SIR,—Concerning "Dr. Lyman Abbott's Advice to a Troubled Wife" in your issue of June 11 I would say, I do not think the advice sound, or "the elements of fairness to all persons concerned conserved." If such advice should be followed where would be the security of a wife's happiness or the family's permanence and sacredness? A true wife could hardly fail to become morbid and jealous under such circumstances. A certain course of action is either right or wrong—there is no middle ground and there is no standing still. A man who begins by giving his interest and attachment to a woman other than his own wife is pretty sure to end by discarding his wife altogether. It seems to me that, in this case, the husband is the only one whom Dr. Abbott thinks it worth while to consider. Though he (the husband) has been false to his marriage vows, Dr. Abbott asks the wife to win him back to righteousness by her love and devotion. The very fact that the husband admits that the other love still claims a place in his heart, though he has tried to banish it, proves the danger of the course he has been pursuing. That a man should be justified in it is preposterous. No, Dr. Abbott is not right. He is not a true teacher. Were his teaching accepted the result would not be conducive to the happiness of the individual or the well-being of society in general. I am, sir, A WIFE.

Progress of the War

FROM the beginning of the war, February 9, to June 6 sixteen Russian war-ships have been sunk or disabled — the *Petropavlovsk*, *Pobieda*, *Czarevitch*, *Retvisan*, *Poltava*, *Palluda*, *Bogatyr*, *Novik*, *Askold*, *Diana*, *Variag*, *Boyarin*, *Korietz*, *Yenesei*, the torpedo-boat *Stereguschtchi*, and the destroyer *Bezstrashni*. Of these the battle-ship *Poltava* and the cruisers *Novik*, *Askold*, and *Diana* are known to have been repaired and are again in commission. Several Russian gunboats also are known to have been destroyed. Japan has lost the battle-ship *Hatsuse*, the cruiser *Yoshino*, and at least two torpedo-boats, and a Japanese cruiser was successfully torpedoed by the Russians on May 10. Other Japanese ships are believed to have been injured in the Port Arthur engagements; but definite knowledge of this is withheld. Port Arthur has been repeatedly bombarded, with damaging effect, by the Japanese, and Vladivostok was attacked by them on March 6, though without serious damage to the port. After two unsuccessful attempts to blockade the entrance to Port Arthur by sinking merchant steamers in the harbor, Admiral Togo on May 7 notified his government that his third attempt was successful. On May 1 the first great land battle of the war took place near the Yalu River, and resulted in a Japanese victory. The Japanese lost 218 killed and 783 wounded. The Russian casualties numbered 2394 killed, wounded, and captured. The Japanese buried 1363 Russian dead, and took 613 Russian prisoners. The first Japanese army is concentrated at Feng-Wang-Cheng. The second decisive land battle took place on May 26 at Kin-Chow, thirty-two miles north of Port Arthur, and the Japanese, though suffering the greater loss, were again victorious. The Japanese casualties were 739 killed and 3444 wounded. The Russian losses were 30 officers and 800 men killed and wounded. The Japanese have occupied Dalny, and are reported to be moving on Port Arthur.

June 7.—Admiral Togo to-day informed his government that two Russian gunboats were destroyed at Port Arthur on June 4, instead of one, as previously reported.

June 8.—Chinese merchants who arrived at Chefoo to-day from Port Arthur report that a battle between Russian and Japanese troops has been raging for four days within ten miles of Port Arthur.

General Kuropatkin is still at Liao-Yang, and has sent 10,000 troops to the southward as a precaution against an advance by the Japanese.

Viceroy Alexeieff to-day reported to the Czar that on May 26 a Russian torpedo-boat, which was one of ten sent out to engage the Japanese boats operating in Kin-Chow Bay, struck on the rocks and sank.

The cable between Japan and Korea has been cut.

June 9.—A report received to-day in St. Petersburg says that the advance-guard of General Kuroki's army has begun to move eastward from Feng-Wang-Cheng. On June 7 a Japanese brigade attacked and defeated a Russian detachment at Saimatse. The Russian losses were 102 men killed and wounded. Saimatse is west of Feng-Wang-Cheng and controls the roads to Liao-Yang and Mukden.

Sixty-two mines have been found and exploded by the Japanese at Dalny, and the harbor is now completely cleared. Two Russian ships were also found underwater, one of which is believed to be the cruiser *Boyarin*.

June 10.—General Kuropatkin telegraphed to-day to the Czar that on June 8 the Japanese captured Siu-Yen, forty-five miles southeast of Haicheng, after a severe engagement, in which the losses on both sides were heavy. The number of Russian casualties is not yet known. General Kuroki announces that the Japanese losses were three men killed and thirty wounded. General Kuroki also reports that his losses in the engagement at Saimatse on June 7 were three men killed and twenty-four wounded.

June 11.—General Kuroki's main army is still at Feng-Wang-Cheng, and has not followed the detachment which occupied Siu-Yen on June 8. General Kuropatkin is strengthening his force to the south of and on a line parallel with Siu-Yen and Feng-Wang-Cheng.

June 12.—A report from Haicheng says that on June 9 the Japanese, in attempting a flanking movement around the Russian right, fell into a Russian ambuscade posted in a ravine thirty miles southeast of Haicheng, and two entire battalions were annihilated. No official confirmation of this report has been received. The Japanese advance-guards are now forty miles out from Feng-Wang-Cheng.

It was stated in St. Petersburg to-day that Admiral Skrydloff had taken the Vladivostok squadron to within thirty miles of Port Arthur. He found several Japanese war-ships confronting him, and an engagement ensued, but as none of the Port Arthur ships appeared he returned to Vladivostok, arriving there on June 10.

Twelve trains of Russian reinforcements are said to be arriving daily at Liao-Yang.

The final report of the Japanese military commission, which was assigned to bury the Russian dead in the battle of Nanshan Hill at Kin-Chow, was received to-day in Tokyo. It gives the number of Russian dead, which were left behind and buried by the Japanese, as ten officers and 694 men.

June 13.—A telegram from Newchwang says that the Russians attacked a small Japanese force southeast of Shung-Mao on June 11. After a slight fight the Japanese retreated to Yaotung Pass, the Russians pursuing them. There the Japanese were heavily reinforced, and the Russians were caught in a trap, losing over 800 killed or wounded.

Admiral Togo reports that the Russians have evacuated Yinkow (the port of Newchwang). The Russian forces at that place numbered 3000 men, with twenty guns.

According to a report from Tientsin, the Russian battle-ship *Czarevitch* has been repaired at Port Arthur and is now ready for sea.

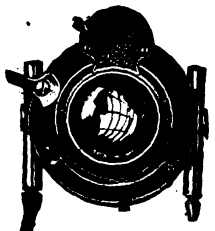
ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

FOR SAFETY
in the delicate process of feeding infants, BORDEN'S EAGLE BRAND CONDENSED MILK is unexcelled except by good mother's milk, as it is rendered perfectly sterile in the process of preparation. Lay in a supply for all kinds of expeditions. Avoid unknown brands.—[*Adv.*]

FOR a tenacious and persistent Cough, PISO'S CURE FOR CONSUMPTION is an effectual remedy. 25c.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

ADVERTISEMENTS.



Pears'

Whoever wants soft hands, smooth hands, white hands, or a clear complexion, he and she can have both; that is, if the skin is naturally transparent, unless occupation prevents.

The color you want to avoid comes probably neither of nature or work, but of habit.

Use Pears' Soap, no matter how much; but a little is enough if you use it often.

THE TRUANTS

BY A·E·W·MASON

SYNOPSIS OF CHAPTERS

In the opening chapter Pamela Mardale is introduced to the reader as a young society woman of London, beautiful and of rare personal charm. Into her early life has come a mysterious influence which dominates and directs her whole career. What this strange influence is only two of her friends suspect—a young schoolmaster who knew her as a child at Roquebrune, and Alan Warrisden, who is in love with her, and who, though his proposal of marriage is refused, determines to win her. Late one night at a ball, Pamela and Warrisden, while seated on a balcony, observe a young couple leaving the opposite house. They are Tony and Millicent Stretton, who live in a gloomy home presided over by the rich but unjust father of the young man. They are in reality kept prisoners by the whims of the tyrannical old man, and it is only by playing truant and going out by stealth late at night that they are able to enter at all into the life of the outside world. This practice they keep up for a year, but finally both of them grow extremely weary of their monotonous life, and in a moment of exasperation Tony determines to go to America to make his fortune, while Millie is to be left behind and sent for as soon as her husband is able to establish a home. Millie becomes infatuated with Lionel Callon, a gentlemanly adventurer. Pamela wishes to help her. She sends Warrisden on a mission to find Tony and bring him home. Warrisden learns from a friend of Tony's, a Mr. Chase, that Tony, having lost all of his small fortune in New York, is now in the North Sea on a trawler. Warrisden uses every argument to prevail upon him to come back, but he refuses, and Warrisden is forced to return alone. Tony remains on the trawler until the term of his cruise is over (meanwhile having learned of his father's death), and then, after much perplexity and indecision, decides to return to London, feeling that he has seen a way out of his difficulties. He reasons that he would deserve Millie's contempt if he returned at the moment when life had suddenly been made easy for them by his father's death, and decides to enlist in the French Foreign Legion, as no other career seems open to him. The same evening John Mudge, a friend of Pamela's, while at a reception given by Lady Millingham sees Lionel Callon enter the Stretton's house, where Millie is living. He learns from Pamela of the peril Millie is in from Callon, and invites Pamela to leave the whole matter in his hands. Tony goes to Algeria and joins the French Foreign Legion at Sidi-Bel-Abbés, enlisting under the name of "Ohlsen." Meanwhile Mudge has conceived a plan for getting Lionel Callon out of the way and so saving Millie from peril. He buys up all Callon's debts and places them in the hands of a single firm of solicitors, who insist on a settlement from Callon within twenty-four hours. Callon receives a proposition from Mudge to superintend an important enterprise of the latter's in Chile, at a salary of four thousand pounds a year, the term of his absence from England to be two years. He realizes that Mudge's intention is to get him out of the country, but his financial difficulties constrain him to accept the offer, and he leaves England without having seen Millie Stretton again.

CHAPTER XVIII

SOUTH OF OUARGLA

"HALT!" cried Captain Tavernay.

The bugler at his side raised his bugle to his lips and blew. The dozen chasseurs d'Afrique and the ten native scouts who formed the advance-guard stopped upon the signal. A couple of hundred yards behind them the two companies of the Foreign Legion came to a standstill. The convoy of baggage mules upon the right flank, the hospital equipment, the artillery section, the herd of oxen which was driven along in the rear—in a word, the whole expedition halted in a wood of dwarf oaks and junipers at three o'clock in the afternoon.

The order was given to gather wood for the night's camp-fires and the companies were dismissed. Each soldier made his little bundle and fixed it upon his shoulders. Again the bugle rang out, sounding the "fall in." And the tiny force marched out from the trees of the High Plateaux into the open desert. It was extraordinary with what abruptness that transition was made. One minute the companies were treading upon turf under rustling leaves, the next they were descending a slope carpeted with halfa-grass which stretched away to the horizon's rim, with hardly a bush to break its bare monotony. At the limit of vision a great arc like a mirror of silver glittered out of the plain.

"Water," said a tall, bearded soldier who marched in the front rank of the first company. It was he who had stepped from the train at Bel-Abbés with a light dust-coat over his evening dress-suit. He passed now as fusilier Barbier, an ex-engineer of Lyons.

"No," replied Sergeant Ohlsen, who marched at his side. "The crystals of a dry salt lake."

In the autumn of last year Ohlsen, or rather—to give him his right name—Tony Stretton, had marched upon an expedition from Mesheria to the Chott Tigri, and knew therefore the look of those tantalizing salt lakes. That expedition, which had conducted a survey for a road to the Tiguig oasis, had brought him his promotion.

"But we camp by the lake to-night," he added. "The wells of El-Guethifa are close."

The companies went forward, and above that salt lake they saw the mirages begin to shimmer, citadels and hanging gardens, tall towers and waving woods and majestic galleons, topsail over topsail, floating upon summer seas. At the wells the sheikh of the district was waiting upon a mule.

"I want fifty camels with their saddles and their drivers at five o'clock to-morrow morning," said Tavernay; and although as far as the eye could reach there was no moving thing upon that vast plain except the small group of Arabs and soldiers about the well, by five o'clock the camels were squatting upon the sand with their drivers beside them. The mules were sent back from El-Guethifa that morning, the baggage was packed upon the camels, and the little force, insufficient in numbers and supplies, went forward on its long and untoward march.

It passed through the oases of El-Maia and Methlili to Ouargla, at that time the last outpost of French authority. At Ouargla it rested for a week; and there renewing its supplies, penetrated southwards to survey the desert country of the Touaregs for the construction of the oft-mooted trans-Saharan railway. South of Ouargla all the difficulties of the advance were doubled. The companies went down through the archipelago of oases in the dangerous Touat country amongst a sullen people who had little food to supply and would hardly supply it. Tavernay led his men with care, neither practising a discipline needlessly strict, nor relaxing into carelessness. But he was under-officered, and his officers even so were inexperienced. Lieutenant Laurent, a man irritable and unjust, was his second in command, and there were but two sous-lieutenants besides. In spite of all Tavernay's care, the convoy diminished. One day a camel would stumble on the slippery bottom of a salt marsh, fall and break its limbs; the next, another would fail and die through a long-untended wound caused by the rough saddle upon its back. In the ranks of the soldiers, too, there was trouble, and Laurent was not the man to deal with it. There was hardly a company of the Legion, recruited, as it largely was, from the outcasts and the men of sorrows, in which there were not some of disordered minds, some whom absinthe had brought to the edges of insanity. Upon these the severity of the expedition worked havoc. Tents had been perforce discarded. The men slept under the stars. They woke from freezing nights to the bitter winds of dawn and two hours after dawn they were parched by a burning sun, and all the day they suffered under its pitiless and blinding glare. Storms whelmed them in lofty spirals of whirling choking sand. For a week they would toil over high red mountainous ground of loose stones; then would follow the monotony of bare round plains, piled here and there with black rocks quivering and glittering in the heat when the sun rose day after day upon their left hand in scarlet and set in scarlet upon their right, and they themselves were still the tiny centre of the same empty inhospitable space: so that only the difference of the ground they trod, the feel of soft sand beneath their feet, where a minute before they had marched on gravel, told them that they progressed at all. The worst of the men became prone to disobedience, eager for change; and every now and then a soldier would rise upon his elbow in the night-time, gaze furtively about over his sleeping comrades, watch the sentries until their backs were turned, and then crawl past them into the darkness. Of these men none ever returned. Or some mania would seize upon them and fix a strange idea in their brains, such as that which besieged Barbier, the fusilier, who had once stepped out of the railway-carriage in his evening

(Continued on page 986.)

Too Much

A CHINESE servant employed in a New York family, who lived next door to a famous woman pianist, left suddenly after only a few days' service.

His knowledge of the English language was limited, and the letter which he left behind him notifying the family of his departure was written in Chinese. With the aid of an interpreter the gist of the communication was made out. "I do not mind your heathen parrot," said the letter; "I do not mind your barbarous customs of dressing and eating; but the lady next door who sits on the musical instrument every day is too much."

An Unusual Work

A STORY is being told of a printer, employed in one of the largest American publishing-houses, who was asked by a friend what was the most important book to be published by his firm during the coming year.

"——— ———," he answered, naming a work whose forthcoming appearance had aroused much interest.

"What sort of a book is it?" asked his friend.

"It's an autobiography written by the man himself," explained the printer, impressively.

The Wrong Department

A PROMINENT physician tells this story at the expense of the modern craze for specialization in the medical profession: A poor woman from the East Side of New York went to a near-by dispensary to ask aid for her little son, who had had one of his fingers smashed by a baseball bat. At the first room where she applied she was told by a curt attendant that the boy could not be treated there.

"Wrong place," he explained; "this is the eye and ear department."

"Vere is der thumb und finger department?" inquired the woman, simply.

Royal Pawnbrokers

THE three-ball sign symbolical of the pawnbroker's business was used in London, in very early times, by certain merchants from Italy who had emigrated to England to found the first money-lending establishments in that country.

It is believed that the familiar sign of the three golden balls was adopted by the Lombard merchants from the armorial bearings of the Medici family, some representatives of whom were money-lenders.

(Continued from page 984.)

dress. He leaned over towards Stretton one evening, and said, in a hoarse trembling voice,

"I can stand it no longer."

Both men were sitting by a tiny fire which Barbier was feeding with handfuls of halfa-grass and sticks. He was kneeling up in front of it, and by the red waving light Stretton saw that his face was quivering with excitement.

"What can't you stand?" he asked.

"It is Captain Tavernay," replied Barbier. He suddenly laughed in a pitiful fashion and cast a glance over his shoulder. "There is a man put on to watch me. Night and day I am watched by Captain Tavernay's orders. He wants to fix a crime on me! I know. He wants to trap me. But let him take care!"

Stretton fetched the doctor, who listened for a while to Barbier's rambling, minatory talk, and then shrugged his shoulders.

"Hallucinations," said he. "Ideas of persecution. The commonest form," and having fixed Barbier into his proper category he walked away. There was nothing to be done for Barbier upon this expedition. He had to be watched; that was all. Thus for seven hundred miles the force pushed southwards from Ouargla and thus from within it disintegrated as it went. Tavernay could not but notice the change, but he said nothing to any subordinate. The men would fight well if fighting happened. That he knew, and meanwhile he marched on.

It was just when the seven hundred miles had been completed that Tavernay realized fighting was likely to happen. He went the round of the camp as the sun was setting, when the rifles were piled and the fires crackling. Stretton was at his side, and saw his commander stop and shade his eyes. Tavernay was looking westwards. Far away against the glowing ball of the sun, which was just dipping down behind the plain, the figure of an Arab mounted upon a camel stood motionless and black. Tavernay swung round and looked behind him. On the crest of a sand-hill to the north a second rider stood distinct against the sky.

Tavernay watched the men for a long time through his glasses.

"Touaregs," said he, gravely. "Masked Touaregs," and that night the sentinels were doubled; and in the morning the bugle did not sound the reveille.

Moreover, when the force advanced, it advanced in the formation of a square, with the baggage camels in the centre, one gun in the front line and the other in the rear. They had marched into the country where the Senoussa sect prevailed. The monasteries of that body sent out their missionaries eastward to Khordofan, westwards to Tafilet, preaching the purification of the Mohammedan religion and the enlargement of Mohammedan countries now subject to the infidels. But nowhere had the missionaries raised their standard with more success than in this Touat country of the Sahara. The companies marched that day alert and cheerful. They were consolidated by the knowledge of danger. Captain Tavernay led them with pride.

"An insufficient force, ill-found, inadequately officered," he thought. "But the men are of the Legion." They were "mes enfants" to him all that day.

But the attack was not yet to be delivered. During the night the two scouts had ridden on their swift Maharis northwestwards to the town of Lasalah. They knocked upon the gates of the great mud fortress of Abd-el-Kader, the sheikh, and were instantly admitted to the dark room where he sat upon a pile of rugs. When the eyes of the scouts became accustomed to the gloom they saw there was yet another in the room, a tall man robed in black with a black mask of cotton wound about his face so that only his eyes were visible. This was the chieftain of the Hoggar Touaregs.

"Well?" said Abd-el-Kader, and the scouts told him roughly the number of the force and the direction of the journey.

Then Abd-el-Kader turned to the Touareg chieftain.

"We will let them go further south, since southwards they are marching," he said, in his suave gentle voice. "A hundred miles more and they will be amongst the sand-dunes. Since they have cannon, the attack must be sudden. Let it be at the wells of Bir-el-Gharamo."

The Touareg chieftain rode out that day towards his hills; and, unmolested, Captain Tavernay's expedition went down to the dunes. Great waves of yellow sand, sometimes three hundred feet from crest to base, intersected the face of the desert; the winds had given to their summits the overhang of a breaking sea; they ran this way and that as though the currents of an ocean had directed their course; they had the very look of motion; so that Stretton could not but remember the roaring combers of the cold North Sea as he gazed upon these silent and arrested copies. They made of that country a maze of intricate valleys. Led by a local guide commandeered from the last oasis, the companies of the Legion marched into the maze, and on the second day saw, as they came over a hill, just below them in a narrow hollow, a mud parapet built about the mouth of a well. This was Bir-el-Gharamo, and here they camped. Sentries were posted on the neighboring crests; suddenly the darkness came and overhead the stars rushed down towards the earth. There was no moon that night, nor was there any sound of danger heard. Three times Tavernay went the round of the sentries—at eight and at ten and at twelve. But at three o'clock, just as the dawn was breaking, a shot was heard. Tavernay sprang up from the ground, the alarm rang out clear from the bugle over the infinite waste, the companies of the Legion seized their piled rifles, and fell into battle order with an incredible neatness and expedition.

To be Continued.

The Hawthorne Centenary

By Edith Baker Brown

BY an odd coincidence the birthday of the author whose work is a more absolute, a more unquestioned imaginative achievement than that of any other American falls on July 4. A hundred years ago Nathaniel Hawthorne was born in Salem, Massachusetts. He was of straight Puritan descent, his ancestors numbering among them efficient men in the colony—seamen, men of affairs. The Hawthornes seem to have been a reserved and intellectually independent race. One of them, a prominent judge in witchcraft days, condemned an innocent man to death, and the family was popularly supposed to suffer from the "witches' curse," after the manner of the Pyncheons in *The House of the Seven Gables*. In fact, that story embodies not a little of the family tradition, slightly transmuted to the purposes of fiction. The recluse strain was strong in both Hawthorne and his elder sister, although the isolation in which the immediate family lived was partly due to Mrs. Hawthorne's complete retirement from the world after her husband's early death. For ten years after Hawthorne's graduation from college, he says that perhaps there were not twenty persons in Salem who knew that there was such a person in existence as himself. Then came his meeting with Sophia Peabody—a love episode as purely poetic as the meeting of the Brownings, and the man partly issued from the shadowy life of dreams. Six years after his marriage Hawthorne wrote his wife: "Thou art the only person in the world that ever was necessary to me. Other people have occasionally been more or less agreeable, but I think I was always more at ease alone than in anybody's company till I knew thee. And now I am only myself when thou art within my reach." In an almost literal sense the companionship of his wife was Hawthorne's one vital social experience. Without her he would indeed have been solitary. With her his hitherto purely intellectual life found its humanity. His contact with the wider world of men was always something rather shadowy. In a way, the society of his time and place—its idealism, its unworldliness—entered into the substance of his thought. But toward its particular men, its particular enthusiasms and events, he was singularly cold. His coolly artistic handling of the Brook Farm Community offended the ardent reformers of his day; and the great civil war passion found him apathetic as it found no other one of his literary contemporaries. His life abroad left him only the more a New-Englander—the man he had been from the beginning.

Such was Hawthorne's life, deeply bedded in the past, singularly simple in its elements. To cosmopolitan persons like Henry James—indeed, to our cosmopolitan modern sense in general, the material it offers to art seems bodiless and meagre. Yet results prove that it offered to Hawthorne's genius the perfect conditions of creation—such conditions as have not occurred again in our literary history. And what is the character of the art that issued from them? Reread to-day, these three or four brief but perfect romances on which Hawthorne's fame rests, impress us first of all by an artistic refinement, a contemplative and analytic subtlety which is hardly to be matched outside of modern French prose. They seem to represent that happy moment in art when the utmost imaginative sensitiveness has not yet the touch of decadence, but concerns itself still with the moral realities of life. It is curious that the Puritan genius which has been pronounced so hostile to art should issue in a contemplative habit so disinterested and imaginative, in a taste so pure, as it issued in Hawthorne; yet though Hawthorne is the chief representative, he is not the sole one of this artistic flowering of Puritanism. Thoreau, Henry James, Whistler, show all the same inheritance. There are moods when Hawthorne's work, in its artistic detachment, seems almost to offend serious passion. This was the effect it had upon the moral earnestness of Emerson, who yet ought to have sympathized with its imaginative detachment. Yet it seems to us an obtuse reader who cannot feel the intense moral reality which Hawthorne's most playful, most serene intellectual utterance always had for himself. Nor can one fairly call this intensely introspective genius, which searched so deeply into the motives of character, morbid; for it does not deal with the eccentricities of temperament, or the morbid emotions, like so much modern decadent art, but rather with the great normal realities of the soul's life. Hawthorne himself said: "When I write anything that I know or suspect to be morbid, I feel as though I had told a lie." It is indeed this instinct for the basic, the fundamental, in which lies the creative power of his work. A certain rightness of character and mind everywhere characterizes this man of daintiest artistic habit, and a perfectly spontaneous democratic sympathy which we may rightly claim as his American inheritance.

Hawthorne's romances have not the body, the stir of actual life, the volume, of many great novels. His art is like a lucid, still lake, that mirrors experience to its depths and strangely ethereal-izes it. He wrote little, but what he wrote was written in the perfect mood of creation. We can recall no other novelist of his

time whose creative gift was so sure—save Thackeray. Thackeray worked with the every-day material of human nature. Hawthorne, rather—Puritan and idealist—sought his material in the inner life of man—in the world-old problem of sin and redemption. His art owed incalculably to his inheritance and also much to that particular social environment into which he was born and which his son has so aptly described: "The seed of democracy" (in Hawthorne's youth) "was bearing its first and (so far) its sweetest and most delicate fruit. Men and women of highest refinement, education, and sensibilities thought it no derogation, not only to work for their living, but to tend a counter, sweep a room, or labor in a field. Religious feeling was deep and earnest, owing in part to the recent schism between the severe and the liberal interpretations of Christian destiny and obligations; and the development of commerce and other material interests had not more than foreshadowed its present proportions nor distracted people's attention from less practical matters. Such a state of things can hardly be reproduced." Through his wife, as we have already said, came the deepest and most human of his insights. Hawthorne preferred *The House of the Seven Gables* as the book most characteristic of his mind, and we can understand what he meant, not because this particular story embodies a family tradition, but on account of that little parable of the isolated life which runs all through it—this life with its yearnings toward humanity, and its final emancipation through love. The exquisite playfulness of so much of the narrative is also characteristic of the sunnier side of the author's genius. To reread any one of these romances of Hawthorne's is surely a duty of the present centenary that affords the rarest of intellectual and imaginative pleasures.

An Architectural Illusion

THE photograph shows the façade of the new Chamber of Commerce in Liberty Street. The feature of interest is the peculiar and apparently perilous position of the group of figures seated over the doorway. It is difficult to believe that this porch and pediment form part of the façade of the building in line with the rest of the elevation. The illusion is probably due in part to the setting back of the old brownstone building adjoining the Chamber of Commerce at the extreme end, which throws the group into greater apparent prominence, but more particularly to the fact that Liberty Street, at its juncture with the alley at the corner of which the building stands, deflects slightly in a southerly direction.

NOVELS BY MAURUS JÓKAI

Black Diamonds
Translated by FRANCES A. GERARD
A happy blend of the elements of romance with those of every-day life. . . . The action is varied, animated, and sufficiently exciting to sustain the reader's interest, to which a constant appeal is also made by the fresh and piquant aspects given the book by its Hungarian atmosphere. 16mo, $1.50

The Green Book
or, Freedom Under the Snow
Translated by MRS. WAUGH
A great story by one of the great masters of fiction. Jókai is a writer of tremendous power, and, always equal to himself when occasion demands, he is supreme in "The Green Book." 16mo, $1.50

The Lion of Janina
or, The Last Days of the Janissaries
A TURKISH NOVEL
Translated by R. NISBET BAIN
In depicting his hero, Ali Pasha, as cruel and as crafty an Oriental as ever lived, he has drawn him in such a picturesque manner, and touched so lovingly and charmingly the very few and slight phases of his character that were above reproach, that he compels our admiration in spite of ourselves. 16mo, $1.25

THE STORY OF

Amalgamated Copper

A PERSONAL WORD BY THOMAS W. LAWSON AND A STATEMENT BY THE PUBLISHERS OF

Everybody's Magazine

The Personal Word by Mr. Lawson

Personally I know that one hundred millions of dollars were lost, thirty men committed suicide, and twenty previously reputable citizens went to the penitentiary, directly because of Amalgamated.

It was largely because of my efforts that the foundation of Amalgamated was successfully laid. It was created because of my work. It was because of what I stood for, because I had the public's confidence, and because my promises had been kept that the plain people invested two hundred million dollars of their savings, and it was because of trickery and broken promises that the public lost the enormous sums they did.

My motives for writing the Story of Amalgamated are manifold: I have unwittingly been made the instrument by which thousands upon thousands of investors in America and Europe have been plundered. I wish them to know my position as to the past, that they may acquit me of intentional wrong-doing; as to the present, that they may know that I am doing all in my power to right the wrongs that have been committed; and as to the future, that they may see how I propose to compel restitution.

THOMAS W. LAWSON.

A Statement by the Publishers of Everybody's Magazine

In the articles by Mr. Lawson, beginning in the July number, under the caption of "Frenzied Finance, The Story of Amalgamated," we have a narrative from Mr. Lawson's own lips, how, in the last few years, he has seen millions of dollars won without right, and thousands of men ruined. It is a story of financial tragedy of to-day.

In the great financial happenings of recent years story-tellers have given their version; political economists their theories; reformers their pictures; and historians their tablets. For the first time in the history of High Finance we have the High Priest tell it as it happened, and it is for *Everybody's Magazine* to publish "the cold-blooded facts," for Mr. Lawson has pledged himself to tell the truth, the whole truth, and nothing but the truth.

How Star-Distances are Measured

(Continued from page 980.)

lactic displacements, and not to any other cause.

It is true that these results were subject to such uncertainty as might arise from the necessary assumption that the two small auxiliary stars used for comparison were themselves infinitely remote. But Bessel was able to show that even if such were not the case, his observations, though they would not give the true distance of his star, would at least tell him how much nearer it is to the solar system than are the two stars of comparison. In other words, his observations gave at least a sort of "lower limit" as to the star's distance, within which limit it was most certainly situated.

It is extremely difficult to obtain a notion of the magnitude belonging to this stellar distance. Expressed in miles, it gives so long a series of figures that it is impossible to visualize what they mean. To get over this difficulty, astronomers have invented a new unit of distance, called the "light-year." This unit is equal to the space that would be covered in one year by a light-ray travelling steadily onward at its usual rate of about 186,000 miles per second. It is evident that such a ray would pass over a very respectably large distance in the course of a whole year. Such is the astronomer's unit for estimating stellar distance, and Bessel found for his star a distance of eight such units.

A satisfactory beginning once made, astronomers were not slow to continue observational researches into stellar distance. Before them they have seen always a most fascinating reward, the possibility of discovering a real neighbor in stellar space. The vast majority of stars are unquestionably so remote from us that the quantitative valuation of their distance belongs among those problems that occupy the borderland between that which man *may* hope to attain and that which is forever placed beyond human ken. Yet still there *may be* a few—perhaps but one single star—nearer incomparably than are the countless congeries of its fellow orbs. If such there be, its discovery would indeed be an achievement of surpassing interest.

So there need be no surprise that astronomers are continuing Bessel's work with activity; that they should have devised a more effective engine of attack than he possessed was also to be expected. This has been found in the photographic method of observing. Though no more precise than the older processes, photography is superior in ease of application, and in the output of results produced by a given quantity of labor. The method is essentially similar in principle to Bessel's, except that measurements of a photograph under the microscope are substituted for direct eye-observations upon the sky itself. The subsequent calculations are, then, quite analogous to the former ones.

To make photography most effective in this work it is necessary to use a large telescope. The telescope is, in effect, the photographic camera of astronomy: with a big camera we obtain a big picture, and this reduces to a minimum the harmful effects of all sources of error in observation. But to make good photographs the telescope should be provided with a photographic lens, ground quite differently from the usual telescope lenses intended for visual use. The largest existing telescope, that of the Yerkes Observatory, is a visual one. But it has recently been found possible to adapt it for photographic work as well; and this fact, of the utmost importance to those interested in stellar distance, is full of interest also in its probable influence in every department of observational astronomy.

To accomplish this it has merely been necessary to insert in the telescope, between the sensitive photographic plate and the star's light as it comes down from the lens, what is known as a "ray-filter." This is a glass plate coated with a preparation transparent to the kind of light that affects photographic plates, but opaque to all other light. The telescope's lens gathers all kinds of light from the stars, but the filter admits to the photographic plate only

that which is suitable for it. Thus we reach the same result as if the telescope lens itself had been ground in such a way as to collect only the photographic rays. We have, in effect, a photographic telescope.

One of the astronomers at the Yerkes Observatory is devoting himself at present to stellar parallax work with this new arrangement of apparatus. With the enormous size and light-gathering power of his instrument, he enjoys advantages not hitherto realized in photographic astronomy. That he will discover some star comparatively near us is but a hope; he cannot fail, however, to increase materially our slender stock of knowledge as to stellar distance—and that within the space of a very few years. Let us but be put in possession of a large number of well-determined star-distances, and we shall be able at last to theorize with some approach to certainty concerning the construction of the stellar universe.

Trials of a War Correspondent

(Continued from page 973.)

thrown on the mud floor of our doorless hut, and, placing a rope mat over the opening to keep out some of the chill of night, we wished ourselves in the warm comfort of even a Bowery lodging-house.

Our expensive canteen, to which, by the advice and consent of the government, we pay seven and a half dollars gold a day, was days behind; how many, we could not even calculate.

However, fortunately for us, headquarters began to relent a little, and a piece of meat—a raw chunk of the worst cut of a freshly killed beef—was added to our rations, and we were permitted to draw horse feed.

We live by the clock. At ten in the morning Captain Okada will receive one correspondent as a representative of all, and give out any news he may have. At four o'clock rations may be drawn for the next day. At five o'clock feed for the horses may be obtained. Between four and five Captain Okada will censor all telegrams and manuscripts, which must first be read to him, line by line, and then he submits them to the higher officers. If they pass muster, two red seals appear on the paper, covering the first and last word, and all letters are sealed and stamped with the censor's stamp in his presence. Captain Okada informs us that at 2 P.M. to-morrow he will be pleased to take us to see some of the country, but when he exceeded his authority and took some of the correspondents up on the commanding point of Wiju castle, whence some of the Russian positions could be seen, it is said he was reprimanded.

We cannot move from the unhealthy spot in which we have been located until orders are received from headquarters, though the request to do so was made three days ago. It is understood, however, that they have the matter under consideration, and may move us all nearer the headquarters camp.

One correspondent from New York spent two whole days in trying to have his horse's shoes tightened. There were something like ten men's hands through which the matter had to pass before the necessary permission could be secured, and each man had to write or see personally the man ahead of him before the important question could be settled.

Three correspondents came in after five o'clock, with tired and hungry horses, and they could not draw feed for themselves or their horses that day, as the supplies had previously been issued to the seven men already in camp, and therefore the newcomers were not officially present.

Captain Okada assures us that conditions will change after the first great battle, but, as he expresses it, "We are doing everything in our power to screen our movements from the enemy, and therefore you must be patient." The word "patient" we have heard from Japanese lips until we feel like screaming with pain as it jars our nerve-racked ears!

One correspondent, particularly bitter against the commanding generals in Cuba and the Philippines, was heard to exclaim, "Say, Pussy Shafter and Grandma Otis were real saints in disguise to the Umpty Umps we're up against now!"

WINCHESTER

AUTOMATIC RIFLE
.22 CALIBER MODEL 1903

LIKE HISTORY IT REPEATS ITSELF

As a means of pleasure and sport, the Winchester Automatic Rifle is as far ahead of any other .22 Caliber as an automobile is ahead of the historic one horse shay. After loading this rifle, all that it is necessary to do to shoot it ten times is to pull the trigger for each shot. Although automatic in action, it is simple in construction and not apt to get out of order. For city, country or camp it is the gun of the day. To shoot it is to appreciate it. You can handle this rifle and see it shot in our demonstrating booth at the St. Louis Exposition.

See our Exhibits at St. Louis, in Manufacturers and Fish and Game Buildings.

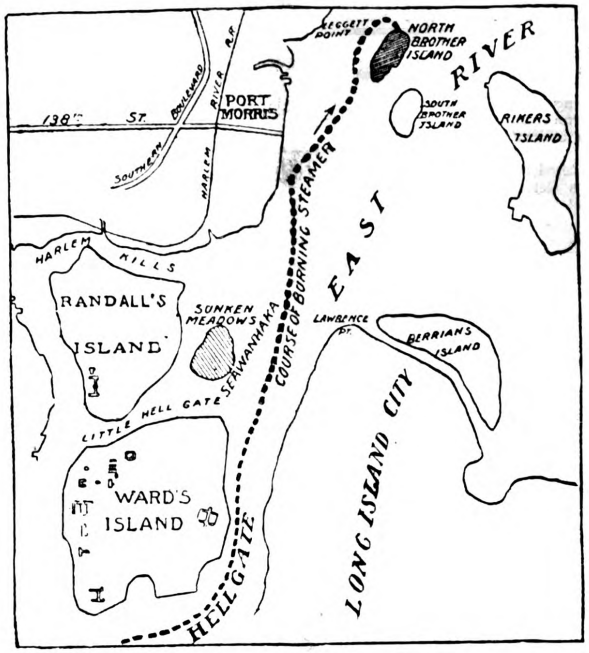
The "General Slocum" Disaster

One of the most appalling marine disasters of recent years was the burning and sinking of the excursion steamer "General Slocum" at North Brother Island, East River, New York, on June 15, A conservative estimate of the dead and missing is 1200. Up to 3 P.M., on June 16, 522 bodies had been recovered. These were mostly women and children connected with St. Mark's German Lutheran Church of New York, under whose auspices the excursion was given. Twenty-four years ago, on June 28, 1880, a similar accident occurred to the steamer "Seawanhaka" near the scene of the present disaster. In the "Seawanhaka" disaster there were 62 dead and missing

ON June 15, within a short distance of the spot where the steamboat *Seawanhaka* caught fire and burned, with a heavy loss of life, twenty-four years ago, the steamboat *General Slocum*, carrying an excursion party from St. Mark's German Lutheran Church, New York, was totally destroyed by fire, with an estimated loss of 1200 by burning and drowning.



The *General Slocum* was chartered for the annual excursion of the Sunday-school of St. Mark's German Lutheran Church, and left the foot of East Third Street about nine o'clock in the morning bound for Locust Grove, Long Island, where the excursionists were to spend the day. The number of tickets sold is reported to have been 988, but this did not include the children who were on board. Most of the excursionists were women and children. The *General Slocum*, commanded by Captain William Van Schaick and with two pilots on board, proceeded up the river as far as Hell Gate in apparent safety. It was not until the boat was opposite 130th Street that the first evidences of danger were noticed. According to the stories of some of the survivors, smoke had been noticed before this, but it was supposed to be coming

The Steamer "General Slocum" Sinking off North Brother Island after the Fire

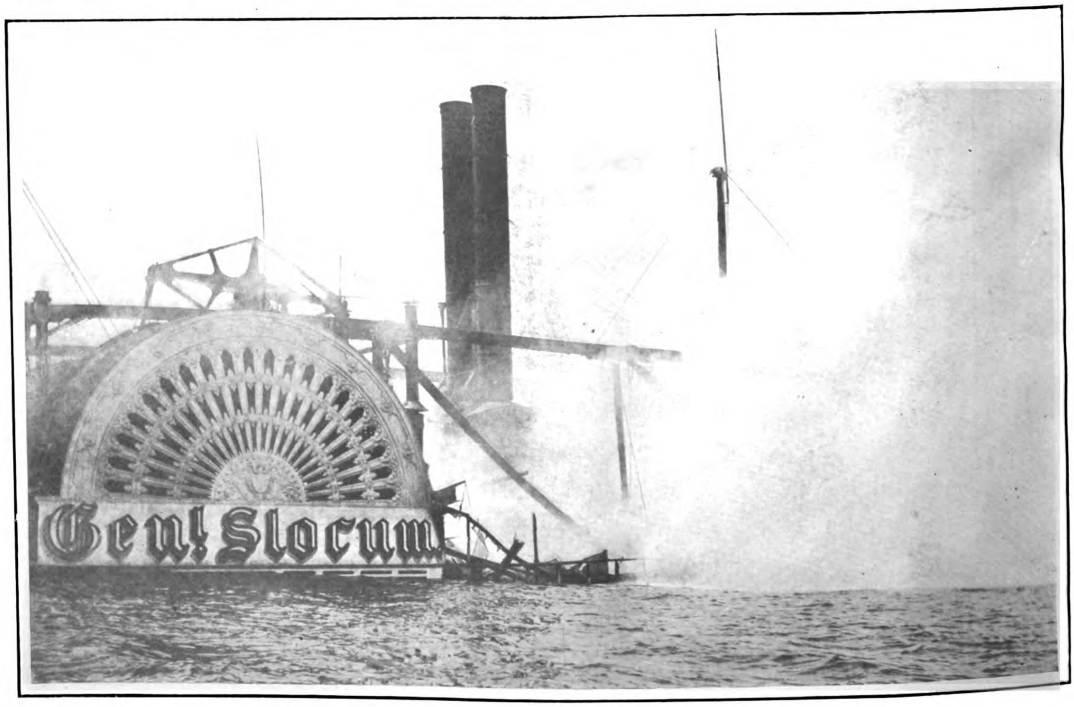
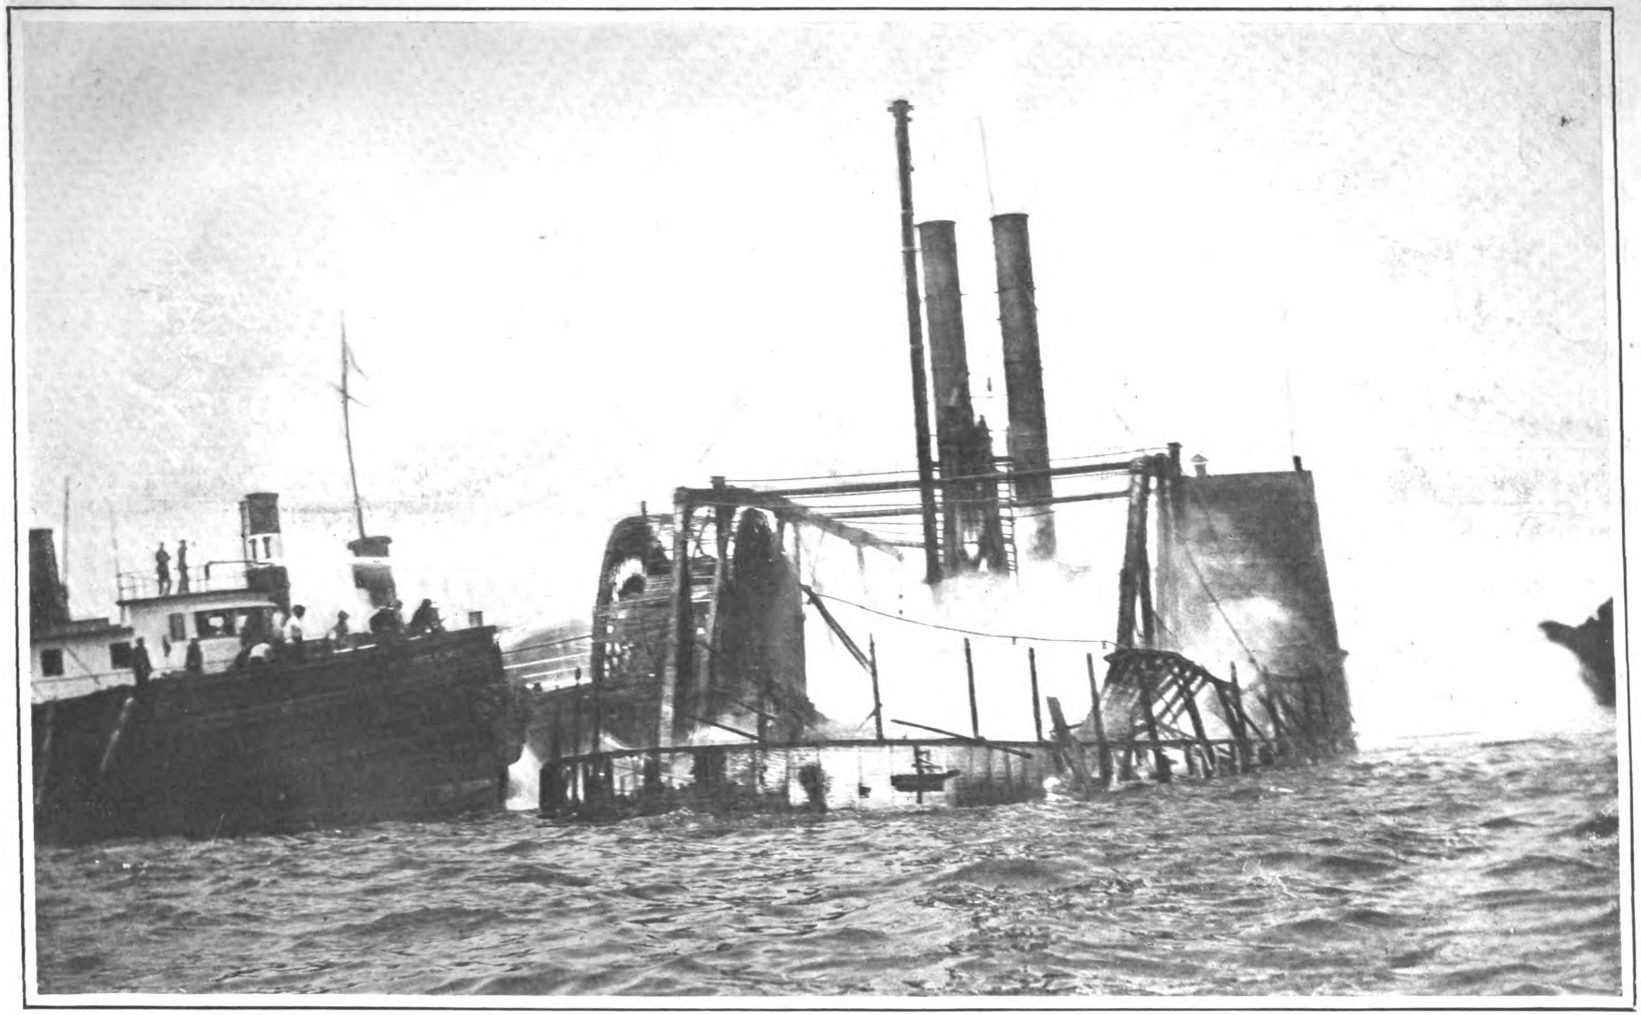
from the kitchen on the lower deck, and no attention was paid to it. The first warning of peril came with the cry of Fire! from the forward deck, followed by an explosion and the appearance of a sheet of flame. Panic prevailed immediately, and the crowd of women and children, terrorized by the flames, which spread with great rapidity, crowded to the rear of the boat. It was then that what appears to have been an error of judgment was made in the management of the boat. Instead of running her ashore on the sunken meadows, the *General Slocum's* captain continued on up the Sound, the wind forcing the flames backward through the length of the boat with increasing rapidity. Then began a struggle among the panic-stricken excursionists. Many, frenzied by the oncoming rush of the flames, threw their children over the rail into the water and jumped after them; others remained on the boat until they were forced overboard or until the flames were actually upon them. Apparently there was no attempt on the part of the deckhands of the boat to check the fire or to restore order among the passengers; and according to the stories told by survivors the boat's supply of life-preservers proved to be worthless. The *General Slocum* by this time was opposite North Brother Island, where Captain Van Schaick planned to beach her. As she ran ashore the supports of the hurricane-deck were burned away, plunging passengers on to the blazing deck below. Meanwhile the situation of the steamer had been observed, and river craft and boats from the shore went to her assistance. One tugboat put off from the pier at North Brother Island, and, going alongside the burning steamer as she grounded, succeeded in saving 155 lives. Rowboats and tugs by the score were hurried to the wreck and rescued many from the river. Shortly after the *Slocum* struck the shore at North Brother Island she drifted away down-stream, bringing up finally on the beach at Hunt's Point, over a mile away, where she burned to the water's edge.



Map showing the Course of the Burning Steamer

The news of the disaster spread rapidly, and from every hospital in the city ambulances, physicians, and nurses were sent to the scene, and prompt and efficient service was rendered to the injured who were taken from the wreck.

The burning of the *General Slocum* is the worst harbor disaster in the history of American catastrophies. A disaster similar in many ways was the burning of the steamboat *Seawanhaka*, on June 28, 1880, mentioned above. The *Seawanhaka* was on her way up the Sound from Peck's Slip, with about three hundred passengers. When off Ward's Island she took fire as the result of an explosion, and sixty-two persons lost their lives by burning or drowning. An earlier instance was the destruction of the Staten Island ferry-boat *Westfield*, on July 20, 1871, caused by an accident to her boiler as she was leaving her slip with a Sunday morning crowd of excursionists. Fifty persons were instantly killed.



The *General Slocum* was launched in 1891, and suffered many mishaps.

One of the most serious of these accidents occurred on July 29, 1894, when she ran on a sand-bar late at night when crowded with passengers. Many were injured in the panic that followed. She had had other mishaps of a more or less serious nature, the most recent before that of last week being a panic and riot on August 17, 1901.

The Fire in Progress—Scene after the Collapse of the Hurricane-deck

A VIEW OF THE "GENERAL SLOCUM" ON FIRE OFF NORTH BROTHER ISLAND

As soon as word was received of the disaster, fireboats were at once hurried to the scene, where they attempted to put out the fire aboard the steamer and to rescue those who were im ned on her. At the moment the vessel went aground the hurricane-deck gave way, throwing many passengers, women and children, into the flames below, where rescue was impossible

SCENES AT NORTH BROTHER ISLAND AFTER THE DISASTER TO THE "GENERAL SLOCUM"

The "General Slocum," while still burning, was beached at North Brother Island. Scores of bodies were cast up on the shore, where they were taken in charge by the police and the authorities on the island. The physicians, nurses, and attendants from the hospital on the island at once went to the assistance of those on board the burning steamer, and succeeded in rescuing many from drowning and in relieving the injured. Assistance was also given and the work of rescue directed by the commissioners of the health and police departments
